LYING there in the windy darkness, she put her arms around Susan, holding her shaking shoulders close against her own breast. She loved Susan. She wanted desperately to say something; but she did not know what to say. Until today she had not realized that Susan had so loved Jared, even perhaps as Jared had loved her, Mary Penrose. At last she found some words:

"I'm sorry, Susan. I never loved him like that, even though I said I'd marry him. I'm sorry he didn't love you instead of me. That would have been better, and I'd have told him—straight out, I would—if I'd known your feelings. I would, and that's a fact."

Susan suddenly tore herself free from Mary's encircling arms and stopped crying. Mary felt the tiny room grow tense and heavy with whatever was in Susan's mind. In those pregnant moments even the thought of the red book and those ancient, more gracious Tintagel loves, lurking as they always were in her consciousness, were swept into the background. She knew that something was coming and waited for it as one waits, half-suspiciously, for an event which will change one's life.

Susan began to speak in a dry, quite tearless voice: "It's not for 'im I'm crying. That I'll do by and by, when I'm straight with you. There's time enough—days and weeks and years. It's what I've done to you, Mary, that's killing me. You're my best friend, and I've not been fair to you. Jared did love me. 'E wouldn't have, but I made 'im. I kept telling 'im—all the spring I did—that 'e could have all of me 'e wanted. I kept telling 'im in little ways—something taught me how—and by and by 'e understood. That's what's killing me. And that's what killed 'im, too."

Mary lay quite still. It seemed to be dead. In it at all. From the tiny, casement window she saw a light flashing on a faraway reef in a high tower.

"I'm a great sinner, my best friend and I'm a sinner because, except for my sins, I'm not sorry I never known what before, what it felt like as not I'll suffer for my sin—suffer and your leaving n be punished in the leastwise I've got th

and such like. I never thought it new."

Mary reflected a long moment in the still, musty darkness. "It is old," she said. "That's quite right, Susan. But new things happen there to folks—at least to me. You'll see."

She lay awake after Susan slept, reviewing again the stories in the red book, picturing Jared and Susan among the primroses. Although the glowing pages between which Jared's letter had lain, pages which chronicled the love of Sir Tristan for Iseult the Fair, had worked no miracle for her, they had for Susan and for Jared. Their love, which had killed Jared and which lay so weightily as a sweet sin upon Susan's heart, was for Mary shorn of wrong by its very glamor, by its pervasive and transcending power, transforming the dullness of their lives into something ancient, magical, satisfying. Susan, whom she loved, had for a brief moment lived an old romance, which had in some strange way brought back to somber Cornwall the enchantment of its earlier, higher days. Even Jared himself by his terrible act had taken upon himself a dignity which in life he had never possessed.

WHEN the early light came, turning the gleam of the faraway beacon from gold to blue, Susan awakened.

"I've just dreamed, Mary, as 'ow we offered bed and breakfast in our cottage like Jared's mother said. It might be I could make some shillings for us that way."

"I dare say," said Mary. "Folks do race that fast along the roads these days." The sun came up over the gray Atlantic and the beacon ceased to glow. "And I was just thinking, Susan. Maybe when the dark comes early, you'd place a candle in the upper window against my coming home."

"I dare say," said Susan in her turn. "A candle now and then at night is nought so dear!"

THE END

"I haven't got an empty tube. Just squeeze the toothpaste into a paper bag!"

AL ROSS

MR. MFGTCH

helps to keep 'em flying

Once upon a time there was a man named Mfgtch. One morning he came down to breakfast and saw by the papers that the world was coming unglued.

"What a mess," muttered Mr. Mfgtch.

When Mr. Mfgtch got to the office, where he was a Little Shot, he called Miss McZrty over to his desk.

"Miss McZ.,," he said, "how many people are there in the United States?"

So Miss McZ., who was good at vital statistics, told him.

"And how much," continued Mr. Mfgtch, "is it going to cost us to larrup the living day-lights out of the Nazis and the Nips?"

So Miss McZ., she told him.

"Jeepers!" observed Mr. Mfgtch. "Now then! How much is the cost of doing the larruping divided by the number of us folks who have got to do it?"

"Just a minute, sir," said Miss McZrty, who was employed by the firm as a Comptometer operator. And so saying, she went to her desk, and in a jiffy worked out the problem on her trusty Model M Comptometer.

Even as she whisked through the problem, she thought what a marvelous adding-calculating machine the Comptometer is, and how speedily, accurately and economically it handles all sorts of figure work.

And as she hurried back to Mr. Mfgtch's desk, she considered what a dreadful jam Management would be in if it were not for figure-work machines in general, and Comptometers in particular.

When she got back to Mr. Mfgtch's desk, she told him the answer.

"JEEPERS!" said Mr. Mfgtch, whose vocabulary was not extensive.

And that noontime, on his way to Hank's Hamburger & Pinball Emporium, he paused at the corner bank long enough to purchase a whopping-big United States Defense Savings Bond. *Felt & Tarrant Manufacturing Company, 1714 N. Paulina Street, Chicago, Illinois.*

IN ONE American town, a Civilian Defense leader recently fell prey to what seems to us to have been a peculiar worry. Maybe the same sort of thing has happened in 3,000 American towns; we don't know.

All householders in this particular Civilian Defense unit's area had been duly told how to go about blacking out, and what to do in case of air raid alarms or actual air raids. The common sense which most people, believe it or not, possess, might have been trusted to carry on from that point.

But the gentleman who figures in this story felt that not enough had been done. It was discovered that only a handful of these people had made preparations for having innocent, frolicsome fun for themselves and families during blackouts. Even fewer had equipped cellar or sheltered rumpus rooms with the checkers, cards, ping-pong outfits and wholesome reading matter supposed to be necessary at such times.

So this Civilian Defense leader proposed that all these people be more or less forced into making these provisions, whether they wanted to or not . . .

In another American town, two ambitious and managing ladies, who hated each other socially and personally long before Pearl Harbor, and haven't sunk quite all their differences since, have contrived to split their town's Civilian Defense organization cleanly up the middle into two warring factions.

This, too, may be taking place in 3,000 other American towns; again we don't know. But it is too bad that it is taking place anywhere in the country . . .

The WPB recently ordered the cuffs off all the trousers in retail stores when the order took effect, and banned manufacture of trousers with cuffs till further notice. Some busy mind at Washington then conceived a supposed improvement on this order. This mind worked it out that if you bought cuffless trousers and had a tailor decorate them with false cuffs,

usually called French cuffs, you were breaking some kind of sacred law.

This, though the French cuffs are made without using extra cloth. It was not the saving of the cloth that mattered to this mastermind; it was the pure, unadulterated cufflessness of American pants. We haven't heard as yet of any order directing men to get the cuffs off pants purchased before the cuffless order came down, so that we shall become a uniformly trouser-cuffless nation, but such an order would not be surprising . . .

We go into these seemingly petty instances because they seem to us to be symptoms of an upsurge of intolerance in this country.

It is an intolerance bred by the war, of course. And in some of the people who are practicing it, and will practice more of it unless sat upon or kicked in the teeth by public opinion, it has praiseworthy motives behind it. It springs in many cases from excessive and misguided but perfectly sincere zeal to do something to help win the war.

But it is excessive and misguided, nevertheless. Far from contributing anything toward winning the war, it can only stir up rancor, malice and resentment among some Americans toward other Americans. To repeat something which you may be tired of hearing, but which can hardly be repeated too often just now, that is precisely what our Axis enemies want—that we shall do more and more bickering and faultfinding and back stabbing among ourselves, until at last we shall cripple our own war effort.

What's the reason for it? Something inborn in democracy, as claimed by Mr. Hitler?

Partly, we'd say, yes. We had the same kind of goings-on during the federal prohibition era. Once that law attempting to regulate private conduct was on the books, we turned out to have a lot of citizens who were burningly anxious to regulate and regiment their fellow citizens. Many of those born Nosy Parkers see a glorious comeback materializing for them in

this war emergency and are making the most of their opportunities.

But we think the Administration at Washington will be wise to discourage this kind of ing and divisive intolerance and concentrate public attention on fighting the enemy of ourselves.

Henry Morgenthau, Jr., Secretary of the Treasury, struck exactly the right note when he insisted that all purchases of War Bonds and Bonds be wholly voluntary. Secretary Morgenthau explicitly forbade companies of any sort, direct or indirect, in the sales of loans. He was wise enough to know that the American people without compulsion are generous and ready to make every sacrifice required for victory in this war.

The tone of some of the rationing and other decrees, necessary in the war, on the other hand, has been unfortunate. Instead of being phrased as appeals to the intelligent people who well know what war sacrifices, some of these have sounded like orders issued by a new member of the Hitler-Mussolini club to a passel of ignorant Americans. They must be ordered and booted and threatened to deliver any results at all.

We think especially in this sudden, autocratic freezing of the whimsical, contradictory alarms and excursions regarding rationing blades.

This kind of stuff not only makes Americans mad at the government, but encourages the little neighborhood born zealots to hector and bully the low citizens.

It had better be called off, the bottom up. Happily it is being called off at the top. We are supposed to fight Hirohito and Mussolini. It is a bloody and deathly matter. The more energy we squander in fighting our own enemies, the less energy we have for our enemies.

AMERICAN NOTES by Raymond Gram Swing

Report from a national arsenal of mobile power

G LOCOMOTIVES... "Where to?" I asked the dock foreman. "Far East, Asia, mountains; war orders. We practically built [redacted] of these little ones the hour! Don't look so surprised. We build locomotives of all kinds, s, ed by the hundreds... been at it a hundred years, know how to do it."

ASSEMBLY YARDS... "Which is which?" I asked the super. "Don't blame you knowing," was the answer. "Both streamlined to the ears! Near one is line, other is Steam-Liner." Each is an ultra-modern power source, record-making, wartime traffic over U. S. rails.

IN THE MACHINE SHOP... "What's that?" I asked. "Roller-bearing for a battle-ship turret, machined as fine as a watch part," was the answer. No wonder our American warships have an edge. Equipment like this means everything in active service.

ON THE PROVING GROUND... Tanks, lots of tanks, wheeling and jumping like cavalry! Believe me, special skills and 100 years of engineering experience are worth plenty... these days! And when they told me how many, I felt good. I felt very good.

Picture OF THE MONTH

SPENCER TRACY
HEDY LAMARR • JOHN GARFIELD

"TORTILLA FLAT"

A Metro-Goldwyn-Mayer Picture

PRODUCED BY: Victor Fleming
Based on John Steinbeck's novel

SCREENPLAY BY:
John Lee Mahin and Benjamin Glazer

FEATURED ARTISTS—Frank Morgan,
Akim Tamiroff, Sheldon Leonard, John
Qualen, Donald Meek, Connie Gil-
christ, Allen Jenkins, Henry O'Neill.

RAPID REVIEW (Read 2 minutes and go): As heady and warming as new wine... is M-G-M's latest venture in turning a great book into a great picture. "Tortilla Flat", John Steinbeck's idyll of the carefree "Paisanos among the Pines", is in M-G-M's splendid tradition of literary works faithfully pictured. It happens in old Monterey by the Pacific, a strange world apart. Steinbeck, with his genius for depicting unusual people ("Grapes of Wrath"), has found in his own native locale these wayward, wonderful characters. They are often in trouble but never really bad. Love, food and drink are their absorbing occupations and the tinkle of the guitar is ever mingled with the sound of laughter. Here, Spencer Tracy, as "Pilon", is leader among those down-to-earth convivialists who believe that Wine, Women, and Song are essentials of the gay life. Hedy Lamarr is a turbulent, tempting spitfire of a shapely lass—and John Garfield is happy-go-lucky Danny, who turns serious about love. Great direction stemming from Victor Fleming. He megaphoned "Captains Courageous" and "Gone With The Wind" among many others and again gives you something entirely new under the sun in "Tortilla Flat".

TRACE TRACY—through all his wonderful performances and you'll agree that he's best of all as "Pilon"!

HEADY HEDY: As "Sweets", Hedy Lamarr is equal parts of fire and fun!

HE DIDN'T SEND FLOWERS: You'll be overcome with laughter when Danny (John Garfield) sends "Sweets" a vacuum cleaner to show his love. Her house wasn't wired but there was electricity in the air.

NOTE TO DOG LOVERS: See the old "Pirate" and his five dogs (he calls them his "boys")—as tatterdemalion and lovable a group of man's best friend as you've ever seen! Frank Morgan as the Pirate gives an off-the-beaten-track performance.

ANY WEEK

WE HOPE it makes a difference to someone, although we doubt it, that we're sick and tired of being told by visitors to these shores that the apathy, the complacency with which the American people accept this war is appalling. What do they expect to find us doing—beating our heads against walls, tearing down enemy embassies and consulates, lynching neighbors who aren't wringing their hands, flinging ourselves into the sea? We're neither complacent nor apathetic. Hungry for a hero, we've been Heaven-blest with a real one, Douglas MacArthur. Looking for a leader, we're trustful of the President even though he lacks novelty. We get a little silly now and then but we're not apathetic. We have it from Mr. Enos B. Plickette of Washington, D. C., that it is going to be very helpful when both the War and the Navy departments are moved out of the capital to Arlington, Virginia, where many of the more painful scenes cropping up in staff offices will be lost in the suburbs. "Not long ago," writes Mr. Plickette, "a stout staff officer called in his stenographers and spoke to them sternly about their spelling. Their spelling was strictly hearsay. 'This war can be won or lost on the type-writer,' said the colonel. 'If the enemy were to see the spelling in some of these letters you've typed he would be encouraged by the knowledge that we are an uncultured people. We would lose the confidence of our Latin-American neighbors and would become the laughingstock of the Chinese.'" So maybe that's what visiting deplorers have on their minds and don't like to say anything about it. We're not so hot at spelling ourselves and understand that the weakness is more or less general. Mr. John B. Kidney of Havre, Montana, reports that he has recently seen a large rock on which was painted, "Remember Pearl Harb." The painter stopped there either discouraged or prioritized out of enough paint to go on. Something tells us that this has very little to do with what we started out to say. Which shows that at last we're getting the hang of this columning racket.

ANYWAY a South American good neighbor recently sent a large package of small, dried leaves to the New York Agricultural School at Morrisville, New York. No letter accompanied the

gift but after viewing, smelling and tasting the leaves the experts pronounced it tea and whacked it up among the faculty. For some days thereafter tea was served in the afternoons with much discussion of the quality thereof. Some said it was much like a better imperial hyson but others regretted that it lacked the body of the best oolong. Presently it was rather generally agreed that it was more like a fancy souchong, well endowed with theine, which gives tea its stimulating quality, and that obviously it was rich in vitamin B as all good teas should be. So they drank all the tea before the good-neighbor donor's letter arrived stating that he was anxious to know the result of feeding the stuff to chickens suffering from coccidiosis, a quite nasty parasitic disease of barnyard fowls. Anyway it hopped up the faculty of the New York Agricultural School nicely and is soon to be given a fair trial in Washington.

OCCASIONALLY we have certain pacifistic leanings ourselves. In fact we have one right now. Staff Sergeant William C. White, United States Marine Corps, invites us to trade wallops with him. When we begin swapping smacks with a marine sergeant, things will have reached a pretty pass. It's about all we can do to lick a marine corporal—which shows what rotten condition we're in. The sergeant objects to our statement of some weeks ago that "To a marine, a sailor's a swabbie; to a sailor, a marine's a flatfoot." To this, Sergeant White says, "Listen, Mac, to a sailor, a marine's a gyrene or leatherneck, but when you call a marine a flatfoot (which is a marine's term of endearment for a swabbie) you'd better be grinning like the Cheshire cat or start swinging or taking off at high port."

THE sergeant writes from the Pacific Coast where, according to Mrs. Morena Z. de Zuche (don't blame us), things are somewhat Jap-hazard these days. Working for Mrs. de Zuche is an Irishwoman whose four sons—all the sons she has—are in the Army and whose daughter—the only one she has—is an Army nurse. Mrs. de Zuche's Irishwoman took the day off not long ago to say goodbye to a Japanese woman whose two sons—all she has

**"Drop in some morning
about 10:30, McGinnis,
and I'll show you a traffic jam!"**

"Sure, Mac, I know—you run up against parades, football crowds—and a World Series now and then. But we're handling traffic jams almost every day.

"This war is taking some of the traffic off your beat and putting it on mine—taking it off the streets and putting it on the telephone lines.

"And we're getting short of materials. The stuff that used to make switchboards and cables now goes to the shooting part of the war.

"But we've found the public good-natured and helpful just as you have. The trouble began with Hitler and will end when we finish with him."

LONG DISTANCE *helps unite the nation*

"Things have changed
since Grandpa's
time . . ."

For years hog bristle made the
best brushes...then along came
Pro-phy-lac-tic's **PROLON**

Du Pont chemists have outdone the
hog—there is no better bristle than
Pro-phy-lac-tic's synthetic "PROLON"

Du Pont is "tops" when it comes
to making synthetic bristle! And
"Prolon" is Pro-phy-lac-tic's name for
du Pont's finest grade.

So when you hear competitive tooth
brush claims, ask yourself this: *how can
the same du Pont bristle, in another brush
under another name, last longer than
under the name "Prolon" in a Bonded
Pro-phy-lac-tic Tooth Brush?* You know
the answer—it can't!

"Prolon", on the other hand, has a
mighty important *plus* over any other
synthetic bristle sold under any other
name . . . only "Prolon" is rounded at the
ends! See for yourself, in the photomi-

crographs, the difference between the
rounded bristle-ends of "Prolon" and
the harsh, jagged points of ordinary bris-
tle. *Think of the difference on your gums!*

The only Tooth Brush in the World with

1...ROUND-END BRISTLE

**2...SIX MONTHS MONEY-BACK
GUARANTEE**

We have no way of telling how long a Bonded
Pro-phy-lac-tic Tooth Brush will last you...may-
be a year, 18 months, even longer. We can, and
do, however, give a clear-cut 6-months money-
back guarantee with each brush—the *only* brush
in the world with this definite 6-months guar-
antee of service. That's how sure we are of its
dependability and durability!

... and don't miss this new line of
gem-like, transparent hair brushes!

Pro-phy-lac-tic's latest triumph! Dresser and toilet
brushes in crystal-clear plastic. Choice of four gleam-
ing, jewel colors. Transparent Jewelite backs. Moisture-
resistant bristles of du Pont Prolon. \$1.50 to \$10.00
—at most brush-goods counters. Illustrated: Roll-Wave,
a unique "curved-to-the-head" brush . . . with comb, \$4.50

Jewelite Brushes by Pro-phy-lac-tic

KEEP UP WITH THE WORLD

By Freling Foster

Scientific studies have shown
that the arrival of the first baby in
the average American family in-
creases the work in the household
about fifty per cent.—By John J.
Murphy, Ithaca, New York.

In Tibet, many Buddhist monks
spend their entire adult life sealed
up in little stone huts with only a
small opening for the passing of
air and food. A few years ago one
of these men was dragged out of
his hut after being shut in for sixty-
nine years and was found to be
blind and shrunken to half his
former size. Contact with daylight
killed him within an hour.—By
Charles H. Brush, Jacksonville,
North Carolina.

An old and peculiar profession
in Java is that practiced by *go-
woks*, women who analyze a man's
fitness for marriage. After a youth
has proposed to a girl her parents
send him to one of them for study
and in about a week she reports
on his possibilities.—By Mary
Louise Sprague, Seattle, Washing-
ton.

Some of the heaviest rains on
record, particularly those which oc-
cur at night in the South Pacific
Ocean, come out of a clear sky.
Warm, moist air rises from the sea,
condenses in the colder strata and
then descends in sheets of water
that make ship awnings useless.

Scientific auditory tests, made a
short time ago among 500,000 men
and women, revealed that, while
five out of two thousand had diffi-
culty hearing over the telephone,
sixteen had difficulty hearing a di-
rect conversation.

Scheelite, the chief tungsten ore
in the United States, is often
searched for in pitch darkness with
the aid of a portable ultraviolet
light. When thrown on the ore, this
black light causes it to glow with a
distinct fluorescence.

An 1,800-year-old painting of the
Madonna and Child, on a wall of
the famous catacomb of Priscilla
in Rome, is reputed to be the
oldest picture of these figures in
existence.—By Janet Schwertman,
Washington, D. C.

PUBLIC LIBRARY
Burlingame, Calif.

IDEA

NO FOOLING, THEY'VE A SCIENTIFIC
PLAN FOR STRETCHING TIRE MILEAGE
THAT'S A WONDER!

DOES IT WORK? SAY, I'D
BE THUMBING RIDES RIGHT
NOW IF I HADN'T GOT WISE.

SURE YOUR TIRES ARE WEARING OUT,
BILL BUT I KNOW A PLACE WHERE —

OKS LIKE I'D GET
7,000 MILES OUT
OF THEM.

THEY DON'T TELL YOU WHAT
TO DO—THEIR EXPERTS DO
IT FOR YOU.

YOU JUST TAKE OUT THIS GOODYEAR
TIRE-LIFE EXTENSION POLICY
AND YOU'RE ALL SET!

BETTER GET YOUR GOODYEAR TIRE-LIFE
EXTENSION POLICY TODAY BEFORE YOUR
TIRES ARE "GONE"—IT CAN ADD THOU-
SANDS OF EXTRA MILES LIFE TO YOUR
PASSENGER CAR OR TRUCK CASINGS!

Tips for Certified Tire Buyers

TO GET the longest-wearing tires, get
Goodyears—world's first choice for a
quarter century.

ON ORDINARY tubes, get LifeGuards
—they insure maximum tire-life and pre-
vent damage after punctures, enabling
you to come to a smooth, safe stop.

WHEN READING — Goodyear dealers
have facilities available for handling
passenger and truck tires
by factory methods that
give a better, safer job.

MAKES YOUR DOUBLE EDGE RAZOR PERFORM MIRACLES!

We know you've been asked to believe a lot about razor blades. We know you're suspicious of claims and superlatives. All we ask is that you listen to the story of 6NX—and

then make up your own mind about it. 6NX is our secret, closely-guarded formula. It's a process representing a certain combination of special steel, tempering, grinding, honing and wrapping applied to the new Star

Double Edge Blade for double edge razors. It's the result of hundreds of scientific experiments—of specially built machines—of unending patience and a high order of craftsmanship. And it has produced a double edge blade unique in the history of blade-making! On sale at dealers everywhere... Star Division, American Safety Razor Corp., Brooklyn, N. Y.

INTRODUCTORY OFFER

1 TEST BLADE FREE

TOTAL **5 FOR 10¢**

Money back if free test blade doesn't give you the best shaves you've ever had in your life!

ALSO 15 FOR 25¢

INCLUDES 3 TEST BLADES FREE

Made by the makers of Star Single Edge Blades

STAR DOUBLE EDGE BLADES

FOR DOUBLE EDGE RAZORS

WING TALK

The Navy's Douglas Torpedo Bomber (TBD-1) is the heaviest carrier-based plane. Its folding wings have a 50-foot span.

RELEGATED to the background by the spectacular performances of heavy bombers, dive bombers and fighters, the torpedo plane, born and developed in this country, has come into its own and has brought great rejoicing to its faithful advocates.

Oldest and most ardent believer in the torpedo plane was Rear Admiral Bradley A. Fiske, who died a few weeks ago with his claims vindicated beyond doubt—but by the British and Japs. Remember Taranto and the Prince of Wales and the Repulse? While, at this writing, American Navy torpedo planes have not had equal opportunities with those manned by British and Jap pilots, we do have the most efficient and highest-performance torpedo plane of all, the Douglas TBD to the Navy; Devastator to you.

The birth of the torpedo plane can be figured from two dates, whichever you choose—1911 or 1917. In 1911 the Fiske theory was given a practical demonstration. In 1917 the first of a long line of planes built specifically for torpedo work appeared. The idea of launching torpedoes from aircraft was not readily accepted by naval experts, primarily because both the airplane and the special torpedo it had to carry were insufficiently developed to match the proved performance of the torpedo launched from surface and subsurface craft. But through the years, the Navy's torpedo-plane advocates kept everlastingly at it, and the aircraft industry made constant refinements and developments until today we have the Devastator, a carrier-based, three-place low-wing monoplane that flies well over 200 miles an hour and can pack a heavy tin fish.

There's a technique in torpedo-plane operation. At dropping point, the plane must be in nearly normal flight position. None of this diving at the battleship, for the torpedo might nose over when it hits the water and run the wrong way, or if dropped from too low, the splash might hit the plane and wreck it. An ideal condition for attack by torpedo plane is rain, low clouds or the faint light of dawn or dusk. This is not so good for the high-altitude heavy-bomber boys.

No time to argue here the effectiveness of torpedo versus aerial bomb, because ships have escaped from both and also have succumbed to both. But the torpedo, operating under water, hits the ship in its softest spot, below the waterline, where the explosion is confined.

AMERICA STREAMLINES COOKING

AMERICA'S armed forces calls for "streamlined cooking." Typical is this scene in Air Corps Field. Here hundreds of thick, juicy steaks are speedily fried on Hotpoint Ranges... and how they satisfy he-man appetites! The two chefs above using flameless, efficient Hotpoint-Edison Electric Cooking Equipment were officially commended for their clean kitchen and delicious food.

To "Pass Inspection" at this U.S. Coast Guard Training Station, meals must have that real home taste. And prepared the quick, easy, Hotpoint electrical way, they're every bit as wholesome, healthful and downright *delicious* as mother's own! Durable Hotpoint-Edison equipment is widely used aboard U.S. naval vessels and at many navy bases, for its outstanding thrift, safety and dependability.

...economy are essential in the cafeteria of our industry plants. That's why hundreds of such as the one partially shown above, where meals are prepared daily—depend on cleanly, Hotpoint-Edison Electric Cooking Equipment!

Mrs. G. A. Sickler—Milwaukee defense-home tenant—speaks for more than a million Hotpoint Range owners when she says, "My Hotpoint is clean and safe—gives perfect results every time. And by using Hotpoint's *measured heat* I save money, conserve electric power!"

Mrs. W. J. Grenier of Leominster, Mass., states that, "Our grocery bills are away down since getting a Hotpoint Refrigerator. I buy food at bargain prices—keep a week's supply safely. And because our Hotpoint uses so little current, we conserve electricity as well as food!"

Good Care Conserves Good Appliances

Today Hotpoint's entire production facilities are devoted to war work. If you already own Hotpoint Appliances, however, you can expect them to serve economically and well over a long period. They are built for *extra* durability by America's largest manufacturer of electric ranges. But with proper care, good appliances will perform *better*—last even *longer*! To help you conserve your present equipment, Hotpoint has just issued an informative new 20-page booklet packed with practical suggestions for the proper care and use of electrical appliances—plus new ideas for preserving vitamins, cutting food and current costs. Ask your Hotpoint retailer for a copy, or fill out the coupon and send to us with a 3¢ stamp to cover mailing cost.

Better, Brighter Tomorrow! While Hotpoint's vast factory is busy turning out appliances for our war, engineers in Hotpoint's laboratories are forging ahead with discoveries that promises great things for the future. Discoveries made today will make home makers with still finer time-and-labor-saving Hotpoint Electric Appliances when our factories again turn to civilian production.

"How can I help WIN THIS WAR?"

HAVE YOU, TOO, had that "left-out" feeling? That helpless urge to do something—anything useful—to help?

Work for the Red Cross—war bonds—your Victory garden. . . . All that's been asked, you've done—and felt it wasn't enough.

And when you hung that little flag with its proud star in your window, you vowed that nothing you could do here—to help him—would go undone.

You heard some thoughtless ones—still asleep to Freedom's peril—complain because there were no more tires—or cars—or other luxuries of a rich nation at peace. And you were ashamed—and glad.

Ashamed of the few who want their freedom saved without discomfort to themselves. . . .

And glad that before most of us even saw the grimness of our peril, industry had started a million machines whirring in our defense. . . .

But can you—who never saw a factory machine

—or handled a factory tool—do anything to help? Yes! By treasuring the things you already have! Your car—refrigerator—washing machine. . . . Your oil burner—radio—vacuum cleaner. . . . The gutters and screens on your house. . . .

Because every part worn out thru neglect—every ounce of metal, rubber or chemicals used for avoidable repairs—means time and material diverted from war production . . . weapons missing at the battle front!

Find the instruction books you barely glanced at. Give every precious part the oil—or adjustment—or paint—or cleaning—its maker said would

prolong its useful life.

A new plug on a lamp-cord is a little brass in plugs for a million lamp-cords—million machine-gun cartridge cases. The us can do is to see that the long shadow not postpone our day of victory.

THIS MESSAGE is published solely in the interest of American victory. We have no ax to grind. We have been converted to the making of essential war and war production. We look forward to the day when they may serve civilian needs again. How soon that depends upon how well we all do our job now. There will be no let-up short of victory.

STEWART-WARNER CORPORATION
Chicago, Illinois • Belleville, Ontario

PEACE-TIME MAKERS OF Alemite Lubricants • Alemite Motor Oil • Alemite Lubricating Equipment • Stewart-Warner Speedometers, Instruments, Gauges • Die Castings • South Wind Car Heaters • Dual-Temp Refrigerators • South Maid Electric Ranges • Magic Dial Radios • Bassick Casters.

Put These in Your Home Defense Program

- Have timing, carburetor, generator and ignition on your car checked spring and fall. Change to the correct gear lubrication at the same time. To get easier starting—more mileage from gas—better performance.
- Give your car ample lubrication. You prefer Alemite lubricants. Use them and get them regularly. Increase mileage between lubrications.
- See that your automatic water heater is never set for more than 140 degrees. Lower it. Too high temperature actually shortens the life of the tank.
- Never let your refrigerator freeze more than 1/4 inch of frost before defrosting. This is insulation—cuts efficiency.
- Clean metal tools—particularly hand tools—after every use, and wipe with a dry cloth.
- Waste nothing—buy nothing—throw nothing away that can be repaired, service, or be re-used.

Death of the Moon

by Roy Cohen

BY JOHN HOLMGREN

the day of her life was the day
when she discovered she was not
allowed to dance with her husband

sign outside said SAM'S NIGHT CLUB
BAM. It was in Miami and it wasn't
as you might think from the name. It was
beside the B spots in town and a lot of
acts had played there, one time or another.
The place was different from what you would expect
of the man who owned it. Sam was a
w, so of shy and gentle. Everybody liked
him. He built the place up from nothing and hadn't
red it for years.

One evening Sam was worried. He said hello to
the regulars at the bar and then sat at a table
by himself, waiting for somebody. After a while
in. She was dressed in yellow slacks. She
had a pretty seventeen dollars' worth of lettuce
salad. She was Dale Clark. She was the cigarette
girl. Sam's face and she had worked there for
a year.

He told her to sit down and told her there
wasn't anything about putting on her little red panties
on, which was the costume she wore while
cigarettes and cigars. He said, "There's
a table over there to talk over with you, Dale."

He smiled, and her whole face lighted up, and
he said, "I can take it."

He looked straight at her. She could see he
wasn't embarrassed about something, and even when
he was talking she couldn't peg the embarrass-
ment. He was telling her that he'd been offered a
place in the new show opening next Wed-
nesday. "Joe Julie," he said. "Which is some
of a dance act."

He said, "I never heard of 'em."
She said, "Nobody else. That ain't even their
name." She waited.

"It's a new act. Breaking in, see? They want to
groove their routines and I've got a chance to get 'em
cheap."

Dale said, "That sounds like a bargain. What's
the argument?"

Sam fiddled with an old signet ring and looked
everywhere but at the pretty girl opposite him.

"The man in the act," he explained. "He's the
draw. It's Eddie Cameron."

He knew that would hit her hard and it did. She
didn't answer right away and when she did, her voice
wasn't quite steady. She said, "Where do I figure in
this, Sam?"

He looked straight at her. "Everywhere. You've
been here a long time. I like you. Everybody likes
you. I don't want to stack you up against something
that would be tough to take."

Impulsively she reached across the table and cov-
ered his hand with hers. "You're the world's best,
Sam. I never knew anybody else as thoughtful. But
if you can get Eddie Cameron cheap you'd be a fool
not to grab him."

He said, "I wouldn't want to embarrass you."
"Because I used to be married to him? Because
we used to be dancing partners? Don't be silly!"

"I'm not silly." He had his own ideas and he stuck
to them. "You were in love with him, weren't you?"
She looked away. "Yes."

"You've never really (Continued on page 35)

Dale stood against the wall. There was a
catch in her throat when she saw Eddie—
tall and blond and easy and graceful. Julie
was a nice foil, tiny and vivid and dark

Lieutenant Wreford Goss Chapple is a native of Billings, Montana

How Cecil Brown Got the Story

My orders were: "Get to Australia."

I had just reached Batavia by plane from Singapore, a pathetic city, the bomb-blasted bastion of British power in the Far East.

Transportation was problematical from Java to Darwin, at the northern tip of Australia. But the Dutch Airlines, KNILM, promised me passage within a week. Seven days is too long to wait for a plane which might never get off.

My impatience to get out of Java was due to two reasons. I could not work there. I had been barred from broadcasting from Singapore; I was persona non grata with the British authorities. And the Dutch, with great regret and courtesy, said they must, as a result, also consider me an outlaw.

Why not see the American Naval authorities in Surabaya at the eastern end of Java? Perhaps I could arrange speedier transportation through them. I left Batavia on a Monday night at 6:00 P. M. by train for Surabaya and traveled down the spinal column of this lush, rich outpost of the Dutch colonial empire then soon to be attacked, overrun and conquered. At 8:00 A. M. Tuesday I arrived at the jeweled city where the great Dutch naval base was located.

A telephone call to the United States Naval Headquarters at Surabaya brought two developments: assurance I could take off early the next morning for Darwin in a Navy bomber, and a luncheon date with four American naval commanders.

At American Naval Headquarters late that afternoon Rear Admiral W. R. Purnell, who had approved my passage to Darwin, wanted to see me. Commanders J. V. Peterson and W. A. Deems took me in to the admiral. He said, "I'm mighty glad to see you. You're the first American reporter who has come here. I don't know why we're being ignored."

"You're not being ignored any more," I said. "I'm just passing through, but I could certainly use a few stories of American heroism. For a year I've been writing and broadcasting about British heroism."

"We've got them," Purnell exulted. "Our boys have done a job that the whole world should know about."

Admiral Purnell turned to Commander Peterson and said, "Take Mr.

Brown in to Captain Wilkes and let him see that submarine commander's diary."

Captain John Wilkes, commander of the United States Submarine Forces in Asiatic waters, was a browned, stocky, square-jawed officer, amiable, bright-eyed and delighted to have the story of one of his men told.

He reached into his steel-cased file marked "Secret and Confidential" and drew out a sheaf of papers.

"This," he said, "is 'Moon' Chapple's diary as he handed it in to us. It is one of the greatest operations of the war thus far."

I hastily skimmed through three or four pages and then urgently implored Captain Wilkes: "Give me a typewriter, some paper and let's get hold of Chapple."

At Naval Headquarters there I copied Chapple's diary. At times the bravery, the utter unconcern of death contained in that diary was so overwhelming that I forgot I was a reporter hurrying to do a job and became an emotionally overcome spectator of a great exploit.

As Captain Wilkes and I sat working on a rough map, an orderly came up, saluted and said:

"Captain Wilkes, I am unable to find Lieutenant Chapple." Captain Wilkes said, "Keep trying. He has a few days' leave but he must be around town somewhere. Mr. Brown must see him." That was at 7:30 P. M.

Until 3 A. M. we searched for Chapple. I then grabbed an hour's sleep at the Oranji Hotel and was called at 4 A. M. by Lieutenant-Commander E. T. Neale to go to the Naval Base for the take-off in the PBY, 800 miles across Bali and the Timor Sea to Darwin, in northern Australia.

In the gray darkness of early morning at the Surabaya Naval Base, just fifteen minutes before taking off, I found this tall, husky, round-faced submarine skipper whose diary I had. We met in a cubbyhole of an office.

"Understand you've been looking for me." He smiled, boyishly.

I opened my portable typewriter on a narrow table half covered with operational maps. Hunched over them were the pilot, the copilot and the navigator of the PBY that I was to take.

I told Chapple I wanted all kinds of details to intersperse in his too dispassionate, too modest diary. Color, atmosphere and dialogue that he did not include in the diary.

"We have no time now," I said. "I will type out a hundred questions. Will you answer them and mail them to me in Sydney as fast as you can? Give me three thousand words in excruciating detail."

Chapple laughed: "That's the toughest assignment ever given to me but I'll try."

The pilot of our PBY said, "Let's go. We've got to get off from here before daylight." We did.

We taxied down the harbor, passed four seaplanes burned out and half submerged from the Japanese attack the day before and got into the air.

A few days ago a fat envelope, heavily stamped with censor's seals, came to me by air mail from Australia. Chapple came through and his elaborations are included in his story.

CECIL BROWN

Take 'er Down

By Cecil Brown

C. B. S. CORRESPONDENT

IT WAS a hazardous mission, but the orders were explicit. They said to proceed to a gulf on the west coast of Luzon and to pursue and attack a large enemy naval force and concentration of transports. And that's what Lieutenant Wreford Goss Chapple, of Billings, Montana, skipper of a United States submarine did.

He got one ship. Then for hours that were years he squirmed about on the bay's treacherous bottom to evade depth charges the Japs dumped on him. Thirty-seven times the exploding ash cans came near enough to make the pigboat clang with that awesome sound that submariners dread.

Other submarines were ordered to the same waters on the same mission. Only two succeeded in entering the gulf. One of them was Chapple's. For succeeding in taking his submarine into the gulf, for attacking the enemy successfully, and for bringing submarine and men out Lieutenant Chapple got the Navy Cross and it's proud they are out in Billings, Montana.

You'd never think, though, from reading Moon Chapple's diary, that he did anything extraordinary. His classmates at the Naval Academy dubbed him Moon because he resembled, in his plebe year, the indestructible Mister Mullins of the comic strip. What was probably the most dangerous part of his mission Chapple set down in about seventeen paltry and ineloquent words. This was when he took his submarine into the gulf over the reefs that spread east for about ten miles across the entrance. He never had more than 30 feet of water in which to navigate and usually it was so shallow that razor-sharp rocks were everywhere to knife the pigboat's belly.

This is how Moon described it: "One morning in the latter part of December at 1:44 A. M. we were proceeding over the northern part of the reefs."

Deadly Hide and Seek

That is a new high in understatement. That gulf is about 25 miles wide at the mouth. At least ten miles of the width are protected by the reefs. The remaining 15 miles were very definitely protected by Jap destroyers, about ten of them. As it was, Moon Chapple had to elude six destroyers in addition to reef spears.

If the Jap patrol had been good enough to drive off the other destroyers which rushed to the area, you may be sure it was very good indeed; in the shallow waters of the reefs, Chapple had no depth into which to dive if he had been spotted. The Japs knew this. Chapple knew this. That's why he chose to enter that way.

Once inside it was no picnic. By 5:17, the submarine was clear of the reefs and Chapple took his pigboat down. At 6:15 he came up to periscope depth and sighted many transports. He said there were so many of them they looked like cars in a parking lot. He also sighted two destroyers circling about the transports. He saw some motor launches hovering about. These undoubtedly carried tons of ash cans.

"But," wrote Chapple, "the vessels were somewhat to the north and slightly out of my area."

For an hour Chapple kept his eyes pressed against the rubber eyepieces of the periscope. The periscope is the skipper's job, his symbol of command.

The enemy drew closer, and eager, glistening with at battle stations. One buck we get one." The closer on slow motors. C to himself the Jap detector pick up his vibrations, within range.

"At 7:10 A. M.," Moon's four torpedoes at four misses.

"The first one was for the target. The second fourth fired were ahead from a little under the enemy ship to about a ship's length.

"One of the latter three lent possibility of hitting three vessels. The depth under water at which moves) of the last of the have been too much for

A Hit-and-Run

The Jap ships were old shallow draft and it was that Chapple miscalculated the torpedoes set higher.

"We reloaded and div destroyer which dropped charges fairly close. I had to lose the destroyers who trail."

When an ash can explodes there is a sound within confines of a submarine like a sledge hammer against you inside the boiler. It might mean a buckled or a leak, a flooded battery and then a slow death. Chapple about well below the surface 45 minutes, keeping in range, and then he rose scope depth. He had a quarter there was a sitting duck.

"At 7:58 A. M. we fired I saw the ship's anchor charge of troops. She was and loaded with troops. I fired led the ship. I fired smack at her. Thirty seconds heard the explosion.

"We dived immediately charges came closer to us ones we heard. At least destroyers were after ployed evasive tactics as we found ourselves rising face as though we were stopped, coasted to about depth gauge. We flooded (tanks) rapidly in order selves from rising."

So began thirteen critical fifty men and a pigboat momentarily out of contact the surface. Overhead morning under a blue sea. Jap destroyers search pertinent little American Hounds baying for a hole the kill. In his quiet way,

"Slowly the submarine bottom, plowed its nose in the gulf, and rested the all the machinery and element in the ship, except erator (which supplied electric lights) to eliminate

"The clanging continued always near us, for the day. Small boats with irregular intervals. The

JAMES SESSIONS

The first torpedo led the ship. I fired the second smack at her. Thirty seconds later we heard the explosion

es, an conversations were in
Practically no one had slept
before and all were tense and
although self-contained. Our
mess boy said we must be
illage here his folks lived. He
like us to go up and sink
the Japs right off his folks' front
couldn't smoke, of course. The
tion stations. They got
moving about in their
feet, careful to avoid dropping
a spoon, even, whose
cup picked up by those
night The last destroyer

that I'd sighted had apparently followed
us very successfully with its sound-de-
tecting gear. That last clang had been
close. I set a one-man watch in the con-
trol room.
"With our own sound gear we could
hear the movements of the enemy above.
We heard propeller noises, approaching
and receding. Finally, we'd all heard
enough of this. I ordered the sound man
to stow the apparatus, turn it off. I fig-
ured—and I know the men figured—that
we were pretty helpless and that we
probably were going to get it and what
was the use of knowing exactly when.
"We followed, for instance, the move-

ment of what appeared to be landing
barges shuttling back and forth between
the transports and the shore. When one
would approach and pass us and move
on toward shore we would follow the
sound with our eyes as though we could
see the barge. Emery, the gunner's
mate, remarked that the way we fol-
lowed the sounds back and forth was
like watching a ball being batted back
and forth over a net in a tennis match.
"But still there was noise to plague us
in our deathly stillness below. There was
water in the bilges in the control room.
We were in such shallow water the ship
was rolling. Of all the disturbing noises

I've ever heard the back-and-forth slosh-
ing of that water was the worst.
"I organized a game of cribbage in the
control room. The play wasn't as sharp
as usual. We couldn't remain long with
the sound gear turned off, so the passing
back and forth over our heads of those
boats was very distracting. People be-
gan to be droopy and sleepy in the after-
noon. The deck bore a black slime from
condensed moisture. Officers and men
lay down in the slime to sleep.
"At about 6:30 P. M. we began to feel
that we were going to get away with it.
It was getting dark. Our hopes and
(Continued on page 57)

JOE LOUIS NAMED THE WAR

By Carl Byoir

Joe Louis and Wendell Willkie at the Navy Relief Society Show in Madison Square Garden on March 10, 1942, when "Joe Louis Named the War"

Joe, you have named the war.
I don't think you knew
That you were naming the war,
But you named it.
You named it when you said,
"We are going to win
Because we are on God's side."
You were right, Joe,
And you have named the war.
This is God's War.

Maybe you read in the newspapers
That the President asked the reporters
To name the war.
Our President is a very great man, Joe,
But he does not know very much about whom to
ask
To name wars.
Reporters, Joe, are men who think with their
heads.
No one could name this war out of his head.
It had to be named out of the heart and out of
the soul,
And out of some instinct that reaches back
Thousands and thousands of years;
Back through all the struggle of mankind
To establish the rights
That we are fighting to keep now.
But you were right, Joe.
You named the war.
This is God's War.

Maybe you are the first human being in five
thousand years
Who was not too conceited in naming a war.
For in all the wars that men have fought in
the past,
Men on both sides said, "God is on our side."
I think you are the only man in all history
Who ever said, "We are on God's side."

Of course I know, Joe,
That you were not thinking about naming a war.
You just put into words something that you felt
Way down inside of you.
So maybe it was your great grandfather
Who named the war.
I imagine he was born a free man, Joe,
And then someone brought him to America
And made a slave out of him.
And maybe through the long nights he dreamed
Of being free again
Because he knew the bitterness
And the agony of slavery.
He knew the value of freedom
And wanted it again.
And maybe he was there, Joe,
When Abraham Lincoln wrote the Emancipation
Proclamation
And said that this really was a free country
And made it come true,
That white men and black men were all free.
That here it didn't make any difference
About a man's race or creed or color.
That this was really a country where all men
were free.
Maybe those words were stamped
On your great grandfather's heart,
And maybe they were burned into his soul,
And maybe he came to love America
And to cherish its freedoms
More than some people who just inherited them.
And so, maybe, you just felt what he felt
And so you named the war.
This is God's War.

This is not the first time
That someone like Hitler
Thought he was bigger than God,
Or that someone like Hirohito
Thought he was God.

The whole history of mankind
Has been a history of struggle
Against men like this.
And that's why we can be sure
That we are on God's side,
Because in the long run the people
Who are on God's side
Have always won.
The rights of free men
Were not won all at once.
God has been fighting these wars
As long as there have been men to set

Through all the dark centuries
A lot of people believed
That freedom for mankind was not God's plan,
But they were wrong, Joe.
Men have come out of the darkness,
Men who believed in God;
And after a while, because they believed
They knew they could win back their
But always, Joe, it was a struggle.
Winning it and losing it, and winning
back again.

Eve yone knows that here in America
We had to fight to be free;
And we had to fight to stay free;
And we are fighting now to stay free.
What too many of us forgot, Joe,
Was just what you have reminded us
That freedom is part of God's plan for
So, if we want to be free men now,
Let us all pray for faith
And wisdom and strength
To fight through to glorious victory
On God's side.
In God's War.

The Man who Hated the British

By Jack Macmurragh

es, d he shut his teeth on
and napped off the radio.

The boy raised his fist and brought it
down on his father's thick shoulder; and
the red man grinned under the blow.

"How's the war goin'?" the lad asked.
"Singapore's gone," Paddy Kelly
said. "DamnthetheBritish!" From long
habit he made it one word, and his voice,
though lowered, rumbled like a truck
on a wooden bridge. "God grant our
generals'll get over the same sleepin'
sickness. If trouble don't send a callin'
card, it catches the generals with their
britches hung on the bed post!"

The lad picked the gun from his fa-
ther's lap, and his father grinned with
only the slightest of embarrassment,
like a man caught cheating at solitaire
by an understanding friend.

"My rifle," the boy said. "I put it
away, greased."

His father said from the corner of his
mouth, "I run outa guns to clean. The
first week, I scrubbed the riflin' outa my
Lee-Enfield."

Molly Kelly's footsteps came down
the passageway, and Paddy Kelly said
hurriedly, "What brings ye home?"

"I quit my job," the boy explained.

From the doorway, his mother said, "I
thought the tractor broke."

"It did," he said. "So I quit my job."

With his hands on his knees, his fa-
ther gave him the look from under one
thick brow. "What's up, boy?" he asked
quietly.

"I enlisted," he said.

There was a quick silence in the room,
and then his father threw back his head.
"Now, by jinks," he said, "them Japs'll
get outa the Philippines!"

His mother's face was very still, as
though caught between expressions.
"Did you think about it first?" she
asked. "Instead of waiting for your
draft number?"

"I did, Mother," he said very calmly.
"I wanted to know," she said, "for my
own peace of mind."

And she said no more, knowing that
with some things there was no point to
words.

But her husband said, "Remember
what I've taught ye! One bullet where
ye want it is worth more than a hundred
around it. Ye don't shoot deer in the
belly, but that don't hold with Japs.
Nobody cares if ye spoil their meat.
Hold fine an' shoot 'em in the belly."

"They tell me the brush is too thick
for fine shootin' in the East Indian jun-
gles," the boy said.

"Use the butt," his father said auto-
matically, and then jumped to his feet.
"East Indian jungles! Am I sendin' ye
only to make the world safe for the
British?"

"And the rest of us," the lad said.

LOOKING at his son, Paddy Kelly took
a deep breath. "There's one thing,"
he said then grimly. "If ye get caught in
that thick brush with a general—British
preferred, because them I know best,
and they're the most stupid—kick his
thick head for your father."

"I'll bring ye a pair in a gunnysack,"
the lad said, and he held out the rifle.
"Keep it clean for me, Dad."

His mother said pleadingly, "Din-
ner's ready for the table."

Her lad turned to her then and the
softness came into his eyes and his voice
and his hands. "It's hard enough this
way," he said; and he took his mother's
face in his two hands and he kissed her
square on the lips.

"God's blessing on you," she said.

His father said sulkily, "Ye're in an
awful hurry to help the damn' British!"

"No time to waste," the lad said, and

"Singapore's gone," Paddy Kelly
said: "DamnthetheBritish!" He made
it one word and his voice rumbled
like a truck on a wooden bridge

he raised his fist, and—slow and hard—
on his father's big shoulder he put the
blow of farewell.

They stood at the gate while the boy
kept walking away, waving over his
shoulder. "He's goin' without me,"
Paddy Kelly said. "For the first time,
Molly, he's tacklin' a dirty job, one that
needs doin', without me there to take
one end of it."

Then from the corner of his mouth, he
said, "In the house, quick, Molly, or he'll
be seein' me do it!"

She looked back over her shoulder,
but she followed her husband in.

He stood for a long minute with his
face to the blank wall above the radio.
"Molly, darlin'," he said, "would it be
too awful lonesome for ye, if I found a
way to get in it? There may be fightin'
at Gallipoli again."

She looked at the big back and at
the red neck, scrubby as a boy's; the
corners of her mouth quivered, and she
laughed, for she could laugh with tears,
which is a blessing of the Irish.

He turned then, and the tears ran
down one side of his face and around the
corner of his sheepish grin. "The lad'll
take care of the Japs," he said, "but the
Germans need the hand of a man who's
licked 'em. And the poor British need
a man who knows their generals. D'ye
think they'd have me, Molly? At Gal-
lipoli, Molly, or thereabouts, I might
find the eye I left there in '15—or a
German who'll replace it. There's no
blue eyes like my own among the Japs."

Escapade in Martinique

By William A. Krauss

ILLUSTRATED BY DESIRÉE MILES

Young Nicolas de Goncourt decided to go to Martinique the easy way. At the time—more than a century ago—it looked like a good idea. The girl was a circumstance he hadn't foreseen

HE HAD not expected the girl on the jetty in Fort Royal. That she should be there to meet him, to receive him, was a circumstance altogether unforeseen. She came quickly, with little steps, through the press of yammering Negroes, of brightly caparisoned colonials and, surprisingly, walked directly to him, stopping before him with a curious planted stiffness, her slender face cool and impassive, bland. She said, "Your pardon, messire—you are Blaise Lorrain?"

There was, of course, only one answer:

"Yes." And he looked at the girl with an open stare that he would have considered, in another, ungracious.

His survey was thorough. She was a

girl above the common height with strong and well-molded shoulders; her skin was warmly brown and her eyes held an astonishing blueness, brightly, innocently blue, color of the morning sea. But it was her hair that principally caught and kept his attention: hair that was heavy and long and incredibly golden brown. Without any kind of doubt it was the loveliest hair he had ever seen.

In short, she was good to look upon and utterly unexpected and the young man called Blaise Lorrain gaped at her with more than a suggestion of interest in his manner. To himself he said, in the silence, under his breath, "And what am I to remark now? Do I know this girl or don't I? What am I to tell her—what greeting?"

But it was she who ended the pause: "Your voyage was pleasant?"

"Pleasant," he said, inclining his head. "And you seem to be in good health—"

"Oh, I am," he said. "Yes. I think I can assure you that I am in good—the best—health. And you, pray?"

She said in a voice quite flat, neither friendly nor unfriendly, "I am well." And she added: "I suppose you may kiss me now, Blaise Lorrain. That's

your privilege, isn't it?" She turned up her expressionless face to him, her lips parted.

Then, strangely, his assurance melted. His mind slipped quite uncharacteristically into a muddle of indecision. He looked at the girl and looked away, as if parrying. His eyes moved over the unfamiliar scene about him: The brig from France, riding at anchor now, sails down; the dancing shallop beside the jetty; the jostle of people on shore, against the backdrop of the pink and white tropical town. He observed, irrelevantly, that the sky was clean and colorless with the light of morning, the West Indian sea heartlessly blue.

The girl said, "Well?"

He thought: I do not so much as know her name. This is indeed extraordinary.

But he touched her arms gently at the shoulders and—his misgivings temporarily ignored—kissed her.

She said to him, then, "Naturally you won't expect me to cry out that I love you." She gazed at him evenly. Suddenly she turned her head and glanced along the wharf. "There's Father," she said bleakly. "Wearing the green linen jacket. Do you see? He will expect you to wave to him."

He brought up blade to slit the lo did not touch the really take yours. Nicholas de G

It was with a sense of uncertainty that the young Blaise Lorrain lifted his hand, signed toward the strange linen jacket. What else, then, could he do? He forthwith dropped his head at the girl. She stared unsmiling.

"Father will be happy girl said tonelessly.

I wonder, thought the young man, and he shrugged—so tally.

THE beginning was in France, on a gray day at the wharf. The ship *Renn* had five hundred tons' burden, in the service for Mathon Fripleted loading. It would sail on the evening tide o'clock or thereabouts (Continued on p. 26)

In his Oregon corral, Ranger is roped and brought out for examination by officers of a U. S. Army Remount Service detachment. The Army is scouring the country for suitable cavalry horses

"Fifteen hands," says Lt. Col. as Ranger passes his first test.

On goes the saddle, and now Ranger must prove himself to be tractable and gentle. The Army will not purchase buckers or mean-tempered horses

After Ranger has been exercised, Col. Dean puts an ear to his nostrils to listen to his breathing. Ranger proves to be

New War Horses

By Richard L. Neuberger

The cavalry always knew it would come back. And it has. Here's how the Army is getting its horses

FROM the bleak plains of Russia to Oregon's green uplands is half the distance around the world, but Lieutenant Colonel Fred Koester of the United States Army Remount Service said to the lean cowpuncher standing with him at the corral gate:

"Cy, the Russians are proving that cavalry can still win battles. That means, among other things, that we need all the horses we can get now—good, strong horses that our own cavalry can ride to battle. You and your hands better tell everyone back in the hills that the Army wants horses and wants 'em right away, and that we're paying cash on delivery."

Cy Rood gave his chaps a hitch and took a dusty halter from one of the corral posts. "Yes, sir, Colonel," he said. "We'll pass the word along to all the ranchers, Injuns and wranglers in Crook County that their Uncle Samuel hankers after any horse they don't need for spring plowing or fetching the mail."

This is taking place throughout the only in Crook County, Oregon, but in near with a barn or a pasture. Polo ponies, far riding-academy thoroughbreds are being re-ice on our far-flung military front. The horses, thousands of them. Most American equipment for this war exclusively in terms ships and guns. But the Quartermaster charged with the responsibility of obtaining there is another essential—horses. This we we entered the war, even before Russian cav drawn artillery began pushing back the s Nor must it be forgotten that at the very s man attack on Russia, the defenders' cava delayed the foe.

Colonel Edwin N. Hardy, the tall, gray who is chief of our Remount Service, nodd agreement when Bernard Valery reported t

... knew the Chan-
... but why should
... the hated English-
... an embittered old
... learns interna-
... the hard way

Channel swimmers on the walls . . . Old Marcel and Laura. . .

He jerked back, becoming tense and alert. This was no place for an Englishman to idle.

Alleyn glanced at his watch, then skidded down the back slope, following the tilting dunes, slipping along their sandy shoulders, staggering as the low dry brush snagged his clothes.

His powerful body moved with peculiar stealth for a man of his size. His solid face with its long nose and wide forehead had been stained an Indian brown, as were his hands. The stain gave his features an almost Oriental cast, the inscrutability of one whose profession is danger. His uniform wore that mark also. It was that of the Commandos—black, with black skullcap, blackened equipment and arms.

Only three days before, he and a band of five had crossed the Channel from their Folkestone base, landed in Occupied France near Calais. Creeping up the night-bound beach behind the Casino, they had knocked out a sentry.

Having memorized the street plan of the town, Alleyn had made his way to the enemy munition dump near the railway. The place had been poorly guarded. He had overcome two more sentries and had taken his time planting the dynamite and touching it off with a grenade before retreating across the *gare* plaza.

He had seen by his watch that he had twenty minutes to contact their waiting

boat. Just then a tremendous explosion rocked the city and cut a cone of light into the sky. His nerves went on edge for he saw another black-clad figure race toward him, turning at brief intervals to fire at pursuing soldiers.

It was Bradford, who had held up the station guards. Alleyn opened fire to cover the man. Suddenly Bradford went down. Alleyn retreated into an alleyway, reloaded and continued firing with a cold, mechanical bluntness. It had looked like a trap until he had found a disused sewer main leading to the sea. That blind eternity through the dark, slimy passage had taken thirty minutes and when he crawled out, on the beach, the Commandos' boat was gone.

He realized, almost without feeling, that he was stranded in enemy territory.

It was then that his thoughts had turned to Gris-Nez, a short distance down the coast, and to Old Marcel. The old man could help him, if he would.

NOW, as he skirted the dunes, moving toward the small cove east of Gris-Nez beach where Marcel lived, he wondered. The past seemed so vivid now as he neared the cove. He felt a sharp twinge of emotion. He was glad, in a way, that the war was bringing the old man and himself together again.

He remembered the old Frenchman's squat body. The face built square to support a bleached walrus mustache that overhung each corner of his mouth.

Alleyn hardly saw his face when he whirled, the carbine sliding into his hands with a dry sound. That was how he stood when the heavy blow of knuckles against flesh and jawbone caught him

For twenty years Marcel had been as much a part of Gris-Nez as the stark white beach facing the Channel. He had been the first Frenchman to swim it, and "The Sleeve," as the French call it, had done something to him. Some people said he had floated in the cross tides too long and brine had replaced blood in his veins.

Alleyn knew it wasn't that. Marcel was very human. It was the death of his Parisian wife that kept him from returning to Paris. Instead, he built himself a shack by the cove and brought his daughter, who was yet a child, to live there.

He had gotten himself an inshore fishing boat, an open affair with a one-lung gasoline engine and a makeshift whaleback of canvas at the bow for shelter. He began guiding swimmers across the Channel.

He knew every inch of the Channel. He read ripples and currents like a blind man fingering braille. He made swimming a matter of timetable, and his brain was like an admiralty chart.

The Great Exhumation

By Fred Lieb

All over the land, baseball's old-timers are limbering up creaking soupbones and aching muscles as war and the draft open new roads to old glory, just as they did back in 1918

BASEBALL is starting this season just as it started the 1917 campaign—lots of patriotic fervor, fond hopes and a prayer. It will most certainly need the prayer if the experience of the last war means anything. The boys got through 1917 without too much misery, but in 1918 when General Crowder issued his "Work or Fight" edict, the bottom fell right out of the baseball business.

What followed was the greatest process of disinterment ever known. It was distinctly on the ghoulish side. Old players who had done nothing but wield a pool cue for ten years were suddenly resurrected and pushed out on the diamond. The St. Louis Cardinals had Bobbie Wallace, in his twenty-third year of big-league baseball, on second base. The Giants pumped new life into the fabulous Jay Kirke, who had been creating legends in the minors for several centuries. The Yankees brought back Ping Bodie, former White Sox outfielder, the celebrated wack who far antedated the Brooklyn Bums and, at that period, was only several years removed from desuetude.

Will it happen again? It most certainly will happen again and we forthwith predict it.

In his famous letter to Judge Landis, President Roosevelt urged that base-

ball keep going at its usual pace for the sake of morale. He suggested that night ball be extended for the sake of the defense workers who otherwise would be cut off from the sport. The pronouncement was greeted with hallelujahs by the magnates who have their millions invested and by the players who depend on the professional game for their groceries, but the old judge himself kept his battered hat firmly on his head.

"No one can tell," said the judge. "Baseball will go up and down—with the rest of the folks."

The draft has been in effect for over a year. Hank Greenberg, slugging first baseman-outfielder of Detroit, and Hugh Mulcahy, an All-Star pitcher with the lowly Phils, went early. Since then, a batch has been taken, including Bobby Feller, baseball's No. 1 pitcher; Cecil Travis, Washington's second American

League hitter in 1941; Bud Travis' hard-hitting teammate, Sam Chapman, Connie Mack's one-run clubbing outfielder; Harry Campbell, Brooklyn's third baseman; Carl Rowell, the Braves' promising second baseman; Pitcher Barnacle Bill Sewell, the same club; Johnny Beasley, Louis Browns' shortstop; Al Simmons, shortstop of the Athletics; young pitchers Mickey Vernon and Johnson of the Red Sox; and Hutchinson, Detroit's experienced investment.

Draft boards have toughed it out since Pearl Harbor. There was Benny McCoy, the young infielder, drafted by "Abe Lincoln" Larimer, whereupon Benny sold him to the Philadelphia Athletics for \$50,000. The Michigan draft board, considering elder McCoys could live for that nest egg, put Benny in the blue of the Navy. Benny appealed directly to Roosevelt and won deferment. When the Japs started the Wolverine State's board moved Benny back to the list. So he decided to avenge his father in the blue of the Navy. He hit .406 with Ted Williams. President's advisers overruled the board and put Ted on the list. The California Comet enlisted when the season is closed and he steered himself to take a Bronx cheers until then.

As this is written, the War Department has lost a champion Yankee have lost a champion. Sturm, .239-hitting first baseman; Silvestri, third-string catcher; third-string pitchers. How-

Prying Finger

Agatha Christie

EDITED BY MARIO COOPER

Sorry Thus Far:

advice of his doctor, Jerry Burton, a Londoner who has been injured in a crash, goes—with his sister, Joanna, to a small provincial town of Lymstock. He rents a house from an old maid: Emily Barton.

After his arrival, someone—some writer—sends him a foul anonymous letter. But, since others have received similar missives, he is not seriously concerned. Among those whom the Burton family knows are: Richard Symmington, a lawyer; Owen Griffith, a physician, and Aimée; the vicar—the Rev. Dane and his wife; Mr. Pye, an eccentric; Megan Hunter, Symmington's daughter; Elsie Holland, the Symmingtons' governess; and Miss Jane Marple, an elderly lady who is visiting the Burtons.

Symmington gets one of the letters; she is shocked and commits suicide. A short time later, the Symmingtons' maid—Agnes Woddell—is found dead! Whereupon, Superintendent Inspector Graves, who is looking for a writer, redoubles their efforts.

The letters are composed of printed matter and pasted on a sheet of paper. Jerry Burton is much excited when he finds them in the library of the house he is occupying—from which a number of papers have been neatly removed.

Inspector Nash finds the typewriter which the letters are addressed; the man in the office of the Woman's Institute.

Weeks go by, Burton observes with surprise that Joanna is falling in love with Griffith. He observes with even more surprise that he is falling in love with Megan (as a matter of fact, he asks the girl to marry him; but Megan—a curious person—understand—turns him down). . . . Inspector Nash telephones Burton, and tells him he has found the author of the letters. A few minutes later, the two men go to the home of the Griffiths, where they arrest—Aimée Griffith!

Inspector Nash protests her innocence. And Owen is shocked; his sister is not guilty. Nevertheless, he is dreadfully shocked; and when Burton tells him that Joanna (who has come in, a bit later) is the man she loves and kneels before him in a chair.

Conclusion

Now tell you coherently the events of the next twenty-four hours. Various incidents stand out, unrelated to the main incidents.

Remember Joanna coming home, her white dress drawn, and of how I tried to cheer her up, saying:

"How's being a ministering angel?"

How she smiled in a pitiful way and said, "He says he loves me, Jerry. He's very, very kind and stiff!"

I said, "My girl won't have me!"

She said, "My girl won't have me!"

She said, "My girl won't have me!"

She said, "My girl won't have me!"

She said, "My girl won't have me!"

She said, "My girl won't have me!"

She said, "My girl won't have me!"

She said, "My girl won't have me!"

She said, "My girl won't have me!"

She said, "My girl won't have me!"

She said, "My girl won't have me!"

She said, "My girl won't have me!"

She said, "My girl won't have me!"

She said, "My girl won't have me!"

She said, "My girl won't have me!"

She said, "My girl won't have me!"

She said, "My girl won't have me!"

She said, "My girl won't have me!"

She said, "My girl won't have me!"

She said, "My girl won't have me!"

She said, "My girl won't have me!"

found everybody's tongue wagging nineteen to the dozen. Emily Barton was saying that she had never really trusted Aimée Griffith. The grocer's wife was saying with gusto that she'd always thought Miss Griffith had a queer look in her eye—

THEY had completed the case against Aimée, so I learned from Nash. A search of the house had brought to light the cut pages of Emily Barton's book—in the cupboard under the stairs, of all places, wrapped up in an old roll of wallpaper.

"And a jolly good place too," said Nash appreciatively. "You never know when a prying servant won't tamper with a desk or a locked drawer—but those junk cupboards full of last year's tennis balls and old wallpaper are never opened except to shove something more in."

"The lady would seem to have had a penchant for that particular hiding place," I said.

"Yes. The criminal mind seldom has much variety. By the way, talking of the dead girl, we've got one fact to go upon: There's a large heavy pestle missing from the doctor's dispensary. I'll bet anything you like that's what she was stunned with."

"Rather an awkward thing to carry about," I objected.

"Not for Miss Griffith. She was going to the Guides that afternoon, but she was going to leave flowers and vegetables at the Red Cross stall on the way, so she'd got a whopping great basket with her."

"You haven't found the skewer?"

"No, and I shan't. The poor devil may be mad, but she wasn't mad enough to keep a bloodstained skewer just to make it easy for us, when all she'd got to do was to wash it and return it to a kitchen drawer."

"I suppose," I conceded, "that you can't have everything."

The Vicarage had been one of the last places to hear the news. Old Miss Marple was very much distressed by it. She spoke to me very earnestly on the subject:

"It isn't true, Mr. Burton. I'm sure it isn't true."

"It's true enough, I'm afraid. They were lying in wait, you know. They actually saw her type that letter."

"Yes, yes—perhaps they did. Yes, I can understand that."

"And the printed pages from which the letters were cut were found where she'd hidden them in her house."

Miss Marple stared at me. Then she said, in a very low voice, "But that is horrible—really wicked."

Mrs. Dane Calthrop came up with a rush and joined us and said, "What's the matter, Jane?"

Miss Marple was murmuring helplessly, "Oh, dear, oh, dear, what can one do?"

"What's upset you, Jane?"

(Continued on page 68)

And waiting there, with my heart thudding, I saw Symmington come out with Megan in his arms and carry her downstairs, with Nash and myself a discreet distance behind

Magic Mud

By J. D. Ratcliff

Set good bacteria to catch bad bacteria—that's the story back of gramicidin. It takes up where the sulfa drugs leave off and already there are several miracles to its credit

THIS is the story of weapons against death that take up where the sulfa drugs leave off.

The story begins with an idea that kept hammering at the head of a research man. It was one of those plaguing ideas that refuse to let one alone. It ran something like this: soil is the great creator. It is also the great destroyer. Bury a leaf of lettuce, a canary or a pork chop and they are soon consumed. By what? The bacteria that teem in the soil. One investigator estimated that each pea-sized clump of earth contained a population of 50,000 bacteria!

Now we get to the part of the idea that was keeping our researcher awake at night. What were the bacteria that struck men down with disease? Organic matter—living stuff like other members

of the vegetable and animal kingdoms. And here was the nub of the whole thing: if there were soil bacteria to destroy all other organic matter, wasn't it reasonable to suppose that there were soil bacteria to prey on the microbes that kill men?

The young Frenchman who had these teasing thoughts was Rene J. Dubos. He was born in a suburb of Paris, studied agriculture in France and Italy and finally came to the United States in 1924. After taking his Ph.D. at Rutgers, he joined the staff of the Rockefeller Institute for Medical Research in 1927. Dubos, tall, fuzzy-haired, mild, makes no claims to the originality of his thinking. The great Pasteur had the same idea and so had hundreds of other investigators. But with a big difference.

All these others played with the interesting thought and put it aside. Dubos let it worry and plague him. He let it hound him while he was busy on other jobs. It kept elbowing its way into his thinking. *Somewhere there were good microbes which would attack bad microbes.*

Medical research men have assigned jobs to do just as do bricklayers, lawyers and astronomers. But while he was busy on this routine work, Dubos started an epochal piece of side-line re-

search. Once and for all he would chase down this soil-microbe business. If good ones were to be found, he would find them.

The procedure was simple enough—perfectly straightaway job. Dubos made his start one afternoon when he took three kitchen tumblers to the greenhouses at the rear of the institute buildings in New York. He filled his tumblers with soil, carried them back to his lab and put them on an out-of-the-way shelf. Each day from then on he dampened the soil of Kitchen Tumbler No. 1 with a milky soup made up of that ugly brute of a microbe that causes pneumonia. No. 2 got a daily dampening with a culture of streptococci—causer of sore throats, childhood fever, erysipelas and a host of other diseases. No. 3 was treated with staphylococci—microbes responsible for such pus infections as boils and carbuncles, as well as a highly fatal type of blood poisoning.

The idea behind this daily exercise was obvious enough. If the soil did contain something to destroy man-killing microbes, that something would thrive if fed a daily diet of its favorite fodder. The beneficent cannibals would grow lusty and produce large families. Soon they would be available in such quan-

Doctor Charles H. F. treating a leg ulcer of twenty years' standing. Complete healing was effected in three weeks by the use of gramicidin.

tity that they could be set to work on other soil bacteria. This continued for months before I at an epochal day in the spring of 1939.

For purposes of the test I set up eight test tubes and filled them with cultures of the pneumonia microbe. He would see what happened. A soil he had been nursing went into each tube: soil Kitchen Tumbler No. 1. A little preliminary flourish Dubos went out to lunch.

When he got back a jar was waiting. The first tubes in water-clear and the others rapidly! The pneumonia microbe was being destroyed with incredible speed—perhaps something of the same implications—he But Dubos didn't know what

HOT FROM THE "LINES" AT WILLYS-OVERLAND..

HELL BENT FOR VICTORY

THEY'RE rolling off the teeming assembly line at the Willys-Overland plants, in ever-increasing numbers—hell bent for Victory. They're the motorized mustangs of our modern army—Willys-built Jeeps. They climb stiff grades, crashing streams, mud and hauling men, guns and other vital materials. Jeeps are getting more power, more speed, more action and durability out of a ton of steel and

a gallon of gasoline, than has ever been done before.

It was the great Willys civilian engineering staff fresh from their fine triumphs in the Willys-Americar and Go-Devil engine, who collaborated with the Quartermaster Corps of the U. S. Army to create and perfect the jubilant Jeep.

But, proud as we are of this fine achievement, we are still a motor car concern—dedicated to the building of low-cost, dependable transportation for

"the people" as thousands of thankful Willys car owners are realizing at this moment.

Willys-Overland Motors, Inc.

TODAY do your part. Conserve rubber and other materials vital to war equipment. Buy defense stamps and bonds. Pay taxes with a smile. Whatever the total price you pay, it will be as nothing compared to the value of continued Freedom. . . . TOMORROW, make your first new post-war car a Willys—"The Jeep in Civvies."

THE GO-DEVIL ENGINE—power-heart of WILLYS CARS and all JEEPS

Diagnostician!

Tick! Tick! Tick! Your automobile mechanic listens to the engine and tells you what is wrong. For the Doctor of Motors has an almost uncanny way of diagnosing trouble . . . without taking the engine apart "to see what makes it tick"!

Years of study and experience have made your mechanic an expert at the fine art of diagnosis. He recognizes the symptoms. He understands the cause. He knows the cure.

Remember, your car must last for the "duration." Depend upon your Doctor of Motors to keep it in tiptop shape. Trust him. He will never let you down.

★ ★ ★

Better mechanics everywhere recommend and install Perfect Circle Piston Rings because they know how well these rings stop oil pumping, save gasoline, and restore power, pickup, and pep. Install Perfect Circles in your car. It will take but a few hours, and the cost is surprisingly low.

Escapade in Martinique

Continued from page 16

young man named Blaise Lorrain, came aboard with a scuffed leather traveling case and was conducted to his cabin.

His name meant nothing to anyone—Blaise Lorrain. He had told the captain that he was from the low country north of Rouen. He was unwell—haggard and unwell, his eyes deep-sunk. And on the third day at sea—the weather was extravagantly bleak—he died suddenly of an acute intestinal disorder that baffled all the rude chirurgical experience of Captain Arouet François Bec-Prudhomme.

"Too bad," the captain said blankly, tugging his wispy beard. The bleeding seemed to have been a mistake. In any event, it had done no good. The captain's interest was entirely academic.

Of course, there was no one to mourn Blaise Lorrain. The practical thing was done: he was consigned to the sea at five o'clock, slipped over the side in a sailcloth sack.

LATER, in the half-hour before dinner, the captain sent word that he should be pleased if M. de Goncourt would drink a glass of brandy with him. In the captain's cabin, if messire would be so good. So Nicolas, damoiseau de Goncourt, who was related to Mme. la Vicomtesse de Lisle, went to the captain's cabin. He drank several small glasses of the captain's excellent cognac. Conversationally the captain said, "The young Lorrain died today."

"Ah?"

"The other passenger," the captain explained. He shook his head. "Naturally you would not have noticed him. He was a clerk or something of that stripe from the neighborhood of Rouen—"

The captain paused. "We buried him in the sea at five o'clock." And the captain saw, then, that M. de Goncourt was sunk in private thought.

It was not often that the brig Renne was favored by a passenger like Nicolas de Goncourt. He wore exquisite blue cloth laced with silver, and rich knee boots of black leather. His eyes were like gray stones in clear cold water. Yellow hair fell below his shoulders. Good breeding sat upon him like a well-tailored cloak. He was, as has been said, related to Mme. la Vicomtesse de Lisle.

More, he was the nephew of M. de Pouancey, governor of Martinique for the French West India Company. It was, where the banks of the Seine were cobbled, common gossip that he fenced superbly and had duelled often. He had long been accustomed to the pleasant diversion of spending money.

He was, in that season, in the boisterous middle decade of the seventeenth century, three-and-twenty years old; and it should be observed that he was leaving the sweet comforts of Paris for the precise reason that he had spent rather more money than legally belonged to him. Not that he was dishonest; decidedly not. He was merely careless. He had often and rightly said that he did not understand money—money was a bore. Certain relatives, including the reluctant vicomtesse, had settled his debts for him and strongly recommended that he taste life in the colonies for a period.

In a distant colony, the conclave of aunts and uncles agreed.

Martinique, for instance; there was the ship Renne scheduled to sail so conveniently soon from Le Havre—

Now he sat deep in his chair in the captain's cabin with his eyes half closed and an expression of intense preoccupa-

tion on his strong brown captain said, to end seemed to him awkward brandy, messire?"

The young man waved me about this Lorrain."

The captain shrugged. impress me. He was q nobody."

Nicolas de Goncourt space. He watched the ing lamp above the capt listened to the low whir the ship's timbers. Th patiently; and after a w man said, "Hark to n homme—" earnestly, elt "I am going to offer you a and it is my intention favor—"

"Messire."

"This: Nicolas de Go day on your ship and to into the sea. It shall be—that was the name, Bl who lands on the wharf in Martinique."

"Messire—" The wor tion.

"Because I prefer it t The reason should not you, captain; you who ar world." Here Nicolas paused; here the captai ously. "You are aware th who governs Martinique, brother. I should be unc surveillance; in effect, hi Revolting thought. It rather, to go ashore as I In that name, for a whil freedom."

"But will not M. de F you?"

"He has not seen m years."

"Your family, though. sist upon an inquiry."

"Aunts, uncles, cousin trouble themselves too me."

The captain tugged at frowncd. "I hesitate to s yet this might involve n difficulty—"

"I spoke of a sum of m. Again, but slowly, C Bec-Prudhomme smiled faintly unpleasant smile moment had passed he ship, wind-buffed, crea sea."

But the instant's opportunity passed.
The old man interrupted the silence. He
said, "The wedding will be at your con-
venience. Shall we say in about two
weeks' time? You will want to discuss
it with my daughter."

The wedding! thought Nicolas de
Goncourt. So—

The situation held a curiously static
quality: the old man, this Edouard
Vauban, standing beside the carriage,
his eyes on Nicolas de Goncourt; and
still in the carriage, not having moved,
poised for descending, Nicolas de Gon-
court and the girl Caroline Vauban.
Thus they remained, as if in tableau, for
a long moment; and then the old man
turned away and walked toward the
broad steps of the house, and Caroline
Vauban said, low but audibly, with an
almost fierce accent of misery in her
voice, "The wedding will be at your con-
venience, naturally—it is for you to say,
M. Lorrain!"

Nicolas de Goncourt looked toward
her quickly. He saw the constriction of
her throat and the uncontrolled quiver-
ing of her lips. Then, suddenly, she was
crying—crying openly and angrily, and
her hands were lifted and so tightly
clenched that he thought for an instant
she was about to strike him.

But she dropped her hands and
turned from him; she jumped from the
carriage and ran toward the house.

THEY drank small cups of black island
coffee on the veranda of M. Vauban's
house after dinner, and at nine o'clock
Vauban arose heavily from his chair.
He would, he said, retire now; he was
weary; but if they wished to sit for a
while, to watch the night sky—

"Yes," Nicolas de Goncourt said; "for
a while." He looked at the girl; she
kept her eyes cast down in rigid silence.
After a minute old Vauban murmured
good night and went into the house.

Low night sounds flowed up from the
town, accenting the quiet. Nicolas de
Goncourt leaned toward the girl. "Why
do you hate me?" he said softly.

She raised her eyes, then. "I don't
suppose I do."

"But you do. You very plainly do."
"You misunderstand."

He shook his head. "I misunderstand

Modernizing Aunt Martha

THE MORE YOU get to know my Aunt Martha, the more you love her. But, believe me, what she knows, she *knows*! "Annabelle," she says to me one morning, "mind what I tell you: there's nothing does a body as much good as a real, stiff, old-fashioned *purge*."

BUT I TOOK HER INTO CAMP that morning. "Auntie," I said, all determined-like, "that little idea went out with the bustle! What you should do is find and correct the *cause* of your trouble. And maybe I'm the little girl who can help you. Come on down to breakfast."

"HMPFF!" AUNTIE SNIFFED. "What's this 'modern marvel' you're talking about?" "Why, it's nothing more than this grand breakfast cereal," I told her. "KELLOGG'S ALL-BRAN. If your trouble's the common kind, due to lack of 'bulk' in the diet, ALL-BRAN is just the thing to get at the cause of it. Eat it every day and drink plenty of water."

"GLORY BE!" says Auntie right after her first crunchy spoonful, "This is delicious! And if ALL-BRAN will do what you say it will, young lady— well, I always intended you to have that diamond ring, anyway!"

nothing. You hate me. Because I have come here to marry you."

She said, almost whispering, "I hate the thought that you have been brought here to marry me." She shrugged, motion full of intensity, as if an unspeakable burden lay upon her shoulders. "But I must be fair to you," she went on. "I hate the *thing*—not you. I hate what you represent."

"What do I represent?"

"The contract between my father and your uncle."

"I begin to understand," he said.

"I wonder you don't hate me too," Caroline Vauban said.

He watched the sweet, strong curve of her chin, the mobile loveliness of her mouth. "No," he said. "No; it hasn't occurred to me to hate you."

"Because you see it differently. For you this is an adventure. You're not being sold—"

"Ugly word."

"—as I am being sold. To please my father's whim and vanity, to keep a promise made without any thought of what I might feel. And for your money—for your uncle's wealth, which will be yours. Father would like that in the family!"

He said, "You put it very baldly. Surely you give it quite the worst interpretation."

She lifted her hands impetuously. "There is no other way to say it." She sat with her back straight, staring at him. "My father was prepared to marry me to you—no matter what you might be. He did not know you; he has not seen you since you were a child. It mattered nothing to him what you might have grown to be."

His voice was mild: "Have I grown up so badly?"

"It's the intention," she cried. "The contract!"

Nicolas de Goncourt bent forward in his chair. "You're a rebellious spirit. Unfortunately there aren't many like you. Certainly not in France. I feel the most pressing temptation to kiss you again."

She drew away quickly.

"Of course," he said. "You're consistent. You would be."

But he stood up and took a step and was beside her chair; and he bent suddenly and kissed her on the lips. Then, as she avoided his eyes, he walked into the house where candles glowed softly. He went up the stairs and to bed.

HE SLEPT badly. He woke in the night to a consciousness that she was in his mind, and he said her name: "Caroline." In the darkness he pictured her face, saw again the unhappiness in her eyes; and he knew that he was profoundly moved. It came to him sharply that he had never felt quite this way before. The emotion was something that did not go easily—perhaps would not go at all—into words. He said to himself, almost aloud, in the black room, "Am I in love with Caroline Vauban? Is that it?"

He fell into a heavy sleep in the hour before dawn. It was M. Vauban knocking on the door that awakened him. "Come," M. Vauban called heartily. "Dress. Have breakfast. And we'll go down into the town together. I must introduce you about, you know."

The girl was not at breakfast. The two men sat together at the long table and M. Vauban spoke briskly about the society of Fort Royal, the commerce. "And for the love of heaven," he said, waving a coffee spoon under the nose of Nicolas de Goncourt, "don't talk politics in the town. There's a deal of bitterness here against the monarchy—"

"So?" said Nicolas de Goncourt.

"Opposition of interests between the crown on one side, the landlords and merchants on the other. I'll confess that

in this island we're less than content with the policies of Louis and his precious minister Mazarin—"

"Ah," said Nicolas de Goncourt amiably. "Then I am warned neither to arouse the Royalists nor enchain the *commerçants*."

"Precisely."

"You may rest easily. I have no interest in these colonial quarrels." Nicolas de Goncourt sipped his coffee, watching the older man's face. And a vivid sense of the difficulties of his situation flooded him. Why, he wondered, did he not speak now? It was patently ridiculous to go into the town with old Vauban, to be introduced hither and yon as Blaise Lorrain—Blaise Lorrain of the neighborhood of Rouen, nephew of some moneybags bourgeois man of business—fiancé of Caroline Vauban. It was ridiculous and in very bad taste and its result could only be a greater confusion.

But he knew that he must speak with Caroline Vauban before he revealed himself to her father. He must; it was simply, clearly that; he ceased to dispute it. He had a lively notion of what

France. One does not apply to one's king these gutter epithets."

Poussin glared. His lips twitched. A fire-eater, this fellow, Nicolas de Goncourt thought, vaguely amused. Poussin said, coldly, "You are recently from France, monsieur. France is an odd place these days, since the civil war was fought and lost. Am I to understand that you are a Royalist bootlicker?"

HE WAS tall; he had massive shoulders. The breed of the bully, Nicolas de Goncourt observed, smiling. Doubtless he'd had some success with the small sword among the gentry of this remote and uncultured island. Ah, well! thought Nicolas de Goncourt. And he raised his eyes to meet the glower of Jules Poussin.

"Your manners are churlish, monsieur," he said. He ignored the agitated hand of old Vauban, plucking at his sleeve. "To say the truth, unwholesome. I am ready to accept your apology."

"Bootlicker," Poussin said, and would have continued—

But Nicolas de Goncourt reached

"While you have been high counter in your He knows that. He knows what you are, where y He can—and will—kill y

Her voice was almost de Goncourt glanced a likely. "Is he really that?" he asked, smiling eyes. "To take advantage myself, scarcely better th house clerk?"

But the girl was gone agitated step; and the si ness of evening gathered When a minute had pas Goncourt said, "M. Vaul your carriage tomorrow meeting is set for six o'

But Nicolas de Gonc

the old man's reaction was going to be—

They sat at a round table and drank coffee: Nicolas de Goncourt, two merchants of the town, old Vauban, and Jules Poussin, a young man, not twenty-five, son of a planter of sugar and tobacco. The conversation moved, as inevitably it must in that day and in that place, to the colonial taxes of the crown. Nicolas de Goncourt listened without much attention to the heated condemnation of the policies of Paris. It was young Poussin—red of face now, excited—who thumped the table and declared in a voice altogether unguarded that Louis, King of France, was unprincipled, a tyrant, and, in his private life, brutal and salacious.

NICOLAS DE GONCOURT was, in fact, much more offended by Poussin's manner than by anything he said. He found this excellently dressed colonial a bore and he disliked the size of his mouth. He took it upon himself to say, mildly, "I sympathize with your disapproval of Louis' taxes, monsieur; I should be prepared to defend your right to disapprove. But Louis is King of

across the table and struck Jules Poussin hard on the cheek with the flat of his hand.

"You were mad!" Caroline Vauban said. "Mad!" She drew in her breath with the exasperation of a woman faced anew by the evidence of man's eternal blundering. "And Father warned you—"

"I warned him," M. Vauban said, shrugging helplessly. "I told him that here, in the island, one must be extraordinarily cautious—"

"You did indeed," Nicolas de Goncourt said, looking from M. Vauban to his daughter. "However, I have long held the opinion that caution can be carried to excess. I do not like your M. Poussin. He is a boor, a blusterer, full of vapor. I am perhaps illogically appalled by his lack of humor. And I shall be happy if we refrain from discussing him further."

"But he will kill you!" Caroline Vauban cried.

"I think not."

"He has fought often with the sword—"

"Indeed?"

swer. A controlled rage occupied him. He felt the balance of his sword. By conscious effort he relaxed his muscles until a kind of fluid strength moved warmly through his body.

"On guard!" Jules Poussin cried. The blades met, clicked; Jules Poussin flung himself violently into attack. But the guard of Nicolas de Goncourt was like a wall of stone. He stepped with the nimbleness of a panther—or of a dancing master. His eyes did not leave the right hand of Jules Poussin. For the length of a minute his tactics were entirely defensive. Then he said, "You fence like a trained bear, M. Poussin. You have no grace." And, a moment later, "I'll concede you strength, my friend—the strength of a bear, a bull. But you should confine yourself to fighting with a club—"

He sidestepped with the speed of light and brought up the tip of his blade to slit—from shoulder to elbow—the loose sleeve of M. Poussin's silk jacket. He did not touch the flesh. The sleeve fell open.

"Do you really take yourself seriously, M. Poussin?" Nicolas de Goncourt cried. And, for the first time, he laughed. But not pleasantly. Deftly he explored Poussin's guard and pinked a button of his jacket. "The time of my breakfast approaches," he said. "I grow short of patience. Let us have done with this buffoonery!"

The steel sang with the blow of forte on foible; Nicolas de Goncourt's wrist was iron; he twisted with wrist and arm and shoulder. Then Jules Poussin stood disarmed, hands lifted as if to shield his face—and his face gray and distorted.

NICOLAS DE GONCOURT wheeled and stepped quickly across the field toward the carriage. He saw, from the corner of his eye, that one man broke from the ranks of the witnesses and followed him. He knew the man instantly—de Pouancey, governor of the colony. He had not forgotten, through the years, the gamecock bearing of his uncle, the almost comical jauntiness of his shoulders. Nor had he forgotten that beneath the flamboyant exterior, de Pouancey was as hard and as sharp as the point of a diamond. At the step of the carriage Nicolas de Goncourt paused.

Caroline Vauban was at the open door. Her hand gripped Nicolas de Goncourt's sleeve.

"Mademoiselle—" de smiling and bowing. An- standing to his full height, expressionless, "Nicolas de aunts have said it, your it, and I say it. You a "How," Nicolas de sponded evenly, "did name?" He felt Carolin upon him; and he was was frowning. He caught it tightly.

"Why haven't they confiscated it?" Alleyne asked cautiously.

"They let me fish," the old man explained. "Each evening the guard goes into 'The Sleeve' with me. We fish for the officers at the lighthouse. I'm going fishing now." He spoke calmly, as if he had thought it over and made a decision. He stared straight at Alleyne without seeming to see him.

Alleyne stood and gripped the old man's arm. "You're not fishing, Marcel," he said evenly. "Listen. We're going to make the Channel again. You and I. You want to see Laura, don't you? She's waiting."

Marcel jerked his arm free. Bluntly and with an expressionless face, he said:

"I can wait, too. The war will end. Wars always do and the Germans will go. You took my daughter and now you want my boat. No. I'll keep it. Maybe Laura will come back if she's alone. . . . When the Germans go, the swimmers will return too. Then I'll show them the way across the water. . . ." He paused, then added slowly, "But not you."

Alleyne stared in silence. The old man's voice rambled on, and yet there was something more behind that incoherent speech than just talk about the Channel as it used to be. There was a thread of vengefulness. Alleyne quickly realized the old man wouldn't expose him to the enemy. He would merely ignore him and leave him stranded like an unarmed man left on an island of tigers.

"You stay here as I do until the war ends," said Marcel. "It's very lonely. You will know how I felt when you took Laura." He walked away.

Alleyne felt his nerves run cold as he stood there, his huge body now made invisible to those at the lighthouse by the darkness. As the old man shuffled off, he wheeled quickly and ran to the sheer sandy bluff flanking the dark sea. He moved fast, sliding to the beach below. Reaching it, he cut back toward the shack, advancing silently.

The boat's shape was softened in the gray mist and gloom. Alleyne passed it as he crept on toward the hut itself. He came around from behind. Above his own muffled breathing he heard the sound of Marcel's sabots plodding down the trail. Then, directly ahead, his eyes centered on the Nazi sentry, a motionless figure in the thickening mists.

The man had a carbine slung over his shoulder. He was listening for Marcel and he carried his head forward as he scanned the darkness.

ALLEYNE advanced with the padded silence of a jungle animal until he crouched less than a yard behind the man. Here he paused, his body growing taut.

Suddenly he spoke challengingly: "Look out, man!" It was not meant as a warning, but to throw the guard off balance during one keyed instant. He saw the man's arms rise gently—then stop.

Realization must have stabbed through the man with sickening force. Alleyne hardly saw his face when he whirled, the carbine sliding into his hands with a dry sound. That was how he stood when the heavy blow of brown-stained knuckles against flesh and jawbone caught him.

The crack was like thunder. It was followed by a groan as the sentry rocked in the sand, his body rigid for a moment. Alleyne hit again. The man's knees buckled and he dropped senseless on

"Your Ma's a CRAB!"

How right is he, mother?

Are you cross and shrill when the day's work has worn your nerves to a nub? Then, about mid-afternoon, get into the tub with a cake of Ivory Soap.

Freshen up in an IVORY BATH

the beach. Alleyn caught the carbine just as Old Marcel emerged from the mists.

Marcel stopped, astonished. His eyes and head swung toward the bluff he had just left, and back. Alleyn jerked the carbine toward the boat. He said bluntly, "Push it out, Marcel."

THE mist was thick and full of chill. The motor throbbed unevenly, muffled by the oppressive invisibility. A cloying odor of gasoline hung with the boat.

Alleyn handled the tiller familiarly and experienced the terrible aloneness of the small boat out here. . . . Darkness crept all about, as if the black of the North Sea and the Atlantic had now engulfed an entire continent and an island. It was as if there were no more Channel—only sea.

Old Marcel was forward, nursing the wheezing engine along with resentful silence. Alleyn eyed him carefully, aware of his increased bitterness. The old man was utterly cut from France now. The discovery of the German sentry, tied up in a fishnet, gagged with a wad of waste, would make that final. Still, Marcel refused to accept the fact that there was no returning.

The boat rolled slightly with the drive of the screw and nosed into the darkness. Back toward Gris-Nez, the German coastal watch was probably listening, waiting for the sound of the boat to stop, for Marcel to set out his nets and return.

SUDDENLY the engine coughed, then stopped. Alleyn quickly picked up the carbine. "What's wrong?" he demanded. "Mines?"

He watched Marcel poke his head and shoulders from beneath the canvas whaleback. There was a look of patient triumph on the old man's face as he watched the prow lose its head and drift idly with the sleek tidal current.

"*Pas d'essence*," he said. "No gasoline. There is only enough to reach mid-channel or return. I stopped the engine."

"That's a lie," Alleyn snapped. He slid the bolt on the carbine; its smooth oily click was ominous, as it could only sound on the unbroken sea. "Remember, Marcel," he added coldly, "I could have left you at Gris-Nez. You wouldn't live long after they found the guard. You understand? I brought you because I like you, because you're Laura's father."

Marcel stared back, his eyes heavy with an old man's bitter opposition.

"No petrol," he insisted. He ignored the gun. His mustache drooped like some soggy plant hung too long in a chilling fog. He slowly prepared to put out his nets. "I fish now," he said at length. "You swim from here. Then I go back."

Alleyn frowned and tried to think it out. "They'll kill you, if you go back," he said. "Why didn't you tell me there was no petrol?"

Marcel shrugged indifferently. "You think I'm an old fool," he said. "If the Germans found me with the guard, they would kill me. But not if I am fishing and then go back alone. I can say I didn't see the guard. That is why I did not tell you the petrol was low. Now you can swim to England and let me alone. You thought you were once a swimmer. It is up to you."

"Swim?" Alleyn gave a harsh laugh. "You know I can't make it from here, even if there were lights and a small boat."

"If you stay in the boat and we don't go back, a patrol will search for us," Marcel grunted. "They listen at the lighthouse."

The choice had been thrown at him, and yet there was no choice. Alleyn lit his storm lighter and glanced at his

watch. "Seven five," he said. "How long has the tide been going out?"

"Twenty minutes."

"We'll drift with it."

After making his decision, Alleyn fell silent. His shoulders rocked with the idle drift of the boat and he glared dully at the old man without actually finding him with his eyes. At the same time he was keenly aware of the boat's motion and its incapability of holding the intensity of hostility flowing out of it. That hostility would have to be changed or they would both sink with it.

He said: "You're a fool, Marcel. There's a war on. It'll have to be won before you can have the Channel the way you want it. Forget Laura went with me. Forget you hate me. The job is to win and we can't do it each alone. You've got to give up a lot of things to win."

"You aren't good enough for her," Marcel replied abruptly. He crawled out from beneath the whaleback and sat on the gunwale bench looking at the sea

"He went home, to Egypt."

Alleyn shook his head. "Helmy wrote to Laura. He's with the British. Fighting on the desert."

The boat drifted past mid-channel, still carried as though the tide were some powerful, unseen hand reaching up from the sea, grasping the keel and guiding it. Now and then the mist lifted in patches revealing clear spots through which the stars thrust down, giving them their position. Once, an ugly wart-skinned mine drifted by.

A SLIGHT chop creased the surface of the sea and wavelets slapped noisily beneath the curve of the bow. A few hours before sunrise the chop increased and the mist drifted over the Channel in long, moist, gauzelike streamers. Neither man had slept. Each had listened above the tongues of the sea for the sound of patrol boats and in the extended silence and night chill each had regarded the other: Alleyn with

almost as if there were danger. As the flood tumbled to the edge of the German short slack set in, lous about Helmy.

Alleyn finally hushed but a few miles from bound English coast a citement welled within the engine started.

"You see," he said, only for swimmers, old we can use what petrol Dover. We're going to

Marcel stooped backward. The news hardly him and the brooding scarcely changed. Then as the flywheel spun, then its uneven throb the small boat like a pulse. The boat took clambered back, taking Alleyn.

"You're heading for asked. He held the carbine

The old man remained glistened a little as the mist beads. His eyes Alleyn's, giving his first He said, "I'm an old man til now I was too old make me take sides. I thought on Laura's side and Helmy. He was silent for a moment added, ". . . and on yours."

Alleyn let the carbine forth, gripping the handle warmly. There was a strong emotion between them, but it was deeper, stronger for its suddenness.

SUDDENLY Marcel's body An instant later, the starboard stern, Alleyn's drumming of a patrol boat within the fog like a gaseous rumble, over the throb of the tiny insubstantial a cold blade of expectancy Alleyn's spine.

He wheeled toward the engine when it opened in the drifting fog a shape shot across it, swept past the small boat into the swirling mist.

"Nazis!" Alleyn's in a thin echo.

He turned toward the old man closely, he would stick, or turn

"They've seen us. I tor." Marcel's voice hoarse. The drumming

patrol boat circled, bat darkness. The old French then leaned hard against the

"Doggone it—who can that be?"

as though he were measuring its motion and velocity. "If a wind rises, it will push us into the North Sea," he murmured absently.

Alleyn glanced at the sea also. He overlooked the old man's stubborn opinion for the moment and considered the tide. "A swimmer's tide, isn't it?" he said thoughtfully. "It should carry us toward England. Remember, it was almost this smooth and misty the time I started my swim. A storm broke it up near the Goodwin Sands and you pulled me out."

AT THE mention of the Sands, Marcel became alert. He nodded slightly while his eyes patiently scanned the dark curtain pressing in on all sides. There were no longer lights to take bearings on, but he seemed to have the feeling of where they were and where they were going.

Some of his outward bitterness dropped away. "I had this fog when I took Helmy across," he murmured reminiscently. "Laura came with us."

Alleyn put the carbine aside. He leaned forward, saying, "You know where Helmy is?"

alert caution; Marcel, with uncertain animosity.

Something was changing in the old Frenchman. It was either leveling off his bitterness or deepening it. Alleyn wasn't sure. The old man seemed to be struggling to understand Alleyn's decision to try reaching England without petrol, thus risking both their lives.

Alleyn tried to explain: "Our lives are already risked," he said. "That happened when France surrendered. If we went back it would be certain death. It would be death even if you went back alone. This way, we have a chance."

Marcel asked again about his swimmers. "They'll be killed. They shouldn't be fighting," he murmured as he stared at Alleyn with the bitterness rekindling in his eyes.

"They're fighting for you and the Channel as it used to be," Alleyn replied. "You ought to be, too, Marcel."

"But I'm a trainer, not a soldier."

For a long while, the old man silently brooded over this. Then he asked more questions. There came more silence; then, from time to time, he spoke as if he were carrying an imaginary swimmer across the Channel on this night. It was

flares. "The fog is going," he explained. "The German boat has a small cannon and when they see us . . ."

"Put it away," Alleyn said wearily. "With the first flare they'd have our range, fog or no fog."

Marcel put the flares aside reluctantly. "But if we get into the water with belts before . . ." He listened tensely to the enemy boat, nearer now. "They're feeling for a channel across the Sands."

Alleyn raised the carbine. It made a futile gesture seem even more foolish and he lowered the gun again. What chance did a carbine have against a cannon? Then he saw Marcel staring skeptically toward the dim shore and the Channel surface. The old man looked as if he were reading it. "The slack and ebb tides are short this season," Alleyn heard him say. "The ebb is already running. It goes down the coast. You might make it. You're not a good swimmer, but you're young. I'm too old. The ebb runs only another hour, then it turns back toward France."

"Nonsense. We'll make it together," said Alleyn. "I'll show you."

Marcel started to say something, then he flinched as the air quaked with the explosion of a small cannon. His weatherbeaten face grew pale as he saw a geyser of water spout up a hundred yards beyond. The patrol boat was still feeling for them.

Alleyn yanked a cork lifebelt from beneath the bench and tossed it at the old man. "Here, put it on," he ordered. "Get clear of the boat, quickly, Marcel. Get out there in the water and stay as wide of the boat as you can. The Nazis may think we went down with it when they sink it. I'll try for the coast and bring back a crash boat to look for you."

He began stripping off his own heavy black uniform. The whistle of a shell and a second explosion sounded nearer. The sea churned twenty yards off the port bow. Alleyn saw Marcel go pale again and struggle to control himself. He also felt time tightening about them, running out thin. The fog was lifting fast and the patrol boat's motor throbbed near by. His own nerves drew taut as he quickly opened a drum of thick, crude oil and began greasing himself with it.

"It should be lanolin," he heard Marcel muttering with old-man fussiness. "Only lanolin keeps out the sea's cold. . . . Remember, you must swim hard. It's very cold. You should make toward Foreland. Perhaps you can beach at Shakespeare Point. But remember, swim hard."

"All right, old man," Alleyn gripped Marcel's rough hands warmly. "Keep clear of the boat and be off before they blow it. Pray we make it, and stay afloat." He turned to the rail.

THE water was heavy, dark and full of the nauseating tang of brine. Its first numbing shock slid over him, held out by the oil, as he came to the surface and sighted the coast ahead. He struck out toward it without looking back.

At times the sea rolled him. He now thought of swimming, and nothing else: the length of his stroke, his breathing. One had to think only of these things because being in the Channel was not like riding it. The sea looked angrier, larger and far lonelier, and a careless man could succumb to terror in it. It was only after he had gone a few hundred feet that he sensed the current drawing him back. That awareness grew until he realized that something was wrong.

"Swim hard," Marcel had said. That was it. He could fight the current to a standstill, staying in the same place, never reaching the coast.

He quickly realized what had happened. He had been tricked by an old man's treachery. Marcel never made

mistakes on his tides. The old man had known that had run out and this was which threw swimmers English shore. That was had refused to swim. It let Alleyn take to the sea the old man still hoped the mercy of the Nazis.

A sharp, cold anger blazed in his own danger and he turned, straddling the fog had lifted, letting the solid, bleak morning hang broken sea. To his right, long, rakish deck of the ures crowded the foredeck, swinging a cannon toward

Alleyn made out Marcel hunched in the small old man were frozen to the gunfire ripped the car from the bow and the life like a cork. Air cupped whaleback's canvas and surface, drifting away. Then Alleyn gasped, se up along the boat's bow

me, could have gone places," she "it'd stuck; if he'd been thi that's why he's never part he needs. Sure, he's

breaking in a new act. He's always breaking in new acts. He always will be. He thinks he belongs way up there and maybe he does. But not with just anybody."

Sam was studying her, his shrewd eyes missing none of the tenseness, none of the eagerness. He asked, "Does he know you're working here?"

"No. We've been out of touch with each other since before I came."

"If you're still in love with him . . ."

"I didn't say that. I didn't say I wasn't, either. But when a man has been your husband . . . when you know that he needs you . . ."

"I'm putting it in your lap," said Sam steadily. "You give me the answer."

For no reason at all, there were tears in her eyes. "Gee, Sam—what a dope you are! Whether they call themselves Joe & Julie or what, you know you're getting a bargain. But you'll pass it up for a cigarette girl . . ."

"I'd pass it up for you, Dale." He chewed hard on the cigar and looked down at the floor. "I wouldn't hurt any of my regulars—you know that."

Yes, she knew it all right. She knew what sort of man Sam really was—sneaking around, doing nice things for everybody, like he was afraid he'd be found out.

She said, "This won't hurt, Sam. Maybe it's just what the doctor ordered."

And so Eddie Cameron and his new partner were booked in for two weeks, with a two weeks' option, under the name of Joe & Julie. When they rehearsed with the orchestra Wednesday, Dale wasn't there. She wanted to catch the first show at ten-thirty that night, to see Eddie then for the first time.

The opening show was nice. The chorus got mixed up in some of their new routines but the audience didn't realize it. The M.C. was a holdover—and good. There was a trick xylophone player and a pretty redheaded singer who wowed them with swing and then laid 'em in the aisles when she did "Jim" for an encore. Then the emcee announced Joe & Julie.

Dale stood against the wall. There was a catch in her throat when she saw Eddie. Same Eddie—tall and blond and easy and graceful. He still had an infectious grin and a loose, lean-hipped body. Julie was a nice foil, tiny and vivid and dark. Otherwise, Dale might have been watching the old act, Cameron & Clark. Same musical arrangements, same routines—straight ballroomology

ROSS

Thought it was a cross
A man had to bear
To wear
Regular, year-round shirts in June
And stew, like a prune.

"Why can't you be cool like Ferd?" Ross's spouse demands.
"Why don't you wear shirts like Ross does?"
dittoes Ferdinand's.

Before long the affections of those who
were hitched
Were temporarily switched!

Well, a little bird
Told Ross and Ferd
(For the sake of rhyme, we'll say it was a
sparrow)
About Summer Shirts by Arrow:
About the Arrow Collars that couldn't be
crisper,
About the fabrics weighing less than a
whisper.
A couple of other sparrows joined the chorus
And sang, "They're also oh so porous
And cooler than
An electric fan."

FERDINAND.

On the other hand.
Decided comfort outweighed propriety
And stepped out in summer society
Undisconcerted,
Nonchalant, and polo-shirted.

Ferd bought three or four
And Ross a trio more.
And when Ferd's wife saw Ferd she
gave Ross
The toss.
And when Ross's wife saw Ross, she
gave Ferd
The bird.
Ross and Ferd went back to their
respective marital blisses
With their respective marital Mrs.
And lived cool as mountain laughter
Ever after.

spiced with subtle comedy touches. The nostalgic tap-tango, the trick lifts, the comedy breaks. They hit Dale harder—harder than she had expected.

She didn't know that Sam was standing beside her until she heard him. He said, "Good act. Darn good!" His lean, sensitive face was alight with appreciation. "Your old routines?" he asked.

"Yes."

"You must have been good."

Funny how he said it. As though it were a question. As though he were asking her whether she had been as good as this Julie Martin. As though it had never occurred to him that she had been—or could have been anything other than a cigarette girl.

THE show closed with a patriotic number, and a few minutes later Eddie came out of the dressing room. Dale was standing there, her cigarette tray suspended about her neck with a strap. She wore her almost nothing costume and looked very young and very pretty. Eddie said, "Well, I'll be . . ." and Dale smiled and said, "Me, too."

He took her hand and turned her around and eyed her approvingly. "Same old Dale and twice as luscious."

She could have said, "Same old Eddie," but the words stuck. She felt hot and she felt cold; definitely her knees were shaky. It was odd, meeting this way for the first time after the divorce.

He seated her at a table and started to ask questions. He carried it off beautifully, as though there had never been anything between them—no partnership, no marriage, no ecstasy, no quarrel, no divorce—just two old friends who had chanced to meet again. Then Julie came out and Eddie introduced her. The girls were shaking hands and saying nice things while Eddie was explaining, "This is Dale Clark, Julie. You've heard me speak of her," and Julie said yes, she had, and she gave Dale an appraising—though not unfriendly—scrutiny, and then she said she wanted to talk to Sam. In spite of herself Dale liked the girl.

Eddie asked dozens of questions but didn't wait for the answers. He mostly talked about himself: what he'd been doing, what his chances were. He asked Dale what she thought of the act, and when she said she thought it was great, he beamed.

Later on, after he had gone into a huddle with Julie and the orchestra leader about the music, Dale was waylaid by a little blond chorus cutie called Honey. Honey was eighteen years old, pretty as a picture and devotedly married to the head bartender for two years. She adored Dale and knew her like a book and she'd been keeping her sharp blue eyes wide open.

She demanded to know what was cooking, and Dale told her. Honey was goggle-eyed. This was something right out of a confession magazine and she saw fresh romance brewing.

"You think you're still crazy about him, don't you, Dale?"

"Why do you say it that way?"

"Oh, I don't know." Honey shrugged. "Skip it. Anyway, I'm rooting for you to get what's best for you." And she refused to elaborate.

That was the beginning of something. Julie was there, of course, but as the days went by, she sort of blanked out. No matter what else figured personally in Eddie's life it was a cinch bet that Julie didn't. And as for that young gentleman, he was his same charming, egotistical, ambitious self. There had been a few moments when Dale had thought this business of breaking in a new act was just a gag. She had figured that perhaps Eddie was on the skids, that he was playing a spot like Sam's because

it was the best he could the new tag—that Joe &—was merely a shield for

But she knew now that level. Eddie had fitted himself to find a partner, grimly determined one with whom he could. Maybe Julie was the answer she wasn't, and Dale knew meant. She'd either come to her, or Eddie would. Sentiment had no place in his professional plans.

Two weeks passed swiftly. Julie were held over. She headed swing singer. Samphonist go and brought in wacky comics.

Dale was both happy and Eddie was taking her in stride. He treated her as an old friend and infrequent references to jocular. She didn't know what was covering up but the thing about his casual situation which rankled, because she'd built it up in her mind, maybe because of nature of unfinished business because there was a sub something in the atmosphere these nights.

It sort of focused on Honey. They seemed bent upon it. They were both unusually considerate, usually inattentive. She didn't mind it didn't understand it.

On Wednesday morning of the week something happened. Honey burst into Dale's tiny room before noon, which was prearranged for her. She said, "Sam's a mile. Julie has wrenched her ankle. She can't dance."

Dale sat on the edge of the bed, pinning her feet into a pair of mules which were decorated with little pompons. She shrugged and lay back on the velvet lounge, sleep out of her eyes. She thought.

Julie hurt. Her ankle twisted in an odd break, somewhat of a side. Dale put coffee in and got dressed while Honey watched her and said but Honey knew what she

THEY walked to the door. They found Eddie and a debate. Eddie was arguing that he could dance alone and make of it, and Sam was shaking his head. "I gotta book in another act," he was saying. "I gotta book act—if I can find one."

Dale hoped nobody would notice the elation she felt or the fact that she had been born all over again. The two men and said, "Let me help. Eddie and I use together. If he sticks to the maybe I can fill out until gets better."

Eddie wasn't having a keed," he said. "But no layoff like this . . . well, start dancing again."

Dale didn't tell him that she'd stopped rehearsing by herself. She told him that she'd kept up her stretching and bering and stretching, didn't tell him that she'd believed their separation. She said, "Why not What can you lose?"

Eddie looked at Sam. "You," he said. "Dale's a but about stepping into the know."

Sam said, "Might be. V you're willing, Eddie." Ar said yes, Sam sent out an orchestra.

From that moment Dale into a tailspin. It was on

she'd ever known. Scared, though she'd never danced properly, Eddie was patient. The girls were excited. They—and the singer—worked all day on the stage while she was rehearsing the infinitesimal stage, fixing this, that, taking it in here and there.

At ten-thirty. It wasn't much except for the two comics, new—because they were all excited about Dale. Sam hung in the door of the dressing room, a cigar that he never remembered. Then the emcee made an announcement. Julie had met with the audience in for a surprise. Maybe they didn't know their little cigarette girl used to be the partner of Joe, of Joe & Julie. And she was filling in... Dale heard and felt Eddie's hand on his chin. Chin up, keed. You can

step into a fog. There was applause, there was applause, the strained, eager faces of the girls rooting silently for the actress. It was a new and when it was over, a half dozen bows, and she went into the dressing room. They brought her a drink and they all said she'd be a star. Dale wanted to cry because she hadn't been wonderful.

She was professional to now. She had danced as she had; so that wasn't the trouble. It was that Eddie was better—infinitely better—than he'd ever been when he was a partner. He was going places, high places. She was able to see it when she was the girl. But she saw it now. He was all too kind to her... back to front. She had been wonderful for a fill-in; for a cigarette girl. She put it that way, but she knew Eddie was kind, too. He was a partner, Eddie wasn't. But she was the restoration of the old act. Clark was out. A finished

surprising thing was that her heart, rather than her head, had added up to Goodbye, Eddie. She thought that would cut deep but it didn't. Eddie was a man with an overwhelmingly ambitious heart. He didn't register with the love affair had really ended the day they divorced. Dale hadn't realized it until this morning. She'd been clinging to an illusion.

She didn't want to continue for the long, heartbreaking week of rubbing salt in the wound. She was going through the routine of her show, knowing that it meant nothing. Julie's ankle wasn't too bad. The deal could be cut down to a few days. And so, partly because she talked it over with Julie, partly because she couldn't stand the pity and false sympathy of the place, she slipped a change in her costume, took a taxi and the address of Julie's hotel.

She was a simple, unpretentious, inexperienced hotel girl on Flagler Street. She got into Julie's room and went up. She started to rap on the door and a maid answered. She was happening inside that she heard rhythmic, clicking, tap-tap-tapety-tap. Even, firm, Dale put her hand on the knob and opened to her touch. She

Julie was there. She was scantily clad but that wasn't what Dale noticed. What she did notice was that Julie wore dancing shoes and that she was practicing a new routine—practicing on two good, strong ankles.

Dale said, "What gives?" and Julie made no pretense of misunderstanding. She dropped into a chair and said, "I'm sorry, Dale. Who tipped you off?"

"Nobody." Dale shook her head. "Your ankle's okay?"

"Sure, it's okay."

"Then why...?"

"It was a frame-up," Julie explained. "I was paid to play sick."

"Eddie...?"

"No. Eddie doesn't know anything about it. It was Sam."

That was a tough one. Dale repeated, "Sam?" like someone in a fog and then asked, "Why?"

"I don't know. He wouldn't tell me. But he offered me something nice and I couldn't figure where it'd do any harm." The girl's eyes were kindly. "How'd you make out?"

"Terrible. I used to be better than Eddie. Now I'm not in his class." Her voice pleaded: "Can you be back in the act tomorrow night?"

"Sure, I can. If that's what you want."

It was what Dale wanted. But she wasn't thinking about that as she took another taxi back to Sam's. There was an answer somewhere but she couldn't get it. Eddie? She might have understood it if he'd pulled the frame. But Sam? Where did Sam fit in? What right did he have butting into her business? What was the big idea behind it?

She got back to the place five minutes before the second show. Eddie was in a ferment. He'd seen her go out and didn't know what was what. Afraid she might not get back in time.

Dale danced grimly through that second show. No fire; no pep; going through the routines mechanically. And with each beat of the music, with each tap and twist and twirl, she found herself getting more confused and more angry.

It was Sam. She couldn't figure him in this thing, no matter how she looked at it. She couldn't even understand her resentment but there it was. She had seen him right after the first show, wandering around with an odd look on his lean, kindly face which said, plainly as words, "I can't lie to you and I don't want to tell you the truth." Right now he was sitting at the bar, watching the act.

THE show ended. Dale waited until the orchestra started to give out with dance music and then she went trailing down to where Sam was sitting. He started to get up as she swept down on him but she said, "Just a minute, Sam. We've got things to talk about."

She talked fast. Perhaps there was the faintest hint of hysteria in her voice. Things had been happening fast; surprises had hit hard... like finding out, for instance, that Julie's ankle was not injured. She told Sam about that. She told him she knew the Eddie affair was ended, finished, through, done with. She told him Julie would be back the next night and she told him that she knew he'd engineered the whole wacky deal. "But why, Sam?" she finished. "What was the idea? What does it all add up to?"

Sam looked very unhappy. He mopped his forehead and twisted on the bar stool. He told her to skip it but she refused to skip it. She wanted an answer. She made him talk.

"So I stepped out of line," he said awkwardly. "I thought maybe it would work out."

"What would?"

"You and Eddie. You used to be married to him. Ever since you left him you

HICKOK SCORES AGAIN...with HICKOK CAMEOS

New Hickok Cameos...on tie chains and tie bars, \$2.00; key chains, cuff links, \$2.50.

The most sensational men's jewelry idea in years... these Hickok Cameos... typical of Hickok's alert, you'll-like-it styling! Finely modeled classic heads... gold-colored on richly contrasting backgrounds... treated in a modern manner. Traditional smartness of cameos... plus 1942 ingenuity... See them now!

CONSOLIDATED AIRCRAFT—These four-engined LIBERATOR bombers, like the equally famous CATALINA and CORONADO flying boats, have long been in production at one of Consolidated's great factories. They are now rolling out in volume from a mechanized assembly line.

DOUGLAS AIRCRAFT—Designed as bombers, the Douglas airplanes shown above are highly versatile and have seen action as pursuits and night fighters as well. Hundreds of other Douglas planes, from dive bombers to giant transports, are streaming out from Douglas plants.

VOUGHT-SIKORSKY AIRCRAFT—KINGFISHER Observation Scouts were recently cited for their successful attacks on enemy submarines. Hundreds of them have been delivered to the Navy, and soon will be joined by quantities of the powerful Vought CORSAIR shipboard fighter.

REPUBLIC AVIATION—The Republic THUNDERBOLT with its 2,000-h.p. Pratt & Whitney engine, is being hailed as the Army's champion pursuit plane. Speed, range, altitude and blistering fire-power make the THUNDERBOLT one of the world's most formidable airplanes.

First Line

AMERICA'S *offense* against the Axis is already rolling on the production line of the aircraft industry.

At the beginning of the emergency, this industry was already ready with superior types of airplanes, engines and propellers. Its next responsibility was the volume production of these types. The photographs on these pages show how well it has been meeting this responsibility.

Heavy bombers, medium bombers, dive bombers, fighters, pursuits, trainers and transports are streaming out from production lines in factory after factory to meet the 1942 goal. Vastly expanded, the industry is now expanding still further. At the same time, it is giving every possible assistance to other industries.

★ The scenes pictured on these two pages show only a part of the rising output of the American aircraft industry.

VULTEE AIRCRAFT—The basic trainers shown above are being assembled on Vultee's pioneering mechanized line, and are being rushed to completion for widespread use by the Allies.

above

BEECH AIRCRAFT—Each of these Beech twin-engined trainers will be used to teach hundreds of bomber pilots. Especially designed for this task, they are helping to launch the mightiest offensive force in the world.

NORTH AMERICAN AVIATION—These fast North American medium bombers, lined up for fly-away delivery to the Army, combine speed, range and striking power. These airplanes are a small fraction of the output from one of North American's factories.

LOCKHEED AIRCRAFT—This assembly line is the birthplace of HUDSON bombers, long famous for their brilliant record in the R.A.F. On similar lines in the Lockheed and Vega plants, hundreds of LIGHTNING pursuits and VENTURA bombers are being built for the United Nations.

GLENN L. MARTIN CO.—The B-26 is one of the latest Army bombers to enter quantity production. Double Wasp engines drive it at a speed approaching that of the fastest pursuits. Other Martin planes in production include the BALTIMORE bomber and the Navy's MARINER.

BACKYARD BARBECUE

Grand Fun! Little Expense! Easy to Manage!

THE SET-UP

Any outdoor fireplace or a portable grill serves as base of operations. A sturdy bench covered with a checked cloth makes a fine serving table. Use pie-tins for plates—bandanas for napkins.

Simple—But Man, Oh Man! Here's a real Barbecue Sauce.

Mix together ½ cup butter, ½ cup Heinz Tomato Ketchup, 1 tsp. salt, 2 tbs. sugar or light corn syrup, 2 tbs. Heinz "57" Beefsteak Sauce, 2 tbs. Heinz Cider Vinegar, 2 tbs. Heinz Worcestershire Sauce. Bring to boiling point. Keep sauce warm while meat is cooking. Every few minutes baste meat with sauce—using a new dish mop, large butter brush or cloth tied to end of a stick.

What to Barbecue: Grilled Spare Ribs, Hot Dogs, Chicken, Hamburger, Ham Steaks, Pork Chops or Roasts are all candidates for barbecue honors. Cook in the usual way—keep basting with barbecue sauce till done. Then—fall to!

Heinz Tomato Ketchup has a flavor that can't be copied—for it's cooked the home-way—to an old farm recipe.

With a thrifty dash of Heinz Tomato Ketchup, you give your cooking the subtle richness of Heinz Vintage Vinegar and prize, vine-ripened tomatoes carefully blended together and perfectly seasoned! Keep a bottle handy for steaks and chops, too. Heinz Ketchup is so full-bodied you can afford to use it often!

FREE! Fascinating new booklet on Sandwiches—all kinds for every occasion! For your complimentary copy, write to H. J. Heinz Co., Dept. C-5, Pittsburgh, Pennsylvania. (This offer good in U. S. A. only.)

HEINZ TOMATO KETCHUP

were't sure whether you were still carrying the torch. And so long as you weren't sure . . . well, there wasn't another guy in the world. There was only one way to straighten things out, and that was to fix it so you'd get back into the act. No matter how it worked, you'd know where you stood with yourself."

Dale felt kind of funny—sort of hot one minute and cold the next.

"You mean, Sam, you were thinking about me when you did this?"

"Maybe."

"You wanted me to click . . . and to find out all over again that I was in love with Eddie?"

"Yes. If that's how it was."

Her eyes met his steadily. "Well, it wasn't. I found that out for sure. I don't belong with the act or with Eddie either. So . . . where am I?"

"You're here," said Sam. "You're still working here."

"Yes." Dale stared around the room, full of the odor of stale drinks and tobacco smoke. She looked hard at Sam. Things were beginning to hit hard—like coming out of a dream, slipping back into a world of reality. She said, "You got to keep talking, Sam."

His voice wasn't quite steady. He said, "You got to ask yourself questions, Dale . . . and answer 'em yourself, too. For instance: What kept you here this long? You didn't have to hold onto a job like this."

He stood up. There was a certain dignity about him—a quality she'd never seen before.

He said, "Think it over, Dale. Think it over all the angles."

He left her there. And ing—thinking hard.

Sam was right. Something to keep this job. That had kept her from when she realized that for Eddie had died of c

Panama Patrol

Continued from page 20

—in a manner of speaking. From the Zone, no lights stab up at you but there's a sultry glow upon the ground from hooded lamps, and millions of stars mock the futile gloom. Ancon, Balboa, and Quarry Heights, whereon sits the quiet, hewn-faced commander of the Canal Defense, Lieutenant General Frank Andrews, are shadowy but wholly visible. Gilky and the rest of us, streaking across the star-spangled skies, could blast Ancon, Balboa and Quarry Heights to blood and dust (and die happy) if we were the enemy.

We could smash the Pedro Miguel Locks if we could get this far. However, this is no secret. The Japs know it. The Nazis know it. For years we've been giving away thousands of maps and cross-section charts, photographs and engineers' tables, until the Canal itself hasn't a ghost of a secret left. All the enemy would have to do is get this far in and this far down. That's all. That's the enemy's problem.

The Canal Zone Holds Surprises

But even if he gets by Gilky and the interceptors, his troubles will have just begun. We can go no further along this line. Use your imagination and don't boggle at improbabilities. The Canal Zone is tropically rich and riotous with defense surprises. We've heard the Albrook organ play its *Danse Macabre*. Have you seen and heard Walt Disney's *Fantasia*? That gives you a thin hint, as the Old Mill Stream gives you a hint of Niagara Falls. Gilky built the Albrook organ. You should hear him play it. We've climbed the mountains where former bellhops, divinity students, milkmen, soda jerkers, college sophomores and ticket scalpers have become jungle troops, antiaircraft artillerymen, bomb and bolo fighters swinging from tree to tree, screaming back at howler monkeys. The temptation is strong to tell you more of what we've seen be-

low there, from Mexico to America—and beyond. I the speedy Jap to find out dict no joy for him when These lads, shackled to take the offensive, are a fight.

This is the place to be, upon the scramble of peo tered communities, the cl mile gash of free and imp that is the all-important below there, afoot or in taxis driven by brown m the chauffeurs of prewar F scary old ladies, you're confused. The only thing is that those Panamanians ought to be in the tank of their brothers who drive t public busses. Incidental on the left side of the s British. We asked one of said that there'd be too r if he drove on the right, good a reason as anyone for anything down there.

up Central Avenue on the flank hedr Plaza is the Presidencia— na's white House. Therein sits Ricardo Adolfo de la Guardia, na's president. De la Guardia be- present as the result of last Oc- coul'état which sent the Huey sh Adolfo Arias into exile. In ngton eyes, Arias was tricky if eachous, a little too prone to induly to the cause of our es. Perhaps however he was y a crowd politician eager to

drive ■ harder, more profitable bargain with the Canal's owner, the United States.

We haven't time to go into that but he surely got the works when the time came; and de la Guardia, a less spectacular statesman whose heart is in Panama not Havana, has taken over, co-operating completely with Wash- ington. If we had time, we'd tell you how it happened—a grand tale of how to get rid of ■ political boss. Too bad the United States hasn't studied the Latin-American procedure. She could use it occasionally and be the better for it.

Looking down through the clear, dark blue we can see the Canal Administra- tion Building, the seat of the civil gov- ernment of the Canal Zone. From that headquarters, Major General Glen E. Edgerton, governor, and Colonel Joe Mehaffey, engineer of maintenance, rule the affairs of seventy-five thousand civil employees among whom the caste sys- tem is more than somewhat prevalent. It is just as impossible for the low-paid worker (the silver set) to break into the social circles of the upper brackets (the gold crowd) as it would be for the guy who mows your lawn to ride Mrs. Astor's plush horse. But neither Edger- ton nor Mehaffey, both tough-minded United States Army engineers, are much concerned with anything but running the Canal.

One last look before we strike out above the jungle, over the Pacific, to the far-flung airfields, the battered mountaintops. High above all these groups on Quarry Heights is the com- mander—General Andrews. Andy's a flier too. He's pushing toward sixty, was built for offensive warfare. He's an old cavalryman, turned airman. We didn't fly with him but saw him bring in his huge Army transport plane as neatly as you'd wheel a pram the length of ■ suburban block. He gives you a feeling of deep security. He smiles in- frequently. Even ■ professional grinner would find little to smile about in Andy's job.

At last we're off to see what lies be-

A MESSAGE OF MAGNIFICENT COURAGE HATE and SHEER MILITARY GRID

"How is China's morale?" his American friends asked Lattimore. "Superb!" he assured them, "what the Chinese worry about is: How is *our* morale?"

Here is one of the great stories of this or any war—how China, fighting with rifles and bayonets against tanks, planes and heavy artillery, stopped the Japanese army dead in its tracks.

In this stirring article, Owen Lattimore, President Roosevelt's personal envoy to Chiang Kai-shek, reveals the priceless secret victory we may learn from China's fighting millions.

Few men know more about the strategy China has learned and the courage she has gained from these years of tragic suffering. And few could tell the story so movingly, so vividly. If we use China's great secret we'll win a quicker victory and a greater peace.

Don't miss "How to Win the War"—one of more than 100 important features in the big June American Magazine, now on sale at your nearest newsstand.

- **"NIGHT BEFORE THE WEDDING"** by Noel Pierce, a dramatic novel of stolen love and mad impulse in dazzling war-time Manhattan. Beginning in this issue.
- **"WILD MEN FROM HEAVEN."** Don Eddy writes about the Army's newest daredevils—the Paraski Troops.
- **COMPLETE MYSTERY NOVEL.** "Deadly is the Diamond" by Mignon Eberhart, has all the thrills and excitement you'd ask of a good \$2.00 novel.
- **HAILE SELASSIE**, Emperor of Ethiopia, asks "What of the Future?" A stirring message for Americans from a deadly foe of Fascism.
- **"I PILOT A BOMBER"** by Lieut. H. D. Maxwell, Jr. How the Army Corps is making the world's best pilot.
- **ELEVEN FINE SHORT STORIES** from the best pens in the country. Don't miss Carver's moving tale "Mr. America the President." "Nothing to Report" a thrilling account of a mouse who joins the Navy and meets a real thing.

They are a talented mob. You could dig up a small professional dance band. In Ye Olde Bucket of Bloode we were about to be entertained by a magician when the alert sounded, and just as mysteriously as they had appeared, the airmen vanished. Seconds later the jungle roared as ship after ship took off. So did we. Gilky swinging east again. He's a veteran but if he lives to be a hundred he'll never be an old-timer. Not old-timer stuff. They say he could fly a rocking-chair if you gave him a couple of palm-leaf fans. Back in the first World War he flew Martin biplanes which made sixty miles an hour and inspired the old Army brass hats to predict that they had no place in combat because they were too fast and would overshoot their target. Some of these men are still in the Army, still shaking their heads.

Gilky was getting bored. No Japs. The best we could do was a buzzard. It made a three-inch dent in one of our wings.

him on a rubber raft, he had sunk to his shoulders. And that wasn't all. The tide was coming in, bringing sharks with it. The rescue gang, taking two hours to make a quarter of a mile, shot three of the sharks. Bill was right glad to see us.

He introduced us to a kid flier whose hobby is gun collecting. He has everything from beautifully inlaid Spanish matchlocks to cunning little killers made in what was Czechoslovakia. Somebody has told him that the Japs have a .25-caliber automatic that nobody in the Western Hemisphere has seen yet. Very solemnly, unmindful of the kidding of his fellow airmen, he tells us that he's going to be careful about bagging his first Jap. He hopes to force his Jap far earthward before blasting him. He doesn't want the Charlie plane to burn before he has a look for one of those .25s.

Throughout the whole Interceptor Command, half the men make model

but the buzzard was all through in a lovely explosion of feathers. Buzzards fly by the hundreds over the Isthmus. They got used to the slower planes, diving out of their way. But the new fast fighters have caught them unprepared for real speed. The pilots don't go for them intentionally because they're oversize buzzards and can do a lot of damage if they smack you square. Anyway we had to be content with a large buzzard before landing in our next jungle hideaway.

Rescue from Quick Mud

Lieutenant Jack Burr, who used to be swimming coach at Miami University, and Lieutenant Jim Johnston, a pitcher who belongs to the Boston Red Sox, gave us something to eat, and Lieutenant Bill Buxton of Memphis, Tennessee, told us why he was very glad to see us. Bill's plane caught fire as he was coming in. He bailed out but landed in the quick mud near the coast.

He fought hard and his life preserver helped but he was three hours in that mud, and before the rescue party got to

airplanes. They don't follow conventional lines, constructing stereotyped plans of ships already in existence but build their own ideas, their dream ships. Gilky says that the lads breed some swell ideas, practical too. And why not? When they're not doing that, they study the schoolbooks they abandoned or they go in for archery. They compose music. They paint. We saw three novels in the making. We caught two poets at their trade.

They'll hike miles on their nights off—when they get them—to the native villages and dance the *tamborita* or more primitive dances with the San Blas, the Cuna and the Chocoi Indians, learning things about the tom-tom that Gene Krupa never dreamed of. In exchange they break out into American swing for the Indians, who are politely appreciative but make it clear that they think it somewhat unnecessary. Until they got to know better they joined the San Blas Indians in a few bowls of *chicha*, compared with which our American popskull corn likker is a standard temperance drink. It takes only two slugs of *chicha* to teach the white man

that you have to be born to it. The Indians have taught them *balseria*, a swift, lethal game wherein you throw mahogany spears at one another and laugh yourself sick if you get a guy in the belly. But it's all in the spirit of good fun, and even the victims try to appreciate good throwing.

The night grows darker as we approach the dawn. Gilky knows what he's doing. He's been flying these skies for two years. But we're somewhat confused in our directions. When you're in the Canal Zone you're confounded at first to see the sun rising out of the Pacific. But that's as it should be; the Pacific end of the Canal is twenty-seven miles east of the Atlantic end. However, as you fly toward South America, soar over Colombia and on toward Ecuador, things become normal again.

Throughout the night, our radio tells us lots of things we may not repeat here. But the suspicion grows that the Japs have a base or two in western South America. It is still a suspicion, but one that won't die. We know the spots where they are most likely to be. The South Americans are helping us scout them. When there is any certainty, we'll blast them. We're tired of watchful waiting, of appeasing. But that's what the Canal's defenders are watching closest. Two, three or four enemy planes, hastily assembled, bent on a suicidal raid, might make the attack. An attack from a source like that is more likely than from a carrier five or six hundred miles offshore. Wait and watch! It's grueling work, tough on the nerves, much more punishing than aggressive warfare.

What are We Waiting For?

One of General Andrews' jobs is to keep his troops calm, but every time there's a fresh outbreak of Nazi submarine attacks back yonder in the Caribbean, the same old growl is heard:

"Why don't we get going? What are we waiting for? Let's take those Vichy islands—Martinique and Guadeloupe! That's where the Nazis are refueling, taking on ammunition. Let's clean the devils out!"

In the predawn blackness we talk to headquarters back at Albrook Field. We hear the night's reports from South America, from Costa Rica, Nicaragua, El Salvador, Guatemala, Mexico and other countries. We know that great convoys bearing American troops, planes, guns, food, ammunition are hurrying darkly down the Pacific, bound for Australia and MacArthur.

We hear that our jungle troops, kept informed by the intelligence sections, have rounded up a half dozen strangers forty miles or so west of the Canal. The prisoners were caught with their mules. The mules were very important. They carried short-wave transmitters on their backs—small affairs easily concealed by a blanket. There's a pretty good road from Panama City to David up near the Costa Rican border. But what wouldn't we give for that Inter-American Highway now! The transmitters might have operated from cars on this road. But with a mule you can get into the jungle where the white man can't follow. Fortunately, loyal natives can, and they can report to Captain McIntire or the Army Intelligence—which they do and did. We're forbidden to repeat rumors. We don't think we are doing so when we say that quite a number of men trek into those jungles who never come out. It's all nice and mysterious—and tough.

But they'll probably send the captives to the internment camp in the Canal Zone, and very lucky the prisoners will be. That internment camp is quite a commentary on the camaraderie existing between Central America's Germans, Japs and Italians. The

NAVY ANNOUNCEMENT TO COLLEGE FRESHMEN AND SOPHOMORES 17^{THRU} 19

...and High School Grads who are planning to go to college

You want to serve your country! Why not serve where your college training will do the most good? Under the Navy's newest plan, you can enlist right now. You don't have to quit college. You can stay in college, continue your studies and qualify to become a naval officer—on the sea or in the air.

Who may qualify

If you are between the ages of 17 and 19 inclusive and can meet Navy physical standards, you can enlist now as an Apprentice Seaman in the Naval Reserve. You will be in the Navy. But you may remain in college, taking regular college courses under your own professors. Your studies will emphasize mathematics, physics and physical training.

After you have successfully completed 1½ calendar years of work, you will be given a classification test. This examination is competitive. It is designed to select the best men for training as Naval Officers.

How to become an Officer

If you qualify by this test and can meet the necessary physical standards, you will have your choice of two courses—each leading to an officer's commission:

1. *You may volunteer for training as an Aviation Officer.* In this case you will be permitted to finish at least the second calendar year of college work before you are ordered to active duty for training to become an officer-pilot.

However, at any time during this two-year period, you may have the option to take immediately the prescribed examination for Aviation Officer . . . and, if successful, be assigned for Aviation training. Students who fail in their college courses or who withdraw from college will

also have the privilege of taking the Aviation examination. Applicants who fail to qualify in this test will be ordered to active duty as Apprentice Seamen.

2. *Those who qualify in the classification test and do not volunteer for Aviation will be selected for training to be Deck or Engineering Officers.* In that case, you will continue your college program until you receive your bachelor's degree, provided you maintain the established university standards.

Those whose grades are not high enough to qualify them for Deck or Engineering Officer training will be permitted to finish their second calendar year of college. After this, they will be ordered to duty as Apprentice Seamen, but because of their college training they will have a better chance for rapid advancement. At any time, if a student should fail in his college courses, he may be ordered to active duty as an Apprentice Seaman.

Your pay starts with active duty. It's a real challenge! It's a real opportunity! Make every minute count by doing something about this new Navy plan today.

DON'T WAIT...ACT TODAY

1. Take this announcement to the Dean of your college.
2. Or go to the nearest Navy Recruiting Station.
3. Or mail coupon below for FREE BOOK giving full details.

City & State _____

Military Police have discovered—by the blood, sweat and tears route—that the punishment most dreaded by refractory Jap prisoners is to move the little yellow rule-breaker over to the German sector for a couple of days. The Nazis reduce the Nipponese ego quite perceptibly, and the Jap begs to be returned to his own people, pledging good future behavior. And all the M.P.s have to do is threaten the troublesome German with a day or so in the Jap cage. He wilts at the mere suggestion.

If an Italian gets balky they exile him to either the German or the Jap quarters. He is loved by neither and, being more emotional than either of his Axis partners, he begins to scream repentance the moment the guards come for him. At his approach, both the Japs and the Nazis go into their burlesques of Mussolini, wringing their hands, hiding behind one another, beating their chests, weeping convulsively. There used to be nearly a thousand Axis-lovers in the bull pen. Gradually they are being moved up to the States where, in an emergency (an attack), they'll be safer or at least not so dangerous.

Confinement Breeds Contempt

It's interesting to walk through the compound, watching characteristics. The Italians are almost servile, pleading for a smile, a kind word. The Nazis stand rigid. They'll salute you if they think that you are authority. Most of the Japs are hissingly ingratiating, replying to questions with many deep bows, lynx-eyed. We used to think them cute. In the internment camp they're much cleaner than the Nazis and the Italians. The Italians just can't seem to manage cleanliness all by themselves. The Japs and the Germans complain to the M. P.s that their Latin friends stink.

No one pretends to believe that all the subversives, all the Axis agents and all the possible saboteurs in the Canal country have been rounded up. Most of the military and the astonishing Captain Leo McIntire believe that attempts at sabotage are the ever-present danger, and that attempts upon the locks may be made as a prelude to an attack in force from the air. They are watching. We advise no one valuing his life to meander into the immediate vicinity of the Canal after dark.

Watchful waiting isn't the best for nerves. There are times when the Army in Panama would give anything for a fight. But thus we write, actual warfare has been nearer to the Canal than the sin many tankers and supply ships Caribbean and the racing attackler's U-boats on the naked little oil-refining island of Aruba. When in Aruba during the attack. Here in Panama they laugh at that attack we say they're jealous. Of course wasn't much of a battle but it's the one we've had to date. A couple of shells crashed through the barracks were sleeping in. Maybe they were but they didn't do our roof any good the garage nor the car in it. Move we got out of that barracks just as if we'd been missed by high-sive stuff. (Note to the kid soldier from Indianapolis who jammed rifle muzzle into our ribs: Honedier, we were just running to the to have a look at that submarine we weren't reaching for a gun dawn's early light. We were just on our pants. Honest!)

All right, Gilky, laugh at the of Aruba! Show us a better war abouts! Say those shells were Boy whizzbangs! If you had been you'd have loved it, spoiling for—even a little action—as you a

We're back in the Canal Zone bookful of notes about kids who are flying Army planes, who have made of boa constrictors which they've after Hollywood's most provocative oomph girls, and of howler monkeys which they've named after members of Congress and of Mr. Roosevelt's innet.

"Good morning, Senator. Turn for a good windy day, I see. How about a nice pension this morning? Are you this morning, Mr. Congress? Have a seat! Don't worry about snakes. You're probably used to Have a nice iguana sandwich. It's terrible but it's reeking with six vitamins, one for each letter of the alphabet. Smells like Washington healthy, sir, healthy!"

Otherwise, flying the Isthmus, the Pacific, with Gilky has been a miserable flop.

No Japs!

THE END

"Well, it's finally happened—th' colonel tripped over a broomstick while makin' an inspection!"

New War Horses

Continued from page 19

In 1941 when the Army Remount Service, scouting from Vermont's farm-forever countryside to the lonely back of Puget Sound, bought horses. This was more than had been purchased all during the previous war. While the attention and effort of the nation were concentrated on the increased production of mechanical juggernauts, keen-eyed Army horsemen were searching ranches, stockyards and back-roads for war's oldest transportation, the transportation that can ford the most surmount mountain ranges and the toughest forests and jungles. These horses are searching still. Few back-country farms or remote cowpunchers' ranches can escape their careful scrutiny. Wherever horses work or forage, officers of the Remount Service invariably show up to feel muscles, examine hoofs and judge gait and height. No branch of the War Department roams so far into the hinterland.

The Number Still Increasing

In 1940, the Army bought only 2,323 horses, but once actual conflict seemed America's threshold, the quota was multiplied more than ten times. The exact number which will be purchased in 1942 is a military secret, but it is sufficient to say that if you own a horse between the ages of four and eight, the Remount Service wants your animal's services. To date this year, the Army's purchases are far ahead of even the 1941 figures for the same period. If wishes were horses, the Remount Service would have many more frisky steeds available. Tanks and trucks can be built as speedily as mechanical ingenuity can master blueprints and machinery, but it takes five years to breed a horse fit for military campaigns, and no power on earth can speed the time.

Besides all this, the war has shown that horses can trek across terrain where the most advanced mechanical creations cannot. When the Army was holding extensive maneuvers along the Sabine River in Texas and Louisiana, a steady rain lashed the region for three days. The roads turned into quagmires, and the military highways were left behind, tanks bogged down until their treads disappeared. Not without some pride and reluctance, Colonel Hardy, present as an observer, was able to report, "Not a single motorized or mechanized unit could move forward to take up its initial position off a paved road even to start the war." The cavalry and the horse soldiers were the only ones which could move, and they did move and they were there at the locations at the assigned time. So the horse is an integral part of the American Army once more, and county agricultural agents in all forty-eight states have been instructed to collect intelligence information on every horse in their areas. Animals not required for minor essential travel may soon be required to, provided all tests are met. What are some of those tests? What kind of speed does the Army want in this time of crisis, when our cavalry and artillery may be on battle fronts in both hemispheres, on five continents and all the way from Alaska to the tropics? Watch, then, as Ranger is inspected, regarded for and bought at Harold Rabines' wilderness ranch, deep in the oak-wooded basin of the John Day River, eighty-four miles from the nearest railroad.

Ranger was the first prospect of the morning as the Remount detachment trudged down the road in the sunrise

after an Oregon breakfast of beefsteak, biscuits and hashed browns. Cy Rood led Ranger into the yard back of the big red barn, while Colonel Koester, a chunky, bronzed man who used to ride for American Olympic teams, watched with practiced eye. Ranger stopped and the colonel walked up to him, telescoped a measuring stick out of his ivory-headed cane and leveled it on Ranger's withers. "Fifteen hands," he called.

"Fifteen hands," repeated Captain Cecil Edwards, scribbling the information in a little black notebook. Ranger had satisfied the first requirement. Only horses fifteen or sixteen hands high are eligible for the United States Army.

Next, the veterinarian of the troop, Lieutenant Colonel William H. Dean, jaunty in breeches and a camel's-hair vest, slipped a gloved hand into Ranger's mouth over skittish protests and peered at the teeth. "Four years old," he announced. The oval-shaped markings on a horse's incisors tell his age to within a few months, so Ranger had passed another test. Army mounts must be between four and eight years.

Colonel Dean circled around Ranger, then looked at his head again. "Chestnut gelding with a star, a broad race and a snip." This described the white blaze on Ranger's face. Noting the white leg markings, the veterinarian added, "Three-quarters stocking, both hinds."

All this was scrawled in the black notebook by Captain Edwards. The Army will not consider horses which might be readily visible to an enemy observing from airplane or hilltop. "I want a column that matches the terrain," growled General Oliver Howard in 1877, as he led the 1st United States Cavalry across the Oregon uplands in pursuit of Nez Percé hostiles. This is still good Army doctrine, particularly since the great expansion in military aviation.

Brown or Black Preferred

Major General John K. Herr, our present chief of cavalry, believes that horses are becoming increasingly important in the Army because they, unlike mechanized vehicles, can leave the roads and scatter across country when attacked from the air. So grays, appaloosas, pintos and other light colored horses are out. Browns and blacks in the various shades are preferred, and their white markings must not be too splurgy.

"Color okay," said Colonel Koester, eyeing Ranger. He picked up one of Ranger's forelegs and examined the hoof. "Shoed properly, foot strong, sole intact," he declared.

The cowpuncher clucked softly and pulled on the rope, and as Ranger jogged around the yard, the two colonels watched closely. A splay-footed horse cannot carry a cavalryman or drag a fieldpiece; and at headquarters, a horse unfit for action is a black mark against the Remount unit that purchased him. Colonel Dean turned to his fellow officer and nodded approvingly.

"All right, saddle him up!" ordered Colonel Koester.

Cy pulled Ranger to the fence, bridled him and cinched on a Western saddle with its big horn. Ranger stiffened once nervously as Cy swung onto his back, leather chaps rustling. Colonel Koester scrutinized the proceedings carefully. "Are you sure he's gentle, Cy?" he inquired.

"Plumb sure," drawled Cy from the saddle. "He's just sorta fidgety this morning. He don't know what to make

The Boy who's doing a Man's Job of Home Defense

The Dutch Boy has a man-sized job on his hands today—protecting not only homes but farm buildings, military structures, factories, against the attack of the elements. He's rolled up his sleeves and is showing what he's made of.

This is not the first war during which white lead has protected American property. It defended the home front even in Washington's time. And today Dutch Boy White Lead does this heritage proud. It holds on with Dutch stubbornness... never cracks and scales... and thus saves the expense of burning and scraping off the old paint when repaint time finally does come around.

And here's a timely point. These days when materials are being conserved it's more important than ever to use a paint that stands up. And there's no more durable paint than one made with Dutch Boy White Lead.

Now Dutch Boy, formerly sold only in paste form, is also available as a ready-to-spread pure white lead paint. Especially designed for two-coat work it comes in Exterior Primer and Outside White. Together they give sparkling white-

ness and complete coverage with two coats—even on unpainted wood. Of course all white lead paint can be colored.

Don't forget—there's no combination like good paint and a good painter. And whichever form of Dutch Boy goes on your home—the famous paste or the new paint—"you're money ahead when you paint with white lead."

Write for Free, 36-page, Color-Illustrated Booklet! Tells you everything you ought to know about buying a paint job. Address Dept. 394, care of the nearest office listed below...

of all the fuss, but he's gentle all right. He won't throw anybody."

"We haven't got time any more to break in horses," Colonel Koester explained.

"He won't give you any trouble," reiterated Cy reassuringly, as he wheeled Ranger into the pasture that sprawled off toward the thick forests.

The Remount officers followed on foot. "Trot him," commanded Colonel Koester.

Cy made a wry face. The trot is the standard gait of the cavalry, but cow-punchers and wranglers eschew it. To them, posting is an evil chore. Their choice is to loaf along at a walk or bang away at a gallop. But orders are orders, and Cy brought Ranger into a trot.

This was an important test. Horses that pace or single-foot but will not trot are worthless to the Army. As part of the accelerated rate of modern warfare, the daily journey expected of an American cavalry troop has been increased from 40 miles to 65 miles. A brisk trot is the means by which this extended mobility is to be attained. So Ranger has to be able to trot and he has to have enough wind and endurance to trot a long way.

Sound of Wind and Limb

After the two colonels had ratified Ranger's gait with a nodded "Okay" to Captain Edwards for the notebook, Colonel Koester told Cy to let him go at a gallop. Twice the wrangler, bandanna streaming in the breeze, took Ranger around the big pasture in the direction of the snowy ramparts of Strawberry Mountain. As Ranger came in, he was panting hard. Colonel Dean grabbed the reins and bent over to listen to his breathing.

If a rasp came from his lungs, Ranger would be returned to his backwoods grazing on the edge of the Malheur National Forest. A winded horse is of no value to cavalry or artillery on the march, especially inasmuch as the mounted units of the American Army must surmount rugged, slanted country which renders mechanized equipment useless. If Ranger's respiration was clear he would become part of that Army, and where he would go, only the fortunes of war could tell.

Colonel Dean straightened up. "Wind sound," he said.

Colonel Koester, cane under arm, Captain Edwards' notebook open in his hand, led Ranger over to where Harold Grabner leaned against the high fence of lodgepole pine. The rancher pushed his flat five-gallon hat back on his forehead and fell into step with the Army officer. They moseyed across the barnyard while the topic of their conversation followed at as discreet a distance as the reins would permit.

"Your horse, Harold?"

"Yep, Fred."

"H'mm. Let's see what the notebook says about him." They walked a minute in silence. Colonel Koester spoke again: "Not bad, but he might carry a little more flesh."

"He's a good horse, Fred. He was sired by Point Blank. That counts for a lot. Point Blank's been one of the best stallions in Oregon."

Cy joined them, and Colonel Koester stopped and pointed at Ranger with his pencil. "Hope this horse of yours can stand up under tough going."

"He's only four years old. The Army'll get a lot of service out of him."

"I think a hundred and seventy dollars is a fair price, don't you, Harold?"

"I do, Fred."

"All right then, Harold?"

"Yep, Fred."

On a folding shelf attached to one of the dusty automobiles of the Remount Service, a bill of sale setting forth Ranger's specifications all the way from gait to markings had been drawn up by Captain Edwards. The back read: "I hereby swear that I am the owner of the horse described on the reverse side and have this day sold same to the United States Government." Harold Grabner signed, and Ranger was the property of his Uncle Sam.

In the past year this has become a familiar transaction in every rural area in the United States. Thousands of horses like Ranger have been sold to the Army. Thousands more will be sold in the months to come. Remount detachments are constantly on the move. In 1941, Colonel Koester and his troop traveled 100,000 miles and bought 3,224 horses. To get this number, they looked at 14,000 hopefuls. Only one in four passed muster. The qualifications are severe and all Remount officers scrupulously careful.

There are seven Remount divisions—Western, Southwestern, Northwestern, South Central, North Central, East Central and Eastern. They include all forty-eight states. From various Army posts in these areas, Remount officers journey to farming communities and the gaunt open range in search of horses. Generally they announce fixed schedules in advance. Thus ranchers in Texas know, for example, that on a certain morning the Southwestern Remount detachment will be at the O'Keefe place near Sierra Blanca. From hundreds of miles around, cowboys and ranchers and professional horse breeders bring in animals.

Informality rules these occasions, and many of the ranchers call the Remount officers by their first names. Before the present emergency, in the years when the Army was buying only 2,000 horses annually, the Remount units were nevertheless familiar to most of

The are 105 Remount stallions as, twenty each in Oregon and ten in Louisiana, three in Ha- vo in Connecticut, one in Massa- s as so on almost everywhere erican flag flies.

Old Dobbin Isn't Through

use is is the most mechanized hisry, the American people verlooked the fact that it is still n with the horse is an important Me individuals thought the omen of the armored division the ad of Old Dobbin at the Yet there are 200,000 horses in asian cavalry, and 800,000 horses les e packing Soviet supplies. erma have a cavalry of 50,000 in addition to 900,000 horses and carrying equipment. Even the se here 50,000 cavalry horses 5,000 animals to haul artillery gons.

American Army has had a far nuer of horses in use than these other nations. A year ago General Herr said the Nazis had hors, dragging artillery and ces, to United States 11,000. As as the Polish campaign, Hitler's cher obachter reported, "It is exaggeration to say that without the aid advance of our armies have been impossible."

animo being bought by the Re- Serv are shipped to one of Remount depots—Fort Robinson, ska; Fort Reno, Oklahoma, or Royal, Virginia. After a training onditioning period most of the

horses go to the 1st Cavalry Division at Fort Bliss, Texas, or to the 2d Cavalry at Fort Riley, Kansas. The average price paid is \$165. Checks are sent on delivery of the animals at the nearest railroad shipping point.

The shortage of rubber may add to the difficulty of getting plenty of first-class mounts. In agricultural districts, where the Army buys the bulk of its steeds, tire-rationing has restored the essential usefulness of the horse on countless farms and ranches. No longer have rural residents so many horses to spare. On the high plateau of central Oregon, where the Remount Service purchased hundreds of animals in 1941, cattle will be driven down to the railheads this year for the first time in a decade. Cowboys on horseback will replace the huge trucks and trailers which transport companies are now afraid to risk on tire-chewing mountain roads.

Even the Lowly Mule is Wanted

Mules, too, are needed as the American Army realizes that hoofs must supplement treads and wheels. In 1940, the Remount Service bought only 290 pack mules, but last year the number soared to 4,096. The long-eared brayer with neither pride of ancestry nor hope of posterity is still in military demand. His sinews are worth ten trucks when roads dwindle into forest trails. Artillery stuck in the Russian snows, tanks snared by the Malayan jungle have taught a lesson which may be applicable to Alaska and Latin America: that in the wilderness, whether it be arctic or tropical, animal flesh is the most reliable all-weather transportation.

There is a sentimental side to this recruiting in farm, barnyard and polo field. A little nine-year-old girl brought her pony to a Remount inspection near Seattle. Her father hovering in the background made it evident that the desire to sell the animal stemmed principally from him.

"He's a nice little horse," Colonel Koester said to the girl. "Do you ride him?"

The little girl nodded and burst into tears.

The colonel stepped back and cocked an eye at the pony. "However," he added hurriedly, "I'm very much afraid that he's a trifle too small for us. He's not exactly what we're looking for. We can't use him."

The little girl walked away clutching the halter with an expression of ineffable joy.

In a town in southern California the Remount Service bought two fine thoroughbreds from a handsome, dignified woman who needed money to send her tubercular husband to a sanatorium. A high-school girl on a farm in the Rocky Mountains sold her horse to the Army so that she could finance a semester at her state university. A lean, gimlet-eyed cowpuncher parted with his bay gelding at a hamlet in the Sierra Nevadas. He was so crushed and broken up that he could hardly speak. The Remount officers never asked him what his story was.

Once Colonel Koester had to reject a lumbering draft horse that a gray-haired farmer with handle-bar mustaches brought in from the hills. The man was indignant. "He's a good horse," he shouted at the colonel. "I'll bet he's as good as any horse in your whole Army!"

"That's the stuff," the Remount officer shouted back. "We like to hear a man stand up for his horse that way. We don't think much of a man who won't stand up for his horse. You bet he's a good horse but every horse can't be in the Army. You let him do his part to win this war in front of a plow!"

THE END

Keep 'em Shining!

**Simoniz Needed to Protect All
Finishes . . . and Preserve Your
Car's Beauty Through to Victory**

**U. S. Government
Urges Motorist
to Protect Finish
4 Times a Year**

SIMONIZ NOW . . . and save your car's value. Appearance will determine how much your car is worth when Victory comes.

There's Nothing Like Simoniz

World-famous . . . Simoniz is acknowledged as the greatest protection for all finishes. It keeps weather, dirt, moisture, and ultra-violet rays from dulling and destroying the lacquer or enamel. Every finish lasts longer under Simoniz. And each application builds up more and more beauty.

The Sooner You Simoniz, the Better

If the finish is dull, first use the wonderful Simoniz Kleener to bring back all the glorious sparkle and color your car had when new. Don't delay. And be sure you always insist on genuine Simoniz Kleener. In times like these your car deserves the best!

THE SIMONIZ COMPANY - CHICAGO, U. S. A.

Simoniz your furniture, woodwork, linoleum, venetian blinds, refrigerators, and kitchen equipment. It gives the finish a beautiful shine, keeping your home forever beautiful.

MOTORISTS WISE
SIMONIZ

Simoniz Kleener now a liquid, as well as a paste. You can choose the one you prefer.

Simoniz and Simoniz Kleener costs less than other polishes that give but an artificial shine. Obtain yours at hardware, drug, and grocery stores, or write for a list of dealers well as wherever automotive supplies are sold.

the judges rode off a way and dismounted. The gallery dismounted too, and stood around talking, speculating, lighting cigarettes. The horses stood quietly, in contrast to the first day; the foolishness had been ridden out in nine hard days—you could have crawled between the legs of the meanest horse there. Now the judges called R. H. Scott, the club secretary. He joined them, and listened to what they had to say. The judges came back and mounted their horses and rode away, while Scott said:

"The judges request the handlers of Hotfoot and Ambling Sam to have their dogs on the morning course at eight forty-five A.M. tomorrow."

Some of the handlers had their dogs loaded, and some of the followers had made business appointments for the next day; but hardly a man left town that night. The old hand-crank phone in the drugstore was kept busy until after ten o'clock.

The morning was a good one, with only a slight mist hanging over the still muddy grounds. Several amateur photographers and two newspaper photographers floundered in the mud, squatting, squinting, clicking, adjusting diaphragms, changing shutter speeds, winding films, flipping out burnt, clouded flashbulbs. In sepulchral silence sat the judges. Hotfoot walked on his hind legs, in McGinnis' grasp, and whined and jumped about, the quintessence of eagerness.

Ambling Sam stood quietly, not moving; nobody held him, or touched him. Amos Hawthorne had told him to stand, and had mounted his horse, and Sam stood. There was gray about Sam's muzzle, a suggestion of fat on his shoulders, and his eyes did not have the bulging brightness they had had when the stud booklet to prospective breeders was written.

But of course the stud booklet was written six years ago . . . with superb breeding, individuality, brains, and remarkable field quality, this dog stands at the top as a stud animal. His conformation is ideal, tall and racy, yet has plenty of strength; he has the setter shoulder that we all try to breed; his running gear is perfect—long, free and easy stride that takes him over the ground at a tremendous rate, yet light as a fox on his feet. Ambling Sam has a clean-cut head of the bench-show type, with a neck that is long and clean and never will become throaty. He stands straight on his tiptoes, legs straight and well under him, and has the best of feet; with an arch back of great strength and endurance; his tail is straight and tapering, set on at the right place. As to his field-trial quality, all dog men know what he has accomplished. . . . That was six years before, and now the "setter shoulder that we all try to breed" had a suggestion of fat about it, and the long and clean neck that "never will become throaty" had become somewhat throaty.

DR. KING looked at his watch. Time: 8:51. Sky clear, slight wind out of the northeast. "Gentlemen, are you ready?"

Teague McGinnis, wrestling with Hotfoot, said, yes, he was ready, and the gallery chuckled nervously. Amos nodded.

"All right, let 'em go."

Amos said, "Git, Sam!" and Sam shot away as Teague McGinnis released Hotfoot. The dogs ran shoulder to shoulder in the customary race for a few seconds. But Sam had run in too many trials to be diverted from the main object. He turned off, and even as he ran you could see him sizing up the country. Ahead were open fields, and a dog that wanted to do some line running could bust the fields wide open. To the right were the woods, and a dog that wanted to find birds might skirt

them. Sam headed for the woods, turned his horse out toward the course. At 8:55 Sam was in fast flight, and took five minutes without any drawing or suddenly there he stood up and his head high, and looking thing about him was his discolored old teeth and waited.

"Point!" called Duff, and Sam pointed.

AMOS HAWTHORNE dismounted, and drew the saddle boot. He wall of Sam, far ahead in case running, and began qu with his whip, then c There was an explosive birds burst from the se Amos turned toward Sa eye, and fired the gun in

Sam lifted his head and watched the flight of the edly but he did not mov until Amos lifted him by thrust him away. st once he seemed truly im-
for never allowed himself to

pant, mouth open, or to tremble. But
if you watched closely you could see his
upper lip shake with the exhalations,
and you could see the hide stretch tight
over his flaring ribs as he breathed, see
the slow movement of his eyes as he
looked slightly back to see if McGinnis
was coming. . . . Ambling Sam made
up in handling and bird wisdom what
he lacked in youthful fire. When Haw-
thorne wanted Sam to turn, he squalled
and lifted his whip; and Sam, a half
mile away, turned as if he had a string
tied to him and the old handler had
pulled it. As Duff rode the fringes of
the course, he was not seeing Sam, but
his dog Judas. *If I could ever get that
old fool of mine to handle like that I'd
have the best dog in the world.*

The judges had expected to reach a
decision within an hour and a half. But
at that time the only way to have
chosen between the dogs would have
been with a coin. Toward the end of
the second hour, Ambling Sam began
to slow a bit; his casts were shorter and
more often he turned back in to see
Amos, and in the gallery the wise ones
smiled knowingly and some shook their
heads a bit sadly. . . .

Then old Amos stood in his stirrups
and sent a mighty whistle blast across
the hills, and old Sam heard it and
jumped as if stung with birdshot. And
he kept jumping. Every now and then
—not too often—Amos would hit him
with that whistle and Sam would drive.

After his next covey, Sam went even
wider. He was running with animation,
as if with the quail scent he had in-
haled youth.

He ran like a derby dog. They couldn't
believe he was an old dog; and even
Sam forgot it. For when he came to
one of those Tennessee gulleys, he
thought he had the power to clear it.
Sam jumped, trying to clear a twenty-
foot chasm. He was five feet short,
slamming into the side of the red bank
and rolling to the bottom of the gulley.
. . . Duff saw it, and spurred his horse.
But Amos Hawthorne was the first one
to reach the brink of the gulley and see
at the bottom the still dog. Amos was
on the ground before his horse fully
stopped. He started down the steep
red-clay side, only to lose his balance
and go tumbling head over heels to the
bottom.

Afterward, most of them said that
Amos Hawthorne never got over that
fall. Others said it was the sight of his
dog Ambling Sam lying like dead at
the bottom of that deep gulley that

The talk of the town

Blackie: "As I was saying, Whitey—
we're becoming quite a
topic of conversation."

Whitey: "Which proves, Blackie, that
people like to talk about
pleasant things."

● Whenever the subject turns to
Scotch, you'll find Black & White
the center of conversation. People
enjoy describing its fine character,
its superb flavor and bouquet. And
because one good friend tells an-
other, Black & White gets a warm
welcome everywhere.

and nos drove back to Grand on slow, the tires crunching on et grill. Lucie, at the wheel, o keeper head slightly turned grand other would not see the ears at ran down her solemn But Alos was not looking; he

slumped forward, his jaw slack and his eyes staring at the instrument panel.

"I never thought I'd ever see that head hanging," Lucie said finally.

Amos shifted, and said, "Where's that Webster, that rode up them birds right in front of everybody?"

"Squire, listen. He didn't see that point."

"Yes, he did. He rode up them birds on purpose."

"Oh, you're crazy!"

"Where's he at?"

"He's riding in with the horse truck."

"You pay him off and tell him he's fired. And if he ever puts a foot on my place again, he'll wish he hadn't."

Lucie turned the car onto the pavement. "Don't talk like that. Sam ran a good race. Nobody's going to hold that point against Sam."

Amos rubbed his hand against the instrument panel absently as if feeling the smoothness of it. "Aye," he said,

"I'll allow him to feed my dogs, and to ride my horses a spell longer," Amos said, almost whispering in his fierceness. "but child, if you ever allow him to make up to you, I'll have to kill him."

THAT night they sat in the car by the bank of the river again, and it was late. Lucie had told Duff what Amos had said, and Duff had heard her in morose silence.

Now she rested quiet in Duff's arms and listened to the faint sound of a car rumbling across the bridge around the bend of the river, perhaps returning from the big dance at Zurich. This was the same place they had come the first time, and there was again a light in the farmer's house across the river.

"Duff?"

"Yes."

"You see that light? You remember that first night, weeks ago, when we came here? I heard today that there

"I'm a reason, Duff; stay for me."

Duff waited a moment. "If I could get a job somewhere else, maybe they'd let me work on Judas in my spare time. He ought to be worked hard," he said. "Old Amos hates me and the dog both. It's hard to get out and labor for a man that hates your guts. It's all right for a while—you can hate back. But before long it begins to weigh you down. Anyway I don't like to keep a job a woman holds for me."

"Oh, you're just plain crazy. Look, we need you. Wesley can't break all those dogs, and I'm really not much help."

"They're the old man's kennels, and he's the one wants to be shut of me."

"Can't you understand anything, for crying out loud? I'm the one who's got to make the kennel pay."

"I'm not going to leave you in the lurch. We'll get another trainer maybe."

"Well then," she said presently, "what about us?"

"I'm coming back for you."

"Listen, Duff. You can't say it that way. I'm in love with you, don't you know that?"

"Sure."

She mused, "Tell me this: don't you really wish I didn't love you, so you wouldn't feel—well, a sort of responsibility."

He shifted, suddenly uncomfortable.

"Don't you?" she insisted.

"No," he lied.

"If you feel that way it'll spoil everything."

"Why will it?" he asked.

"It just will. You'll think I'm tied onto you."

HE STARED at the dark river and the light beyond it. He said nothing.

"Duff, your chivalry's fine, and I like it. You remember that night I said I'd figured out what was behind your cast-iron front? Well, I saw some of that chivalry stuff, and a few other things. All okay, too. But you save the chivalry for another time; I'm twenty-one and then some, and if necessary I'll flash a birth certificate to prove it."

He laughed abruptly.

"Hey," she said, pleased. "That's okay. I never heard a real laugh come out of you before. Is there another one inside somewhere?"

"You're a crazy girl."

"Didn't I tell you? See, every time you get to worrying about something and get all mulligrubbed, I'll say something snappy and bing! It's gone," she said. "Now, look. I'll do something for you." She kissed him. It was a good kiss, the kind that leaves shortness of breath, but not exhaustion. She turned to look at him. "Listen to me, Duff. You don't have to marry me. Can't you understand that?"

"Honey, listen: I want to marry you."

"But you'd marry me whether you wanted to or not."

"I reckon so."

"Oh," she sighed. "Why did I have to fall for a guy like this? You can't tell where his love ends and his conscience begins. Look, I want to be married on my merits—and don't ask me what they are, either, because you know I'll tell you."

As they crossed the bridge, they saw the headlights of a car coming out the little road that led from the farmer's house. The car waited at the highway to let them pass, and the lights flashed in their faces. Duff turned on the radio. Distantly overhead came the drone of the airliner on its way to Birmingham, and presently its wing lights were visible, a red speck and a green speck hurrying across the tarpaper sky.

Next day Amos complained of pains, and Lucie got Dr. Phillips on the phone. Amos lay almost as if in a coma, his

"Why don't you call up sometime and say you're not coming home for dinner, the way other men do?"

presently, "they said we couldn't go three hours. Well, we shore went it."

"Yes."

"Next year . . ." he muttered. "Just wait till next year. We'll shore win that championship."

WHEN they got back to Tafton, it was apparent that after seventy-odd years of youth, age had suddenly overtaken Amos. His hand, only last week stone-steady, had become trembling and uncertain. His step was no longer strong and light-footed, his mind at times turned childish, and his sight was plainly failing. "He can see just a mite better than a mole," Dr. Phillips said. "He's through riding. Maybe he's through walking. You keep him in a half-dark room for a couple of weeks, and if he makes out to get better, we'll let him up."

Lucie had persuaded Amos to let Duff stay on a few weeks longer—"Until you're able to be up," she had said, knowing that time wouldn't come.

"Lucie," Amos said shrewdly, "you don't want him here fer no reason beside dog training?"

"No. That's silly," she said uneasily.

is a sick child there. They're afraid it's polio."

"That's too bad," he said heavily.

She sat up. "What's the matter, Duff? You're so moody tonight. You got the mulligrubs again?"

"Lucie," he said finally, "I'm leaving."

"What?"

"I'm quitting the job."

"But why? What's wrong?"

"Everything's wrong. I keep thinking about riding up those quail that Sam blinked, and causing him to lose the championship. That old dog had run his heart out, and then I had to come along and show the judges the only mistake he made. I can hear those birds flying up around me now. Sometimes I think I've got a sort of reverse Midas touch—everything I touch goes sour."

"You got to worry about something that couldn't be helped, for conscience sake?"

"Well it could have mighty easily not happened," he said desolately.

"That's no cause to leave."

"There's not much reason to stay."

SORE MUSCLES

put you
"in the Dog House"?

PROMPT RELIEF!

Help Nature drive out Fatigue Acids

Muscles sore and stiff after more-than-ordinary exercise? That pain is probably caused by an accumulation of waste products called fatigue acids!

Here's speedy relief! Splash aching muscles with Absorbine Jr. Its fast, stimulating action boosts circulation. Then, fresh blood surges through these muscles carrying fatigue acids away. Soon swelling reduces—pain subsides. It's grand relief!

Always keep Absorbine Jr. handy. \$1.25 a bottle at all druggists. If sample is desired, write W. F. Young, Inc., 201H Lyman Street, Springfield, Mass.

brown leathery face gaunt and sunken, when the doctor came. Delia Phillips, in the nurse's white uniform she wore when helping her father, came with him: she began efficiently and quietly taking Amos' pulse and temperature, and checking the medicines on the night table beside the bed.

Finally Dr. Phillips leaned back and lit his pipe and said thoughtfully, "Don't believe it was nothing but a temporary setback. Lucie. He'll be all right."

Amos looked from one of them to the other, trying to identify the blurs. "Main thing is, I'm hungry," he complained.

"Your dinner's coming," Lucie said.

Delia was shutting her father's pill case. She turned to Lucie. "How was the dance at Zurich last night?"

"I haven't heard," Lucie said.

Delia turned and looked at her. "Didn't you go?"

"No," Lucie said. "I didn't."

"Why, Dad was out visiting the polio case about three this morning, and he said on the way back he saw you and Duff Webster coming from the dance at Zurich!"

THEY caught the sudden frightened look on Lucie's face, heard Amos rise on his elbow in the bed. Dr. Phillips coughed uneasily and said, "Now, Delia, I said I reckoned they'd been to the dance—I mean—I said, looked like it was them. But of course it wasn't, since she said . . ."

"Lucie," Amos said ominously, "you been out at three o'clock with that Webster?"

"My heavens!" Delia whispered, "what have I done?"

"Plenty," Lucie snapped.

"You answer me!" Amos demanded.

"We'll talk about it presently, Squire,"

Lucie said angrily, "when our friends have gone."

On the front porch, Delia said, "Lucie, I'm so sorry."

Lucie said, "It'll come out all right." Sure, it'll come out all right—I think not, she mused, watching them get into the car. It'll come out fine—thanks to friend Delia . . . I wish I knew whether that break was accidental. I just wish I could be sure.

Holding the wall for support, Amos groped his way around the room to the closet, and opened the door. His trembling old hand slipped familiarly around the balance of the double-barreled shotgun that leaned against the wall. He explored the shelves blindly until he found a paper box, on which was a picture of a bright red deer leaping over a bush. On the side of the box was printed: 12 ga. 3½ drams. O Buck—12 Pellets.

Amos slipped two shells in the gun, closed the breech, and found his way back to the bed. He slipped the gun under the cover, and felt it lying cold against his leg. For a few seconds he lay there panting. Then he called, "Lucie!"

She came in, very pale. "Yes, Squire?"

Amos said, "When Webster gits in this evening, tell him to come here. I want to see him."

"What about?"

"About the dogs; what you reckon?" he said.

"Oh," she said, relieved. "All right."

"You be sure and tell him," Amos said. "I want to see him."

DUFF read the note Lucie had sent out to him at the kennels:

"Duff:

"I won't be out today as the Squire's not feeling good. He wants to see you when you come in. So do I. Hell's to pay.

"LUCIE."

While he was puzzling over the note, a colored boy came out of Wesley's house and walked toward him. It was

Paul, Wesley's son, returned from the North.

"Mister Duff," he said, "I'd like a word with you."

"When did you get back?" Duff demanded.

"Today."

"How come you left up North? I thought you had got ambitious."

"Well, I decided to come back. That's been my trouble, I guess. I've been too ambitious." He spoke with resignation and hopelessness.

"It's all right with me about the job, if it's okay with Miss Sullivan. You can go out with me this afternoon."

They ran a harum-scarum puppy that had an overflowing love of hunting, boundless energy, and a head as hard as a lightwood knot. Amos Hawthorne often said, "You take one of them hard-headed dogs that just grins at you when you rip a streak of hide off him with a whip, and then turns around and does the same thing again, you got a dog you can make something out of. He'll near drive you daft till you break him, but when you git him like you want him you can name your price fer him. Them kind that crawls around and whines and cries, they're twice the trouble and half the dog."

They were working some cutover pine land when the puppy pointed. Paul saw him first and waved his hat. Duff spurred his horse as fast as he dared over the pine tops and junk butts.

"Whoa, boy," he cautioned as he dismounted.

Then the dog broke, his first leap landing him spang in the middle of the covey. The birds came up in a thunder, one or two going off back over Duff's head, the remainder reforming and heading for the thicket at the drain of the two hills. And the puppy, although he knew better, was right in behind them.

"Whoa!" squalled Duff, but the puppy didn't heed. Out of the corner of his eye, Duff saw Paul's horse cut around sharply and then sprint after the dog, leaping over logs and swerving around the dead brush of sawed pine trees. Before they got to the bottom, the Negro had cut the dog off, and still going at a dead run, he turned the dog back with a shout above the thudding hoofs. Then the horse swerved sharply to avoid a hole, and struck a log with his flying feet and went down.

By the time Duff got th had risen, and held his rig ground. Paul lay in the one elbow, his face a cont Duff quickly kneeled be ran his hand along the chest where the trouble s A lump stood out near h "You've busted your Duff said.

day. You can make money, but it costs you more to live, and anyway I got to wanting to see some bird-dog running, so when it all added up I just came on home."

"You got your mind on the wrong kind of things," Duff said.

"It ain't that I want what they call social equality. It's just that I couldn't get away from the feeling that I was unclean, untouchable, or something. That's what I've been running from all my life, the feeling that I'm a filthy animal of some kind. That's why I worked so hard at school, and tried to read and learn, so I'd feel superior, but it didn't do any good."

"Maybe you don't know it, but when you put your hand on my shoulder, feeling for the place, you did something a lot of people wouldn't do, even if I had been dying. When we were going home my shoulder was hurting, and I was embarrassed to be riding while you walked, and my thoughts kept running around in circles, and I remembered how I used to think about that verse they read in church, something about 'as much as ye have done it unto the least of these, ye have done it also to me,' and I used to wonder if they read that in the white folks' church. But I just want to be sure I'm human. I appreciate what you did today, Mister Duff."

"Next time I better let you walk, if it's going to put all that in your head."

"No, sir, I don't believe you'd let me walk. And it helped get a lot of stuff out of my head is what it did."

"Well, hurry up and get well then. We've got dogs to break."

Duff went on to town and Amos Hawthorne's house, in response to Lucie's note. The house was quiet, and he guessed that Lucie had gone out for the moment. It was after dark, and the light in the hall was on. Duff went in, wishing that he could see Lucie and find out what the note meant.

"Lucie?" called old Amos from his bedroom.

"It's me," Duff said. "I heard you wanted me."

"Come in here."

Duff stepped into the sickroom. Amos had hunched himself up to a semisitting position, his head thrust forward as he tried to see.

"Lock the door, Webster," Amos ordered.

"What for?" Duff asked curiously.

"I want to talk to you," Amos said. "Private."

DUFF turned the key in the door. Behind him, he heard the old man say, softly, "I see you now. I can make you out. Look around here, slow. Don't make no quick move."

Duff turned and looked into the gaping muzzle of the double-barreled gun Amos Hawthorne held dead on him. "Look out with that thing!" Duff said, alarmed. "What you think you're doing?"

"Don't move, Webster. Just don't move. I can make you out plain enough to blow you in two."

Duff stood frozen, his back pressed against the door he had locked. "What's got into you?" he demanded.

"You was out with her last night. Late. Three o'clock," said Amos, with cold anger.

"No," Duff said.

"Dr. Phillips seen you. And Lucie done admitted as much."

Now, suddenly, Duff remembered the automobile headlights that flashed in their faces as they crossed the bridge. So that had been Dr. Phillips, returning from attending the poliomyelitis case. With his left hand behind him, Duff felt for the key, saying, "No, there's something wrong."

"Ain't nothing wrong," Amos snapped.

"You better git away from that door. Take two steps to your left. Not but two. This gun's loaded with buckshot."

And you intend to use them, too, Duff thought, moving two steps from the locked door.

Amos said, "I know what you and her was doing, out till three o'clock!" Now his voice had a bitter, vengeful note.

"You're crazy!"

"I ain't crazy. That's what you thought—thought I was crazy, and you could git away with what-all you been doing! But now you see you didn't quite git away with it!"

"Wait a minute. Put that gun up," Duff said, sweating. "Let's straighten this out some."

"Too late fer talking, Webster! I warned you and you never listened. It's just too late fer talking!" Amos said, his breath whistling fiercely. "Now it's time to—"

DUFF dived to the floor, near the foot of the bed, just before the gun roared. A splintered, fist-sized hole appeared on the wall where he had stood. A glass fell from the mantel and broke. The thin maze of gun smoke hung suspended, and the sweetish smell of it reached Duff on the floor where he lay trying to hold the sound of his breath from Amos' listening ears.

The bed stirred. "I see you, Webster," said Amos. "And I got another barrel."

Duff lay motionlessly, waiting for someone to come and investigate the noise. Nobody came. He dared not move, for he knew the hypersensitive ears of the old man would catch the faintest rustle of clothes or creak of a floor board. And that Amos would shoot at the first sound.

"I see you," Amos repeated. "Lying there on the floor. You might as well git up."

If you saw me, Duff thought, you'd be shooting that other barrel, not talking.

Two courses seemed open to him. The first was to crawl to the door, and try to unlock it and get out before Amos shot. Next to impossible, that course. The other was to crawl around to Amos' side, and touch off the second trigger of the gun. The trouble was, if one board creaked he would be as good as dead.

This thought induced another one. With excruciating slowness, Duff drew his right leg up and painstakingly untied his shoelace. He took off the shoe. Then, taking a deep, hopeful breath, he tossed the shoe to the other side of the room.

"Hah!" Amos exclaimed triumphantly, swiftly swinging the gun toward the sound. The gun roared, and Duff's shoe jumped. Duff sprang up and unlocked the door.

He was opening the front gate when Lucie drove up and got out, her arms full of groceries.

"Hello," she said brightly. "How long—why, Duff, what's wrong? What's happened?"

"Look," Duff said, holding her wrist. "Paul broke his collarbone this afternoon. When he gets well enough to ride again, I'll really have to be leaving. There will be trouble if I stay longer."

When he told her what had happened in the house, Lucie began crying, and finally she said, "Yes, I guess maybe you had better go. I guess it's the only thing to do." She looked into Duff's eyes. "Please try to forgive him. He's stubborn and unreasonable and all. But he loves me, Duff, and that's why he did it."

NEXT day, Amos revived somewhat from the relapse the incident with Duff had left him in. He lay still, his harness-leather face and mud-gray hair

and dark glasses raised on two white pillows.

"How's things at the kennels?" he asked.

"Fine enough," said Lucie. She was pale. "Wesley's been trying to find us a Negro boy to help out until Paul can ride."

"Webster gone?" Amos said.

"Yes," she lied.

"Didn't skip out with nothing wasn't his, did he?" Amos asked sharply.

"No, Squire."

"It's a wonder." Presently he said, "How's Sam?"

"Fine."

"You ain't letting him git fat?"

"Not a bit of it."

"They seeing to his feet?"

"Look," Lucie said suddenly, "why don't you let me bring Sam in tomorrow? He'll be company. Okay?"

AMOS snorted. "I don't want no dog in this house. It's plenty enough to work all your life trainin' 'em and feedin' 'em and runnin' 'em, without bringin' 'em into your bedroom like one of them little dish-faced Pekingeses."

But Lucie brought Sam into town anyway, and led him into the old trainer's bedroom. Amos heard the dog's toenails clicking on the floor, and he demanded:

"Lucie, have you brung a dog into this house?"

"Just Sam," she said.

"Aye dammit," he began, "it's gittin' to where . . ." his long skeletal fingers went over the dog's head and slid down his shoulder. Sam's fine-cut head was slightly raised as he scented the medicinal taint on the old familiar hand. The dog relaxed, grinned, and stood there while Amos' fingers inspected him. "Gittin' to where . . . Lucie, he's got fat on these ribs."

"Just a touch. Tomorrow I'll have Wesley put him in harness and road him a while," she said.

Then she added, "If you're through with him I'll take him on out."

"Wait a minute," Amos said, "I want to see . . ." He kept sliding his hand over the dog's back and neck, as if looking for some sign of improper conditioning. Lucie went out quietly and shut the door.

Next day she forgot to bring Ambling Sam into town.

"Where's Sam at?" Amos asked.

"Out at the kennel," she answered.

"What's the matter with him?" he demanded. "Why don't you want me to see him? He been on one of his fighting sprees?"

"Why he's fine. Nothing wrong with Sam."

"Yes, there is. You cain't fool me."

"No, Squire. He's okay. I'll bring him tonight and show you, huh?"

Amos relaxed, muttering. "Well, all right. But you be sure he comes in. I ain't goan let a valuable dog like that go down without my knowing it."

After that, Ambling Sam spent part of every day in Amos Hawthorne's room, and a ritual developed: On being brought in, Sam would trot with restrained pleasure to the bedside, and Amos then went into his act of pretending to feel the dog's shoulders and legs and even the pads of his feet; and when it was over and he was through surreptitiously petting Sam, the pointer went to a corner and went to sleep.

ON THE same day that Wesley's new handler showed up for work at the kennels, Ambling Sam got in one of his fighting moods. Sam's usual disposition was fairly peace-loving, but occasionally he became irritable and took offense if any other dog brushed against him or even walked too close to him. On this day a puppy in the same pen tried to play with him, and jumped up on him, and Sam turned on him with

lightning savagery, throwing the younger dog against the kennel wire and biting him from one end to the other. Lucie and Wesley came running, shouting at the dogs without effect. Wesley grabbed the water bucket and drenched the snarling dogs, and that ended the fight.

"For an old grandpa like you," Wesley panted angrily at Sam, "you sho does act puppified sometimes!"

"Alf," said Lucie to the new colored boy who stood outside staring, "take this old fool and put him in that empty pen and let him cool off for a few days."

The new boy, Alf, led Sam down toward the end of the kennel yard, in the direction of the empty pen Lucie had pointed out to him.

"Ain't you shame yourself, a-fighting and a-fussing like that?" he asked the now quietly panting bird dog.

There were two pens in which no dogs were in sight. Alf hesitated momentarily, then chose the end pen because it seemed to have more warm sunlight. He opened the gate and Sam walked slowly in.

For a while Sam stood at the fence and watched the preparations for the morning hunt. Now the horses were saddled and the hunting wagon was being loaded with the dogs that would be worked. Finally the caravan pulled out, Lucie and Wesley going in one direction, Duff taking the new boy with him to the north.

With only a faint interest, Sam inspected the punishment pen into which he had been thrust, sniffing one post after another and following the usual ritual. Finally he entered the kennel house; instantly his manner became one of challenge, for the dog Judas lay asleep in one corner. Judas stirred and raised his head, then was on his feet instantly, and there was no father-and-son love between the two dogs.

Sam advanced stiff-legged, tail and hackles up. Judas came to meet him. No preliminary argument took place; one moment later they were whirling in battle. Half locked, they rolled out the door into the yard. They now fought silently, not growling. Blood spread its red stain upon them and upon the ground. In silence the to-the-death combat went on. Sam's teeth closed on Judas' upper jaw, some of them stabbing the roof of his mouth. Judas

whirled, flung the older dog struck quickly at the back neck.

From that moment on Amos was dying, but he kept fighting. He could not rise. Even as he lay out of him he was trying to get onto Judas' foot. Then he relaxed, and his hemorrhage slid out of his mouth onto the pink earth, sand partly to it; and his glassy eyes slowly closed. A few blowflies with their stinks found him and were around him almost before he was breathing. For a few moments he stood at the scene of his pat he limped to the kennel house and licking his wounds.

He was still engaged in work when the tragedy was over. When Lucie came she gave a deeply painful gasp, and she thought of the innocent cause of it all.

THEY buried Sam down in the woods pasture, where he had been laid under without ceremony. Afterward Lucie quietly retied the vase of blue flowers. Before the place she heard a voice that Wesley had come back to her. She saw him there and not satisfied to bury Sam with a sort of funeral speech. Wesley said:

. . . and he was jest a do such a dog as ain't never yeah green earth. 'Scuse me please recollect he was a C kind of a bird dog, didn't habits 'cept a little tough den, didn't suck eggs, didn't body, didn't bark at white never loaf on de job w workin'. adventure was not yet over.

Red stood indifferently, his tail wagging slightly.

"Gee," Lucie whispered to Wesley, "I wish it were only a couple of leopards or something in there."

She took a breath, then turned the knob of the door. A chemical sickroom smell drifted out; the shades were down, the winter sunlight breaking through one or two holes in them, to be caught in the dotted-Swiss curtain Lucie had made. Amos was dozing as the table radio reported farm prices from Montgomery.

"Hah?" Amos said, stirring.

"Squire," Lucie said, wetting her lips, "here he is."

"Who?"

"Here's your dog."

Red now moved forward, sniffing the sheets and the table of medicine bottles. Amos' groping hand found the dog and slid over his shoulders slowly, caressingly. Lucie watched in agony, thinking: *The voice is Jacob's voice, but the hands are the hands of Esau.* After a seemingly interminable time, Amos said, "He ain't got as much fat."

"Better, huh? We've been roading him, like I said."

Amos grunted, and there was nothing in his face to indicate whether or not he was suspicious. After a while, he grumbled, "A house ain't no place for no bird dog."

"Want me to take him out?" she asked hopefully.

Amos' brown hand tightened against the dog. "Might as well let him stay, since you brung him," he said.

When released, Red made a tour of the room, sniffing at every strange object. "What's the matter with you, Sam?" Amos asked, listening. "You act like you ain't never been in this room before, walking around sniffing and acting curious. Ain't nothing changed since last week."

"He's just looking around to be doing something," Lucie said.

Amos said absently, "Yeah . . . yeah. Well, go on about your business."

Outside, Wesley waited for the report, tricklets of sweat on his neck. "Did we git by wid it?"

Lucie tilted her head. "Like a breeze," she said.

(To be continued next week)

THERE'S A DIFFERENCE WORTH KNOWING!

Rum 89 Proof—Schenley Import Corp., N.Y. Copr. 1942

rapidly down, out of sight. We hung about for seven minutes and dived in case enemy warships might be hiding in the gloom about us. The torpedoed ship was out of sight before we dived. Later we surfaced again. We went toward the spot to seek survivors or wreckage. We found none . . .

"I have a case of buck fever . . . carefully searched for other ships. Then we headed westward."

The men had received word calmly that hostilities had begun with Japan. Their first orders stated merely that war had started and to govern themselves accordingly. Then came word that Pearl Harbor had been bombed. At first nobody believed it and when the news was confirmed the opinion aboard ship was that the Japs were crazy to have tackled Uncle Samuel.

"It turned out," commented Chapple in a letter which I received from him supplementing the hasty notes I had made of his diary, "that they weren't so crazy. . . ."

The only change in the routine aboard was that the men seemed more alert, more eager. The torpedomen caressed their weapons with greater care. They spat on every one for luck. Once they came upon a merchantman and were about to fire when they discovered it was a friendly target. They sighted numerous British, Dutch, American and Filipino cargo carriers.

On December 10th came word of the bombing of Manila and most of the crew had friends there and wondered worriedly how their friends had fared in the attacks. The Filipino mess boys particularly were worried. The succession of ships the submarine encountered only increased the eagerness to "get" an enemy.

The Crew Elated

When they finally shot their first ship on the 12th, the men's spirits rose to that restrained excitement that is the high point of emotions aboard a submarine. In the pigboats excitement is something you feel but never express. In these ships, a maximum of deadly machinery in a minimum of space, the innards of a bull compressed into the dimensions of a greyhound, drama reaches a climax in an incident such as this:

"The men were as elated as I was," writes Chapple, "about shooting our first vessel. We were all keen to get any other ship that might be coming to join this one. Everyone wanted details concerning the ship which I wasn't able to supply."

"Seaman Reynolds, always very punctilious about addressing me, who always said 'Good evenin', Captain' or 'Good mornin', Captain,' greeted me this evening with 'Nice shot, Captain.' Signalman Coleman remarked: 'As the man who was about to be hanged said, that'll be a lesson to that bird, for coming into our area . . . ' which didn't mean very much but which was indicative of the efforts at self-control which the men exercised."

Came days of routine surfacing and diving and exploratory work and then, finally, the orders that sent Chapple on his mission. From the position of the Japanese invading fleet supplied to Chapple, he saw at once that he could not possibly intercept the main body of the invading force before it entered the protective shallows and reefs of the invasion bay. He so wrote in his log:

"I believe from the position of the enemy given us we will be unable to intercept him before he enters gulf."

It turned out his calculations were accurate.

The dawn-to-moonset game of hide and seek with the enemy cost the submarine a bent propeller. Scraping about on the uneven bottom and that upward slide on what must have been a sharply

angled mudbank when it seemed the boat was determined to come to the surface amidst a score of Jap destroyers, damaged the ship. Result was the propeller turned off-center and made a terrific racket, increasing many times the chances of being picked up by the vigilant enemy's sound detectors.

For two hours Chapple threaded his way through dangerous coral reefs before he dared come to the surface. The following day, after several hours spent in charging batteries on the surface, the lookout sighted an enemy patrol.

"Take 'er Down Again"

"Take her down," Chapple shouted, and she sank where she lay, without forward movement. All that day they lay on the bottom, resting, sleeping and keeping very quiet indeed. After sunset the submarine rose again to charge batteries and give the men fresh air. The ship, crippled but still game, had not yet completed her mission. Chapple wrote:

"On Wednesday, at 5:12 A. M. we made a stationary dive and started touring the area southward. I had planned to locate enemy transports and make an attack just before sunset. At 11:27 A. M. through the periscope, I sighted six enemy transports under way and headed south. But the ships were too far away. We bobbed up during the morning for a quick look."

"Off the south coast, in the bay, there was a large red flag on a buoy. This buoy was a little on our quarter when the following events occurred: There was one destroyer in the distance, no patrol boats. We were in about 23 fathoms of water. At 11:52 A. M. a bomb or shallow mine exploded. This shock put the control room depth gauges temporarily out of commission. We got readings from the fathometer aft, however, and relayed these by word of mouth, the length of the ship to the control room and bridge. We dropped down."

"We had planned, my second in command, Lieutenant Melhop and I, to lay low until the transports anchored and then wade in amongst them after dark. But it wasn't to be. That Jap destroyer came and started working over us. They'd undoubtedly picked up the sounds of the terrific explosion I mentioned earlier, the one that crippled our main depth gauges."

"We headed north. We stopped all machinery except the bow planes that guided the ship's depth. We used evasion tactics (secret). At 12:05 P. M. we received three depth charges to port, at 12:08 five to starboard. By 12:09 we were in deeper water lying on the bottom. At 12:23 we received four charges to starboard, one charge to starboard at 12:26. At 12:30 drove full speed ahead on all motors."

Chapple, with his noisy propeller, was taking a desperate chance to try to get away. Those depth charges were coming closer at every moment. The submarine rang like a boiler filled with compressed air and struck by a steel maul at regular and successively louder intervals.

"At 12:45 four depth charges exploded to starboard."

Chapple signaled for a dead stop and the submarine halted, settled to the bottom. The Japs were tossing batteries of ash cans. There were some at 12:47, a few more 12 minutes later and again at 1:01 P. M. Twenty-eight depth charges burst in the vicinity of the hunted pigboat in the space of 43 minutes, each sending vibrations through the craft that shook it like a hooked marlin and that sounded like thunderclaps as you'd heard thunderclaps deep in the sea.

The men were taut. "Well," one said, "there's another present. They're getting close." And then one said, "Merry

Christmas, boys," and men's throats relaxed.

At approximately 5:00 P. M. the propeller noises and sounds the cans—Navy make as they slice through the water—had died down. By about 5 o'clock man McNeal, in the control room, said: "All clear all around."

At that precise moment somebody snapped back: "Get that all-clear stuff."

McNeal looked puzzled, looking very apologetic. The Japs were pushing sailboats. And maybe

Throughout that day, the blowers stopped and the heat beyond human endurance.

"We surfaced at 10:00 A. M. danger from enemy craft. The submarine had been about 18 hours. I ordered, from battery room. I also gave the order for a dive."

At that moment an explosion in the after battery compartment. I return again to Chapple for simple understatement of heroism, cannot be surmised.

"I went below," Chapple wrote, "and into the battery compartment. There were no small fires elsewhere as if canvas. The compartment covered the top of the compartment was in great confusion. I blew out some of the Electrician's. Howard L. Buck and I went in and rubber boots to E. C. Harbin, Chief Mechanic, who was injured."

"Buck and I went in and then Machinist's Mate Ross lifted Harbin into the engine room. Two others went in. Buck conducted an extraordinary coolness. An entry has been made in his record. Same entry for Ross."

In the Navy's books the same entry and the same for one Moon Chapple Billings, Montana.

Aground Und Water

That night found Chapple exhausted and crippled. He was moving at less than half speed on the engine. The other engine Chapple remained on his second looked after administered morphine men. Because of her being generally crippled Chapple wanted to try to leave surface, using his Diesel attempt the risky run through the reefs. Or quit the Jap-filled gulf."

"At about 2:15 A. M. Japanese destroyers, "about two miles off," let them pass and he went to get clear—enemy was too far away power of our submarine. We were unable to propeller gave off a tractor falling down a nyon."

"At 3:46 we sighted a destroyer. We turned to At 3:48 we were obliged enemy was approaching At 3:50 three depth charges close aboard."

"The destroyer began to follow. He didn't use pinger close. We tried what could with low battery peller which was very

rounded by reefs and uncharted subsea promontories, Chapple took a desperate chance, the only means he could employ to save the lives of his crew and his boat. He surfaced in daylight at 2 P. M., when he expected there would be swarms of enemy craft on the sea. His diary says:

"We found ourselves on a reef. Nothing was in sight. We picked up what we thought might be two destroyers on the other side of the reef, ten or twelve miles distant. We tried to dive to hide from the enemy. It was too shallow and we hit bottom with a heavy thump. We tried to go ahead but ran aground again. We surfaced and went ahead at normal speed on all engines. The two destroyers turned out to be auxiliary craft which we started to outrun, but which, apparently, never sighted us. At 4:23 P. M. we dived and headed for Manila. We arrived the next day, operation concluded.

THE END

Chapple Writes About Himself

Billings, Montana, in 1935 my boy was born in Billings, but unfortunately I was not present at the launching. I received a telegram from my father on my son's birth: "Six pounds, eleven ounces and all man." He later wrote that the boy looked like me but not to worry about it, that he might outgrow it.

From the sub I went to the Naval Academy, for 3 months, as assistant B squad coach in football. I enjoyed very much working with the midshipmen. Lieutenant T. J. Hamilton was then head coach at the Naval Academy. From there I went to the U.S.S. Pike which was then commanded by Lieutenant Commander H. H. McLean, as Assistant Engineering Officer, and later Engineering Officer, with collateral duties of reading over all orders written by Captain McLean, who claimed that if I could understand the order anybody could.

Leaving the Pike I went to the Naval Academy for two years, where I took an engineering course for Operating Engineers. While there I tried to help Spike Webb with the boxers and coached an intramural football team. During the time off that I had, my wife, child and I spent our leaves with my family in Montana. After leaving Annapolis I went aboard the U.S.S. Perch (since lost), a submarine somewhat similar to the Pike and under the command of Lieutenant D. A. Hurt. The 14th Submarine Division made the cruise from Pearl Harbor to Manila and established some sort of a record for submarines cruising in formation at high speed, under the command of Captain John Wilkes, now Commander Submarines Asiatic Fleet. We left, shortly after I joined the ship, for the Asiatic Station. One of the chief pleasures I had on this vessel was telling stories about the way it used to be on the Asiatic Station. Of course when we arrived we found everything had changed. From the Perch I went to the U.S.S. Tarpon for six months, under Lieutenant Commander W. W. Weeden. On the Perch I was Engineering Officer and on the Tarpon, Executive Officer and Navigator. At last, on the Tarpon, I was determined to lose the blisters on my hands. On November, 1940, I took command of my first submarine.

My wife Grace, and my boy Michell Wreford Chapple, I have not seen in about a year and 3 months. At the age of four my boy climbed up and down ladders on the Perch and was rapidly being inducted into submarine life by the men on the submarines on which I served. He never had the chance to go aboard his daddy's first command.

KEEP 'EM FED RIGHT

-have their work to do!

What is their part? Ask any soldier who has left a dog behind—he'll tell you.

Tell you that dogs bring companionship in the hours of loneliness. Comfort in moments of apprehension. Loyalty in any crisis.

Tell you, too, to count on your dog to be an A-1 soldier on the home front. So, keep him fed right.

FEED GAINES

Gaines brings to normal dogs all the nutrients they're known to need—even ample meat values. Nothing except water need be added.

For more than a decade Gaines has been fed daily to thousands of home pets—to many kennel-raised dogs. It was chosen by the U. S. Antarctic Expedition and is now used by the U. S. Army.

Remember, Gaines is not a hastily formulated "wartime" substitute. Furthermore, feeding Gaines helps conserve human foods when it displaces table foods.

Your dealer has Gaines in 2-lb., 5-lb., 10-lb., 25-lb. paper bags. It's Guaranteed.

Henrich has been moved into Class 1-A and will go soon. Brooklyn's Bums have lost Lavagetto and Corbitt, promising shortstop recruit, and Don Padgett, bought last winter from St. Louis, has been taken, and the management is keeping its fingers crossed on "Pete" Reiser, National League batting champion; and Peewee Reese, flashy young shortstop. The clubs hardest hit are those who can least afford it, the seventh-place Washingtons and the tail-end Athletics of 1941.

But one must look at 1918 instead of 1917 to get a proper picture of wartime conditions. By the time the abbreviated 1918 season was over, the entire baseball structure was rocking. Everything was knocked topsy-turvy. The White Sox, champions in 1917, crashed to sixth. The Cubs, fifth in 1917, won the National League pennant even without the services of Grover Cleveland Alexander, who was in the Army. The minor-league field was reduced to nine circuits, with only the International League limping along with the majors to a Labor Day closing.

It was in the training season of 1918 that the players realized it was no longer to be baseball as usual. In March, the Germans released their last great offensive which took their forces almost to the gates of Paris. Many ballhawks suddenly developed a desire to exchange their bats for rifles and to fasten their lean throwing fingers around the late Kaiser's neck, for the average baseball player is just as patriotic and liberty-loving as any other red-blooded American. General Crowder's "Work or Fight" order hastened some into the services, but others went without any prodding.

A strong detachment of Boston Red Sox, Manager Jack Barry, pitchers Ernie Shore and Herb Pennock, third baseman Mike McNally and outfielders Duffy Lewis, Jimmy Walsh and Chick Shorten, had enlisted in the Navy the winter before. Shore, a graduate of Wake Forest College in North Carolina, was the only player to win an officer's commission in the Navy, while Dick Hoblitzel, the Red Sox first baseman, won a commission in the Army.

Grover Alexander, Bob Shawkey, Rabbit Maranville, Leon Cadore, Urban Shocker and Ray Fisher put on Uncle Sam's khaki or blue early in the season of 1918, but the great influx of players into the armed forces came shortly after July 4th, when Ty Cobb, Tris Speaker, Eddie Collins, George Sisler, Eppa Rixey, Wally Pipp, Rube Marquard, Dutch Leonard and lesser lights joined the colors.

Baseball's Gold Star Men

At the time of the Armistice, the American League listed 144 men in the services, 83 in the Army, 41 in the Navy and 20 in the Marines and Aviation. The National League broke up its 103 service men as 42 drafted by the Army, 22 Army volunteers, 32 Navy volunteers, and seven Aviation volunteers. In addition to losing Captain Eddie Grant, a former Red, Philly and Giant player, in the fighting in the Argonne Forest, the old league hung out another gold star for Private Marcus Milligan, a rookie Pirate pitcher, killed in an aviation accident. Pitcher Elmer Ponder, of the same club, a war aviator, won the French Service Cross for valor.

Branch Rickey and Percy Haughton, presidents of the Cardinals and Braves respectively, in 1918, were commissioned majors in the Gas and Flame

Division. Christy Mathewson, manager of the Reds, and Ty Cobb also won captain's shoulder straps in the Chemical Warfare Service. Eddie Collins, Speaker and Pipp went into the Marines. John McGraw, manager of the Giants; Hughie Jennings, head man of the Tigers; and Johnny Evers, formerly of the Cubs and Braves, went in as Knights of Columbus workers, Jennings getting overseas. The present Tiger manager, Del Baker, was a young gob in 1918.

The real hero of the war in baseball circles was Hank Gowdy, who joined up almost as soon as war started. He came out as a color sergeant and the athletic field at Camp Benning, Ga., is named Hank Gowdy Field in his honor. Gabby Street, Walter Johnson's battery mate and later manager of the Cardinals and Browns, was only a few jumps behind Hank and enlisted in the regulars. Like Gowdy, he saw plenty of action and didn't win his present nickname, the "Old Sarge," doing kitchen police. "Moose" McCormick, on the Giants' retired list, won an early captain's commission at Plattsburg, was among the first to reach France in 1917, and smacked some telling pinch hits against the Kaiser.

As the big leaguers went to war or to the shipyards, an odd lot of old-timers, misfits and odds and ends were brought in to fill their places. The names of players long washed up reappeared in the major-league box scores. The fact that the Pacific Coast League shut down on July 14th, and the American Association a week later also gave the big leagues a chance to employ experienced players for the closing weeks of their respective races. The Giants closed the war season with old Jay Kirke on first base, and the Yankees employed two discarded National League pinch hitters and utility men, Ham Hyatt and John Hummel, in the outfield. Lefty Hank Robinson, another Pirate and Cardinal discard, became a pitcher for the Yanks.

Unless you know how long these men had been out of big-time baseball, it

will be difficult to judge what happened to the sport when the Browns unfurled their flag, the former Pirates as much as if Art Nehls were called by the Giants, or as Combs were to be the fielder again.

Cleveland exhumed old Washington right fielder, erstwhile Cincinnati Reds catcher. Both had been in the majors. On the same basis, no one was surprised by the recall of Los Angeles, or Paul Hanks, a former catcher for Brooklyn, to active duty as a player.

The Boston Red Sox now graduate manager of Fordham, at third base, find was old George Burns, who had failed with the Yankees. He had been with the White Sox in the World Series. He finished for all the Red Sox spectacular catches of the year was back in the minor leagues following year.

Old Guys Who Came Back

The sight of Hammondsport pinch hitter, a former Brooklyn utility player, lining the garden for something that men had never seen. Between them, they averaged approximately eight feet of other clubs were equally hard.

The most engaging concern Jack Quinn, a man of extreme maturity. After years in the Federal Reserve, he was in the minor leagues by the White Sox after the Pacific League closed, and he was not only a good enough to win the old men's competition, winning five out of six kept going after the season ended with Brooklyn.

"Don't worry, dear—I won't let them move until you are on!"

ld Jack was over fifty when his last major-league game. used Joe Wood, the former tching ace, in ninety-five ht field. Washington came nk Schulte, old "Wildfire" us Cubs. Jimmy Archer, catcher of the same club, with both the Reds and The Browns even had Leon Ames, McGraw's old hard-Detroit dug up Art Griggs after he had been out of years, and the Cubs found e old Philly roly-poly sec- Otto Knabe.

Where t for it? Well, you might as me that old Bob Grove re games in his system, agnst the new competition g pace. If you looked down

into the minor leagues you might be interested in such pitchers as George Blaeholder and "Feets" Marcum, who have been starring in the American Association for many years. In the Pacific Coast League you would find Sam Gibson and Win Ballou at San Francisco, Barrett at Seattle and Herbert at San Diego. They are no longer young, but they do well in their respective circuits and will be plenty fast enough for the major-league pace they're going to see.

Even Dizzy Might Oblige

The prospect of seeing the Big Bambino, Babe Ruth, back in harness would almost be enough to make the war worth-while, but his health prevents that. However, we would see the other Great Babe, the one and inimitable Babe Herman, who is still bashing fences for Hollywood in the Coast League and fielding almost like a wizard, all canards to the contrary.

Charley Gehringer may think he is through, and history may tell him otherwise. Don't be too sure you won't see Dolph Luque surrendering his coaching job with the Giants and coming in late in the game to throw that old curve at the gentry. And last but not least, does anybody think Dizzy Dean is going to be so unpatriotic as to pack that famous soupbone in cotton and refuse to unfurl it for the acclaim of the multitude?

It may not be the best baseball we're going to see, but it will be sentimentally sound. The show will go on and our hearts will be in it as strongly as ever. —But don't let anybody tell you things are going on as they are. There will be some changes, my hearties!

A.E.F.," he repeated. "From now on such contingents will be officially known as Task Forces." And that's our grievance. Task Forces! We don't know who invented that watery substitute for Expeditionary Force but we suspect that he wears pulse warmers, sleeps with the window shut and drinks cambric tea. We have a great many other thoughts on the subject. For example, why not call our overseas forces Protest Groups or something equally spirited. We got to discussing it with Mr. Charles Colebaugh, the managing editor of this magazine. "Ah," said Mr. Colebaugh, "but think of the theme song—A Tisket, A Tasket; My Little Luncheon Basket."

AND if it weren't for ethics or something we'd publish here the name of a private in the United States Army Air Corps who advises us that Hurd Barrett, author of *Rush Job*, a short story we recently published, doesn't know what he's writing about. The tale had it that the test pilot "suddenly cut his switches, twenty feet from the ground, at eighty-five miles an hour, and the big three-bladed propellers ceased to turn." Our private contends that this can't be done, that the propellers would not cease to turn and that he and other student fliers want to know the answer, hating "to call Mr. Barrett a liar." All we know about the matter is that Mr. Barrett is Captain William Hurd Barrett of the United States Army Air Force and a pretty famous aeronautical engineer. But then, we knew more than our captain, too.

AND proved it—once. . . .

and wears pigtales is a yokel. By the same reasoning only a clown could sing Pagliacci.

When the propaganda first spread in New York to the effect that Judy was great as a hillbilly because she was merely playing herself, she said, "Brother, you are making history with them true and beautiful remarks. We walked up here from Florida in our bare feet, subsisting on betel nuts and the bark of trees along the way. It took two traffic cops, a bouncer and a plain-clothes dick to hold me down while they got shoes on me."

In short, Judy is a hillbilly from Jacksonville, Florida, and we will find a summons for libel in our mail box in the morning from the Jacksonville Chamber of Commerce. The Unadilla residence came when she was an infant in arms and is remembered only because Judy is no fool. You don't toss a name like that away when you're entertaining a radio audience of seven billion Unadillalike yeomen.

An agent in Hollywood was discussing the Canova phenomenon. The bright gentlemen at Warner's and Paramount had used her in such pictures as Artists and Models and Broadway Gondolier and had been depressed by the lack of response. Paramount had finally booted her unceremoniously out into Melrose Avenue.

The Hollywood Gold Rush

Republic took her very gingerly with a pair of tongs and dropped her into Scatterbrain, a production that cost approximately as much as a trailer. Slipping this little orphan out under cover of darkness the studio barricaded the doors and prepared to deny the whole thing at the first sound of protest. The first sound they heard was a faint tinkling that turned into a roar. What followed was a flood that almost washed away the studio. Upon analysis this turned out to be pure gold. An idea of the profits on Scatterbrain can be gleaned by the fact that Judy's second picture, Sis Hopkins, was made at a cost of \$750,000, which is more than is spent on a dozen Autry masterpieces.

"If you don't think Canova is a genius," said the agent bitterly, "just go out and find me somebody like her. I'll tell you what she is: She's somebody Thurman Arnold should be investigating. She's a monopoly."

Judy's real name is Juliette. Her father was Joe Canova, an architect and cotton broker and a descendant of Antonio Canova, 18th century sculptor noted for his Graces and Venuses. Her mother, who still lives with her, is a musician and a descendant of Commodore Perry.

"Class," says Judy. "Class all over the joint."

Her sister Anne and her brother Zeke were the ambitious Canovas. They were always plucking at guitars and practicing dance steps and tooting on horns. Judy was to be an opera singer and was eternally piping her way through the Bell Song from Lakmé. On the side, however, she kept an eye on Anne and Zeke who were filled with more vulgar and mundane yearnings. They were aiming at vaudeville. Inspired by this, Judy developed a boisterous mimetic talent that could turn the Bell Song into a shambles at the slightest excuse, to wit, the absence of Maw.

"You start boop-boop-a-doopin'," says Judy, "and where do you end up? Broadway!"

Anne and Zeke had the Broadway

idea, and Judy horned in on it. Zeke didn't want her; Anne wanted her; Judy went along. They were a singing trio and upon arrival in New York they visited agents. They sang sweet, they sang sour, they sang loud, they crooned. They got no work.

At this juncture Judy, walking around town to still her hunger pains, came upon the Village Barn in Greenwich Village. She came loping back to their rookery to report.

"Dear brother, dear sister," she caroled. "I have found it, I have located our destiny. We will take those corny roundelays you have been murdering, dear Annie, and we will hurl them in their teeth. We will floor them; we will lay their bodies out in a neat line. I will even yodel."

"But you can't yodel," said Anne.

"I will now proceed to yodel," howled Judy and let forth with a barrage of sound that did nothing but bring the landlord on the run. This was a mistake as they were in arrears but the usual promises were given and the matter was adjusted.

The Village Barn was an ideal place for Judy to develop her particular form of madness—the pixilated yokel. The Barn knew no restraints; the clients disapproved of restraints.

"A fine, neighborly institution," reports Judy. "If you sat down you soon found one of the customers on your lap."

There was never any doubt about the Canova future after a few weeks down there. They stayed seven months, quitting only to take a vaudeville contract that lasted seventy weeks. That was followed by a series of top-flight radio shows and Judy's first legitimate venture, the musical comedy Calling All Stars. It was in this production that she found herself in a life-and-death struggle.

"I am kicked, I am wounded, I learn about life," says Judy sadly.

It seems that actors were afflicted with something known as professional jealousy. If Judy had a song she found at second rehearsal that it had been given to somebody else. No star advanced to the footlights for his number without keeping a wary eye to the rear for fear of being booted into the orchestra pit by another star. Judy cowered in corners, whimpered and lost her num-

bers one by one—until she was given more to

On the basis of this, she went out to Hollywood and made a series of films membered with awe in Judy explains them one to the gas mask is a

Three-Way Success Story

Back on Broadway the Ziegfeld Follies with their radio work money roll in. The bringing \$1,700 a week was good, and they had the California gold field been tapping the till \$4,300 every Saturday well in the Follies and in Yodel Boy. That again and a break-up Zeke, who continued in circuit while Judy muffed six grand every week. "I would have done eighteen bucks a week," says Judy.

But the parts were dropped her contract have looked at the future hadn't been for a \$1,000 which had been built up the years. Money had her early, as from a because she never knew and was notorious on soft touch.

"I'm Annie the apple, verse," says Judy. "Two I'm plucked."

Church, a church with a small member- ship, and sings in the choir when she is in Florida. Her favorite hymn is The Old Rugged Cross. She plays the piano and guitar, both badly, and still has three huge packing cases unopened from a trip to London.

"I know the things I got in there," she says cagily. "If I hold them long enough, they'll eventually be back in style."

She speaks a little French and Span- ish, was an honor student in English at school and is known for such elegant phrases as "I sot up all night" and "Wait here a minute and I'll make a b'iler of coffee." She believes in fortunetellers and also writes poetry, a bit pathetic. Some of her music has been published and she has minor ambitions along that line, with little expectation of doing anything about it.

An indication of how well things are going for her at Republic may be had from the fact that she recently turned down a deal at M-G-M.

If she is inwardly yearning to be a great figure in the cinematic world her pictures give her little chance for it. In these she is invariably the butt of a humor which is rough, hilarious and strenuous. Even the titles of her pictures are a form of insult: Scatterbrain, Puddin' Head, Sleepytime Gal and Lazybones. In Sleepytime Gal she took a beating, being frozen in a refrigerator system and falling off a fire escape. She emerged uninjured but chastened.

"The maul-and-lacerate school of acting," she says sourly.

But that will probably be the sort of thing she will keep doing till the end. Being typed in Hollywood is like a life term at Alcatraz; you only cease being that particular character when you cease. Ginger Rogers can stop dancing and be an actress but Jimmy Durante will always be Durante; Chaplin will be Chaplin, the little tramp; Harold Lloyd, to his dying day, will be remembered as the man who wore glasses. Canova has reluctantly come to the conclusion that she is stuck—stuck with a fortune, of course; but stuck. When the studio asked her recently to answer a questionnaire she hesitated a moment over "character" and then wrote:

"Moody and generally unhappy. I'm a comedienne."

THE END

"I'm getting kinda worried. Ma joined the women's auxiliary, and I haven't heard from her for two weeks"

He rushed headlong to find what was the nature of this silent, unseen death struggle going on in the tubes. Quickly he fished a fleck of solution out of a tube that was still cloudy. He dropped it on a glass slide, stained it and slipped it under his microscope. There before his eyes was the fundamental drama of all time: the struggle between good and evil.

The round, berrylike microbe of pneumonia stood out in purple outline—the color coming from the dye. Attached to it was a newcomer—a minute rodlike organism. As Dubos watched, the pneumonia bug began to shrivel! Smaller and smaller—then it disappeared! It had been utterly and completely destroyed by that magic wand of a microbe, the newcomer! Since the unknown microbe hadn't eaten the other there was but one conclusion. It had secreted some substance, some magic juice that had destroyed the microbe of pneumonia.

Dubos went along to his other tumblers—the ones he had been watering with streps and staphs. To test the mud which he hoped could have strep-killing qualities he prepared another eight tubes. In them were violent strep cultures, obtained from a man who had died of erysipelas. Again he witnessed magnificent destruction of the evildoers.

More and more tests followed. His magic wand microbe would kill any gram-positive bacteria—those that are stained by the method of dyeing devised by the Danish bacteriologist, Hans Christian Joachim Gram. Included in the group are the great microbe killers: the ones that cause diphtheria, pneumonia, tuberculosis, tetanus, anthrax, childbed fever.

Tedium followed the high drama of this preliminary work. First, Dubos had to identify his magnificent microbe. Next, he had to find what juice, what chemical, it secreted. We'll short-cut across this routine lab work. The microbe turned out to be *Bacillus brevis*—one widely distributed in nature and found in soils, cheeses and elsewhere. The killing chemical it manufactured was tyrothricin. Subsequent work disclosed that tyrothricin was a mixture of two things: tyrocidine and gramicidin. It was gramicidin which did the bulk of the microbe killing. Mark that word well. You are going to be hearing a great deal of it in the months to come. It's pronounced gram-i-sigh-din.

Working—in Life

Up to this point, remember, all work had been done *in vitro*—in glass. Dubos was now ready for work *in vivo*—in life. First subjects were two mice. Into their bellies, their abdominal cavities, he shot enough pneumonia microbes to kill them 10,000 times over. He followed this with shots of crude gramicidin. His microbe poison would work in the soil. And it worked in test tubes. Dubos sat back to wait; to see whether it would work in living creatures. Minutes slipped into hours, and hours into days. The mice continued to scamper in their cages. They were all right. They were alive when they should have been dead ten thousand times over! Weight for weight and volume for volume this new stuff was from a thousand to a hundred thousand times more potent than the sulfa compounds!

Up to this point, everything looked beautifully clear-cut. Here was an incredibly potent weapon against the microbes which cause most human woe. As little as one part of this chemical to a billion would stop the growth of pneu-

monia bacteria. Then fearful hitches began to appear.

The stuff wasn't soluble in water. When shot into the blood stream it destroyed red blood cells instead of fighting microbes! It actually killed mice in a matter of seconds when shot into their veins. Rabbits took a little longer to die, but at autopsy they gave a horrid record of what had happened. Organs were hemorrhagic, and blood was thinned to water.

This was heartbreak stuff. Was gramicidin another of those medical will-o'-the-wisps that tease researchers to great heights, then slam them down on the hard ground? It looked as if this might be the case. Then shrewd clinical men got on the job. Just because something couldn't be injected into the blood, they noted, that didn't necessarily mean that it was valueless.

Several groups asked Dubos for cultures of his trained soil microbe. Already they had begun to call it Dubos' bacillus—a supreme honor for any bacteriologist. They wanted to grow these bugs and harvest the chemical they threw off. They had ideas of their own about treating human patients. There were many body cavities where horrible infections could take root—in the chest, the abdomen, the bladder and elsewhere. This blood-destroying trick of gramicidin wouldn't matter in such places.

Tubes of culture went to the University of Chicago, the Mayo Clinic and to Evans Memorial Hospital in Boston. This is a small place—it has only 32 beds. It is devoted entirely to clinical research; treating patients with unusual ailments and, to a large extent, using curative weapons that are new to the medical armament.

Gramicidin was made to measure. It was handed over to a two-man team: Dr. Charles H. Rammelkamp and Dr. Chester Keefer. There were three lab assistants to grow the microbes and handle the animal work.

These men went over to Rammelkamp couldn't be blood stream. But it could open wounds; and ulcers, buncles. And in body cavity it be useful in treating a massive infection of the that is so frequently a trait of pneumonia? And might to chase microbes from in and perhaps to treat inflammation of the mastoid bone?

There seemed to be a for this microbe destruction it couldn't be injected. Its type was desperately beautiful performers though they were, they wouldn't touch of that kind.

Experiment on En

t tre human beings. But there
rule, the book against his work-
th animals. He elected to work
w matis, one of the most costly
ms tit face the dairy farmer.

Microbes at work in cow udders make
milk unfit for use, and frequently ne-
cessitate destruction of the animal.

Dubos hit on a procedure. Why not
inject gramicidin into the udder in the
morning; then milk it out in the eve-
ning? That would give this magic stuff
a day in which to do its work. As else-
where, results were striking. In most
cases the disease was promptly eradicated.
This is the most promising
weapon yet found against the disease
which each year costs the dairy farmer
uncounted millions of dollars.

So far gramicidin has been used on a
host of human ailments. It has cleared
up infections of sinus tubes. It has been
used as a precautionary measure in
mastoid operations—the surgeon simply
swabbing out the cavity with grami-
cidin solution. This step seems to
eliminate many of the complications
that follow surgery. It has been used
with remarkable results in treating bed-
sores and boils; and will probably be
used to treat infections of the bladder
and in preparing fields for skin grafts.

Still, one point must be appreciated.
To date, doctors have used gramicidin
on relatively safe things. They have ex-
ercised the natural caution that must
attend work with any new drug.

Gramicidin holds out tremendous
hope in treatment of war wounds. There
is every reason to believe that it will
act swiftly in wounds that once would
have meant amputation. Its miraculous
ability to kill microbes should make a
tremendous step forward in wartime
surgery. In this connection note one
fact: the sulfa drugs are splendid aids
in this type of work if they are used
early enough—if they are used before
wide-scale infection takes place. But
once microbes have gained ascendancy
in a wound the sulfa drugs are almost
powerless. Not so with gramicidin. So
far as this drug is concerned, the more
microbes the merrier.

A number of large pharmaceutical
manufacturers are already at work mak-
ing gramicidin. Dubos' bacilli are intro-
duced into trays of culture, medium
—microbe food—and are allowed to
grow. Gramicidin which they throw off
is collected. Approximately three gal-
lons of culture is required to produce a
fleck the size of a pencil eraser. If it
weren't for the incredible potency of
this new stuff, costs would be prohibi-
tive. But the bit of gramicidin we speak
of, the 1-gram bit, would be enough to
treat 250 cases like the 16-year-old boy
with empyema.

Gramicidin being produced today is
being sold for treatment of cows—but
not men. It isn't likely that it will be
released to the medical profession for
at least a year—until all loose ends of
the research are tied up. Meanwhile, the
men gathering this necessary informa-
tion beg people not to write asking for
gramicidin, or asking for treatment.

Very little—not more than a few
grams—of absolutely pure gramicidin
has been produced to date. Such clinical
successes as have been reported
have been achieved with a crude ex-
tract. The pure stuff that has been ob-
tained has gone into the hands of
chemists. They are trying to piece to-
gether the molecular structure in hope
that they can make the material artifi-
cially. But they have an even greater
hope. They have tinkered with the sul-
fanilamide molecule, chipping off un-
desirable qualities. Some of the new sulfa
drugs have radically different properties
from the mother stuff. Chemists hope
that they may do as much with grami-
cidin. Possibly they can get rid of the
blood-splitting characteristic; and
maybe they can find why it is insoluble
in water. If they can do these things
they may have produced the microbe
killer supreme.

Our Fighting Men

GULF COAST AIR CORPS TRAINING CENTER, San Antonio, Texas. Today's No. 1 assignment for Air Corps public relations men is to play up the jobs of the navigator and bombardier. So far, the pilot has been the glamor boy—hero of miles of movies, popular fiction, and head man in Air Corps releases. Given a greater opportunity to turn in a spectacular one-man job, he has to date grabbed a large hunk of page-one space, with the result that most of the lads turning up at U. S. flying schools are all set mentally to become pilots. So few have been interested in the course-charting or bomb-dropping chores that cadets have had to be lifted from the ranks of would-be aces.

The Army needs more bombardiers and navigators and wants Air Corps recruits to realize these key jobs require just as much skill as piloting. Some of the Air Corps publicists currently are polishing off their best adjectives, coining nicknames for the men who may some day drop a few eggs on Hirohito's house. Stories from the Kelly Field Navigation School point out that the navigator is the "brains behind the bomber"—he picks the course that gets the ship to its destination and home again, while the pilot simply flies as per instructions. Cadets learning the art of bomb-dropping deep in the heart of West Texas, where the Midland Army Flying School is scheduled to become the largest bombardier college in the world, are referred to officially as Hell from Heaven Men, Lords of the Bomb-sight, and The Most Dangerous Men in the World. "He," says a message from Midland about a bombardier, "will deliver the long punches, the hard punches, the haymakers, when Allied air offense opens full blast."

MIDLAND statisticians have, in the way of statisticians, ferreted out the average bombardier cadet: Twenty-three-year-old John V. Hogan, who weighs 160 pounds and measures five-foot-ten from the bottom of his G.I. shoes to the top of his G.I. haircut. This makes him a good two inches taller and some 16 pounds heavier than the Army's average man, whose dimensions were calculated last winter by the Quartermaster Corps. The latter office, by the way, maintains not only that Texans and men from the West Coast are two inches taller than the rest of the Army, but that soldiers from the Yankee section are two to three inches larger around the middle, and Southerners have the biggest feet. Kindly address to the Quartermaster Corps any letters of complaint about these findings.

CAMP WALLACE, Hitchcock. The incident which brought Pvt. George Bosela into considerable disfavor occurred in the mess hall. Seeing what he believed to be the hand of another chow hound reaching over his shoulder, Pvt. Bosela took a hefty jab at it with his fork, then turned around to gloat. The gloat never came off. The victim was a colonel on an inspection tour.

CAMP BULLIS, San Antonio. Newest wrinkle in Lt. Gen. Walter Krueger's Army is a school to train intelligence specialists in the art of quizzing prisoners of war. About 100 officers and men, hand-picked from the linguists of Third Army units from Mississippi to Arizona, have just finished six weeks of eight-

hours-a-day scratching on note pads and burrowing into books, getting a line on what the Army officially describes as "the technique of asking questions to secure information a prisoner does not mean to disclose."

The pupil-picking was handled by two teams of language experts who put prospects through personal interviews; primary entrance requirement was a fluent conversational knowledge of at least one foreign lingo. Classroom menu featured a brief review of principles of combat intelligence (maps, messages, etc.) in English, followed by the application of the assorted foreign tongues to these principles. School data was dug out of foreign textbooks and miscellaneous tomes in near-by libraries, and solicited from missionaries, first-generation Americans and Army officers who had served abroad. Fourth Army Corps experts dished out the dope, which we'd pass on to you were it not for the fact that Hitler would like some of the details himself.

CAMP BOWIE, Brownwood. The decent interval of one year having elapsed since we last reported a soldier's clash with strange Mexican food, let us now consider the case of the infantryman who spied enchiladas (tortillas, chili, cheese and onions) on a Texas café menu. Evidently under the impression that the concoction was a seafood, the guy ordered some, gingerly poked it with a fork, then summoned the waiter. "Look, bud," he said, "why didn't you tell me these were soft-shelled enchiladas?"

RANDOLPH FIELD, San Antonio. Men who pilot our bombers over enemy territory will have to be able to do it when the world below them is dark as the inside of a coal mine mule's stomach, so extra hours under the hood and behind the instrument panel of the Link trainer are being added to the course here and at other basic flying schools. Until last December, Randolph housed only three of the ground-anchored, blind-flying, mechanical instructors, which were used solely by officers who were brushing up on their instrument technique. Cadets didn't get Link instruction until they reached advance school. Now, however, there are 37 Links at Randolph, and six hours of terra firma blind flying have been worked into the basic course.

Navigation cadets at Kelly Field are experimenting with a navi-trainer, which, looking something like a cousin twice removed of the Link, features a rolling map on which the student tries to follow a course while keeping tab on a batch of instruments in front of him. The gadget is being tested at schools in all three of the country's Air Corps training centers and may be adopted nationally.

SHEPPARD FIELD. A young lady in South Dakota sent a box of cookies to Pvt. Edward E. Babcock, in one of the squadrons here, but before the package arrived Pvt. Babcock was shipped off to California. Now the young lady wants to know what lug ate the cookies. The empty box was sent back to her under Babcock's name—with a request for a refill.

FORT ROSECRANS, San Diego, Cal. It cost Pvt. William Mellessey exactly \$7.45 to hear the voice of his bride at his wedding, performed by long distance

ENGINEER TRAINING. Fort Belvoir, Alexandria, Va., teach an engineer has to know. Soldiers above are wearing the camouflage suits, resembling overalls colored to blend with

Scale models help the engineers work out effective artillery installations. Also one of the duties of the Corps is the plotting and developing of new maps daily for use

phone. The Axis shattered furlough plans of the half Chippewa Indian, half French coast artilleryman, and the wedding problem was outlined to Chaplain D. V. Ellsworth, who got the necessary documents, arranged a three-way, 2,000-mile hook up, solemnly intoned the full church service and pronounced Mellessey and Miss Ruth Graving, of Minneapolis, man and wife. "Now," said the nervous groom, unable to kiss the bride, "we've just got to win this war, and the sooner the better!"

FORT LEWIS, Seattle, Wash. Note to goldbrickers: Master Sgt. W. R. Barnett, of a Ninth Corps signal company, has been in the Army for more than thirty years and has never answered sick call.

GOWEN FIELD, Boise, Idaho. Non-coms who earned their stripes over a period of peacetime years and the new top kicks who got theirs pronto in a rapidly expanding Army, are at it tooth and nail. The new tops think it's up to them to show they rate the stripes and the old hands aren't going to let a bunch of "upstarts" steal the show, so the competition is fierce. There are no fights, though; the strippers are all working toward the same goal.

FORT DOUGLAS, Salt Lake City. We don't want to imply that all volunteer officer candidates are fugitives from 1-A, jumping at a chance to get bars, but there are reports that some 3-A citizens decided their dependents weren't so helpless after all. Couple of hours after one such candidate turned up at the Reception Center, a sergeant called on his C.O. and asked about the status of this new man. Seems he'd been acting as though the fort was a summer resort and that the sergeant was a bellhop. "His status is that of any other private," said the captain. "That's all I want to know, sir," said the sergeant. Last we heard, the new man was ordering mops around and being executive to a bushel of spuds.

CAMP WILLIAMS, Lehi, Utah. Negro soldiers being trained into M.P. battalions at this new camp have plenty on the ball when it comes to police and guard duty—when they buckle down to it. Two Army trucks were sent to a Salt Lake depot to pick up a new bunch and found them sitting in a heated sightseeing bus wondering when it would take off for camp. An officer in one of the trucks got them out of the bus and a Negro corporal counted 16 of the boys into the Army vehicles. Only 15 of them piled out at camp. The other, having caught sight of a cutie on a corner, showed up two days later, which is why Army trucks no longer pass through Salt Lake's Harlem.

FORT HUACHUCA, Arizona. This old, mile-high, border cavalry post, which was given a \$7,000,000 workover during the past year, is being expanded again. It's to be the home of the reactivated 93d Negro Infantry Division, first of two such units recently authorized by Secretary Stimson. Commanding the 93d will be Brig. Gen. C. P. Hall, who is white, but there will be a number of Negro line officers in the division. Assignment to this post was once enough to lay any officer low; now it's one of the choice spots, modernization having made it into something of a glorified dude ranch. Back of the post are the rugged, wooded Huachuca (*Whah-choo-ka*) mountains; sweeping desert valleys sprawl out in the other three directions. Negro soldiers like the nearby border towns of Naco and Nogales, scenes of many battles during the hectic days of Mexican revolutions.

(Continued on page 73)

Miss Marple said, "There must be something. But I am so old and so ignorant and, I am afraid, so foolish."

I felt rather embarrassed and was glad when Mrs. Dane Calthrop took her friend away.

I was to see Miss Marple again that afternoon, however. Much later, when I was on my way home.

She was standing near the little bridge at the end of the village, near Mrs. Cleat's cottage, and talking to Megan, of all people.

I wanted to see Megan. I had been wanting to see her all day. I quickened my pace. But as I came up to them, Megan turned on her heel and went off in the other direction.

It made me angry and I would have followed her, but Miss Marple blocked my way.

"I wanted to speak to you," she said. "No, don't go after Megan now. It wouldn't be wise."

I was just going to make a sharp rejoinder when she disarmed me by saying, "That girl has great courage—a very high order of courage."

I still wanted to go after Megan, but Miss Marple said, "Don't try and see her now. I do know what I am talking about. She must keep her courage intact."

There was something about the old lady's assertion that chilled me. It was as though she knew something that I didn't.

I was afraid and didn't know why I was afraid.

I didn't go home. I went back into the High Street and walked up and down aimlessly. I don't know what I was waiting for, nor what I was thinking about. . . .

I got caught by that awful old bore Colonel Appleby. He asked after my pretty sister as usual and then went on:

"What's all this about Griffith's sister being mad as a hatter? They say she's been at the bottom of this anonymous-letter business that's been such a confounded nuisance to everybody. Couldn't believe it at first, but they say it's quite true."

I said it was true enough.

"WELL, well—I must say our police force is pretty good on the whole. Give 'em time, that's all, give 'em time. Funny business this anonymous-letter stunt—these desiccated old women are always the ones who go in for it—though the Griffith woman wasn't bad looking even if she was a bit long in the tooth. But there aren't any decent-looking girls in this part of the world—except that governess girl of the Symingtons. She's worth looking at. Pleasant girl, too. Grateful if one does any little thing for her."

"Came across her having a picnic or something with those kids not long ago. They were romping about in the heather and she had been knitting—ever so vexed she'd run out of wool. 'Well,' I said, 'like me to run you into Lymstock? I've got to call for a rod of mine there. I shan't be more than ten minutes getting it, then I'll run you back again.' She was a bit doubtful about leaving the boys. 'They'll be all right,' I said. 'Who's to harm them?' Wasn't going to have the boys along, no fear! So I ran her in, dropped her at the wool shop, picked her up again later and that was that. Thanked me very prettily. Grateful and all that. Nice girl."

I managed to get away from him.

It was after that, that I caught sight of Miss Marple for the third time. She was coming out of the police station.

Where do one's fears come from? Where do they shape themselves? Where do they hide before coming out into the open?

Just one short phrase. Heard and noted and never quite put aside:

"Take me away—It's so awful being here—feeling so wicked. . . ."

Why had Megan said that? What had she to feel wicked about?

There could be nothing in Mrs. Symington's death to make Megan feel wicked.

Why had the child felt wicked? Why? Why?

Could it be because she felt responsible in any way?

Megan? Impossible! Megan couldn't have had anything to do with those letters—those foul obscene letters.

Oh, my Megan, my little child. Not that! Anything but that. And that old Tabby is after you; she suspects. She says you have courage. Courage to do what?

IT WAS only a brainstorm. It passed. But I wanted to see Megan—I wanted to see her badly.

At half past nine that night I left the house and went down to the town and along to the Symingtons'.

I passed through the Symingtons' gate and up to the house. It was a dark overcast night. A little rain was beginning to fall. The visibility was very bad.

I saw a line of light from one of the windows. The little morning room?

I hesitated a moment or two, then instead of going up to the front door, I swerved and crept very quietly up to the window, skirting a big bush and keeping low.

The light came from a chink in the curtains, which were not quite drawn. It was easy to look through and see.

It was a strangely peaceful and domestic scene. Symington in a big armchair, and Elsie Holland, her head bent, busily patching a boy's torn shirt.

Quiet domestic talk—quiet domestic

scene—and a golden head of needlework.

Then the door opened and came in.

She stood very straight way, and I was aware of something tense and strung up. The skin of her face was tight and her eyes bright and there was no diffidence about her no childishness.

She said, addressing Symington giving him no title (and I reflected that I never had him anything. Did she address father or as Dick or what?)

"I would like to speak to you alone."

Symington looked surprised, not very pleased, but Megan carried her determination unusual in her.

She turned to Elsie Holland. "Do you mind, Elsie?"

"Oh, of course," Elsie jumped up. She looked startled.

She went to the door and farther in so that Elsie could see her.

Just for a minute Elsie's attentionless in the doorway her shoulder.

Her lips were closed, still, one hand stretched clasping her needlework.

I caught my breath, suddenly by her beauty.

When I think of her I think of her like that—in

tion, with that matchless perfection that belonged to a

Then she went out shutting the door. Symington said

"Well, Megan, what is it? What want?"

Megan had come right to the door. She stood there looking at Symington. I was struck by her resolute determination

by something else—a haughty me.

Then she opened her

extra money?

something that startled me to the core.

"I want some money," she said.

The request didn't improve Symmington's temper. He said sharply, "Couldn't you have waited until tomorrow morning? What's the matter, do you think your allowance is inadequate?"

A fair man, I thought even then, open to reason, though not to emotional appeal.

Megan said, "I want a good deal of money."

Symmington sat up straight in his chair. He said coldly:

"You will come of age in a few months' time. Then the money left you by your grandmother will be turned over to you by the Public Trustee."

Megan said:

"You don't understand. I want money from you." She went on, speaking faster: "Nobody's ever talked much to me about my father. They've not wanted me to know about him. But I do know that he went to prison and I know why. It was for blackmail!"

She paused.

"Well, I'm his daughter. And perhaps I take after him. Anyway, I'm asking you to give me money because—if you don't—" She stopped and then went on very slowly and evenly—"if you don't—I shall say what I saw you doing to the cachet that day in my mother's room."

There was a pause. Then Symmington said in a completely emotionless voice, "I don't know what you mean."

Megan said, "I think you do."

And she smiled. It was not a nice smile.

Symmington got up. He went over to the writing desk. He took a check-book from his pocket and wrote out a check. He blotted it carefully and then came back. He held it out to Megan.

"You're grown up now," he said. "I can understand that you may feel you want to buy something rather special in the way of clothes and all that. I don't know what you're talking about. I didn't pay attention. But here's a check."

Megan looked at it, then she said, "Thank you. That will do to go on with."

SHE turned and went out of the room. Symmington stared after her and at the closed door, then he turned around and as I saw his face I made a quick uncontrolled movement forward.

It was checked in the most extraordinary fashion. The big bush that I had noticed by the wall stopped being a bush. Superintendent Nash's arms went around me and Superintendent Nash's voice just breathed in my ear:

"Quiet, Burton. For God's sake."

Then, with infinite caution he beat a retreat, his arm impelling me to accompany him. Around the side of the house he straightened himself and wiped his forehead.

"Of course," he said. "You would have to butt in!"

"That girl isn't safe," I said urgently. "You saw his face? We've got to get her out of here."

Nash took a firm grip of my arm.

"Now, look here, Mr. Burton, you've got to listen."

Well, I listened.

I didn't like it—but I gave in.

But I insisted on being on the spot and I swore to obey orders implicitly.

So that is how I came with Nash and Parkins into the house by the back door, which was already unlocked.

And I waited with Nash on the upstairs landing behind the velvet curtain masking the window alcove until the clocks in the house struck two, and Symmington's door opened and he went across the landing and into Megan's room.

I did not stir or make a move for I knew that Sergeant Parkins was inside masked by the opening door, and I knew that Parkins was a good man and knew his job, and I knew that I couldn't have trusted myself to keep quiet and not break out.

And waiting there, with my heart thudding, I saw Symmington come out with Megan in his arms and carry her downstairs, with Nash and myself a discreet distance behind him.

He carried her through to the kitchen and he had just arranged her comfortably with her head in the gas oven and had turned on the gas when Nash and I came through the kitchen door and switched on the light.

And that was the end of Richard Symmington. He collapsed. Even while I was hauling Megan out and turning off the gas I saw the collapse. He didn't even try to fight. He knew he'd played and lost.

UPSTAIRS I sat by Megan's bed waiting for her to come around and occasionally cursing Nash.

"How do you know she's all right? It was too big a risk."

Nash was very soothing.

"Just a soporific in the milk she always had by her bed. Nothing more. It stands to reason he couldn't risk her being poisoned. As far as he's concerned, the whole business is closed with Miss Griffith's arrest. He can't afford to have any mysterious death. No violence, no poison. But if a rather unhappy type of girl broods over her mother's suicide, and finally goes and puts her head in the gas oven—well, people just say that she was never quite normal and the shock of her mother's death finished her."

I said, watching Megan, "She's a long time coming around."

"You heard what Dr. Griffith said? Heart and pulse quite all right—she'll just sleep and wake naturally. Stuff he gives a lot of his patients, he says."

Megan stirred. She murmured something.

Superintendent Nash unobtrusively left the room.

Presently Megan opened her eyes.

"Jerry."

"Hullo, sweet."

"Did I do it well?"

"You might have been blackmailing ever since your cradle!"

Megan closed her eyes again. Then she murmured:

"Last night—I was writing to you—in case anything went—went wrong. But I was too sleepy to finish. It's over there."

I went across to the writing table. In a shabby little blotter I found Megan's unfinished letter.

"My dear Jerry," it began primly:

"I was reading my school Shakespeare and the sonnet that begins:

"So are you to my thoughts as food to life,

Or as sweet-season'd showers are to the ground"

and I see that I am in love with you after all, because that is what I feel."

"SO YOU see," said Mrs. Dane Calthrop. "I was quite right to call in an expert."

I stared at her. We were all at the Vicarage. The rain was pouring down outside and there was a pleasant log fire, and Mrs. Dane Calthrop had just wandered around the room, beat up a sofa cushion and put it for some reason of her own on the top of the grand piano.

"But did you?" I said, surprised.

"Who was it? What did he do?"

"It wasn't he," said Mrs. Dane Calthrop.

With a sweeping gesture she indicated Miss Marple. Miss Marple had

"Two more, they say . . .
pretty soon even **ENO**
won't help them!"

Smoking, eating or drinking to excess may bring on headaches, heartburn, and the heavy, stuffy feeling of acid indigestion. When that happens, just remember—a dash of sparkling, tangy-tasting Eno in a glass of water helps alkalize by relieving excess stomach acid. A larger quantity taken before breakfast acts as a refreshing laxative. Buy world-known Eno . . . and use anytime you feel out-of-sorts.

finished the fleecy knitting and was now engaged with a crochet hook and a ball of cotton.

"That's my expert," said Mrs. Dane Calthrop. "Jane Marple. Look at her well. I tell you, that woman knows more about the different kinds of human wickedness than anyone I've ever known."

"I don't think you should put it quite like that, dear," murmured Miss Marple.

"But you do."

"One sees a good deal of human nature living in a village all the year around," said Miss Marple placidly.

Then, seeming to feel it was expected of her, she laid down her crochet, and delivered a gentle old-maidish dissertation on murder.

"The great thing in these cases is to keep an absolutely open mind. Most crimes, you see, are so absurdly simple. This one was. Quite sane and straightforward—and quite understandable—in an unpleasant way, of course."

"Very unpleasant!"

"THE truth was really so very obvious. You saw it, you know, Mr. Burton."

"Indeed I did not."

"But you did. You indicated the whole thing to me. You saw perfectly the relationship of one thing to the other, but you just hadn't enough self-confidence to see what those feelings of yours meant. To begin with, that tiresome phrase 'No smoke without fire.' It irritated you, but you proceeded quite correctly to label it for what it was—a smoke screen. Misdirection, you see—everybody looking at the wrong thing: the anonymous letters—but the whole point was that there weren't any anonymous letters!"

"But my dear Miss Marple, I can assure you that there were. I had one."

"Oh, yes, but they weren't real at all. Dear Maud here tumbled to that. Even in peaceful Lymstock there are plenty of scandals, and I can assure you any woman living in the place would have known about them and used them. But a man, you see, isn't interested in gossip in the same way—especially a detached logical man like Mr. Symmington. But a genuine woman writer of those letters would have made her letters much more to the point."

"So you see that if you disregard the smoke and come to the fire you know where you are. You just come down to the actual facts of what happened. And putting aside the letters, just one thing happened—Mrs. Symmington died."

"So then, naturally, one thinks of

well established, he staged—on a fine afternoon when the boys and his would be out, and the regular day out. He saw that the little maid quarrel with her boy friend to the house."

"But what did she see?"

"I can only guess. My that she didn't see any-

all a mare's-nest?"

"dear, I mean that she entry window all the afternoon for the young man to it up and that—quite nothing. That is, no house at all, not the anybody else."

"I suppose, no, no, the fact interested me for quite another reason. It was really, you see, Mr. Symmington's one weakness. He couldn't bring himself to write a foul letter to the girl he loved. It's a very interesting sidelight on human nature—and a credit to him, in a way—but it's where he gave himself away."

"I received one?" I asked,

"se not! As I say, this ple. Her husband just in the top cachet of the the afternoon when her after lunch. All Symmington, do was to get home at the same time as Elsie wife, get no answer, go drop a spot of cyanide glass of water she had used th cachet, toss the crumby letter into the grate, he and the scrap of paper t g on' written on it."

"I returned to me. e te right about that, too, scrap of paper was all ple on't leave suicide notes e aps of paper. They use r—and very often an es, the scrap of paper and u knew it."

"I rang me too high," I said.

"I d you really did, Mr. herse why were you im- pressed by the message left scribbled on the tele-

"I say that I can't y—see! 'I can't go on!'"

Miss Marple beamed on me.

"Exactly. Mr. Symmington came across such a message and saw its possibilities. He tore off the words he wanted for when the time came—a message genuinely in his wife's handwriting."

"Was there any further brilliance on my part?" I asked.

Miss Marple twinkled at me.

"You put me on the track, you know. You assembled those facts together for me—in sequence—and on top of it you told me the most important thing of all—that Elsie Holland had never received any anonymous letters."

"Do you know," I said, "last night I thought that she was the letter writer and that that was why there had been no letters written to her."

"Oh, dear me, no. . . . The person who writes anonymous letters practically always sends one to herself as well. That's part of the—well, the excitement, I suppose. No, no, the fact interested me for quite another reason. It was really, you see, Mr. Symmington's one weakness. He couldn't bring himself to write a foul letter to the girl he loved. It's a very interesting sidelight on human nature—and a credit to him, in a way—but it's where he gave himself away."

Joanna said, "And he killed Agnes? But surely that was quite unnecessary!"

"Perhaps it was, but what you don't realize, my dear—never having killed anyone—is that your judgment is distorted afterward and everything seems exaggerated. No doubt he heard the girl telephoning to Partridge, saying she'd been worried ever since Mrs. Symmington's death, that there was something she didn't understand. He couldn't take any chances—perhaps this stupid, foolish girl had seen something, knew something."

"Yet apparently he was at his office all that afternoon."

"I should imagine he killed her before he went. Miss Holland was in the dining room and kitchen. He just went out into the hall, opened and shut the front door as though he was going out, then slipped into the little cloakroom."

"When only Agnes was left in the house, he probably rang the front-door bell, slipped back into the cloakroom, came out behind her and hit her on the

You don't need your auto on a RANCHO VACATION

Go Santa Fe to the DUDE RANCHO country

● On a dude ranch vacation in the Southwest, where bustling highways give way to peaceful trails . . . the horse is king . . . and you won't need your own automobile from the time you leave home until you get back. That's important now, when all of us must conserve on gas and tires!

Along the Santa Fe, in the cool mountains and valleys of New Mexico, Arizona, Colorado, and California, are scores of small and big ranches that offer such simple, wholesome outdoor vacations—anytime from May through October.

Santa Fe's Dude Ranch booklet, with its list of ranches, rates, etc., gives you a world of help in selecting THE ranch that will suit your taste and fit your pocket book. For a copy of this picture booklet, just get in touch with any railroad ticket office, or tourist bureau, or mail the coupon below.

Service Organization will be

at least double that of last year. They'll
need \$32,000,000 to operate their 450
clubhouses and 250 smaller units, and
the money has to come from civilian
pocketbooks. The new campaign starts
next Monday. When United Service
Organization workers call on you—
give!

THE Information-Recreation Center
for enlisted personnel, at 99 Park
Avenue, New York, is operating briskly.
So is the Officers' Club, opened three
weeks ago in the Sherry Netherlands
Hotel. Both enterprises are very much
needed in a town the size of New York,
and the latter project especially de-
serves consideration by hotel manage-
ments all over the country. New York's
new army club is operated by officers
solely for officers; the hotel's grillroom
has been fully equipped and staffed at
the hotel's expense, but there are no
dues and an officer has merely to show
his credentials to eat and drink at prices
he's used to paying at officers' clubs in
camp.

"THIS," writes Pvt. Walter C. Kip-
linger, of Fort Jackson, S. C., "is
merely a thank-you note for giving me
the idea I could get back into the Army
(I'm a veteran of World War I). The
item that caught my eye ran in your
column of February 28th and described
a 50-Year-Old Club at Camp Roberts in
one of the camps, composed largely of
former officers and noncoms of 1917
vintage. I thought if those old has-
beens could get back in, so could I.
They waived about everything except
the Grand Old Flag in my case, and I
finally made it. You stated in your story
that present officers were a bit reluc-
tant to give orders to the old-timers.
My observation so far has been that
these young officers are so far ahead of
us 90-day wonders that there's no com-
parison, even though most of us made
good in those days."

NOT all of this department's sugges-
tions go down without a trace. Last
Sept. 6th we ventured somewhat ve-
hemently to ask why the summer uni-
form couldn't be patterned after the
British idea of comfort, and now it be-
gins to look as though the Quarter-
master Corps will soon introduce a new
outfit for hot climes. Field tests with
half shoes, khaki shorts and knit socks
indicate that these items will constitute
part of the forthcoming summer outfit
for our fighting men.

IDEA is to keep cool while making it
hot for the Axis. G. W.

"We got to make allowances for him,
sir. He was All-America end in 1939"

CARL ROSE

SOMEWHERE IN AMERICA a boy is
moving along the road that leads to
school, to adolescence, to manhood, to
a world that is bound to be different
from any world we know today. And
as he trudges along that road, that
seems so long to him but is so short,
he dreams.

We hope that his dreams come true.
They always have, in America.

Not all the dreams of all young
people, of course. It takes more than
just dreaming to make dreams come true. But for young
men and women who have gone on to plan and work and
fight, a surprising number of their dreams have come true.
So many that America has become the land of opportunity.
So many that the United States has become the nation,
among all nations of the world, that combines national
greatness with individual liberty.

But what about *this* time?

Throughout America factories are running twenty-four
hours a day, men are working overtime, lights are burning
in offices and laboratories far into the night. What are these
men and women of American industry working for? To
produce more goods? For war?

Yes—and more. General Electric has been a part of
American industry for more than 60 years. It has shared
its problems and been a part of its progress. We think that
the workmen and scientists and engineers of General
Electric are working today for that young man—working
that the tomorrow of which he dreams will come, and that
it will be better than today. *General Electric Company,
Schenectady, N. Y.*

★ ★ ★

The volume of General Electric war production is so high
and the degree of secrecy required is so great that we cannot
tell you about it now. When it can be told we believe that the
story of industry's developments during the war years will
make one of the most fascinating chapters in the history of
industrial progress.

Don't Hate the Wrong People

JOB No. 1 for the American people, as for the peoples of the other Allied Nations, is to win this war. Yet some of us are falling for a patent medicine which, if enough of us take it in large enough doses, can almost be guaranteed to lose the war for us.

The defeat medicine referred to is Hate. Hate of one section of the people for another section. Hate of one creed for another creed. Hate of one racial group for another. Hate of one economic class for another. The kind of hate, we mean, that translates into a tendency to blame the hated person or group for all the miseries of this war, or even for the fact that we are in the war at all.

Of all these brands of hate, anti-Semitism has had the most publicity of late, for a variety of reasons.

We're hearing from more and more people that the Jews somehow got us into this war, or are keeping us in it, or are winning us more enemies all the time. As a matter of fact, the Japs blasted us into the war, and the indications increase that they had been planning to do so whenever they thought the time most opportune.

The blame-the-Jews thinkers, however, detour this and other facts in the case, and dish out more and louder propaganda for eventual pogroms as the job of beating the Axis looms larger.

Another contingent of hate peddlers works on the Negro question. Japanese propa-

gandists are known to be trying to sell our colored people on the proposition that Japan is fighting to "liberate" all the non-whites in the world. An estimated 99.99% of our colored people have sense enough to know that Japan hopes eventually to enslave the entire world outside Japan. But too many of our white people go on discriminating against the colored people in the old, hate-motivated way. Thus, they encourage any doubts any of our colored citizens may have.

As loudly as we know how, we would like to urge Americans to repudiate these and other hate mongers. Discourage them. Ignore them.

Let's suppose that, by some strange mischance, Father Coughlin, John L. Lewis, William Dudley Pelley, Senators Pepper and Wheeler, Sol Bloom, and the Ku-Klux Klan's No. 1 Nightshirt were to find themselves shipwrecked and adrift in one lifeboat on the open sea. Here would be assembled about as fancy a collection of one-track minds as could well crowd aboard one small lifeboat. Yet it is a 100-to-1 bet that all these gentlemen would button all their prejudices in their hip pockets for the duration of their particular emergency.

Well, fellow Americans, that is precisely the fix in which we find ourselves at this time. We're all in one boat together, and the "wave of the future" is threatening to engulf us all in a tide that is drawing toward a New Order of slavery for all humanity except a picked handful of Germans and a picked handful of Japs.

China Relief

WE CAN either conquer Japan or be defeated by the Japanese. Unfortunately, the Japanese have won the important means to win the war.

There is only one way to defeat Japan: by attack. The real attack for industry and our Army and Navy preparing will have to be aimed at the judgment of our war leaders.

The easiest way to attack Japan is China. Consequently, we need an active ally and as a belligerent in this war. If China were to be utterly conquered by the Japanese, our difficulties would be immensely increased. If the Chinese were to ally at peace with Japan, it might be possible for us to regain mastery of the Pacific. Certainly the cost of bringing the terms would be tremendously multiplied. Expenditures in human life and in resources would necessarily be prodigious.

This is the rock foundation that underlies the present effort to bring substantial aid to the Chinese. Our government is not providing military supplies to Chiang Kai-shek's government. Private good will can provide supplies and other essential goods urgently by the Chinese people.

Chiang Kai-shek is the leader of all opposition to the Japanese. Chiang Kai-shek and no other general can lead an unwilling people to continue to fight a no less war. The Chinese must have hope. America and Americans can give them hope.

If the Chinese have faith in American friendship, their belief in their chances of survival as an independent nation will be strengthened. No other people has the power or the inclination to help the Chinese.

So our self-interest reinforces the aid being made for aid to the Chinese. We must keep them in the war so that we can fight our enemy, who also is their enemy, more effectively.

Our self-interest is not, of course, our only reason for giving practical proof of our friendship. The sufferings, the sacrifice, the valor of the Chinese have been beyond belief. The Chinese have had nothing except courage, a stubborn determination to be independent, and inadequate arms with which to defend themselves. Losses in lives and in material have been beyond understanding by other nations. The nation has made greater sacrifices for independence. No people have suffered heavier punishment or offered greater sacrifices.

If any people ever earned the gratitude of Americans, the Chinese have. We should consider the appeals being made by groups asking for contributions for them. They are fighting, and valiantly. They have sacrificed, as history has ever been called for. They have survived four ages of devastating punishment. We must answer their call and at the same time defend ourselves. Surely good will seldom offers a better opportunity for effective expression.

EVERY WEEK AMERICANS RELY MORE AND MORE ON RCA RADIO TUBES

UNITING a nation of 130 million people in the flash of a split second is no easy job. Radio does it—thanks to hundreds of millions of radio tubes in receivers, studios, broadcasting stations and what-have-you.

NOW that radio means more than ever, you may wonder about the tube situation. Can you get tubes? If you can't—then what? Here's the story:

RADIO TUBES AT WAR

RCA pioneered the all-metal radio tube. Today, we're turning out more of them than ever before—yet it's just possible you may not immediately be able to buy one. Why? You already guessed! Millions of metal tubes are going into the military radio equipment of the United Nations. And while we're making more and more, the general public is getting less and less.

IN many cases, you can substitute shielded glass tubes for satisfactory performance. There's one man who can tell you all about that. Which leads us into another subject—

THE CARE AND FEEDING OF RADIO RECEIVERS

WHEN tubes begin to weaken, radio performance suffers...but so gradually you don't notice the difference from day to day. Also, most radios require readjustment every year or two, as time, dust and dampness take their toll of its precision. The answer is—call your radio serviceman! Put all your troubles into his competent hands. If he can't get the right metal tubes, he can probably obtain suitable glass substitutes.

TWO SWELL NEW VICTOR RECORDS!

"OUR WALTZ" and "HOLIDAY FOR STRINGS" by David Rose and his orchestra. An up-and-comer, versatile David Rose (whose grand band is on the radio three times a week) wrote, arranged and conducted these two selections. No. 27853.

TOMMY DORSEY sends two swell tunes your way on his newest Victor release No. 27849 "Last Call for Love" and "Poor You," both from Tommy's M-G-M super-hit... "Ship Ahoy." What more need we say?

ANY WEEK

AS THE war gets older, its novelty wearing thin, it is only natural that other problems should engage the minds of the populace. For example, a taxicab chauffeur unburdened himself to Mr. Charles Colebaugh of this magazine. Halted by a red light, the driver asked Mr. Colebaugh to consider the hats on a group of ladies crossing the street. "It used to be," said the driver, "that women dressed up to attract us men." There was a long pause, the taxicab driver contemplating the ladies morosely. Then the light changed. "I wonder," he said, getting started, "what they got on their minds now."

THE name of Colonel Quasmus Murphey has never before been in these columns. But without the ever-ready assistance of the colonel, we don't know what we'd have done in a number of arid periods. Until now, Colonel Murphey has insisted upon anonymity, saying that there are entirely too many names in the public prints and that "I live for the day when a strict censorship will be clamped down upon all names of public servants unless what they have to say or what they've done is worth reading." This censorship, the colonel adds in several thousand words, would save paper, reduce the public confusion, deflate phonies and probably knock many months off the length of the war by reducing the load upon the public mind. However, the colonel consents this once to be identified with a public statement of his own which, we think, is timely. From his home near Sandisfield, Massachusetts, the colonel offers to "swap two large scrapbooks of carefully selected rumors for one fireside chat of reliable information." He goes on to say that the rumors he has collected since Pearl Harbor are "entertaining, plausible, ingenious and pandering to every known prejudice." Some have accurate historical background, he adds, and others are in smart dialogue form—what Stalin said to Harry Hopkins and what Churchill said to the President stuff. "Some are good and sexy too," says the colonel. But what Colonel Murphey wants to know is: "If Washington don't beat the rumors to us with the facts, what are we going to talk about when somebody brings up the subject of the war? Can you imagine somebody remarking, 'I heard

something today that would curl Mohandas K. Gandhi's hair but until the authorities in Washington release a nice uninteresting communiqué on the subject I shall say nothing about it. But it sure is a darb—this one I heard today.' And" goes on the colonel, "I can just hear the other guy saying, 'You're right, don't tell me. I prefer to wait until the authorities give out their unromantic version in easily understood official clichés. So I won't tell what a friend of mine who has a son in the Army was telling me this morning about something that happened day before yesterday.'" The colonel's is a very long letter and we're giving you merely the gist of it. We leave him, quoting from his postscript, a scant two single-spaced pages: "I have a nice fresh mess of Pacific Ocean gossip to exchange for an equal amount of European theater stuff. Accuracy is not essential but the items supplied must be harrowing, as I have been invited to address a Rumors For Republicans meeting next Thursday evening."

WE GOT caught in a nice blackout in Washington. As far as we were able to see, we and a gentleman named Prewitt were the only persons on the street who were not wardens. There seemed to be at least one warden for everybody. Four or five of them stopped squabbling about who was who's superior long enough to crowd us into a doorway next to a large plate-glass

window. Mr. Prewitt protested that a bomb would shatter that window and that the window would ruin us. And that started another fight among the wardens, during which we departed seeking less dangerous shelter. Mr. Prewitt works for the government—something to do with inland waterways. He said that the wardens in his neighborhood were holding singing practice every Wednesday night and proposed to sing nursery rhymes during a blackout. But Mr. Prewitt hasn't found out why, unless it is to make an actual bombing less dreadful by comparison.

A SLIGHTLY bitter complaint from Mrs. Chris J. Miller of Point Pleasant, New York, has to do with vitamins and handkerchiefs, commodities which

American Planes Cited as Superior

Congress Committee Gives Battle Records

WASHINGTON, Feb. 1:—(SPECIAL). Confirming the superiority of American-built fighting planes, the House Military Affairs Committee's sub-committee on aviation today cited the following outstanding performances of these planes on all fronts, from the Far East and Pearl Harbor to the Near East and England:

1. American volunteers defending the Burma Road in Tomahawks (Curtiss P-40's) have bagged ninety to one hundred Japanese airplanes since Dec. 7, with a loss ratio of about one to ten.
2. On Jan. 23 a total of twenty-three planes (mostly P-40's) of the American Volunteer Group "took on two large Japanese forces 130 miles from Rangoon and destroyed three Japanese bombers and nine fighters certainly and two more bombers and ten more fighters probably," with the loss of only three planes.
3. During the Japanese attack on Pearl Harbor, Dec. 7, planes similar to the Tomahawks (P-40's) each shot down two Japanese planes, and engaged and shot down another pair "a short time later."
4. Four P-40's shot down and destroyed twenty out of a flight of thirty German JU-88's and ME-109's "only a few weeks ago." Two of the P-40's were lost.
5. In the Middle East, twelve Curtiss Tomahawks (P-40's) engaged a mixed German and Italian force of over sixty planes and destroyed thirty-six. Their extreme maneuverability and high diving speeds were credited by the pilots using them for the successful result.

How to Leave Your Life Insurance Money

TO DO THE MOST FOR YOUR BENEFICIARY

Most Policies of \$1,000 or More Provide 4 Optional Payment Plans

Have you planned to leave your life insurance money so it will do exactly what you want it to do for your beneficiary? To make this possible, almost all larger policies give you four optional methods of settlement.

1. Your insurance money may, of course, be paid as a single lump sum, in cash.
2. If the amount is sufficient, it may be paid as a definite monthly income for your beneficiary's remaining lifetime.
3. An income of a definite amount may be paid for a limited length of time.
4. The insurance money may be left with the company at interest. This interest is paid to your beneficiary each year, and withdrawal of the principal may be arranged for as desired.

Here are 3 things to remember when you plan a method of settlement: (1) Arrange the plan you would want if you should die tomorrow, considering any Social Security benefits or other income. (2) Keep your plan in line with your changing circumstances by reviewing it periodically with your agent. (3) Leave enough insurance in cash to pay inevitable last expenses.

HOW 2 MEN
WORKED OUT
IDEAL PLANS
FOR THEIR
FAMILIES

CASE NO. 1—EDWARD COOKE . . . a young married man with \$10,000 of insurance. Until Mr. Cooke can afford more insurance, the important thing he wants his present policy to do if he should die is tide his wife over until she can find a job. Mr. Cooke has arranged his life insurance like this: \$500 would be paid to his wife right away to take care of final expenses. The remaining \$2,500 would be paid as an income of \$100 a month for 25 months, plus interest.

CASE NO. 2—ARTHUR KEENAN . . . married and the father of a ten-year-old boy. Mr. Keenan has \$40,000 of life insurance. From time to time, he discusses the beneficiary arrangements in his policies with his agent—to make sure they are up to date.

His latest arrangement is set up as follows: At his death his wife will receive \$2,000 in cash immediately to cover final expenses, un-

paid bills, and other incidentals. She will also receive \$150 every month until her son reaches the age of 18. For the next four years, she will get \$250 a month, the extra \$100 a month being for her son's college education. Then, the balance of Mr. Keenan's life insurance money will be paid to his wife as an income of approximately \$100 every month for the rest of her life.

ARE WE HELPING YOU?

This is another in our series of advertisements—"What Every Man Should Know About Life Insurance." This series is intended to give you the kind of *practical* information on life insurance that will be of real benefit to you and your family.

We hope these advertisements will help you understand life insurance better and give you a deeper appreciation of your agent's services. Your comments will be warmly welcomed.

Big tanks, little tanks, half-tracks, and jeeps—these are the sinews of war. Thousands of the engines in these and all kinds and sizes of trucks, cars and motorcycles in mechanized warfare are equipped with dependable Champion

Spark Plugs for that vital spark that makes them alive. They depend on Champions for that same championship performance that has made them the preferred spark plugs of the motoring public.

TO SAVE GASOLINE • KEEP YOUR SPARK PLUGS CLEAN

A pilot who took part in the Navy's attack on Japanese-held Gilbert and Marshall islands, with plane showing bomb damage

STILL fresh in the minds of many of us are the postwar stories of American, British and French pilots who would stay up all night consuming great amounts of champagne and brandy and shoot down hordes of German planes the next day by way of a pick-up. There is no doubt that a pilot at the front did have a short one occasionally, particularly after a day of hard fighting. Also, he took care of himself pretty much as he pleased. All he was expected to do was to beat the Germans out of the skies, and that he did—as the enemy well remembers.

Today the high commands of all warring nations place highest emphasis on the health of their airmen. This is due, first, to the knowledge gained in the past two decades about aviation medicine and, second, to the terrific performance of the modern combat plane which calls for sharp eyes and minds and tough, healthy bodies.

Perhaps the most efficient program for maintaining physical and mental perfection in active combat organizations is found in our Naval air units, particularly on aircraft carriers. The "in training" procedure so rigorously observed in amateur and professional athletics is easy of accomplishment under these cloistered conditions at sea, and

every provision from hospital to mess is made for both officer and crew. They are under constant supervision and regulation, are uniformly physically maintained. I was on a carrier when the war was just beginning and now let down to a routine program of rest and recreation, forced as vigorously as discipline.

You have to be strong of body to be a carrier-based pilot in this war. Off the deck, down and out over your land plane, be it bomber, torpedo or scout plane. Soon the carrier is out of sight, forced landing in the sea. That great confidence is placed in the pilot's ability to keep the plane afloat until help arrives. The Navy

(Continued on page 34)

Total loss of Axis and Allied planes to date: 12,520. Here's a Messerschmitt 109 that took a dive, missed and crashed—somewhere in England

Things are *Looking Up* in Wichita for Young Folks Nowadays"

"IN FACT," says Captain Records, "things are looking up for *all of us*. The speed with which they're producing war wings in Wichita spells plenty bad news for Hitler, Hirohito and Company. Those aircraft manufacturers are working 24 hours a day to help win this war. And they'll be working just as hard to win the peace that follows.

"As a result, those youngsters of ours are going to have advantages we've never even dreamed of. For one thing, they'll be travelling along traffic-controlled

skyways... flying their own Family Car of the Air as naturally as you drive an automobile today. I saw that plane myself at the Cessna Aircraft plant, in blueprints, ready to be produced when this war's over.

"Yes, I know I've been doubtful about the idea of *flying for everyone*, but not since I saw those Cessna blueprints. You'll be shopping a couple of hundred miles away in a morning if you want to, in your Cessna Family Car of the Air. And so will thousands of folks when this war's over."

RECORDS,
a Mile Pilot,
ahead for
records.

in the Army Now... 24 Hours a Day

and peace comes to Cessna is devoting all to production of Cessnas for the U. S. Army and the Royal Air Force. And these Cessnas and Cranes are

actually flying over a million miles a week in bomber-training service. Deliveries are ahead of schedule. And Cessna is pledged to keep them well ahead. That's why we'll all have to wait until this war is won for our Cessna Family Cars of the Air.

our Wings! Keep 'Em Flying!

stamps) to the address below and we'll send you a 10 cent Defense Stamp... and enclose your "Keep 'Em Flying" Wings free, postage paid.

CESSNA CO., DEPT. C, BOX 1616, WICHITA, KANSAS

Commencement of new careers will come with the Cessna Family Car of the Air

Yes, new careers, and a new and better way to travel, both for business and pleasure, will come with the Cessna Family Car of the Air. You'll learn to fly it as quickly as you learned to drive a car, only your Cessna will take you three times as far. You'll be cruising away on week-end vacation trips that are once-

a-year adventures now. These *wings-for-everyone* are the latest achievement in Cessna's 31 year history. Another was the famous Airmaster, three times judged the "World's Most Efficient Airplane." And, after all, it takes aviation experience like that to build the airplane that *everyone can buy and fly*.

COPY 1942 CESSNA AIRCRAFT CO.

Cessna SYMBOL OF Aircraftmanship FOR THIRTY-ONE YEARS

Copyright 1942—Philco Corporation

"More! Better! Sooner!" is the war-cry of Philco's soldiers of production. In this cartoon, C. E. Sykes interprets the spirit that spurs them on. Posted on the walls of the Philco factories, it is one of a series being drawn for Philco by America's leading editorial cartoonists as an inspiration to the men and women who are helping to produce the weapons of victory.

★ ★ ★

WE HAVE a job to do . . . the biggest job that has ever faced the minds and muscles of American industry. This is the time for our workers to prove that we have earned our reputation as the world's masters of mass production! This is the time for the genius of our industrial scientists and engineers to preserve their gift to America, the world's highest standard of living! And preserve it they will, gloriously and decisively. Production, *in the American way*, is the key to victory!

And with that victory another triumph will come. Peace, yes! Freedom, yes! But a vastly greater enjoyment of both for us all. The new and deadlier swords that men fashion with fierce inspiration today will be beaten into plowshares of untold happiness for tomorrow.

Here at Philco, our engineers and scientists are devoting their toil and their genius to the weapons of war . . . communications equipment, airplane and tank radios, artillery fuzes and shells. Already in their laboratories

and assembly lines, the fruits of their efforts hold the undreamed-of promise for the future. American industry will deliver the implements of victory to our brave and valiant forces . . . and with them, new and abundant joys for the tranquil years of peace!

Free Limited Offer . . . While available, a full size reproduction of the original drawing by C. E. Sykes will be furnished gladly upon request. Simply address Philco Corporation, Philadelphia, Penna., and ask for Cartoon Number 4C.

ng brilliant novel
R.A.—the story of
ay and the Greek
ler Stangou, who
l is a few short
between battles,
of tenderness and
the average lifetime

oungman said, "Do we stay
d twelve thousand?"
ste around there." John
adder his head. "The Greeks
ey are at ten thousand. But
be sure." The two men
ross the green mud of grass
in the general direction of the
t the end of the field.

"Keep well behind young Gorell, Tap. Don't let him get wide."
"I won't," the young man said.
"And don't get wide yourself," John Quayle warned.
"I won't," Tap said again. "Do you think they've got escort?"
"Not from the report. And not this far down anyway."
"I don't know, John. The Italians were bringing in those new F-5s when we left Egypt." The boy named Tap zipped up his Irvin suit and started pulling on his thin gloves with their worn fingers and split seams.
"They're not long-range fighters," Quayle said. "But if there's any around, get young Gorell out of the way."
"I don't like this business of tailing the flight. You can have it on your own," the boy said.
"You'll get used to it. Just keep look-

ing behind. You'll be the first to see anything chasing us. And keep Gorell following me. He'll be all right if there's no escort."
"All right, but don't make your turns too tight," Tap said. "I can't keep height when I'm back there trying to keep up with you."
"Well, keep Gorell in tight then."
The two men separated. John Quayle walked toward a plane that was taxiing downwind to the perimeter of the field. He held up his hand with his helmet in it. The plane taxied toward him. The boy in the plane swung it around and throttled down.
"Say, keep in close to me, will you, Gorell?" John Quayle yelled.
"Sure."
"They're Savoias, I think. So if you get a bead on one, get it on that hump over the trailing edge of the wing."

Gorell pulled at his harness.
"Tap will be behind you." Quayle lifted his hand again and walked toward a plane that was being warmed up by two aircraftmen, two hundred yards away. He looked up as he walked and saw water blue in the sky and streaked chalk in the clouds. He was thinking they would be too high to hide in. Probably at fifteen thousand, and not much of them anyway. Maybe twelve thousand wasn't height enough for the fighters. The Greeks said the Savoias were around ten thousand feet. They might climb a little to get over the anti-aircraft, and the Greeks ought to keep their anti-aircraft quiet. John Quayle thought this while he walked across the field.
As he approached the squat khaki-camouflaged biplane, a man climbed out of the cockpit.
"All right, Sergeant?" John Quayle

"Take your cap off," she said to Quayle. "Why?" he asked.
"Because we have been told not to be with British soldiers"

No Glamor Gal

By Kyle Crichton

pattern of life in Hol-
has had little effect on
Wright. Her stockings
ally wrinkled around
les and she lives over
e. But she takes act-
a serious business

R Teresa Wright had appeared
Detroit with the touring ver-
of our Town she received
from a bellhop at one of the ho-
said merely, "Please don't be
what I'm about to write. Your
appearance is swell except for
You hose about the ankles
wrinkled."
as a client warning and it has
ated by other Wright enthu-
it he had no effect. Friends
gone to the trouble of supply-

ing gifts of garters, supporters and special girdles. The result: nothing. The socks still wrinkle. It must be the contour of the Wright limb.

In view of this, Miss Wright's present employment with Mr. Samuel Goldwyn is in the nature of a national phenomenon. Mr. Goldwyn has previously been a high priest in attendance at the altar of glamor.

Goldwyn once spent a million dollars publicizing the charms of Miss Anna Sten, with the result that (a) the public was not charmed, and (b) Miss Sten, a good actress with a great Continental reputation, was a failure. A later experiment with Miss Merle Oberon rewarded Mr. Goldwyn's patience and confidence in a more substantial fashion, and the financial rewards were excellent until that moment when Mr. Alexander Korda removed Miss Oberon from the Goldwyn clutches by the simple device of marrying her.

The only apparent excuse Miss Wright has for being on the Goldwyn

pay roll is that she is an actress. She was playing in *Life With Father* on Broadway when Goldwyn hired her for the part of the child in the screen version of *The Little Foxes*. She is now Mrs. Lou Gehrig in *The Pride of the Yankees*, a picture in which Mr. Gary Cooper, the gentleman gaucho, has been instructed as painstakingly in our national pastime as an infant is taught to walk. The thing becomes more involved by reason of the fact that although Miss Wright is twenty-two years of age, she has always played children.

Home is Where You Find It

Miss Wright's competence as a performer was established almost immediately by her nomination for the best assisting artist of 1941 for her work in *The Little Foxes*. Even this failed to glamorize her and there is little chance that anything ever will. She lives on the wrong side of the tracks in Beverly Hills and can be reached only by explorers of

great fortitude. It will be found that Miss Wright lives somewhere down a driveway. Furthermore, she lives over a garage.

However, the apartment is extremely attractive and it is at this point that the caller realizes that although Miss Wright may never be another Clara Bow she most certainly has her wits about her.

"Look, the swimming hole," she says, going to the window.

There is a swimming pool. The location is quiet; the rent is reasonable. Also, Miss Wright can act. While being interviewed, she sits on a divan with her feet tucked under her. Nothing shows, especially not a wrinkle.

If Miss Wright looks and conducts herself like Helen Hayes, it is because she wants to act like Helen Hayes. That started when Teresa saw Miss Hayes in *Victoria Regina* and made up her mind about acting. Far from discouraging her, the family urged her on. She was

-Personel. But we hear things."

"What can they find for a woman to do in Personnel?"

"I draft the orders."

"What sort of orders?"

She smiled with a deprecatory shrug. "Just the routine stuff—allowances, uniforms regulations, and so on."

He smiled. "So you're one of the people who tell us how to dress?"

"That's it. I've just been drafting a new uniform regulation. It will appear in Weekly Orders tomorrow."

"Socks to be an inch longer?"

"Not a bad guess. You'll know about it tomorrow."

"You might as well tell me now. Why not?"

She hesitated. "Very well. You'll see Orders, anyway, when you go back. The new regulation affects slacks. Turn-ups are to be worn again."

He stared incredulously. "No!" he breathed. Then he quivered with suppressed laughter. "But the thing's fantastic. What possible reason—"

"But there is a reason," she interrupted stiffly.

"Impossible!"

"I'll tell you what it is. As you know, several officers have had to bail out over the Channel. Some have dropped into the drink several times, and the salt water has caused their slacks to shrink. Turn-ups would allow them to be brought to regulation length. So, you see, behind the order lies a practical purpose."

He became serious. "Imagine it," he muttered bitterly. "This is how we fight total war. I'm sorry to be critical, but—"

She broke in: "Don't blame me. I don't make the orders—I only pass them on." She finished her wine. "Now I must be getting back."

"To think out a new shape for my collar?"

She smiled. "Possibly."

"How about lunch tomorrow?" He touched the empty bottle. "We must have another of these."

She hesitated. "I shall probably be along, anyway. All right, I'll come, but only on the understanding that I pay for the wine. Being independent is still a novelty."

"I don't like the idea, but if it's a

condition of your coming then I'll say no more."

"Good. Au revoir." She moved toward the door.

THE following day the Midi was well patronized for lunch; by noon every place had been booked, and the girl in Air Force blue found her escort already seated.

"I managed to get the same table," he boasted gracefully, as he rose to greet her. "I hope you won't mind, but I've ordered the wine—to make sure of getting it."

"Very wise. Sorry I'm a bit late, but I've had a hectic morning."

"What's the news today? Been working out a new method of lacing shoes?"

"More important things than that," she answered seriously. "Oh, and that reminds me—your persuasive curiosity yesterday may land you in trouble. That order about slacks was canceled at the last minute and I see you've had turn-ups put on. You should have waited until the order was promulgated."

"Is that so?" he said slowly, his eyes on her face.

She nodded. "Extraordinary how information leaks out, isn't it? This morning no fewer than five officers were arrested for being incorrectly dressed. Regardless of standing orders they were wearing turn-ups. That could hardly be coincidence. Somebody must have told them."

There was a brief silence.

"Who could it have been?" he questioned slowly.

She glanced up. "Only one person knew about the order apart from myself. That may give you an idea."

"Are you sure no one else knew?"

"Certain. I planned the scheme myself."

There was another pause. His eyes were still on her face. It seemed to fascinate him. "Who arrested these—incorrectly dressed officers?"

"The police. Not one could give an account of himself, which was only to be expected since they were not attached to any unit—at least, not to a British unit. It rather looks as though

She made a slight inclination with her head. "That's all." He rose slowly to his feet, clicked his heels and bowed

our Intelligence people are not so slow after all, doesn't it? Five spies in one cast of the net isn't bad."

There was another pause. The waiter poured the wine.

When the officer spoke again his voice was strained: "Excuse me a moment. I've just remembered something."

She didn't look up. "If you're thinking of going to your tailor's, I wouldn't bother. And there's no point in trying to hide your slacks. The two gentlemen behind you aren't impatient. I'm sure they'll give you time to drink your wine. As I said yesterday, it may be a long time before there is such another vintage."

His expression did not change. Only the color drained slowly out of his face, leaving it gray. With fingers that were white, but steady, he held his glass to the light, so that the rubies in it glowed blood-red.

"I'm all the more sorry that we shall never know each other better," he said softly, and after drinking deeply placed the empty glass, inverted, on the table.

She, too, lifted her glass, and touched the wine with her lips.

His eyes, now expressionless, came back to hers. "Is that all?"

She made a slight inclination with her head. "That's all."

He rose slowly to his feet clicked his heels and bowed stiffly from the waist. Then, without another word, he turned and walked toward the door, followed by the two gentlemen who were not impatient.

The waiter came forward, smiling. "Taking lunch, madame?"

"No. Just coffee—black."

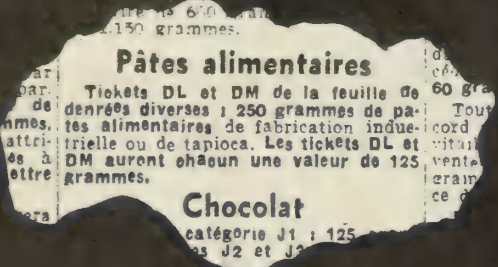

The waiter leaned forward to brush some crumbs from the table. "Everything go off all right?" he whispered.

"Yes. Keep the table reserved, though—we may need it again."

The waiter straightened his back. "Oui, madame," he said loudly.

The story of France's desperate food shortage is graphically illustrated by the unused potato and cheese coupons still remaining on this ration card at the end of the month: potatoes and cheese were not to be had even in the scanty amounts called for

Newspaper advertisements advise ration card holders that certain unused D tickets may be exchanged for noodles, macaroni and tapioca—an infrequent occurrence in stricken France

How France Eats

By Thérèse Bonney
PHOTOGRAPHS BY THE AUTHOR

AT THE end of last year, I drove 15,000 kilometers through Unoccupied France to see how the people lived. I dined with one of the great generals of the French army of pre-Armistice days. In the old days he had lived in style, with a cook who was the envy of all his friends. However, this time an omelette for two had to do for six. The rest of the meal consisted of lettuce without oil and a handful of strawberries.

The wife of a French academician told me that in their household they had had no potatoes in five months, no meat in two. Because of the scarcities, she was forced to spend four or five hours a day marketing. She considered herself fortunate if for eighty to a hundred francs (two to three dollars) she could get enough vegetables for two meals for her husband and herself.

Everything is rationed, and ration tickets are more precious than gold, literally. Without them it is possible to starve; even with them life is desperately hard. I had heard stories of guests giving their ration tickets to their hostess. My experience went even further. I was invited to lunch by an ambassador. On leaving I was asked to hand my ration tickets to my host.

The days of the gastronomically spoiled Frenchmen are gone. The famous chefs who labored over *canard à l'orange* or *truffes aux cendres* are gradually turning their attention to spruce steak, ersatz cutlets, poppy salads. I studied the question of food with those charged with its control and distribution. I visited the farms of almost two hundred peasants in widely separated regions. I motored hundreds of miles to visit factories, slaughterhouses, labora-

tories. I saw soap bones, ersatz pâté de nut flour, biscuits from grape residue.

After the fall of not only blitzed and established an army of two million men, who had to be supplied with the best in the country. The thousands of peasants resulted in neglect of the land, in heavy loss of harvest, a 25 per cent decrease in products, a 50 per cent potato crop, a 30 per cent meat supply.

In 1941 the harvest was seriously affected because of lack of fertilizer and seed. The fields were afflicted by a few thousands died. Two thousand horses were requisitioned by the Germans. T. was told that two French freight cars were among the prisoners, 1,200,000 prisoners, were held in Germany. All French imports in Madagascar, India and China were cut off.

Slaughterhouse figures from the leading cities tell their own story.

paper. Snipping the ticket is a rite and
one on which you keep an eagle eye.
Old women buying at a store watch the
shopkeeper every instant, knowing that
just one wrong move may leave them
mealless at the end of the month.

There is even a gruesome side to the
ration question. At the beginning, there
was some traffic in ration tickets. When
a man died, his cards were kept and
used for extra supplies by the family. To
stop that, the government decreed that
no burial could be made unless the ration
book was surrendered. In a few cases
where men have dropped dead in the
street and have been robbed, the situa-
tion has verged on tragedy for the family.

With fats and oils lacking, substitutes
such as walnuts, beech nuts, sunflower
seeds, peach and prune stones, pumpkin
seeds and *saffor* (a giant thistle) brought
a partial solution to the problem. Cook-
books to meet the new conditions have
been published. One called *Manger cet
Hiver* (Eating this Winter) guarantees
to turn your 950 calories rations into
2,250 calories. Another by the prince
of French cooking, Prosper Montagne, is
titled: *La Cuisine avec ou sans tickets*
(Cooking with or without tickets). Mon-
tagne no longer talks of hare à la roy-
ale or of Koulibacks of salmon or of
chicken *Vallée d'Orge*. Today he writes
of cauliflower marrow, poached nettles,
rutabaga à la Lyonnaise.

Another tiny cookbook furnishes a
hundred recipes for making dishes out
of bread crumbs. An ordinary house-
hold of five, it seems, wastes thirty
grams of bread crumbs a day, two hun-
dred and ten grams a week. That is
quite enough to make any number of
succulent desserts and other dishes.

I brought a few menus back with me
to show what a typical meal in France
is today. Here are a few:

A twenty-five francs fifty centimes
meal (more or less equivalent to a
\$1.25 meal here):

Authorized hors d'oeuvre.

A leaf of lettuce and a slice of to-
mato without oil.

A handful of beans, without any

A French peasant family meal: bread, preserved pork and cheap wine. Peasants fare better than urbanites because they can keep some of the foods they raise.

Staple food is the canned vegetable pâté, unrationed—an unsavory combination of peanut flour (in dish) and vegetable mash, made by a once-famous firm of pâté makers.

A woman is leaving a store in which she has purchased her entire ration—an item which she can carry home without difficulty.

French schoolchildren bring bread to school to supplement the meal the state supplies them. Many French children must get along on this one meal a day.

The village baker comes back into his own. The present shortage of fuel, plus the fact that the peasant gets flour instead of bread, makes communal baking necessary.

A peasant woman makes cheese from milk produced by her own cow. Since cheese is now the principal protein staple of the peasant, a cow is a highly prized possession.

A storekeeper weighs out a meal for one person. Rice has now become so scarce it can be issued only for children—and to adults only on doctor's orders.

A French butcher shop in Vichy displays empty meat hooks and only a few processed meat products on its counter. Many ration tickets are unused because there is no meat to be had.

fat and half a boiled egg (this is called a "cassoulet"). Ten strawberries or one small apricot.

Another menu:

Tapicoa consommé.

Spinach with no butter but a touch of margarine.

A dozen snails, without butter or garlic (margarine).

A handful of cherries.

Another menu:

Potage Lyonnais.

Rutabaga boiled.

Macaroni (without cheese).

People in America ask me about the Black Market, and the answer, I suppose, is always be Black Markets. Sugar is sold at \$1.50 a pound; tea if found can cost from \$20 to \$25 a pound; butter is from \$2.50 to \$5 a pound. A chicken, if found, would run to \$20 or \$25; a chicken, commands from \$5 to \$10. A ham costs from \$10 to \$100.

In Unoccupied France, the Black Market is so active and vicious as in England because of the isolation of France is more social minded. The feeling and determination that must share privations.

However, there are food speakeasies. On my long motor trip over France I found there are generally four or five miles from the town and are frequented at night. Our news diplomats always know where they are. You can get a good meal without ration tickets. In Vichy itself, I ate a pâté, a real steak, a great dish of French fried potatoes and Camembert.

This meal per person, with wine, for a Frenchman, that would mean the equivalent of \$8—a prohibitive sum. These places are very severe measures are taken against them when they are located.

But such subterfuges have an infinite effect on the great problem of starving France. That is technically free, conditions are not worse. The authorities are keenly aware in Belgium, their closest neighbors, where diseases incidental to starvation is a frightening rate.

The French ration of 250 grams of meat at best, was down to 190 grams in 1941. Rice was reserved for children and for invalids requiring a doctor's prescription. Late was distributed only to children. The French are approaching that limit of human endurance which even the cleverest use of ersatz cannot save a nation.

THE END

The Calypso was firing with resin now. She crept into the wake of the General Hook and was gaining rapidly

took time finding the ax and
g straight some rusty spikes. Old

Friend, Chid's big hound dog, put his muzzle on the boy's neck with affection as Chid stooped before a flat rock. The October night was frosty, promising ice in the marshes along the river and in the alder swales by morning. He nailed the shed door tight, taking more blows than he needed, killing time. The General Hook was late coming up tonight.

"Chid," Bull called, "come along now or I'll take the whip to you. When a man has gold he don't have to wait for no one; for his brat, never."

"Yes, sir," Chid said and unhitched the chain from the dog's collar. Chid had woven the collar himself, making it out of what was cheap and handy like most everything else around the place. His father had left him when he was eleven, two years ago, going off to California for gold and abandoning him. Chid's mother had died when he was four. He would have liked to have gone to live with some of her kin as they'd

urged him to but living in exactly this place had been important to his dreams.

Suddenly, from the river, dark and unseen to the westward, came the far-off beat of a stern-wheeler, feeling her way up the black stream. Chid could picture Lag Jessup, the pilot, alert in his port window, using his river sense and that awareness not given to common mortals, guiding his steamer around hidden niggerheads and snags and gravel bars.

Chid knew and loved the river. His dream was to be a steamboat pilot. Until his father had conjured himself out of an almost forgotten past this morning he'd been on his way to making the dream come true.

A single bell, thin and wintry, sounded beyond the shore scrub and the paddle beat ceased. Lag was picking his way between the shore and the end of the Drowned Man, searching for the narrow channel. In a minute he'd need Chid.

"Chid," Bull Hawley bellowed, "what in nation's keepin' you? You tryin' to run away? Come here!"

Chid didn't answer, risking Bull's ready whip hand, whisky-quickenened tonight. Helping Lag and the General Hook was a solemn bounden duty. It paid him two dollars a month. But more important, it was leading him joyously near to the port window as Lag's cub.

On the river a whistle sounded, like a man calling a dog to heel. Old Friend's ears went up. The dog was alert and aquiver at once. "Go ahead, boy," Chid whispered. "It's the sign, boy."

Old Friend faced his muzzle toward the sound in the night, raising his head. Then he bayed—long and deep.

Chid patted him, feeling somehow closer to Old Friend than ever before. What was coming, doing his father's bidding, would be bearable only because

(Continued on page 50)

College on Horseback

By Frank Daugherty

Traditional sports come and go, but polo—and good polo, too—is a year-round fixture at the University of Arizona, where Uncle Sam's future cavalry officers ready themselves

A troop of junior cadets of the University of Arizona—the cavalry R.O.T.C. unit in the Uni-
(Right) Arizona coeds look on at
fice. The player hitting the ball is
His opponent is his teammate John L.

A GOOD many people have tried to make the University of Arizona resemble other state colleges, at least from a sports angle. Football, baseball, basketball and track come and go, but the kids at the school, some from Southwestern ranches, others from the East, just go on believing that polo and horse shows and rodeos are the important things in any sports curriculum.

Years ago the Army established at Tucson the largest R.O.T.C. in the country, and today riding is compulsory for over eight hundred boys. The girls, not to be outdone, go in for everything from friendly gymkhanas to the annual rodeo—which may be a ro-day-oh in California but is a ro-dee-oh in Arizona. Most important sport at the school, though, is polo. It starts soon after the school opens in the fall and runs through until Easter. Arizona doesn't spend much on it: Only \$3,000 in 1940, and that included an invasion of Oklahoma, Iowa State, Princeton and Harvard. The school itself gave \$1,200; the girls, \$600. The gate made up the rest.

Arizona polo teams play the best colleges in the country, and always give a healthy account of themselves. Their all-time record, exclusive of 1941, is 283 games won, 88 lost, 15 tied. Of the team's regularly scheduled Western games in 1940 it won 19, lost 3 and tied 2. On a 7,901-mile jaunt into Eastern polo it won 13 games, tied 1 and lost 4—the losses being to Princeton, Harvard, the Pegasus Club and the War Department. The school has consistently been Western champion since it inaugurated the game in the West in 1921.

This was the year Lieut. Col. Ralph M. Parker, then head of the school's R.O.T.C., took eight boys mounted on eight crowbait horses out onto the parade ground and handed them mallets and a couple of bamboo-root balls.

"Boys," he is reported to have said, "this is polo. You ride the ponies and hit the ball with the mallets. The idea is to put the ball between—" The rest of his instructions were never heard.

History doesn't say the colonel fell off his horse at what followed; but what he saw was perhaps the most unorthodox polo ever played. The eight boys wound long legs under the bellies of the eight crowbait horses, shouted a cross between an Apache war yell and "Yipee-i-ee! Git along, little dogies!" and ran the bamboo ball ragged.

They have been doing it ever since. Not the same boys. There have been some better and some worse ones since then. But in riding skill, in hard, fast polo, they have all had a family resemblance.

They're Easy to Spot

You can still tell Arizona poloists wherever you see them—and graduates were playing polo as far west as Manila and at Army posts over most of the continental United States and in Cuba and Mexico. You can tell them even out of their customary levis and Texas boots and done up in baggy-seated white britches, shin guards and pith helmets. They will be riding the necks of the horses. Their stirrups will be long. And there will be no daylight to speak of between the seats of their trousers and the saddles.

This, of course, is all wrong, as every polo player knows. The society boys who play in the East, and the Army people who play everywhere, never tire of telling you that the ideal poloist rides the iron and not the leather—meaning his stirrup is short and that he stands up in it. Still there are competent sports writers who say they have never seen better riding than the Arizona boys' brand.

The first Arizona team played in the East. It was beaten by Princeton, that year's intercollegiate champion.

The Western boys livened up their Eastern polo a bit by riding around the fields in cowboy regalia, ran nose on into some of the snubbing only polo coteries know how to dispense. But the team went east again in 1926 and dropped at Chester, Pa. No one else wanted to play the series, 3 games to 1, to Pennsylvania Military College.

In 1931-32 Arizona's new coach, Captain Germauer of the Army took what was perhaps the team Arizona ever turned out on a third Eastern foray. Mauger had seen Willie Drift, Lewis Brown, III, A. H. "Harry" Wilson and Leonard E. "V" Smith play for their prep school, the New Mexico Military Institute, and had gone after them the year before, as a college football coach goes after high school stars. He bagged all.

Will Rogers had called the New Mexico Institute "the incubator of coming international polo!" The institute didn't become the incubator of international polo, but it did become the incubator of Arizona polo, and the members of Mauger's team were only the first of many.

ical than prophetic, Rogers gave a
son for Mauger's team, raising \$2,300
like amount given by the school, en-
r players and the coach to pile into a
mobiles and head east.
at dubbed the "polo team on wheels,"
polo team" and "the cowboy team
and without horses." The stage was
the same sort of derisive welcome that
the teams of 1924 and 1926.

ing happened on the way that was to

York and the Yale Club for
as now too good for the Wild-

cats. They were introduced to Louis E. Stoddard,
chairman of the United States Polo Association, to
Clarence Budington Kelland, to many a Yale man
who might have been put to it to tell exactly where
their state was located.

Arizona Was "Included Out"

Then, on some pretty flimsy reasoning, based on
mistaken reports, the intercollegiate polo heads voted
not to let Arizona enter the matches. Two Arizona
members, it was alleged, were ineligible for play.
These charges have since been disproved, but Arizona
has not been asked back for intercollegiate play. In
fact, every Eastern trip the team has made has been
on its own initiative.

Stoddard, who was in a position to judge, in spite
of the team's defeat by Yale, called the 1931 Arizona
team "the finest team combination in polo."
Arizona's coach for 1941, former crack Army polo-
ist Major Delmore S. Wood, has said that the 1940
Arizona team, which he did not coach, "could easily

have beaten any college team in the country if it had
been comparably mounted."

Arizona polo teams on Eastern trips have always
played on borrowed mounts because it is not possible
to transport polo ponies, as it is football teams, across
the country with time out for play every 500 miles.

In the West, it has become the custom for home
teams not only to furnish visitors with mounts, but
to share their own mounts with them for at least half
the game. This little gesture has never been followed
in the East and must be accounted the greatest handi-
cap the Western visitors have played under.

With a top enrollment last year of under 2,700 stu-
dents, Arizona is one of the smallest state colleges in
the country. But it has continually matched itself
with the biggest colleges of the East, and has man-
aged to maintain a brand of polo of which any school
could be proud. It has done this using borrowed nags
and considerably slowed down by soft Eastern fields
which contrast strikingly with the fast dobe-and-
devil-grass fields of the Southwest.

For his 1941 varsity, Wood (Continued on page 57)

Fireman's Daughter

By Philip Clark

ILLUSTRATED BY C. C. BEALL

When a man feels ready and able to save the world, it's a bitter thing to have to put it off until he's eighteen

I DIDN'T have a thing on but this towel wrapped around my middle, and my feet were getting pretty tired from trying to stand with my heels a half inch off the floor so no one would notice. But there were only three other guys between me and the Navy doctor who was doing the examinations. And then this boatswain or quartermaster or whatever they call it with that kind of stripes came down the line checking up papers. He came to me and he said, "Where's your papers? For Pete's sake, don't you guys do *anything* like you're told to?"

I didn't say anything. Because he'd seen me plenty before, only not with all my clothes off. He was a big, red-necked, blimpy kind of guy, and he took a good look at me, and said, "Oh, gosh! You again!"

I still didn't say anything. Because what was the use? He just grabbed me by the back of the neck and marched me out of there. Fast, so it was very hard to hold the towel up, and a lot of big dopes in the line laughed. We went out of the examination room, and back to where I'd left my clothes. He stood over me while I got dressed, and he didn't say anything at all till I was tying my tie. Then he said, "Now look, bubber. Don't come in here again! Do you get it? Don't come here any more! Or shall I have it tattooed on you?"

I said, "All right. Only you don't have to get tough about it."

He said, "Maybe I don't have to, but I will. Now beat it. And stay beat!"

I said, very calm and sort of cold, "Thanks. Maybe I can do you a favor some time."

He didn't get it, of course. Because what I was thinking was that I was bound to get in sooner or later, and I'd probably get promoted a lot faster than him, the big dumbbell. I could just see him snapping out a salute and saying, "Boatswain Something-or-Other reporting for duty, sir." And then the expression on his face when he saw who it was.

Only instead he was slamming the door of the recruiting station in back of me, and I was walking down the customhouse steps. Arlene was waiting for me at the bottom of the steps, and I guess she could tell right away what had happened. Arlene is the only person in the world who understands me even a little bit, and even she doesn't really understand. Not entirely. I guess nobody ever understands that way.

We walked down the street to get the bus, and Arlene said, "Don't feel so bad about it, Tommy. You didn't really think you could—well—sneak into the Navy, did you?"

I said, "Oh, the heck with it. It was worth a try, wasn't it?"

Because, of course, she couldn't see

it the way I had. Just a line of guys waiting to And then the doctor thumps, and looking-amazed. And saying, you're in wonderful shape. If every recruit only can shape you're in—"

And then maybe he'd Father. Even if I did darned consent papers. (it before. Younger than But here we were waiting and I looked at Arlene, she wasn't really sorry. pretty with blue eyes a blond hair, and I know cause I'm in love with felt that way even back before I really fell for her was kind of mad at her, see she didn't really want Not any more than Father. Even if she had come down say goodbye, in case that right off. But it was too to fight about it.

THE bus came, and a couple of soldiers from got on, too. I could see that Arlene a good looking didn't get fresh or anything tell Arlene knew they were her. A girl always does. mad I couldn't think of all the way out to Albany we both live. We got walked up the street to It was awfully warm for year, and we sat on the street Arlene said, "Maybe wished school—maybe change his mind."

Only she didn't really was just humoring me. And the way I'm flunking sight, that's really something forward to."

Because how can you to study with all this going beginning to get kind of just sat there. That's about Arlene. She does time when you've got about. A car came up that was Arlene's father. I came up the steps, and evening, Mr. Bolton."

He said, "Uh—good Bobby."

Bobby! He thought I was rant! He hadn't even looked body ever really looks enough to see who you are, anyway. I was proud Mr. Bolton just marched he said, "Arlene, honey, y in. It's getting cold."

Just like that. Arlene: Father. I'll be right in."

But she stayed with minutes. I guess she made me feel if she just trotted right after him. front door closed, I heard talking to Arlene's mother "Well, Muriel, I've finished First duty tonight! I'm a

what to do when the
er get hot. Swing to light-
weight clothing—meaning gab-
ardine, worsteds, synthetics,
seersucker and lightweight

wool is the summer-
material that looks most like
the business suits.

gabardine makes a good all-round
country. In natural
colors you have a free hand with color-
ing. You can wear the
with contrasting jacket, the
with odd checks.

synthetic yarns—rayon, vis-
cose—in a wide range of
fabrics. They are all light
weight, easily, and are made in
diverse business and sports pat-
terns, good-looking, inexpensive
to clean. Palm Beach suits are
the summer stand-by.

at week ends, pack a
light Shetland-type tweed jacket,
pair of flannel slacks. They'll fix
you in good shape for any country

club, picnic and general country doings.

Coollest suit material is cotton seersucker. So neatly tailored now that you needn't worry about being taken for a sleepwalker in pajamas.

If you're in the Army you'll get a special summer uniform—lightweight shirt, trousers and tie, in sun-tan color. Army men believe in keeping cool, too.

The lightweight idea runs through the clothing picture from head to foot. Shirts are made of paper-weight cotton, meshes and porous materials with lowered neckbands and convertible collars, to be worn without a tie for sports. Summer colors are creams, yellows, tans and blues.

Wash ties are a smart notion because they actually wash. There is still lightweight silk neckwear around in popular stripes and colorful designs.

Lightweight hose, in cotton or rayon, come in solid colors and patterns. The short ankle-length sock is a good choice.

Get into summer shoes early and wear them late. They'll save your business shoes for next fall. Big news in summer shoes is the two-tone shoe of brown and

tan smooth leather in a perforated model that lets in any stray breeze. These are all right for business wear. For weekend and resort wear, the coffee leather and cream buckskin combination is a good choice. There'll be brown and white shoes worn, too, and plenty of moccasin-type shoes.

Lightweight straw hats with colorful puggree bands will be popular; best color—natural. Good all-round country hat is the water-repellent, wind-proof bucket hat, worn originally by college boys, and a success in Florida last winter. It can stand plenty of abuse, and you'll like it for wear on the golf course.

Silver is not on the priority list, which means that you'll find plenty of silver tie clasps and cuff links in the shops. Western-motif leather is good in belts with silver buckles, wrist-watch straps, tie clasps and cuff links. Suspenders are holding up in bright colors in cottons—checks, plaids and solids—for summer dazzling.

Jacket lengths are the same as you've always worn them, but no wool suits

For warm weather outfits in Tommy Dorsey's band: Tommy wears a double-breasted tropical worsted suit without vest; Clark Yocum, guitar, has a seersucker suit, straw hat; Ziggy Elman, trumpet, natural color Palm Beach and sports straw; John Huddleston, single-breasted natural color gabardine suit and a fancy straw; Chuck Lowry, blue-gray synthetic fabric suit; Frank Sinatra, Shetland-type sports jacket and gray flannels. The girl is Jo Stafford

will carry trouser cuffs, and that includes your flannels, coverts, gabardines and tropical worsteds. Cotton and synthetic fabrics may be cuffed if you like. Best summer colors for suits are light tan for general wear, blue-gray for business.

There's no excuse for sweltering this summer. Pick yourself a lightweight suit. We'll tell you where. ★★★

Come Home Again

By D. D. Beauchamp
ILLUSTRATED BY HARRY MORSE MEYERS

As Jill said, anything worth having is worth waiting for. That was what she had always known and the thing Ching had had to learn

THE letter was soiled and untidy from much reading, but when he stopped at an all-night diner for a sandwich and coffee he took it out of his pocket and read it again. It was brief and to the point, as though she were reminding him that she felt now exactly as she had felt four years ago. Just in case I might get any wrong ideas, he thought.

"Ching," the letter said, "I'm out at the ranch for a few days, and if it's at all possible I'd like to see you on a matter

of business. I realize you don't take vacations from the Army at your own convenience, but if you can make it I expect to be here until Thursday or Friday of next week."

It was signed, "Jill." Her handwriting was no better than it had ever been, and in spite of himself the sight of it could still give him a familiar and expectant feeling of excitement. It was lucky, he thought, that her letter had arrived just when he'd been granted a twenty-day furlough. Or perhaps it was just the opposite of lucky, because seeing her again would only complete what the letter had already started, the recollection of a number of things that were better forgotten. He was sticking his chin out and he knew it.

Outside the rain was beating against the windows. The weather was cockeyed like everything else. The counterman drew a cup of coffee from the urn and settled down companionably on a stool. "You picked some night for traveling, soldier. It'd have to be one of two things to get me out in a storm like this. Either money or a woman."

Ching Talbot said, "A combination of the two," and wondered exactly how much truth there was in that statement. He laid a half dollar on the counter and shouldered the door open against the push of the wind.

The pavement was slippery and the flat gusts of rain kept the windshield spattered in spite of the wiper. He loafed out of town doing a conservative thirty miles an hour, a part of his mind occupied with driving, a part of it oc-

cupied with a memory of Jill Garrison, and with piecing together the fragments of the past four years.

The ranch, of course, had always been the important thing. His father and Jill's father had owned it jointly, and afterward it had been left to the children. And that was what had caused the trouble. The land. Or rather their different ideas as to what should be done with it.

THEY had both been born and raised on that expanse of grass and mountains, but it had seen its best days as a business concern long before they were grown up. The memories Ching had of it were clear cut, but somehow impersonal, like forgotten snapshots in an old album. He hadn't lived there since his first year in mining school, and after Jill's father's death Mrs. Garrison had closed the main house, and had taken Jill to New York with her. It was what he had expected of her. She had a weak heart, and living in a high altitude hadn't helped it any. But her departure had left the ranch as just so much unused acreage. At least that was the way Ching felt about it. He had been twenty-four years old then. He was land poor, and money seemed a very important thing.

What he had done was logical enough. Gold was up to thirty-five dollars an ounce, and mining was his business. He borrowed what money he could, and drilled his tests down the floor of the valley along the creek, and it was wonderful. It was only eight feet to pay

Ching went on looking at the window. He said, "Look, I was born and raised on this and I like it the way it is"

dirt. He had all the water in the creek, and the sump up ran around seventy-five cents to the yard. Figure a dredge would handle five tons a day, and you were dealing in important money.

He wired Jill and met her in China. They had dinner in the billroom of one of the hotels, in a room with a red-and-white-checked carpet on the table. That was one detail he remembered. He remembered that the dinner cost him twelve dollars, which was borrowed, but he felt rich, and twelve dollars was chicken feed.

It was chicken feed, that's what he got to the coffee and bran stage. He brought out the papers that gave her the costs: equipment and production over a period of years, and the estimated profits; and he threw the whole works right back in his lap.

"I'm sorry, Ching," she said. "I'm a fool, but that's the only real home I've ever had, and I don't want to spoil it. You'll have to do your thing somewhere else."

HE HADN'T believed he'd first. He had known that a dredge would run the land, but that had never occurred to him as being a matter for a consideration. He considered her point of view so much sentimental tripe, but it hadn't done any good to argue.

She was nice about it, but she said her chin should have warned him that he was running his head into a stone wall. He was scared, though, and all he could see was a two-thousand-dollar note, and no visible means of meeting it.

"It's hard to explain," Jill said. "I don't want money that badly. I'd feel cheap and greedy."

"I suppose that makes sense," Ching said.

"I suppose it does," Jill said.

It had gone on from there. It progressed from personalities to three legal actions. He couldn't recall it in exact detail, but he remembered the bartender, the waiter, and customers all had ringside first-class brawl. What Ching finally was an engagement he had to hock for two months and room after he got home.

After four years he could be remembering that part of it. Looking at it, and in the light of everything that had happened since, the seemed as important as it then, but the bitterness of pride that had grown out of there, and they were real. Considering that, he wondered was driving all night in especially when her letter clear that whatever her reason was wanting to see him they were not personal.

It was eight o'clock in the morning when he got there, and in the low sprawling structure took shape through the rain in under the big fir tree in cut the motor, and in that knew definitely that it had taken to come.

That house, and Jill witnessed a part of his life that and it would have been better that way. There was no time from it now though. He stretched his legs, fished his back end, and started through the wet grass toward the house.

do West Coast
Women like?*

✓ An independent survey reveals they prefer men with: Dark complexions • Brown wavy hair • Blue eyes • Lean profiles • A definite leaning towards sports clothes,
THE KIND OF MEN WHO WEAR

ESSLEY Woman-Wise SHIRTS

When women stop talking about *their* clothes . . . they start talking about *yours*! Essley Shirts are *Woman-Wise*—that is, they have the smart style and careful tailoring that women admire. They are (a) tailored by famous Troy craftsmen and (b) styled by America's foremost men's fashion authority. \$1.85 to \$3.00.

Essley Sports Apparel

is cut for comfort, tailored for fit and styled in the newest patterns and shades.

too, with Hungarian girls. They were all over the Balkans.

"We'll probably get there in time to see the finish," Hersey had said.

John Quayle had been optimistic and replied, "They might surprise you."

"Who, the Greeks?" said Hersey. "As fighters they're good cooks."

They had left in groups of three the next day. Hickey had taken Gorell and Finn over. Hersey had brought over Vain and Stewart. Tap had brought over Constance and South, and Quayle himself had brought over Brewer and Richardson. The others had straggled over. It was a long flight and they had put down at Candia on Crete to refuel, then come on to Athens.

QUAYLE thought about the first time he had flown over this city. He couldn't find the Phaleron airdrome from which they were to operate. The cloud was low and uncertain. He had flown the limit on his gas supply, then taken a chance and come down under it . . . hedge-hopped the houses and followed a road along a coast which looked like the road marked on the map as leading to the airport. He had passed right over the airdrome.

Someone in the flight had shouted in his radio, "There it is down there . . . there's Gladiators on the field!" And he had seen it, turned close in from the hills and side-slipped in. It was Phaleron all right. Then they had driven into Athens.

There had been those surprising scenes. People calling to them as they speeded the two miles into town. The wagon was still desert camouflaged a dust color, and this made it distinctive as British and military. When the Greeks recognized it they shouted happily at them everywhere, and a crowd had suddenly gathered about them as they lifted their kit out of the wagon to carry it into the Athenai Hotel in which they were billeted. Quayle's bag had been taken out of his hand. He had been slapped and patted on the back and his head knocked. He had to fight his way with Hickey to get in at the door of the hotel.

It had been fine; he had heard them shouting, "*Inglisi, Inglisi, airopianos!*" It was very happy for everyone, and they all felt the Greeks were very fine people.

Every time they had walked down the street, people had followed them and talked happily to them in Greek. When there was an air-raid alarm on the first day and they had not taken cover, the police had tried to push him and Hickey into a shelter.

It had been mad and like a moving picture, but the next day and night had been as mad and fantastic, and it was still fantastic.

THE squadron had not left the airdrome because of the low cloud until today. This was their first flight. Hickey had gone to Larissa to see what its airdrome was like, with Hersey and Stewart. Maybe they had been up today also because it was so fine, but maybe it wasn't fine at Larissa. They all might move up there in a couple of days. Quayle would not be sorry; it didn't make much difference where you were, so long as you could enjoy warmth and cinemas.

He looked at the instrument board with full consciousness, without other thoughts, and realized suddenly he was very cold. He had kept some of his consciousness receiving his eyes' registration of the instrument panel as he had climbed. His eyes had not stopped

roaming around the skies the instrument panel and the flight.

The five planes had circled over the Athens area; they were a few miles from the city now, over low 14,000 feet.

"Say, I'm getting colder higher are we going?" I heard in the bulging ear.

"We'll stay here," John Quayle said into his microphone. "As they ought to be somewhere now."

There was no answer. John Quayle looked around. They were shining now blue background to high could see Gorell, Brewer and Tap below him. He was to seeing Gladiators with It made them stumpy and ous appearing; small and ing. And he never got us of biplanes like Gladiators this war.

It was more by good fortune that there had been of Gladiators in Egypt entered the war. It was good the fighter plane the Italia was a twin to the Gladiator. CR.42 was a biplane and like the Gladiator, with around 300, which was faster than the Gladiators. Hu too fast and not maneuver to shoot down CR.42s. An equivalent of the Hurricane was too fast and not enough to shoot down Gladiators.

GLADIATORS were good shooting down CR.42. dom could one Gladiator down a bomber unless he three attacks, which was rare or a flight of Gladiators because one by one they trated on a single bomber and get the pilot or an engine to be at close range. The Gladiators had short range yards—and a small cone CR.42 was the same. The for shooting down each other was about all. They were quickly, like the Fairey Battle of France.

The flight was at fifteen and it was very cold. looked around. The Savo along any minute. They were to see against the variable Greek hills. He pulled his switch and said, "What Tap?"

Tap came back immediately thought you'd seen them. them at about 170, around all right, and no escort."

Quayle looked at his compass. He pulled 170 and looked for the S. He saw them, slow wide line formation, caught background of a Greek two mountains.

"Keep in close, Go Quayle turned his head to was pulling in.

"We'll take them going said into his phone.

"Broadside on, John?" t Vain asked.

"Yes. Don't lose me. Ar attacks. Keep on the one Quayle knew he could t son. He was a steady f

and always kept a level fight. Quayle knew he had to watch Richardson, but he had to watch young Gorell. The newest member of the team. His face was very simple and Quayle could not picture the deliberate and complicated pattern of things that dogged him. It was the same old story just went in carelessly at anything that got in his way. Anything got on his tail, he was sure that came into his mind. The Australian was all right. He was headed, like Richardson. His face was always carefree, though his youth was not.

As seemed way below and a few miles away. Quayle kept their direction, keeping the plane a little off course so he could see all the time. They must be the Gladiators because they were climbing. They were still from Peiraeus, where they were for the Gladiators to catch them. They were leveling to do the

They neared the Savoias, which were climbing. They were right for Peiraeus, which was a few miles from the city. From the air, it looked all the same place.

Members came right over the top. Quayle had brought his position where he could look down onto them broadside. He took a quick look around and saw they were packed close behind him. He saw his wings as a signal, then he banked forward. The nose of the plane dipped, the flat drop of the dive had faded, and he was reaching like a spear, with his eye on the Savoias which were flying in a line.

Seventeen thousand went by on the left. Seventeen thousand, the speed was beyond three hundred, and, in a few seconds had been over the time, he saw the tail of the Savoia. He pushed his stick forward, slightly, so that the plane came in its steep dive, and the head of the Savoia came right. He pressed hard on the stick.

He pulled back on the stick and kept his finger on the Savoia, which was coming now, and held his finger on it until the whole of his field of vision was only a portion of the Savoia. He pulled back on the stick and his stomach rose, and the black Savoia underneath him and

white tracers from the Savoias' guns passing beside him.

He rose two thousand feet in flat climbing and looked around quickly to see the flight. It had broken up; it always did. He saw two Gladiators far to his right behind him. He banked to come back at the Savoias and suddenly saw the white smoke with black edges coming from a plane that was falling quickly. He couldn't see if it was a Gladiator, and the Savoias had got way ahead now and he could see their bombs bursting below. They were good. At least they went on with their bombing but they had split up, which was dangerous for them.

He saw one Savoia alone to his left, ahead of him and a thousand feet lower. He pushed the stick forward again and calculated his rudder and stick movements, so that he knew for sure he would come across the Savoia's blind spot at the tail.

He did not feel his way as most do; he calculated his stick and rudder movements like a series of chess moves and he came down flat behind the blind spot of the Savoia. He kept his speed and pushed the gun button. . . he had the port engine in his sights. The guns chattered. He took a look behind him to see if anything was on his tail; he pushed the gun button again and the four guns shuddered at his feet. He pulled up and banked tight just as a Savoia moved in from the starboard to pick him off. He saw the tracer bullets from its gun amidst streak up beside his tail.

As he climbed again he looked around for the flight. He could see one Gladiator moving down on the plane he had just attacked. From the way he was going at it Quayle thought it must be Gorell, because he was coming down too fast and steep. Quayle banked, watching the scene, way ahead of him now and out of reach. The Gladiator came down on the Savoia, and Quayle saw the tracers dragging past the Savoia, and the Savoia's bullets passing into the Gladiator, but the Gladiator pulled up and nosed over to the left. Smoke was coming from the port engine of the Savoia and it was losing height. He watched it turn and could see it was out of control. It fell faster and went into a flat spin. He half looped and banked so that he could see it lose height and head-crash into the sea.

He looked around for Savoias or Gladiators. The Savoias had got a good lead now and were out of sight. He could see one Gladiator far below him. He turned and realized he was about ten miles from Athens over the sea. He kept looking around for Gladiators, then

How to Tame a Brother

BILL'S THE SWELLEST brother a girl ever had. But sometimes he gets me so mad! Like the other morning for instance. He stands up there, his chest puffed out, a grim look on his face and says, "Listen, muffinhead, let me tell you something. When your innards are off the beam, there's only one thing sets 'em straight—a good, stiff, old-fashioned purge!"

"**LISTEN TO OUR WILLIE!**" I said. "Just full of bright little ideas that are about as up-to-date as a horse-car. I don't suppose it ever entered your head to find and correct the cause of your trouble. Oh, no! Well, you come along with me and learn something!"

"**THIS OUGHT TO BE GOOD!**" he says. "You bet it's going to be good. This swell, crunchy cereal's got just what it takes to get at the cause of constipation due to lack of 'bulk' in the diet. It's KELLOGG'S ALL-BRAN. It may be just what you need. Eat it daily and drink plenty of water."

I'VE GOT TO HAND IT TO BILL! He was a good sport. "Sis," says he, "you've really got something here. This ALL-BRAN is tops. If it will make me 'Join the Regulars,' you've got your bid to Spring Houseparties right now!"

folded up and pushed it in

his coat pocket. The other four were already sitting in the squadron leader's station wagon. It had been recamouflaged a light green and brown earth color.

"We're going into the King George for a bath," Gorell said. "Do you want to come, John?"

Quayle asked young Gorell where he could bathe in the King George Hotel.

"You can pay fifty drachma and go to an empty room."

"That's a swanky place to have a bath," Quayle said. "All of headquarters lives there." Quayle spoke flatly and evenly and he raised his eyebrows when he spoke. His deep-set eyes were covered by the shadow beneath them.

"I know," young Gorell said. He was showing teeth too even and white to be real, but they were. "But it's the only place with hot water today."

So they went to the King George Hotel after Quayle had put in his report at H.Q. The King George was next to the Grande Bretagne, now the Greek headquarters. There were evzone guards in white skirts standing at the entrance, and two cars filled with thugs and machine guns. They were Metaxas' bodyguard. There were groups of people and young Fascist E.O.N. youths in their blue ski-looking suits with white gaiters, waiting for Metaxas or Papagos, the commander in chief, to come out. When they did, the people waved and shouted because they were paid to by the E.O.N., and if you wandered down Acropolis Street any morning you could see the people who needed the money being told where to go and cheer, by the young E.O.N. Fascists.

Sometimes Prince Paul and his Bavarian wife went in there, too, and there was little cheering and no shouts from the E.O.N. Once, when the first public hero from Albania was brought down to be made a spectacle of, there were many more people and much more cheering.

Around the door of the King George, there were always the groups of Metaxas secret police, who were not secret at all but just grim men in civilian clothes. It was easy for Quayle and the others to get into the hotel because they were in uniform, but they were watched, and the little porter with the black mustache and the white hands kept a notebook with the names and rank of all the passers-by and what they did.

THEY walked into the hotel, bumping the secret police as they went in. There were people sitting around in the long lobby, women in expensive clothes, British army liaison officers, and wealthy Greeks and French and Germans. The Germans were not at war with Greece, so they came into the King George lobby to watch the British coming and going and the general activity, and there was none to stop them because the secret police were German-trained and pro-German.

"We want a bath," Tap said to the porter with the white hands.

The man looked at the visitors for a moment, then said, "It is impossible. We have no rooms."

"You had them this morning," young Gorell said. "I rang up and asked you."

"We cannot give you a room," the porter insisted.

"Why?"

"The manager has said no. He said no."

"What's wrong? We pay you, don't we?" Tap said.

"The manager has said he must keep the rooms for other gentlemen."

"To hell with him!"

"It is impossible, impossible. He said no."

"Is Mr. Lawson in?"

"I do not know."

"Well, find out," Tap said.

"He is not in," the porter said immediately.

"Come on, Tap. Can't you see we're not wanted around here?"

"We'll go up to Lawson's room."

"Who's he?"

"He's a war correspondent."

They walked to the elevator, and the porter called something after them. He was telling them they couldn't go up but the elevator door closed.

Lawson was not in, so Tap went to get the maid to open the door. She came, was stout and pretty and wore a wedding ring, smiled when she opened the door and said, "Inglisi," then, "Monsieur Lawson est parti."

"Yes," Tap said. "But we want a bath. A bath..." Tap pointed to the bathroom.

"Oh... pour tout?" the maid said.

"Oui... sure. All of us."

She said something else in French. "What did she say?" Tap was pulling off his shoes.

"She's gone to get some towels," tall Richardson said.

"Fine." Tap had already turned on the water and was taking off his coat. "I'm going to the Argentina tonight. I'm going in here first," he said.

QUAYLE sat down on the low bed and looked around the room. On the mirror at one end was drawn a face in blue and green and black crayon. It had been drawn with soft pencil that will surface on glass. It was put on thickly to give depth, but the streaks where the mirror showed through gave the face more depth and shape, because the light reflected from it. There were large war-office maps of Greece and a picture map of Albania over a desk. There was a small typewriter on the desk, and numbers of folders. In the bookcase there were books in German, French and English. Quayle pulled out a book called *Exiles in the Aegean*.

The maid came in with an armful of towels, gave them to Tap with some soap and went out again.

"Who is this war correspondent?" Quayle asked Tap.

"He's an American," young Gorell said. "They're attached to the army."

"What's he like?"

"Oh... he's like you. He's all right, though. He talks like you."

Tap was already in the bath. Young Gorell and Vain were pulling out magazines from a cupboard. Richardson, the tall boy with fluffy hair and a steady manner, was trying to operate a small radio. As Tap was getting out of the bath, a tall blond man in khaki uniform stepped into the room. He looked around for a moment, then Tap said, "Hullo, Lawson. We were borrowing your bath."

"That's all right," Lawson said.

"This is John Quayle. He's our flight loot," Tap said.

"How're you?" Lawson said. He saw the slight, fairly square figure that stood carefully—as if careful of exactly the way he stood. He saw Quayle's rather dull face collectively, but individually split it into features—the keen nose, the regular shapeliness of his features. He could hardly see Quayle's eyes because they were so far back in his head under the two ridges above his nose. His top lip was thin and without expression, but the bottom one was full and shaded the curve leading to his chin. Finally, Lawson noted the brown, reactionary but silky hair that was dry but somehow regular and not very wild. He liked it all immediately and liked the slow smile that spread around Quayle's lips when he shook hands. Tap introduced the others, and Quayle sat down on the low chair.

"Are you an American?" Quayle asked Lawson.

"Sure. Say, you must have known Anstee."

Quayle thought quickly, not delib-

HEY, WHAT'S COOKIN'?

YOUR FEET?

Nice going with the first aid, Mabel. But, after this, let him fan his own feet—while he walks! Get him circulating in a pair of Walk-Over KOOLIES. He'll be old fresh-as-a-daisy Davey then! BROADWAY: Two-tones of tan. White. Brown. Or combinations.

erately. It was easy to remember Anstee. He was an American who had been in Eighty Squadron; he was wild and too reckless to fly Gladiators and had finished up with a score of twelve 42s and crashing head-on into a Savoia and never getting out.

"Yes. Did you know him?" Quayle said.

"I went to school with him," Lawson answered.

"Are you from the Middle West, too?"

"Yes."

"Anstee used to get mad when he heard them talking about it being Isolationist."

"So do I," Lawson said. "It's got a slab of Isolationists."

"Where are you going tonight, Lawson?" Tap asked him as he put his coat on.

"Nowhere. I'll probably have to do battle with censors."

"Why don't you come with us?" Tap suggested. "We're all going to Max-im's."

"I might drop around later," Lawson said.

"What about you, John?" Tap asked Quayle.

"I might drop around later, too. You fellows go on."

LAWSON sat down at the small desk and rolled some paper into a typewriter and started to type. Tall Richardson had got out of the bath and young Gorell went in there. Quayle read the book while the others had their baths and Lawson typed. When Vain, the young Australian, had finished bathing, Tap and the others, who had been sitting around reading magazines, got up. "Thanks for the use of your bath, Will," Tap said to Lawson.

"That's all right. Any time."

They all thanked him and went out. "See you later, John," they said to Quayle.

Quayle nodded and stood up. He asked Lawson if it was all right if he took a bath. Blond Lawson went on typing and laughed and said, "Go ahead." So Quayle took a bath and wiped himself on the only dry towel left and piled the wet ones into a basket and pulled on his clothes. Lawson had finished typing when he came out.

"Were you up today?" Lawson asked Quayle.

"Yes."

"Did you get any?"

Quayle hesitated.

"It's all right," Lawson said. "We'd never get it past the censors, anyway."

"We have to be careful," Quayle said. "We got a couple of Savoias."

Quayle liked this blond American, as quickly as Lawson had liked him.

"Do you have much trouble with the censors?" he asked Lawson.

"They're the curse of this war."

"Are they Greek or British?"

"Both. The Greeks are a little worse than the British."

Quayle was pulling his flying boots on. "How do you get on with the Greeks?" Lawson asked him.

"All right. Pretty good. We don't have much to do with them."

"They're funny people," Lawson said. He was folding the paper in his hand and pulling out the carbon paper between the slips. "They're about the toughest people I ever ran into. They're fighting a war with bare hands. But they've got no idea of system!"

Quayle smiled.

"They'll listen to Metaxas now," Lawson continued. "They have an idea that he's systematic. They love system when they can get it. Yet they hate Metaxas' guts, really."

"What about the British?" Quayle asked him.

"That's different." Then Lawson saw that Quayle was pin-pricking him. He

with, and you were never sure of the British. The British had this strange streak of cold patriotism that was really not cold but overdone. You could never be sure of them. So they kept off talking Metaxas and politics, though that was why Lawson had brought Quayle out here.

Quayle didn't mind, because of the girl. She was very important to Lawson, too; Quayle noticed that earlier. Her father and brother knew what was going on. The father was amused and Astaries was cynical about it. He said nothing all the time the empty conversations between Quayle and Helen went on. But he started an argument with his father in Greek which ended when Mrs. Stangou said something.

"You must forgive them. They argue all the time about the war," she said.

"It is good they argue," John Quayle said.

"Not always. They disagree too much, and they are still father and son."

"WHAT do you disagree about?"

Quayle asked. He was fed up with the complicated pattern of avoiding political discussion.

"It is impolite to discuss it before you," Astaries said.

Quayle said that was political cowardice and they were more scared of the effect than the injury.

"You cannot say that in this country," the girl said. She was angry.

"I apologize," Quayle said.

"We cannot take chances and don't intend to," Astaries said. He didn't look thin now, but vigorous, because he stood up for the first time and walked around.

"I agree," John Quayle said. He wanted them to see he was not antagonistic.

It stopped there because they did not acknowledge what Quayle said. The girl got up and went out. Quayle watched her slow slight swagger, the movement of her shoulders and the proportions of her figure. There was silence. Then Lawson asked Stangou what the Greek communiqué tonight would be.

"They are getting near Koritza," Stangou said. "We have captured a mountain which will give us the town in a day, or, just as they said yesterday . . ."

John Quayle looked up then and saw

"But I thought we'd PAID that!"

You know you didn't

Don't grouch and grumble all evening just because you've had a hard day. Evening's a time for fun and relaxation. Enjoy it by first climbing into your tub with a cake of New Ivory Soap.

Loaf a while in an IVORY BATH

It's more than just a bath! For you're chin-deep in he-man Ivory lather from that big white floating cake. Slather it on and briskly rub it into every muscle. Makes your skin feel like new. Ivory's so mild lots of men use it for shaving. And fast! Ivory lathers faster than any leading bath soap. In no time at all, you step out feeling grand!

A Fresh Start for hours of fun!

Evenings are much more fun when you're fresh from your Ivory Bath. Your work and worries go down the drain. And that fresh, clean "Ivory" smell leaves you a pleasure to your family, a treat to your friends, a Better Man even to yourself! To get more fun out of life, get a Fresh Start every evening in an Ivory Bath!

the girl coming down a stairway to the hall; she had a scarf around her head, or it was a peasant shawl, he did not know.

"I am going down to ring up," she said in English to her mother.

Quayle got up immediately and walked to her.

"I will walk down with you," he said, and got his cap.

"It doesn't matter. It is not far," she said. She was still angry and she was not scared of him.

"I will go," he insisted, ignoring the excuse.

She shrugged her shoulders and he could see the others looking at them as they went out.

"Take your cap off," she said to Quayle after he had pulled it on his head.

"Why?" he asked.

"Because we have been told not to be with British soldiers. Undo your coat, too."

He put his cap under his arm and undid his coat. "I know your father has been in exile," he said to her.

"Yes," she said.

"I'm just telling you that I know why you have no discussions."

"You are *Inglisi*. We have to be careful. We do not know whom you will tell things to."

"It's all right," he said.

"We are always watched. Astaries is always being arrested. They leave my father alone now. They don't put him in jail any more because he signed that he was for Metaxas, but Astaries won't."

"You shouldn't talk at all," Quayle said.

"If we do not we are cowards, as you said. But they shoot now there is a war. We are prudent."

THEY had walked down the stone path and through the gate. It was very dark now and no moon was above yet. He took her arm as they walked, ostensibly because the path was earth and without surface. She did not draw away but accepted it and he could feel the warmth and the firmness of her arm and her waist. They turned into a narrow tree-lined path with wind down its sides and no ceiling of sky because of the trees. At the end of it, there was a small kiosk, which marked a bus stop. The boy who sat there in it gave Helen a hand phone. She rang the number, spoke in Greek, then hung up.

"I was telling the post I will go there tomorrow," she said politely as they walked.

"You are a nurse?"

"No, I help in a first-aid post."

"What did you do before the war?" he asked her.

"I was at the university. I was a student."

"Have they ever touched you?" he asked. He tried to put even pressure on her arm.

"They cut off my hair because I was with Astaries once when he was caught."

He involuntarily looked at her hair in the dark and said, "When?"

"It was long ago. But I do not do anything like that any more because of my mother. With a family, it is two struggles. My mother turned her hair that color when my father was away. He signed for Metaxas because she was ill. I do not do anything any more because of this."

So they walked along quietly after that and deliberately slowly. It was difficult to do anything while he carried his cap, because it was in the way and he felt awkward. It was bad trying to be gracious. He had not any approach to this girl. He knew she did not object to the firm arm pressure but he knew she would resist and be repelled if he did anything more. He did not want to repel her or take the chance.

"Where do you work?" he asked her. "In Athens?"

"Yes."

"I will come and see you," he said. It was awkward conversation.

"I work in a small place behind the university. It has a red cross, so you cannot miss it. I will not be there long." She paused. Quayle didn't say anything. She went on: "I am going to Ioannina, which is near the front. But you will be fine for the girls there at the post. You must come. They talk about the blond *Inglisi*. But you are not blond like Lawson who makes the girls anxious about him."

"I will not make them anxious. When do you go?"

"Next week. I will be glad. It's bad to be here when there is a war. It is not the place to be because we do not feel anything, we do not know it."

"Don't be anxious to get in a war," Quayle said. "It is dirty, the dirtiest thing there is."

"I know it is," she said. "It is not color like rainbow to me. It is essential."

was there and they were surprised to see him. Hersey said he had come back by road from Larissa to look at the route for supplies. He said it was very bad country for flying; the worst mountains he had ever seen were those between Larissa and Albania. The roads were so bad, too, that it was going to be hard to get supplies up by anything but Bombay transports flying them up.

Then the wing commander, who was short and vigorous in his speech, said, "I thought you would all like to hear you're going up to Larissa. Gloomy Hersey has just come back. He and Hickey seem to think the drome there is all right. I looked at it myself yesterday. It's a bit wet but you'll be all right. There's only one thing: You'll have to rely on the Greek ground staff for a couple of days. It's going to be impossible to get large supplies over those mountain passes by road. We'll fly the skeleton ground crews up on the Bombay. We've got one for the squadron now."

Nobody asked any questions when

(To be continued ne

They turned in the wide gate and up the stone path into the house.

"I will come to see you tomorrow. Is it all right?" he said to her as they waited at the door.

"Come at lunch hour. We do not work so hard then and we could eat something."

Mrs. Stangou opened the door and they went in.

JOHN QUAYLE did not see Helen Stangou the next day. He never knew when he could do anything for sure the next day ever, unless it rained. He was standing by all day at Phaleron in case there was a raid. Hickey was not back from Larissa, and Gorell's plane was not fixed; a cross-section support in one wing had been torn by a Savoia bullet. So Tap, tall Richardson, with Vain and Quayle were standing by from early morning until late at night.

That same night they were ordered to headquarters. The wing commander was waiting for them in the large white building that had been a school. Hersey

the wing commander paused, because there was more to come.

"The Greeks are getting badly knocked about at the front," he said.

"The Italians have up to thirty bomber and twenty-five fighter squadrons covering three sectors, so the Greeks get hot water. They're pushing the Italians back near Koritza, but along the coast it's more difficult. We think the Italians are going to concentrate on roads and railways leading to Larissa and along the coast. That's why you're going to Larissa. Later you will go up farther, I think. But you will go up to Larissa tomorrow and wait for the Italians to show up. You'll be patrolling the road and coast areas, but they're so far away you won't be over target areas long. We want the operation kept secret, so just move out quietly tomorrow. We want to surprise them one day without escort. We want bombers down."

"They're worrying the Greeks to desperation because they've lost most of their fighters. But we want this done quietly. Concentrate on bombers but

KEEP 'EM FIRING!

OLDSMOBILE'S ON THE OFFENSIVE!

A VAST NON-STOP PRODUCTION
ATLAS ALREADY SPEEDED THOU-
SANDS OF CANNON AND MILLIONS OF SHELL
TO THE ARMED FORCES EVERYWHERE!

Ever since a year ago last March, Oldsmobile has been a leading mass-production arsenal for the U. S. A.

Long before Pearl Harbor, months before the nation went on a full war-time basis, Oldsmobile men and machines were pouring out "Fire-Power" in volume. Thousands upon thousands of deadly automatic cannon for American fighting planes! Millions of high-caliber shell for the field artillery and for tanks!

Today, Oldsmobile's offensive is getting results.

The good news is now coming in that Oldsmobile "Fire-Power" is dealing powerful blows at the enemy. The cannon are shooting down enemy planes. The shell are devastating enemy lines. The work of Oldsmobile's "soldiers of production" is giving a great account of itself on battle-fronts everywhere.

"Keep 'em Firing" is Oldsmobile's biggest job in 44 years! "Keep 'em Firing" will be the war-cry—and the determination—of every Oldsmobile worker until this war is won.

Wing Talk

Continued from page 8

days are on missions of war and when the targets have been disposed of, all they have to do is find their way to the carrier, maybe one or two hundred miles back, and get on deck—with the ship rolling and pitching or the visibility zero. For the carrier pilots at sea, there's no town to paint red at the end of a successful day of combat with the enemy.

A LOT of perplexing questions will have to remain unanswered until we've won the war, chief among these being the instances of American Army Air Forces generals going out on bombing raids in the Far East. Brigadier Generals Lewis H. Brereton and Ralph Royce—affectionately known to superiors and subordinates in the clannish Army Air Forces as Louie and Ralph—have frequently been criticized and praised by their friends back here for their exploits.

But you don't know Louie and Ralph and perhaps a thousand or more pilots of the Army and Navy, who all through the peace years plotted and planned and fought for recognition of air power. While they carried on this campaign before an indifferent public, the years crept up behind them; increased rank and responsibility became theirs, and one day they awoke to find themselves in the supervisory class, no longer potential war combat pilots. Their experience was worth more to the nation than their ability to score a hit or shoot down a plane. They should leave the actual air combat work to the younger airmen in the Army and Navy.

We know many of these pioneers in Army and Navy aviation. They are responsible for the planes and tactics we have today and they will come to the end of their careers bitterly disappointed because they will never be able to shoot at the enemy from a fighter or drop a bomb on a distant enemy target. But if there are repetitions of the feats of General Brereton and General Royce, someone's got to get tough, or all our high-ranking Army and Navy pilots will

be kicking the youngsters out of cockpits and taking off the enemy just to make sure that of two decades were correct.

EACH belligerent knows planes it has lost since then but there has been no new man to compile the accurate figures, we have some figures for German, Italian and R.A.F. September, 1939, through September, 1941, which we pass on with analysis or comment. There is 12,520 for all three nations does not include German losses or aircraft shot down naval planes or British merchantmen. Neither do the losses in training for all or operational accidents which are plentiful in all countries to weather and inexperienced stepped up into high-performance aircraft. So we don't know have been written off ever in the theater of war, but number gives you something to start figuring.

THE three-striper had been a qualified pilot since the last war and he was about to embark on his greatest adventure to date—a flight in an airplane. He confided to his friends that he saw him off at Dallas that, when he got into pajamas and into a berth, he belonged to the era and he wouldn't shut an eye on the flight to Los Angeles. The thing he knew, the sun was shining in the window and the plane was on the ground. He looked out and saw "Big Bird" the airport building. Just from Dallas.

"You see," said the stewardess, "started out last night, rain weather and came back at night in the hangar at Dallas. We now again to start on our journey to California."

"Now he plans working on something to make the grass grow better."

Carelessness—in conversation
or in action—slows up war
work here...

and delays shipment
of vital supplies here.

It's time to clamp down on loose talk!

This Actual Case shows how Rumors delay Vital Work

From a dozen widely separated sources, we heard rumors about a certain plant (insured in the Hartford) which is doing vital war work. The story was: many workers were being killed—the number of injuries was frightful.

The facts were: not one worker had been killed. There had been some injuries—but no more than usual in this type of work. But baseless rumors—spreading like wildfire—were making it hard to hire needed men, were lowering morale, were slowing up production.

A saboteur, or just a careless remark, can start such a rumor—but it takes a lot of careless talkers to spread it! Careless conversation is as dangerous as carelessness on the job, at home or in driving our cars. Every accident, every fire causes loss of time, materials or manpower we can't afford to lose!

Join the Crusade against Carelessness. Be careful in everything you say and do. Impress on others the vital need for care. That's one way you can help speed Production for Victory.

Keep 'em Flying!

Get expert advice

A Hartford Agent, or your insurance broker, can obtain advice to help you prevent accidents and fires. He can also build a sound insur-

ance program to protect you or your business against serious financial loss. Ask Western Union or Canadian National Telegraphs for the name of the nearest Hartford Agent.

Treat your feet—YES, YOUR FEET—to...

CREAM 'n COFFEE

HERE'S A FASHION STORY that makes sense—good, substantial sense.

CREAM 'N COFFEE is a swell-looking shoe combination, as you can see simply by looking at the picture. But more—it fills a need you've probably sensed for a long time.

CREAM 'N COFFEE blends with your grays and blues and browns and tans, something no other combination can quite do. And since most of your spring and summer suits, coats and slacks are in those colors, it just makes good sense to have this new combination in shoes.

RIGHT? Then treat your feet to Cream'n Coffee Bostonians. Designed to look right—Walk-Fitted to Fit and Feel right, in action.

YOUR FIRST ORDER of Cream'n Coffee is Walk-Fitted Nyland, shown above. Wingtip oxford, bootmaker trim. And—above all—the famous Bostonian Tred-Flex construction that bends at the slightest hint from your foot.

Bostonians . . . Whitman, Mass.

SPORT—that's *Balance*, easy-going saddle oxford in Cream'n Coffee with thick rubber sole. Walk-Fitted.

FOR BUSINESS & LEISURE—pick *Kenyon*—good-looking wingtip oxford in Cream'n Coffee. Fits and Feels right!

RELAXATION—that's what you get in Walk-Fitted Bostonians. *Breezeway* is a moccasin type in Cream'n Coffee.

Good to the Last "Step"

Cream 'n Coffee shoes, like all Bostonians, give you comfort from the first step to the last. They fit right, feel right because they're Walk-Fitted for action.

\$8.95 to \$12.00

Bostonians

FIT RIGHT - FEEL RIGHT *They're Walk-Fitted*

"I don't know who he took me for, but he dragged me out in the garden and kept plying me with military secrets!"

cook reported that she had taken some orange juice in to Amos and found him asleep, and had not wakened him. Lucie went to the door and softly opened it. Amos lay on his side, face to the wall. She tiptoed across the room, and stood beside the bed, and then spoke to him. There was no movement. She turned the cover back and laid her hand upon his hand, and it was cold, and she knew then that he was dead.

Duff phoned Lucie when he heard about the death of Amos Hawthorne.

"I'm coming to see if I can help you," he said. He was at Delia Phillips' house but he didn't think he should mention that.

"No, don't come. Everything's working out."

"What will you do?"

"I'm closing the kennel. It's okay, Duff, honest. The squire had ten thousand dollars in insurance, I discover. He paid it up long ago, and hadn't borrowed a cent on it, bad as we needed money lately. I'm a rich gal, now, see?" she said. "You can do one thing for me. Find Paul and Wesley jobs."

"Of course. I'll give them work myself, and glad to have them."

HAVING Delia Phillips for his girl, Duff found, was not particularly peaceful. Their days together—and they were many—were tempestuous, often angry, but never dead. On week ends they sometimes went to Willow Lake, where Duff liked to fly-fish for bass. Delia had gone in the boat with him once or twice, but she had become tired, and got the twigs of an overhanging limb caught in her hair, and so now she preferred to stay at the swimming pier.

Two Sundays before Duff was to leave for Canada, he found the bass in a striking mood. As the boat moved slowly along the overhung shore line, he deftly dropped the squirrel-tail fly beside the cypress trees, and close to sunken logs; suddenly there was a powerful swirl of water, and a two-

pound fish whipped an air into the slender rod.

"He got you, boss!" the boy said in glee. "You ain't got him yet, you!"

But Duff finally maneuvered himself into the open, and there he landed himself down against the side of the rod, and landed him.

The boatman was putting the live box when, outside, a whined by in a white triangler. A man and a girl sat together in the front cockpit, and a yellow flared from the girl's head.

The waves drifted in, rocking the boat. "Now we got to wait a while," the boatman said, resentfully. "The water gits back ca'm again. You dem speedyboats could do do around some other place where we's fishing at, don't it?"

"Who was that?" Duff asked after the boat.

"Don't know who de gentleman the Negro said, 'but dat lady me like, was de one you most brings down here wid you, Duff!'"

"That's what I thought," Duff answered.

When he got in, he found Delia on her back on the pier, arms clinging green suit.

"Any luck?" she asked.

"You had some, I noticed," Duff said mildly. "Who was the hot shot in the speedboat?"

Delia said airily. "Oh, I don't catch his name."

"You mean you didn't even see him?" Duff asked in surprise.

Delia's eyes darkened. "Are you going to lecture me to-morrow? You don't expect me to go and do nothing all the time fishing, do you?"

"Maybe that's the reason you want to go fishing," Duff answered, beginning to get mad himself.

And so they had one of those arguments. It lasted for several minutes. It lasted for several

d ein in his tremulous state
reat caught at the calm loveli-
ner.

Finally, after a seemingly intermi-
nable flow of words from the minister, it
was over.

NOW another month had passed and
Delia stood in the doorway of the
Saskatchewan farmhouse they called a
training camp, and impatiently looked
across the hot prairie for the returning
horses, for it was noon and dinner was
ready. The incessant wind, cold in the
morning and hot at noon, whined around
the eaves, and she felt the house shud-
der under its strength. Down on the
dry pond, white alkali dust whirls
danced across the bottom, and in the
distance she could see the rooftop of
Benoit's house, Benoit, who Armand
said was a beast and should be "troot-
fed." For the rest of the vista there
was rolling dry land of sage and wolf
willow and Russian thistle like tumble-
weed and yellow mustard, and a huge
rusting steam tractor, relic of the days
when there were rains enough to grow
wheat, and money was as plentiful as
saskatoon berries in the ravine.

Down at the kennel beyond the barn,
the dogs began to howl again, a la-
menting, eerie chorus that seemed to
portend tragedy and death. Delia
angrily shouted, "You hush! Be quiet!"
but her voice did not reach to the ken-
nels. Presently they hushed of their
own accord, and now the only sounds
were the squeaking of the gophers in the
yard, and the cry of a hawk that beat
back and forth over the meadow, and
the occasional wind thumps like a rolled
blanket being swung against the house.

Finally they came, Duff and Paul on
horseback, and the dog wagon, driven
by Wesley, far behind on a spear grass
flat.

Duff came in and dipped water from
the bucket into the washbowl, and
bathed the prairie dust from his face
and arms.

She said, as they ate, "Isn't there
some way to keep those dogs from howl-
ing?"

"No," he answered, "unless I take
them all out hunting at one time.
They're not as miserable as they sound."

"They make me miserable," Delia said.
"Sometimes I get to thinking your horse
has fallen and you're dead, and I'm left

"You swear to tell the truth, the whole truth and

MILLER BREWING COMPANY, MILWAUKEE

Why bubbles leave home

When air bubbles from a melting ice cube meet the sparkle-bubbles in your highball, what happens? They go buggy-riding together—right out of your drink . . . then ice water dilutes what's left.

Prevent this bubble-snatching. Use Sparkling Canada Dry Water, as all smart hosts do.

Its pin-point carbonation—millions of tinier bubbles—stays home . . . keeps drinks tangy to the end. Enjoy its finer flavor soon!

P. S. Drink a glassful any time.
It's good for you.

in this terrible country all by myself." He patted her hand, reassuringly.

"It seems like we've been here a year instead of a month," she said.

"This isn't bad. I think it's wonderful country."

"You ought to stay here by yourself all day."

"Maybe you think I wouldn't like to stay here in this cool house all day. What you ought to do is go out on the prairie with me," he said.

"I'm still sore from the last time I rode on that wagon. And you know I wouldn't get near one of those horses."

Duff thought about Lucie—as he often did now—and how she loved Canada. He rose. "Well, I'll tell you what we'll do. You see those hills over there? They're the Moose Mountains. We'll ride over there Sunday and I'll show you some Indian graves, and old camps where they stayed when they followed the buffalo a hundred years ago and more. You can still see the rings of stones they put around their teepees to hold them down. Maybe we can find some ripe choke-cherries."

"I don't want to see any Indian graves."

"No," said Duff, "you just want to sit around and gripe. Can't you understand this is my job? It's the only thing I'm fit for."

"WELL I wouldn't admit it," she said. "This is no life for decent folk. We're hardly better than heathen gypsies, living out here on this desolate prairie. It bores me silly."

"Hearing you talk like that reminds me of my folks."

"What about your folks?"

"Well, my mother used to nag at Papa like that, fussing at him for being what he was, and he finally tried to change, and it didn't work. It just come to me that it's the same old story." He said evenly, "Listen, I'm doing what I was born to do, and it's hard honest work and nothing to be ashamed of. I'm as good as any doctor or college president that ever lived. You figured this was a life of excitement, or something, just because we travel around. You'll have to get used to your mistake. We have to run bird dogs where there're birds, and there aren't any birds in Times Square or the Loop—not the kind of birds a dog would be praised for pointing, anyway."

"How can you talk like that to me? How can you see me so miserable and lonesome, and not care at all how I feel? You don't give me as much attention as you give one of those dogs out there!"

He started to answer; then his shoul-

ders sagged, and he said, "It's my fault—I should have brought you up here. But come. Come go with us to the check-cord some-where. Then we'll run Judas about him."

"Well, after I run him tight I'll come in and we'll ride into the mail."

"What fun," she said.

DURING the hot part of the prairie chickens gathered into the shade of the dwarf poplar "bluffs" and became lazy stupid. Duff and the two three young dogs on long leashes. Soon one of the dogs p Wesley, who was holding "Whoa, now, boy. Whoa—a young dog's tail tip waved as he made a leap forward, stopped hard by the tautened The prairie chicken, an old squawking into the air, bang the slender poplar branches, a over the bushy trees, only to on the other side of the bluff yards away. "All right, no goes and gits her again, on recollect what happen to yo fleshed 'er jist den."

For an hour they flushed back and forth and finally they all got enough of it and flew away.

"Paul," said Duff, "you horse is ready for another Judas?"

Paul said, "Yes, sir, that the other day didn't seem to hardly at all next day. He toughened up fine."

"Okay, we'll see what the will have on his mind this afternoon."

They put Judas down. T was tied a forty-foot check Duff looked forward to the Judas would hold a point for him to catch up and grab that line. Lying on top of dog cage in a semicomatose Blackie, a coyote hound boy farmer, whose sole duty was Judas' trail when he got lost, him; Blackie knew his job w it capably. Now when he was Judas who was being sat up interestedly, as if quarry would get lost immed could have some fun.

Saddle girths were adjusted, and Judas' bridles straightened. Duff took loose. Within a few seconds er's swift effortless stride

ne of his own accord, though,
ty saw him change ends,
er quick nervous casts, then
ul's hat went up in signal
in and Duff spurred his horse
t over the sage and spear

Duff slid off the heaving horse,

Judas was still there, with his head and
his back straight, and his tail stiff as
a poker. In his eye was a glint of some-
thing like amusement as from the corner
of it he watched Duff ease toward him.
When the man was almost within reach
of him, he plainly intended to leap away
again, and send the birds a-scattering.
But today Judas played the game on too
close a margin.

Duff saw the grass-stained knot of the
check cord lying half-suspended over a
wolf-willow bush, and he made a head-
long dive. Just as his fist closed on the
cord, Judas broke. The few feet of
slack evaporated, three prairie chickens
burst from the cover, and Judas hit the
end of the check cord and went end
over end. The shock of the fall stunned
the dog, and he sat staring blankly with
his tongue hanging sideways out of his
mouth and one ear lying on top of his
head. At that moment another chicken
came out cackling, and Judas made a
frenzied leap at it, only to turn another
somersault, as Duff shouted, "Whoa!"

A FEW seconds passed, and Judas
waited, watchfully. Then, with his
nose lifted he turned and, half squatting,
froze into another point.

"Hand me my gun," Duff said sharply.
"There's still another bird here. To
make a kill over him now will be worth
a month's work."

"Mister Duff," Wesley said uneasily,
"one dem Mounties liable to be out
yonder somewhere and hear you killing
dat chicken out of season."

"You do what I say!"

(To be continued next week)

"Whps! She hit my number! You owe me \$100, Admiral!"

JOEL MCCREA

says:

"IN EVERY MAN'S
LIFE, THERE IS A SECRET
WOMAN!"

Joel McCrea tells about his new
Paramount hit, "The Great Man's Lady,"
co-starring Barbara Stanwyck.

"In every great man's life, there is a woman whose flame
of love sets fire to a man's heart and drives him on
to great deeds.

"That's the theme of my new picture, 'The Great Man's Lady.'
I am Ethan Hoyt, Silver King of the Early West...
pioneer and empire-builder... a great man to the
world—but secretly in love with a woman who can
never be mine.

"Barbara Stanwyck plays that woman, and
I sincerely believe that the Academy
Award will be hers for her great per-
formance. Brian Donlevy as the swag-
gering, reckless ruler of the Barbary
Coast delivers a performance you'll
long remember.

"The critics are already calling 'THE
GREAT MAN'S LADY' 'a truly great pic-
ture.' I recommend it to you."

"Another 'must' for your movie list
... 'MY FAVORITE BLONDE,'
starring your favorite comedian,
Bob Hope, and everybody's favorite
blonde, Madeleine Carroll. It's
fast, it's funny, it's better than all

WITHOUT YOU—*what* *future* have THEY?

In a world of uncertainty, here is one question every father should face. "How can I give my children a fair start in life, come what may?"

For a father's labor and sacrifice one substitute exists . . . a mother's devotion sustained by a regular, dependable income to pay the bills. Let your Mutual Life representative show you our 4 new, budget-fitting policies — 4 reliable ways to safeguard your family's future without a large cash outlay.

Write now for our free booklet, "What \$10 a Month in Premiums Can Do Today". It explains our new policies, built to satisfy today's needs.

The Mutual Life Insurance Company
OF NEW YORK

FIRST IN AMERICA

JENNIS W. DOUGLAS, PRESIDENT

34 NASSAU STREET - NEW YORK CITY

Old Friend would go along with him.

Chid heard the General Hook's slow bell; then the renewed beat of the stern wheel and at last the jubilant jingle of full ahead. The steamer had safely passed the Drowned Man once more, taking her bearing from Old Friend's faithful bark, and Lag Jessup, Chid's hero, had her legging it upriver to Hartford again. From now on Sammy Quoonock, the Mohegan boy, would hail Lag from the Prophet's Rock when Lag whistled, earning Chid's money. Chid was off the river.

He ran for the shanty in sudden fear. Bull was in a nasty mood. His bottle was empty and the fire had gone out. "When we get settled," he snarled at Chid, cuffing him, "I'll do you some learnin'. Fetch the nag around . . . an' you walk in front o' me. I ain't for havin' you scootin' off into the scrub; a-runnin' out on your own father. No, sirree, boy. . . . I need you down where we're goin'."

Chid obeyed, feeling the danger in Bull's manner and voice. Before he'd gone to California so quickly that day two years back, leaving Chid without as much as a bed cover, there'd been trouble from that same nasty mood.

Bull had come in from the oyster beds on the Sound, where it was said he'd rather steal a haul than honestly drag one, and gotten drunk in the taproom of the Wagon & Millers at East Haddam. About midnight there was a scuffle and a man lay dead on the floor with Bull's belt knife in his belly.

Sheriff Mott allowed that Bull had been drawn against first but that he'd provoked. "Get out," the sheriff had said, speaking over a gun. "We'd try you but never hang you . . . and we don't want your kind alive around this valley. I'm only saving taxpayers' money. Hawley . . . you be out of the region by sunup or I'll hunt you down like a sheep-killing dog!"

Bull hadn't said goodbye to Chid. He had taken the few things of Chid's mother's that he could turn into quick cash and silently left. . . .

Chid marched down the trail to the turnpike road. Bull's hired horse, used to roads, picked gingerly after him. Bull sat in the saddle, his lap crossed with a blacksnake whip, holding onto the horn and swaying, hiccupping every time the nag stumbled. Old Friend pressed close to Chid's legs, understanding that he and his master were arrayed against something fearful and evil.

"Hey!" Bull hollered, raising the lantern, "where you takin' that dog? He ain't goin' to New Haven with us, not by a long shot, he ain't!"

"Listen," Chid said, feeling sick. "You said I could take him. You said if I'd come peaceable Old Friend could come. I'd have run away otherwise."

"I know you would," Bull said, "an' maybe I just spoke too previous. Keep him out from under the horse . . . an' get 'long quicker, boy, this here travelin' is thirsty business an' you used up all my rum makin' me wait for you."

CHID'S father had gold all right. Chid hadn't believed it when he'd suddenly appeared out of the scrub this morning, claiming he'd struck it moderate rich on the Yuba. Now, in the bar of the Cliff House, Bull showed his money—a great wad of greenbacks. He threw one of them on the bar and gulped the drink it produced; then motioned Chid upstairs, and shoved him into a small bedroom.

"You stay here till packet time in the mornin'," Bull growled, taking the key.

"What are we going to do in New Haven?" Chid asked.

"Cute, ain't you?" he asked. "Tryin' to make out you what your paw's doing; heh? Since noon you about that Lag Jessup a cub pilot, an' beggin' the help a decent boy or I'm glad you took on so." "I still want to be a swerved. "The river is k Pa."

"Well, forget it," Bull said, opening the door. "I'm goin' to the best bar in New Haven to tend it, that's what. I'll be for thirteen an' high time to somebody."

CHID listened to the sounds; the drumming and farmers at the bar; Bull's voice, by right drinks, was the loudest. He felt so lonely in his life, sensing his mood, snuggled beside him.

From downriver came a big side-wheeler Calypso bound. Old Friend picked up the wind, leaping for the window told him, "that's not a side-paddler out to lick his General Hook. L down!"

Chid never heard the door. He fell into a weary sleep, thrown across Old Friend's back, unloaded her freight and northward growling in the General Hook had been the cream of the freighters from every landing.

Bull roused him out of his sleep at a table, ordering both. Sheriff Mott tipped back in his chair, looking at anything but Chid.

Chid ate, slipping with Old Friend. After a while he stood up and looked up the river over to the dining room. "Bull," he drawled, "he Hook down first . . . y her."

Bull said nothing, musing at the wharf. Old Friend nudged Chid, and Bull scowled. Chid knew a moment "Listen," he said, "Old ain't he?"

"You won't have no over a pet," Bull said, leaving him.

He took Chid by the hand and led him to the agent's wick kept Chid between him.

Out on the river, La his bells and the General ing her great single s blubbering spare steam ties, snuggled to the wharf. Only one gang they were skipping the aboard!" the chief clerk folks. "We're sailin' a Calypso's only the ne Hurry, please! Mister, way-bill for that dog."

"The dog ain't comin' snapped, "just the bo spendin' cash totin' a creation!"

"You promised," Chid said—

"Button your lip, boy. Your dog was useful to an' hold you overnight. boat before I whale you."

Chid couldn't help w

Bull and threw himself burying his face in the fur; hiding his quivering he let himself be led to k, not looking up. Old crouching on the wharf, Chid funned with him. d. "Down, sir . . . you

drew into middle river, e paddle thump of extra Friend raced frantically wharf piles, barking for It only sent Chid into a perate and wrathful. He bull's side whiskers, pull- own. Then Chid butted, owl; ramming his nose. et a grin break into a "kid!" he cheered.

resolutely forward, fearing k to East Haddam wharf. o, ne to watch the gently ler chins which led upward thous which Lag Jessup t was a dead dream now; ld F nd, to forget about.

In the wheelhouse, perched forward of the two tall thwartship stacks, Lag Jessup put the steamer into the Tylersville channel and growled to Horace Stone, his quartermaster. "That boy was happy on the river," Lag observed, feeling mad at his helplessness, "and more likely to come to good than he is now. He's got natural river sense, Horace; I was ready to take him on as cub. If I ever get my hands on Bull Hawley off duty, I'd as lief . . ."

"Pawl the capstan, Lag!" Horace warned. "You're like to be off duty for good. Look astern, Lag!"

Lag snapped his glass on the upriver reaches. The Calypso was just emerging from behind the bend at the River Salmon. Black smoke billowed from her stack and under her bobbing walking beam the paddles beat the water into a white fury. She remained in middle river, not veering into East Haddam and Lag knew what that meant.

"She's skipping her stop," Lag said. "Ed Latham's hooked up to beat us to Saybrook Point and that new freight train from New York. Horace, we lose that, the way profits are now, and Mr. Bowles will lay us up. Ring the engine pit, Horace. . . I want forty pounds and better!"

Horace chumped on his chew hard in approval but kept his eyes on the river astern. "Lag," he asked, squinting, "set your glass on that fuss in the river off the wharf."

Lag steadied his glass, then telescoped it with a curse. "That," he said quietly, "is Old Friend, swimming after Chid."

WHEN Chid came to the pilothouse they told him nothing about the dog, far astern now. Old Friend would get tired after a while and swim to shore. It was kinder to remain silent.

Word of the race had gone through the General Hook. She vibrated with a new and ominous tremble, bespeaking high boiler pressures, and her wheel flayed the river with the roar of an over-shot mill wheel. Passengers clustered at the rails, peering upriver. Mr. Bowles, the owner, circulated among them, assuring the timid that, fast as they were traveling, Mr. Jessup and the engineer were observing the safety precautions set by law.

"This ain't a pleasure race, sir," he assured a professor from the new university at Middletown, "but we got to get that business from that new train comin' up today. We do, and give service totin' to the landings, I'll sign a contract for regular freighting in a week. We don't . . . lettin' Ed Latham get it . . . I'll admit I ain't got the venture left to fight no more."

The mate shifted some heavy cargo, wagons and cattle and such, giving the General Hook her very best trim for high speed. Folks watched Lag with up-turned anxious faces, telling him how much they wanted him to win, to stay on the river. "Don't put any money on it," Lag advised, "we lost an all-fired lot of time at East Haddam."

"That Bull Hawley," said a woman, "he never spelt good for nobody. Right

LOGISTICS

Strategy is the planning of warfare.

Tactics is the execution of those plans.

Logistics, the third branch of military science, is the supplying of everything necessary to strategy and tactics—in the right amount, at the right place, at the right time.

Now, in *total* war, we must apply the science of Logistics to all of our activities as a nation—civilian as well as military. WE-ALL are part of the Victory Program.

Our supply lines are literally life lines of the United Nations. Man-power *and* munition-power are the controlling factors.

Today, Logistics dictates strategy—determines tactics.

Congress has appropriated billions of dollars *but it cannot appropriate one single second of time.*

Time favors those who appreciate it as the priceless commodity it now is.

In war, when we save time we save lives—and we make our individual contribution to Victory.

Motor Trip

CROCKETT JOHNSON

now he's in the bar, drinking and card playing."

An engine came up the fiddley, moving the weights on the safety valves to the last notches, hanging a spanner on each for good measure.

Some of the excitement of it reached Chid, easing the pain of his troubles. He shared the part window with Lag. Lag hooked an arm about him, feeling the broadness of the shoulders which promised a rugged lad, able to handle the big pit wheel, come his full growth.

Chid had never so much wanted to be a pilot before, the grandness of that situation being plain to everybody during a race.

"Calypso's gainin' fearful," Horace observed. "Lag, you'll have to short cut."

"Not with the river in autumn low," Lag said. "Chid, do you remember the ranges ahead?"

"Yes, sir," Chid said, "you line the port chimney on Whalebone creek mouth and lam straight for Anastasia south tip."

"Good boy," Lag grinned. "I told you that only once, a full year back. Chid, I wish I had you for a cub."

"I took a current boat through here and the West Channel, clear to Saybrook Point last week," Chid said with pride. "I got me four dollars but Pe took it."

Chid could risk a look astern now. East Haddam was far in the folded hills of the upper river. He climbed to the settee, hanging out of the stern lay sash. The Calypso was firing with resin now. She had crept into the wake of the General Hook and was gaining rapidly. Lag made some calculations with his gold-nubbed toothpick on the sill varnish and looked anxious.

"How's she doin', boy?" Horace asked.

CHID didn't answer. He couldn't then. He stared fascinated at the foredeck of the oncoming paddler, not believing what he saw. Crouched at the very stern head, sniffing, separating the scents of this strange part of the river, was Old Friend.

The dog scrambled to his feet, standing motionless, almost in a partridge point. His muzzle quivered, sweeping the breezes made by the General Hook. Chid couldn't hear him; but he could see the pinching of Old Friend's belly under his wet coat and he knew he was whining, had gotten his own scent.

"You could," Horace was saying, "take the West Channel and short cut Brockways. It ain't deep enough for Ed Latham's paddles. You could jack up the wheel and skin over, Lag. . . it'd save a mile."

"I been figurin' on whether to risk it," Lag said soberly, "but there's an oak snag at the lower end; always has been there."

Chid heard. He'd been through the West Channel only six days ago. Lag was wrong about that snag. It had lain there, weaving in the current and tide like a puff adder's head, ready to strike death to the first hull to approach it. But now it was gone, moved to the channel edge by a favorable tide and an easterly gale. Chid, remembering the depths as he'd helped pole the current boat, reckoned that, with her paddle raised a mite, the General could get through.

"Lag. . ." Chid said.

"Quiet, youngster," Horace growled, not really angry. "Lag's rung up more steam. He doesn't short cut. Looks like a steam race down the East Channel and we haven't got a chance, boy."

Chid could see the mouth of the West Channel opening ahead. It was good-looking water on top and he alone knew it was good below as well. He wanted to tell Lag that before it was too late to veer for it.

But from the Calypso now he heard

the joyous barking of Old Friend. The dog knew Chid was on the boat ahead. He ran happily along the waterways, pawing at the rail in his eagerness. In minutes the two boats would be beam to beam and Old Friend only yards across a narrow path of water. Chid then had but to whistle and jump into the river. Old Friend would follow, swimming with him to shore. They could take to the woods, go east to other rivers where his father would never find them. With Old Friend his again, there was some reason to running away.

"They got the boy's dog," Horace said. "Dipped him up with a scoop net. I reckon."

L AG said nothing. Chid could see the defeat in his face, the disappointment of being licked. Chid slipped off his coat. Old Friend waited tensely, seeming to understand. Mr. Bowles came to the half door, dabbing at his forehead. "Mr. Jessup," he said, "you got to do better. You're shuttin' me and steam-boatin' down."

"There ain't another turn in her pad-

not telling him about that snag being gone. But Chid couldn't tell him. Lag would sheer off before the Calypso came alongside. He'd leg it for the West Channel mouth: separate him forever from Old Friend and escape.

The valley boomed with the echo of the two racers thumping their engines. Smoke poured from the stacks, darkening the churning wakes. Passengers cheered and catcalls shrilled between boats.

From the General's freight deck Bull Hawley argued drunkenly with someone, shouting he'd not only navigate the ladder to top deck but lick his brat proper once he got there.

Old Friend barked imperatively, urging Chid to action. West Channel mouth was almost abeam now and the Calypso coming up fast. Chid dropped to the deck, ready to run aft. "Goodby, Chid," Lag said at the door, putting out his hand.

But Chid couldn't take Lag's hand. His whole being was suddenly dead. His feet wouldn't move, inside he felt empty, as if something ununderstood

die. You got every trick I know," Lag said, keeping his eyes on things far away. "You can fire me now . . . there's nothin' more to do."

Chid tugged at his shirt buttons. The river would be cold. But not as cold as living in a strange noisome city. The shirt buttons stuck, making Chid mad; making him count ten for calmness.

But curiously, in that ten count, he didn't see Old Friend or the plunging Calypso drawing steadily abeam to where the hound could see him and hear his command to jump. He saw Lag Jessup buying him a basket of staples and giving him a warm coat, saying it would do until he rated a pilot's reefer. He saw Lag pointing out his secret ranges, sharing his river knowledge with him and he saw him, too, without a job, kind of disgraced on the river.

"Jump from the stern, Chid," Lag said quietly, "clear of the wheel. And good luck. If I ever get on the river again, I'll be wishing for you, Chid."

"Go aft, boy!" Chid yelled to Old Friend. "Back, boy!"

Chid couldn't look at Lag. He was do-

ing an awful thing to a man he loved

was floating away, leaving him only a shell. It wasn't too late; not to do what Chid knew he had to do.

"Lag . . ."

"Go on, boy," Lag said, "you'll make it, Chid."

"No," Chid cried, "it ain't that. Lag, the West Channel is open. The snag's gone. Swing her, Lag, swing her!"

There was a mist over his eyes, come unbidden and not going away. Old Friend whined, begging his best. "It's the word of a boy," Horace said, not chumping.

"It's true," Chid sobbed. "I took five feet through six days ago."

L AG'S answer was softly spoken. "This boy's word is all right by me," he said. "Swing her for the West Channel, Horace. Hard down now . . . steady . . . and line her for center water." Lag tooted the whistle, calling the mate. "Get the paddle jacked up, Mr. Mate. Chid, ring up more turns if the engineer's got 'em. . . I guess you know the bells as good as I do."

The compliment didn't brighten Chid now. The water lane between the two racing boats widened, as if each had

AUTO-LITE

MEANS

AUTO LIFE

CONSULT YOUR MOTOR LIFE-LINE TODAY!

Life literally starts with your Auto-Lite* ignition system. Its firing your car alive, makes it keep it running. Along this life-line, from generator to spark plugs, flows the vital energy which brings you the thrill of superior performance. Don't let it strangle its life-giving energy.

To keep your car delivering "like-new" performance, every part and parcel of its Auto-Lite* ignition system has been built in duplicate for you. Ask for original factory parts. They can be supplied by your neighborhood service man, car dealer or one of the thousands of registered Auto-Lite Service Stations near you.

FIGHTING BLOOD

By Hannah Lees

BEN SCHNALL

Meet the antibodies. They are your best defenders against disease. But no one has ever looked at one of them—until now

WE MIGHT as well give up, those of us who have been going around saying plaintively we haven't any fighting blood in our veins. Down at the RCA laboratories in Camden, New Jersey, where that electron microscope you've been hearing about is at work exposing secrets, they've just got through proving we have. Joe Dilks may think he's a conscientious objector. Mrs. Mildred Mush may be too mild even to argue about a tough steak. But they ought to see what their blood's doing all the while. Just as busy as Joe Louis' or Winston Churchill's, busy fighting.

Scientists as a body aren't terribly surprised by this stirring bit of news, just gratified. Like hearing about your tentmate's sister, and reading her letters and eating her cakes, then meeting her and finding her as dream-girl as you'd imagined. They've known for a long time, you see, that the blood had a standing army, and they've known all about that army's personnel and equipment, theoretically. But only theoretically. They'd never caught even a glimpse of the main body of the army till just about now.

Maybe you've been thinking it was the white cells in your blood that fought infections. Well, they do, partly. There is a kind of small energetic white cell, called somewhat incredibly a polymorphonuclear leucocyte, which swims around in the blood like mad, tracking down all sorts of foreign particles from germs to India ink and trying to swallow them up. And

there is a bigger, slower white cell called a macrophage that also swims around in the blood, sucking in foreign particles.

Pus, as you've probably heard, is basically made up of dead white cells and dead bacteria. But these leucocytes and macrophages are just about as much good by themselves as light and heavy tanks—even the best and newest ones—without men to run them or ammunition to keep the enemy from getting away. There is something else in the blood that does the real fighting and gets the germs ready to be mowed down and swallowed up. Without those somethings, if a white cell comes up against a germ, it just bounces futilely off again. With those somethings—well, we'll come to that in a minute, but those somethings are what scientists have been calling, sight-unseen for a good many years now, antibodies.

All they knew about antibodies to begin with was that after a person had had certain diseases, something happened inside him so that he wasn't likely to have them again. After a person had had typhoid fever or scarlet fever, for instance, the white cells which, before, hadn't been able to do much good against the typhoid or scarlet fever germs were suddenly able to swallow them up and cart them off. Then they began to find that if over a period of time a person was given a series of shots of killed bacteria, typhoid germs, say, he built up something—antibodies—which made him immune to the disease. And they found, too, that if a person had recovered from certain diseases, or an animal was given shots of the bacteria of these diseases, their blood got so full of that something—antibodies—that their blood serum could be injected into people sick with those diseases and actually help them get well by reinforcing their own defenses, or antibodies. They had to be special

Dr. James Hillier of RCA's Electron Research operating the electronic microscope that has given scientists their first sight of the natural defenses of the blood in action against germs.

antibodies too. You couldn't help a person of diphtheria by injecting scarlet fever antibodies. Each disease had its own particular antibodies, and no other antibody—whatever antibodies would do.

That wasn't so surprising, they said. Scientists spending hours over microscopes found different antibodies had different weapons of attack. Some of them were the ones that cause diphtheria and tetanus, let fever and gas gangrene, to mention a few, and the toxins that flow all through our blood generally sick, just as if we'd swallow germs may be relatively few and far between in one place, yet the toxin goes everywhere. And what the antibodies do against germs apparently, is set to work with a sort of snare and neutralize the poisons as fast as they come and keep on neutralizing them until different antibodies can be made which destroy bacteria themselves. So they called them antibodies.

But there are other bacteria that keep poisons firmly attached. It isn't near as easy to neutralize the poisons from this kind of bacteria to destroy the germs themselves. So they worked out a couple of systems of defense. One system, and the most dramatic probably, is to solve the germ. Scientists have seen the bacillus, for instance, dissolving right before their eyes under the influence of cholera antibodies. It doesn't really dissolve, they've discovered. What actually happens is that antibodies surround the bacteria and break down their cell walls and lets the innards escape out into the blood where the body takes care of them at their leisure. But something dissolving in the beginning of this kind of antibodies lyses, which means

Visible Results of Unseen

Still another method of attack is phagocytosis. Antibodies have evolved, which surround the typhoid bacillus in bunches, crowd together and precipitate them out of the blood. Glutinate them, that is, which is why antibodies are called agglutinins.

Mind you, nobody had ever seen anything doing any of these things. They had seen typhoid and scarlet fever poisons being the germs finally rendered harmless. The cholera bacillus apparently dissolved. Phagocytosis being bunched together it was known by chemical and other studies to be happening in each case was that antibodies surrounded the bacteria, making a film around them along with all the neutralizing poison down of cell walls the bacteria could be broken by the white cells. But they had never made this film and never thought of seeing it until the electron microscope. Until Dr. Stanley and Dr. Mudd and began investigating the tobacco mosaic virus and typhoid bacillus.

You probably know a good deal about the electron microscope already if you've been following the news. You probably know that the only simple microscope is that it images of minute particles—quite a different thing like twenty-five thousand times. Otherwise it's more like an X-ray microscope.

Take that typhoid bacillus and get it into the electron microscope. Instead of mounting it on a slide you'll mount it on a tiny circle of metal thinner than a quarter of the size of your little pretty fine mesh, two hundred and forty thousandths of an inch, and when you put it in its little slip it into the electron microscope a current, what you'll look at is whatever is in one of the holes made by four of the and forty wires.

Then, instead of shining light on it, you'll shine a flood of electron waves. Instead of an "electron gun," a tungsten filament, a tremendous electric charge going through it. Instead of concentrating the electron beam through a glass lens—glass, even the (Continued)

A SPECIAL PREPARATION FOR SHAVING

FOR THE 1 MAN IN 7 WHO SHAVES DAILY

It Needs No Brush Not Greasy or Sticky

Modern life demands at least 1 man in 7 shave *every day*—and men in service must get clean shaves, too. Yet daily shaving often causes razor scrape, irritation.

To help men solve this problem, we perfected Glider—a rich, soothing cream—not greasy or sticky.

SMOOTHS DOWN SKIN

You first wash your face thoroughly with hot water and soap to remove grit and the oil from the skin that collects on whiskers every 24 hours. Then spread on Glider quickly and easily with your fingers. Never a brush. Instantly Glider smooths down the flaky top layer of your skin. It enables the razor's edge to *glide* over your skin, cutting your whiskers close and clean *without scraping or irritating the skin*.

ESPECIALLY FOR THE 1 MAN IN 7 WHO SHAVES DAILY

For men who must shave *every day*—doctors, lawyers, businessmen, service men—Glider is invaluable. It eliminates the dangers frequent shaving may have for the tender face and leaves your skin smoother, cleaner. Glider was developed by The J. B. Williams Co., makers of fine shaving preparations for over 100 years.

SEND FOR GUEST-SIZE TUBE

If you want to try Glider right away, get a regular tube from your dealer. If you can wait a few days, however, we'll send a Guest-Size tube for a dime and any used metal tube. It is enough for three weeks and is very handy for traveling.

On this test we rest our case entirely—for we are positive that Glider will give you more shaving comfort than anything you've used.

Send your name and address with ten cents and a used tube to The J. B. Williams Co., Dept. EG-08, Glastonbury, Conn. Offer good in U. S. A. and Canada only.

Ernest D. Hurlbut
PRESIDENT

FREE! Great New Tobacco Blend

Postcard brings you absolutely Free generous sample-package America's Newest Smoker's Treat "Three Squires Pipe Mixture". Reg. price 15c. Address "Three Squires", Dept. G, 191 Fourth Avenue, New York City.

Many Never Suspect Cause Of Backaches

This Old Treatment Often Brings Happy Relief

When disorder of kidney function permits poisonous matter to remain in your blood, it may cause nagging backache, rheumatic pains, leg pains, loss of pep and energy, getting up nights, swelling, puffiness under the eyes, headaches and dizziness. Don't wait! Ask your druggist for Doan's Pills, used successfully by millions for over 40 years. They give happy relief and will help the 15 miles of kidney tubes flush out poisonous waste from your blood. Get Doan's Pills.

going to the South Orange and Maplewood (N. J.) High where Stanley Wood was instructing the young thespians, and Papa Wright took Mr. Wood's word for it that Teresa wasn't hopeless. Father staked her to two summers' tuition at the Wharf Theater in Provincetown, where Teresa wrestled with scenery, lugged props about and looked wan and wistful.

"The least likely to succeed," was the Provincetown verdict.

But Doro Merandi of the Provincetown company liked her and when Miss Merandi went into the cast of *Our Town* she put in a word for Teresa, who was hired as understudy to Dorothy McGuire, who created the role subsequently played by Martha Scott. By the happy chance that suddenly made pale and bedraggled females invaluable, Miss Wright was in a good spot. When Eddie Dowling started to cast the touring company, he became irate.

Thanks to Mr. Serlin

"That infernal Hollywood!" cried Mr. Dowling, expressing his resentment of a machine that invariably sucked in every talented youngster. There was nobody but Teresa and she made the rounds of New England and the Middle West.

Next summer she was with the Barnstormers Theater at Tamworth, New Hampshire, where she learned a great deal. When that was over she came back to New York and started giving readings for *Life With Father*, along with all other destitute actors. The boss of the play was Oscar Serlin, who had been testing director for Paramount for many years and hated the films with a stern magnificence. As opposed to that, his reverence for the stage bordered on the pathological.

Oscar was in no rush. Miss Wright thought she was revealing Spartan courage when she gave her first reading, but after she was on the fifth round she looked at Serlin piteously, anxiously merely that she should be shot like a wounded rodeo pony and put out of her misery. Oscar had made up his mind that a blonde should play the role. Teresa was a brunette. Oscar fidgeted and finally decided that it made no difference whether a blonde or a brunette played the role. Teresa was in and later she had a lot more to thank Serlin for, because he made her screen test when the Goldwyn offer arrived and gave her even better advice about her contract, which is unique in cinema history. Here are a few portions of the Serlin-indited work:

"Clause 39. The aforementioned Teresa Wright shall not be required to pose for photographs in a bathing suit unless she is in the water. Neither may she be photographed running on the beach with her hair flying in the wind. Nor may she pose in any of the following situations: In shorts, playing with a cocker spaniel; digging in a garden; whipping up a meal; attired in firecrackers and holding skyrocket for the Fourth of July; looking insinuatingly at a turkey for Thanksgiving; wearing a bunny cap with long ears for Easter; twinkling on prop snow in a skiing outfit while a fan blows her scarf; assuming an athletic stance while pretending to hit something with a bow and arrow."

Faced with these restrictions the Goldwyn publicity staff kept Miss Wright at a distance and caused her some uneasiness. Her competitors were getting their pictures in the papers; she was only appearing on the screen. She ap-

proached Mr. William Hebert, Goldwyn publicity head, about the matter.

"Friends have told me I have a very nice figure," she said demurely but insistently.

Mr. Hebert called in the photographers. Interviewers were also coaxed into presenting an appearance but in several cases this created an assorted amount of ill will when they arrived with licorice sticks and ice-cream cones under the illusion that they were to visit Baby Sandy.

Hardier souls who came with less enlightenment and greater discernment found her a very nice girl, a touch on the unexciting side. When they asked her pointedly about her personal life she said, "I want to be a good actress above everything."

At this juncture the Goldwyn press representative would invariably offer his stock of information.

"Miss Wright is five feet two and weighs 110 pounds. She has wavy brown hair and greenish-blue eyes."

The interviewer would look at Miss Wright and confirm this. Miss Wright would then laugh very merrily.

"If you want to write something entirely original," she would say, "just put in that I hate the hours."

It seemed that although Miss Wright had been reared in Jersey, she had been born in New York. She felt that six o'clock in the morning was an improper hour to be abroad. It had been even worse when she was over at M-G-M making Mrs. Miniver under the direction of William Wyler.

"Mr. Wyler likes you to be perfect," said Miss Wright.

She demurred rather tartly about taking the role of Mrs. Gehrig but the studio executives convicted her of contradiction out of her own mouth. She felt that audiences would not accept her in an older role after what she had been playing, but they reminded her of one of her more romantic periods. When she was appearing in *Life With Father* she received a mash note from a well-known and elderly actor.

"I saw you Saturday night in the play and really thought you were terrific," he wrote. "The last time I saw you was in Pasadena where you were with the

King Players or something and that was so long ago it is possible that an old dame play a young girl like Mar get away with it. You we me up and come to dinner at the Blank Hotel."

Hollywood Has It Say

She didn't ring him around meal but she made the m ing the Goldwyn office al used it against her. She h in Pasadena, she was not and the gentleman was ob a misapprehension, but pointed out that if she cou of his astuteness there wo be no difficulty in convinc that she was her own age.

College on Horseback

Continued from page 21

gathered together about 25 cowboys—Wood says a cowboy turning out for polo has a fifteen-year start on any other boy—to develop into three or four first-string teams, sending them in against opponents in the same game much in the manner made famous by Howard Jones in football. When he has fully tried this system you are going to hear more about those Arizona polo teams.

In Bill Dent, held over from 1940, Wood has a hard-driving player who has been favorably compared to Cecil Smith, another former cowboy and the only 10-goal player at present active in this country. Jim Taylor, his second holdover from the 1940 team, is a skillful and daring rider (another New Mexico Military Institute boy), a fine horse trainer, and a strategic poloist.

The other two men on the team, DeLeslie Woodell, off a cattle ranch in Sonora, Mexico, and John Donaldson, a blue-blooded fox-hunting lad from upstate New York, are still green; and Wood does not feel that he would be justified in attempting another Eastern invasion this year. But he is looking forward to 1943 if the Army doesn't take his best men away from him.

Not all Wood's varsity are cowboys. There is another notable exception besides Donaldson. This is Pete Bidegain, a shepherd. Pete protests, however, that the cowboys hardly ever make him remember it. "I guess—" Pete explains this unusual friendliness between cowman and sheepman—"I guess I'm just naturally rugged."

Under the impulse given to polo in the West by Arizona, coast colleges, including Stanford, California, Oregon Agricultural and U.S.C., began to knock polo balls around on their parade grounds. By 1923 Stanford had in Barby, Edwards, Bruce and Vanderburg a famous Four Horsemen who preceded Rockne's Stuhldreher, Miller, Layden and Crowley, by quite a spell—a polo quartet which won 19 consecutive games in the West and only went down, at last, before the Arizona contingent.

Prep-School Polo Ponies

Also, under the immediate aegis of the university, polo has taken a spurt in the near-lying prep schools of the Tucson district. It is the ordinary thing now for boys entering the Arizona Desert School, the Evans School, the Southern Arizona School for Boys, the Judson School for Boys, and the rest, to buy their own horses for \$50 each from the school, and then sell the mounts back to the school at half price when they leave.

Ordinarily a rich man's game requiring at the very least a string of fine horses and the means to care for them, in the West polo is played by boys who are earning their way through college as stablemen, riding instructors, dude wranglers, and rodeo contestants. But since all are training to be cavalry officers, and since Uncle Sam always has manifested a fondness for polo players in this branch of his service, the use of government horses for the games in this section is the common thing.

Polo for the girls was tried for a while at Arizona, but was finally discontinued. This doesn't mean the girls don't do their fair share of whatever riding is done at the school, as has been indicated before now.

Today the girls share the running of all horse events at the school except polo. Also, quite apart from the boys, they have in their honorary, the Desert

Riders, a group of eleven horsewomen who would be a credit to any Madison Square Garden horse show. Members are picked from women riders in the gymkhanas and horse shows; and their moonlight rides in the spring back to Mt. Lemon with the boys' honorary, Scabbard and Blade, are now traditions at the school. So are their pretty desert hikes on horseback in the flaunting color of long spring desert evenings.

The gymkhanas and the horse shows, which began as military events for the boys, the girls now share equally and sometimes even predominantly.

They go in for box jumps and polo jumps, and can clear automobiles, along with the boys. They do Roman and Cossack riding, and are outstandingly accomplished in the mountain slides, which you used to see the Italian cavalry officers doing in the newsreels. Only the Arizona girls would make the Italian officers look silly by comparison. At least, that's what the Arizona boys say.

Crazy Over Horses

In the Southwest the line between spectator and participant at any social doing is more figurative than actual. The grandsons—and, yes, let's say the granddaughters, too—of the gents at Tombstone, who didn't like to drink alone, still carry a special brand of gregariousness over into everything from a barbecue to a ball game. When it comes to horse events, even staid citizens who have lost power to get in the saddle without the aid of a pulley don't like to sit idly by. Tucson people put on ten-gallon hats, wind bandannas around their necks, and whoop it up for a week or two before any circus, rodeo or preview of a Western picture comes to town.

This fiesta attitude has had its effect upon the boys and girls of the campus. With good distance judging for holidays, the kids have placed their rodeo just one week on the calendar behind the big state rodeo in the town. The result is that the university as a unit dons Western garb a couple of weeks before the town blow-off and doesn't skin out of it—if at all—until a week after their own show, giving the district a full month of Western good time every year at the turn of spring.

Western assemblies are held to pep matters up; recalcitrants are all put in a big bull pen in the center of the campus for all to see their shame; Western music and Western dancing become the evening's entertainment.

Cowboy-attired youngsters around corner lamplights carol their desire to be buried on the lone prairie or home on the range, sing nasally and in falsetto that they want to follow the dogies, ride the canyons, or muddle through the mesquite on the mesa for the last roundup.

But as most of this vocal effort manages to drift into open sorority windows near by, this also helps to keep alive older traditions not peculiar to Tucson.

Colorful? Sure. But don't get the notion that all this stuff is quaint. These are not peasants of Mittel-europa out for a Maypole dance. These are Southwestern Americans fashioning a way of living that suits them, however unrelated to the latest amusements on Broadway or in Hollywood. If you want to play in their part of the country, brother, you play the way they do. And time, in the warm Southwest, is decidedly not of the essence.

THE END

*The forest primeval
now gives Americans a native
pipe of astonishing lightness!*

In the heart of the Great Smoky Mountains, in North Carolina, America has again demonstrated its incredible richness. An unexplored, untapped virgin forest has been discovered of pipe burls lighter in weight than any heretofore known, "Breezewood." The Breezewood pipe, complete with mouthpiece, weighs on the average, less than 1¼ ounces! You'll find, too, that Breezewood gives you an unusually dry, sweet smoke. Hold a Breezewood in your hand—then see what smoking pleasure America has for you, in Breezewood!

No wonder they were astonished! They all guessed too high! Actually the astounding new Breezewood pipe weighs, on an average, less than 1¼ ounces.

**Free your hands
for other tasks**

Breezewood is comfortable because it's light. When motoring, writing, fishing or whenever your hands are busy, you don't have to interrupt yourself so much to handle your pipe.

Grade-A Bees

By Dudley addo

PHOTOGRAPHS FOR COLLIER'S

Down where the tupelo bloom, a pampered race of bees is literally working to death to enrich our short larder with hundreds of tons of their own special variety of fragrant white honey.

that while ordinary tupelo honey contains about 34 per cent dextrose and only 23 per cent levulose, tupelo honey contains about 39 per cent levulose and only 23 per cent dextrose. The difference in language that means that in tupelo honey is in effect a higher percentage of levulose. Levulose is a sort of fructose; when you eat sugar a complex process breaks down the sugar into glucose and levulose. In tupelo, the process is done by the bees. The result is a honey with a higher percentage of levulose.

Tupelo honey doesn't come from a single flower, as we think of honey. It comes from a spongy yellowish-green tree called the tupelo. These trees these globes are about 12 inches in diameter; on female trees the size of a clove. About 100 trees are needed to produce one ton of honey. The trees are male. The female trees are of two varieties—black and white. The white is a variety of gum arabic. The black is big. The white is a spring affair, twenty or thirty feet high, long, straggling branches. Black honey is good but it's not as important.

White tupelos, which are used for lumber, are found scattered through swamps of the upper Gulf Coast. The honey produced in any one swamp isn't pure because the bees come from many different trees. It is in Gulf, Franklin, and W. Counties, around the town of W. Hitchka, that the tupelo alone; no other flower produces honey at the same time and the nectar is hives by the bees is pure.

A few years ago, when demand for tupelo honey around Wewahitchka and the Apalachicola Valley kept bees. They got colonies as Christmas gifts. Housewives tended for honey money as far as where kept hens. Filling ants and deputy shepherds working for them on the prohibition somebody tupelo honey made sweet. The Apalachicola Valley was invaded by bees from miles around.

Dwindling demand and a dry spell made bees unattractive to amateurs. Gradually the business concentrated in the hands of a few dozen apiarists. It was economical to operate hundreds of colonies—because a pensive vacation the bees each year.

Along about the middle of the tupelo is in full bloom. The bees which have been pumping from these flowers well the resulting honey. So the bees—two billion—are hived up and moved to a river landing, and placed in outboard-powered, each one hundred hives. The

(Continued on p. 70)

A group of beehives by the banks of Florida's Apalachicola River. From the blossoms of the tupelo tree, these bees produce a distinctive honey during their twenty-one-day working season.

The tupelo tree, found scattered through the swamps of the upper Gulf coast, surrenders a nectar from which bees create a unique honey: pure white, remaining fresh indefinitely.

OUT West it's horse stealing. In the Ozarks it's kicking a fellow's dawg around. But down in the swamp country of northwestern Florida mashing a bee is practically suicide. The two billion bees down there along the Apalachicola River are so highly thought of that they work only 21 days a year, have a swell boat ride and a nine-month vacation in the cooler North, and get free food if they need it. In return for all this pampering they produce about 375 tons of honey each season. In normal times this great blob of sweetness is an always-welcome addition to the national menu; in these days of increasing sugar shortages it begins to look more and more like manna from heaven. Not only for the 25 or 30 apiarists (a fancy name for beekeepers) that these bees support, but for all of us.

The Apalachicola River bees produce a special kind of product: tupelo honey. It's pure white, keeps indefinitely, won't turn sugary and has a flavor of its own. Some of it used to be mixed with other honeys for flavoring purposes and as a preservative. But chemists found cheaper preserving methods and flavoring processes, and the demand for tupelo went down—for a while.

When chemists analyzed it, they found

Ac Of Congress

Acacia Mutual was chartered by Act of Congress in 1869 as an organization "to forever be conducted for the mutual benefit of its members and not for profit."

Through wars, depressions and hardships, Acacia Mutual has been serving the public faithfully and well. A mutual, not a stock company, Acacia Mutual has larger than 90% of the assets of all life insurance companies in America.

Over 100,000,000 of Assets attest to the soundness of Acacia Mutual. Legal reserves are certified regularly by the Department of Insurance of the District of Columbia.

Over 100,000,000 of Insurance in Force attest to the public endorsement of Acacia Mutual's premium plan. Acacia Mutual's plan more than doubles the dividends of all life insurance companies and the rate even faster.

Over 100,000,000 in Benefits to policyholders have been paid out since Acacia Mutual adopted its policy of "dividends in advance" in 1926. Over \$12,000,000 in dividends to policyholders.

Over 100,000,000 in Benefits to policyholders have been paid out since Acacia Mutual adopted its policy of "dividends in advance" in 1926. Over \$12,000,000 in dividends to policyholders.

Over 100,000,000 in Benefits to policyholders have been paid out since Acacia Mutual adopted its policy of "dividends in advance" in 1926. Over \$12,000,000 in dividends to policyholders.

WHAT "ACACIA" MEANS

Acacia rises its name from a tree which since the dawn of time has been a symbol of evergreen life. In ancient Egypt, in the islands of the sea, Acacia was and is—revered as a symbol of life and immortality.

ACACIA MUTUAL
LIFE INSURANCE COMPANY

\$100,000,000

Says Johnny will go to College!

—thanks to this Unique and Different Life Insurance Company

EVEN during wartime, Johnny's Dad is making certain that there will be money to send Johnny to college! One of the provisions of his Family Security insurance policy covers Johnny's education . . . and behind that Family Security policy stands Acacia Mutual's more than \$100,000,000 in assets.

Acacia Mutual is a 73-year-old life insurance company that really is unique and different . . . unique in the way its flexible insurance plans can be fitted exactly to your problems and your income . . . different in its "economy" basis for determining rates, which keeps your premium payments extremely low.

Why Acacia Mutual's Rates Are Low

In 1926, to place insurance within easier reach of more people, Acacia Mutual

pioneered this new idea in premium rates. It abandoned the customary mutual company practice of charging relatively high premiums and then refunding a part of them later in the form of so-called "dividends." It introduced the plan of paying "dividends in advance" . . . in the form of substantial reductions in premium rates . . . plus additional dividends earned through sound investment, economical management and careful selection of risks. All this enables foresighted men and women to buy insurance which otherwise they could not afford.

For 16 years, through public recognition of the soundness of this idea, Acacia Mutual's volume of insurance in force has grown at a rate more than double the average for all life insurance companies,

and its assets have grown even faster.

Family Security You Can Afford

Acacia Mutual's Family Security Plan is entirely new in principle. In addition to an educational fund, this all-embracing plan provides a "clean-up fund," an emergency fund, and a monthly income for as long as 25 years. One \$5,000 Family Security policy can provide benefits totaling as much as \$20,885! Here is broad protection which, under older plans, would require many more dollars than the average pocketbook could stand.

Learn more about this plan, and about the different kind of insurance company which offers it. Read the column at the left for further information about Acacia Mutual. Then fill out and mail the coupon without delay.

Any Week

Continued from page 4

have always seemed to us to be more or less inoffensive. "Things are happening so fast these days that I may have missed a Washington ruling against women carrying handkerchiefs. But every other story I read in the magazines includes a woman bursting into tears, and a man who hands her a spotlessly clean handkerchief—linen, and always precisely folded. Don't women carry handkerchiefs any more? And don't men ever use the ones they carry? And another thing: I am sick and tired of vitamins, listening about them on the radio, hearing people talk about them, reading about them. Maybe it is vitamins that ail us. Too much vigor, not enough outlets for such vigor. Therefore war. You give me a pain, too, you big vitaminized sap!"

APPARENTLY Mrs. Miller's sore about something. And who isn't? Mr. Jackson Brewerie of Kenosha, Wisconsin, is complaining with some heat that we have ignored "an editorial policy sent to you by me four months ago that would make a magazine of you at a cost of only \$100,000 in ten yearly payments and give all sides of this war instead of being the narrow partisan you are." We've made inquiries but can find no one in these offices who remembers seeing the Brewerie Plan. However, it isn't Mr. Brewerie's letter that traps our interest so much as his concluding words. We recommend them to officials of the State Department who, when writing to diplomats—even those who are doing their best to make the job of licking Hitler as difficult as possible—always wind up their letters with: "Accept, Excellency, the renewed assurances of my highest consideration." Mr. Brewerie comes to a halt with the following

words: "If I don't hear from you in a satisfactory manner by return mail, I will come to your office and kick the tripe out of you."

WE ARE glad that General Marshall, Army Chief of Staff, is in England. And it's none of our business. We've just been trying to get Keenan on the telephone. The general rang the number for two or three minutes, getting nowhere whatever. Finally she said, "Sorry, the number doesn't answer." That's the War Department's number. General Marshall is all out somewhere fighting the war in England if you want to talk to him. In the War Production Board, all the agencies you can find are all right. And it gives you some idea of what the capital of your country is like these days to know that we've been talking to a fellow at Room 7500, extension 71,242. The extension will be among the new numbers. He said that 1,700 new numbers were being added to Room 7500. That there'd be many new materials for making new uniforms are available. There is no trifling matter here. We have something of a military situation. We have to use your imagination for the rest of this paragraph.

WE HAVE no objection of course to a nice electric slogan for this war. There are signs that the search is out of hand. For example, we've seen one in a Washington newspaper: "Ibbidy, bibbity, zibbity, your cash to Uncle Sam." It is the creation of a citizen who modestly calls himself Anonymous—who is about the least he could do.

"Our shoppe is old colonial to the last detail. We even put hoop skirts on our waitresses!"

goes," he thought, and he felt the old familiar feeling of peace rising in him.

"In a jiffy," he said. "I've got a ragline outfit working down in the house he could hear his voice, and the sound of laughter didn't show it was a party."

"A pay," Jill said. "Some of my friends from New York, and a little business?"

ast I know now where I stand, he
but in urt some place just the
and he suddenly realized how
was. e was conscious, too, of
nked us orm, and the stubble of
on his fa. He rubbed one hand
vely acis his chin.

"If I stood inspection this way I'd get court-martialed," he said. "You haven't got a spare bed around the place, have you?"

"You drove all night, didn't you?" Jill said. "That was stupid of me, Ching. I didn't think."

She started toward the door and he picked up the bag and followed her. "Like old times," she said. "Your room's all ready for you."

IT WAS late in the afternoon when he woke up. The sleep hadn't done him any good and he knew why. The tiredness he felt you didn't get from a long drive and lack of sleep. You got the way he felt from seeing someone you'd been in love with at one time, and realizing that you were still in love, and realizing also that it wasn't going to do you a bit of good.

He got out of bed and took a cold shower and that didn't help. Neither did shaving, nor combing his hair, nor putting on a clean shirt, but it was the best he could do. When he had finished, he went downstairs.

They were having cocktails when he came in. Jill got up and took him by the arm and led him over and introduced him: "Mr. and Mrs. Holland, and Mr. Dunham, Lieutenant Talbot." Ching poured himself a late-comer's drink, and sat down and did his best to act civilized.

The Hollands were all right. They were a nice looking, amusing couple, and under other circumstances he might have enjoyed them.

Dunham was something else again. He was pompous and self important, and obviously impatient to conclude whatever business he was there for, and to get back to wherever he had come from. His merely being there put everything on an impersonal basis, and it didn't add to the gaiety of the occasion. There was a tension in the atmosphere, like blowing up a toy balloon and waiting for it to explode in your face.

It was a relief when Jill finally said, "You're staying over the week end, aren't you, Ching?"

He shook his head. "I have to be down in Idaho tomorrow night."

It wasn't true. He could have stayed and it wouldn't have made any difference. But enough was enough.

Jill said, "That's ■ shame," but it

SKY-SCOW

By Paul Schubert

One of the United States Navy's blimps on antisubmarine patrol over the Atlantic comes down for a look at a lone freighter

Here's one of the reasons for the Navy's announcement of a sharp reduction in submarine attacks off the Atlantic Coast: the big blimps are on the job. Come along and watch us kill a U-boat

ONLY forty or fifty miles from New York's Times Square, a ship changed her course and stopped in the dusk to investigate a drifting life raft, mutely empty. The sullen sea was streaked for miles with traces of oil from torpedoed ships. There was a U-boat alert on, and from our height—we were 600 feet up in a Navy patrol blimp—we got a balcony view of all the far-flung machinery of antisubmarine war.

To the north, a couple of lean destroyers charged along. To southward, Coast Guard cutters and Navy subchasers made a wet but businesslike pathway across the waters. Army bombers, swooping low in the twilight, hunted for U-boats like gulls hungry for fish supper.

The tension over this part of the Atlantic was war-zone tension. Only the day before, a tanker and a destroyer had been torpedoed; loss of life had been heavy. You got this tension during the last war, but only as you drew near Europe. The 1942 no-man's-land feel-

ing of death and destruction off New York was as if the English Channel had moved across the Atlantic to take up residence near Manhattan's bright lights.

When we saw the ship change course we thought she had sighted a sub. All hands were at battle stations aboard the blimp, and I, on board as an observer dressed in borrowed Navy flying clothes with a big pair of prism binoculars slung around my neck, was periscope-hunting with the rest of them.

The ship was a British freighter, heavy laden, her decks jammed with enormous packing cases. She was war-worn and in need of paint but clean and well kept, with the undefinable smartness of a "taut" ship. The men on her bridge were looking off over her starboard bow.

"That's wreckage she's looking at," reported our chief boatswain's mate from the bomb bay. "No—it's a life raft!"

Our skipper swore softly. "She's stopped her engine. That raft may be a decoy."

We half expected to see the wake of a torpedo make its way suddenly along the uneasy surface. The skipper took an Aldis lamp and began blinking downward through the blimp window to warn the ship of the U-boat alert.

The steamer's captain, down below us, turned and called an order across the bridge. Her propeller began to thrash over and she got back on her course eastward, resuming her voyage promptly. A flashing lamp on her

bridge blinked up an answer to our message. We read it out word for word. "Thank . . . you . . . good . . . night."

"Any signs of life around that raft?" our skipper asked the chief boatswain's mate. "Or bodies?"

"No, sir. Nothin'."

We revved up the motors and returned to our patrol.

Blimps are back on the job as one of the most useful cogs in the antisubmarine machine. All along our coasts, as fast as hangars can go up and the big silver sky-scows can be provided, we are expanding our blimp establishment and working it to the limit.

What Blimps Are Like

These blimps are big gas bags shaped like elongated teardrops with a cabin attached to the underside, steering and elevating rudders at the pointed tail, and a couple of aircraft engines mounted on struts at either side of the cabin. They have changed very little in a quarter of a century—grown bigger, that's all—and the engines are better. And the cabin is now streamlined and fitted to the bag, instead of being an open car suspended by wires.

There are two standardized sizes, the smaller version being used for training pilots and crews, while submarine hunting is done in big patrol blimps whose lift is great enough to carry a heavy weight in bombs, machine guns and supplies, plus fuel for a long cruise and a crew of eight or ten officers and sailors.

The cabin of a patrol blimp is the same size as a man's room on a bus, longer and slimmer to eliminate wind resistance along both sides are cushioned comfort; a couple of folding bunks back aft for men off watch to extend flights. The control room, shut off by a sliding door, runs the full length of the way aft to the stern. All the equipment is utterly simple but sturdy and practical. The navigation table forward on the port side is a compact but very adequate stallation, an instrument panel with engines and even a pilot made up of an electric blimp and an electric coffee maker.

A blimp is a ship. She acts like a ship, she acts like a ship. The moment she gets the air, after being hoisted in the pre-war she rolls, rocks, yaws and smacks. Motors roar; she cruises altitude and steers toward the coast. As the surf line, dimly visible light below, and goes to put on inflatable rubber.

By that time you're a tuous of the fact that the drop of empty air between ocean. It's a little like a big crow's nest of an

with a fifty-mile circle of visibility ringed around you. The crew is as "Navy" as any man-of-war afloat, and the old Navy smell of "Jamoch" brewing in the galley (coffee to you landlubbers) adds the finishing touch.

The gas bag that holds—or helps hold—this thing up in space is just a big envelope pumped full of helium, the noninflammable gas which has almost as much lift as hydrogen and is infinitely safer. The fact that other countries make less use of blimps than we is not because they wouldn't like to, but because any dirigible inflated with hydrogen is a deathtrap in this day of incendiary machine-gun bullets—and we are the only country with an adequate supply of domestic helium. This doesn't apply to Britain's barrage balloons, since these blimps carry no crew and can be hydrogen-inflated without danger to life.

It is very important that the gas pressure inside a blimp bag be great enough to keep the bag swelled out to its proper shape, because a large part of the blimp's lift comes from the aerodynamic effect of driving the ship forward by its motors. In fact, though blimps are called lighter than air, it is quite common for them to take off heavier than air and to stay heavy through the first part of their flight, until part of their gasoline load has been used up.

It wouldn't be hard to keep the bag pressure constant if the balloon stayed in her hangar. But the moment she rises from the ground into the thinner upper air, the gas inside the bag tends to expand. As the chill of dawn gives way to warmer daylight and then to warm sun, the gas expands still more. Conversely, if the ship runs into fog, the gas contracts. Even a change of atmospheric pressure affects it.

The Big Trick of Ballooning

To allow for this expansion and contraction, the bag is only filled about three quarters full of gas. The rest of it is filled with inner pockets, or "ballonets," puffed out with air under pressure—air scooped in as the blimp drives forward, or pumped in with a little putt-putt motor when she is hovering.

This job of watching the gas pressure is the big trick of ballooning. It's in the hands of the pilot on duty, who watches a panel of pressure manometers and manipulates the controls of vents and dampers leading to the big bag. In an emergency, if the ship should start to rise suddenly—if she ran out of wet fog into hot sun, for instance—he can valve some of his helium, allowing it to escape into free air. If she starts down, he can dump some of his load to make the ship lighter. Fuel is one of his biggest items of ballast; another is his heavy load of bombs. But under ordinary circumstances, he keeps her at cruising height, or takes her up or down, as the skipper orders, by working the big elevating hand wheel just under his right hand. As the old girl sails along with her comfortable rocking pitch and heave, she rides the air waves in sky-scow fashion, and the pilot keeps her tamed with that elevating hand wheel connected to the elevating rudder in the tail.

Alongside the pilot, the second pilot mans the steering wheel. She steers just like a ship, yawing to the gusts and calling for plenty of energetic wheel work to keep her on the course.

We ran into danger ten miles off the coast, just as we were cruising over the wreck of a torpedoed, fire-gutted tanker—the kind of sight to make you ball your fists at the thought of the good men who had been trapped and killed in that water-borne inferno. The sea was sloshing over the hulk's broken back, sucking in and out of the gaping torpedo wound, and a Navy tug was standing by in the hope of towing the derelict into port.

Just then we ran into a squall.

"Ice, Cap'n," said the chief boatswain's mate, who had the pilot's controls.

"Head her for the beach!" said the skipper, and our motors roared to a droning urgency.

Rain, freezing on that big silver bag, added weight so fast that the skipper's brow furrowed up with the anxiety of his responsibility. Blimps are precious right now, and if the cards were stacked against us and we had to make a forced landing, he wanted to have the ship over solid land and not on that choppy sea. From our height, the sea looked deceptively smooth, but when you put the binoculars on the Navy tug down there astern of us, you saw waves breaking against her stubby bows and rocking her like an old porch chair.

Fortunately we got out of the squall and into sunlight before we had to start dumping weight. We came out of the adventure just over the shipping lane and were ordered by radio to patrol to the northward, up toward Ambrose Light.

Another danger not to be overlooked is wind,

ve
nrl
control route usually brings it home after dark. This one is attached to a mooring
naval Air Station. In emergencies, blimps may be refueled at sea by Navy ships

Collier's War-Time Food Chart is an authoritative picture of the kinds and amounts of food you should have for your particular type of daily activity — bible for the housewife planning meals for a family. Allowances of nutrients are those recommended by the Committee on Foods and Nutrition, National Research Council, and by the Bureau of Home Economics, U. S. Department of Agriculture.

This Soldier has the Range ...it's in her Kitchen!

She's in the war.

She's fighting with recipes — not rifles.

She's one of the army of 130,000,000 Americans fighting on the home front.

Collier's is covering the battles this home army fights from day to day just as actively and authoritatively as Collier's ace staff writers cover the far-flung fighting fronts around the world.

Collier's answers weekly the questions of the home army: "What can I do to help win the war?" "Why will this or that activity help?" "How will it help?"

An informed public is a great asset to a nation in peacetime—an absolute necessity for a nation at war. Information *for* the home front and *about* the home front is as vital to the victory effort as the reports from the battle fronts.

How can sugar or rubber win the war? Taxes, or Red Cross, or air raid wardens? Which is important and why?

What's the farmer doing? What's your neighbor doing? How are they coming with those planes and ships? Do you know what a really tremendous job industry is doing?

The active leaders in the great home army that must have the right answers to all these questions have been looking to Collier's for the low-down for years — have found that a close following of Collier's articles from week to week keeps them informed on the events of real importance.

As war calls for a greater awareness on the part of the civilian army, war also tightens the close relationship between Collier's and its millions of key civilian readers.

NOTE TO ADVERTISER

That lady up there at the range is important to you, too, Mr. Advertiser. She's still a purchasing agent.

She's a symbol of the entire home army of 130,000,000 Americans who are fighting this war on the home front.

Your customers are in that home army — living their lives, wanting their wants, thinking their thoughts under the changed conditions that war imposes.

Tell your story to the greatest number of the active leaders among them.

Tell it in the magazine the millions depend on for crisp, timely, informed leadership.

We believe Collier's is closer to its readers than any other weekly in the multimillion field.

Readers are writing in by the thousands for Collier's War-Time Food Chart, mentioned in the April 18th issue. We will send it to you postpaid on receipt of 10 cents in cash or stamps. Address: Collier's Food Editor, The Crowell-Collier Publishing Co., Springfield, Ohio.

Collier's — for People of Action

offshore wind. Blimps air speeds between sixty knots (if a blimp man spoke hour he would mean nauti-hour, which is "knots," so them knots and lets it go at a blimp's speed over the ocean depends on how wind she has to buck.

Atlantic blimps turned out in answer to a U-boat raid far offshore—no use for she went, here, since we keep the Nazis guessing us of operation. Anyway, far, did her job, and come all the way home of headwind that kept her at twenty knots progress. That blimp's cruise but she got home all right. Blimp ran out of fuel, her necessarily be over. Un- weather conditions she at sea by rendezvous craft.

Navy Teamwork

closest partners in the job are the Army bomb- out from the airdromes and furnish a vital part of sub-hunting strength. between the two is close not limited to the official amwork of Army and ated command. Soon marine work began, the working members of the spontaneous effort to get out about the part the is playing. A group of ers rolled up to the Navy's operation one day on a self- will tour to talk over ns for making life dan- U-ats.

ult this praiseworthy ges- began spending their off

days as observers aboard cruising blimps, and the Navy went out in Army bombers at every opportunity. Each service soon conceived the highest admiration for what the other was doing, and now, when they meet at sea, it is with a great sense of teamwork and brotherhood. In radio, patrol plans, etc., co-ordination between the activities of the two is very smooth.

There have also been conferences between the Navy, the Army, the shipping people and the Coast Guard (now a valued part of the Navy). Here all details of antisubmarine work have been thrashed out. Shipping has been told the tricks and novelties of current U-boat methods, which change continually in a life-or-death game of wits between ourselves and our enemies. When shipping had complaints, it got them off its chest; and the offshore job has been organized on a practical, man-to-man basis.

As for blimps, shipping people like them. "Let the blimps carry on as they have been doing," they say. "They keep the U-boats under water, where they can do the least harm."

The great menace of the U-boat attack on our Atlantic Coast has been the submarine which rises boldly to the surface by day or by dark and launches its torpedo and gun attack under conditions where its aim is deadliest.

Ships on our Atlantic seaboard never know nowadays when the Nazi menace will appear, since the Germans use hit-and-run methods, attacking one or two vessels, then eluding pursuit and, if they survive the intensive hunt (not all do by a long shot), often shifting to a new operations area some distance away before launching another attack. Meantime a second attack group may bob up elsewhere with a fresh assault.

But when a blimp patrols along above a ship, she is able, thanks to her height and her ability to slow down to a speed no greater than that of the ship, to keep

■ lookout unequalled by any other craft. If trouble is spotted, she has enough speed reserve to charge to the danger spot (right over the ship if necessary) literally within seconds, and her heavy bomb load gives her a terrific wallop. The U-boat danger zone is a circle only a mile or two in radius about the ship, and in that zone the blimp can give plenty of protection.

I took part, for instance, in the escort of two very precious vessels protected not only by a blimp but by a Navy destroyer. We, up in the blimp, kept our station easily. Sometimes we would forge ahead at twenty or twenty-five knots until we were abreast of the destroyer; sometimes we would circle and drop astern. It was ■ grand day, blue sea and bright sun, and we were a martial procession, with all hands at battle stations and all the ships' guns trained out ready for action.

Suddenly the destroyer put her rudder over, heeling deep as she shot off to starboard at full speed. We skated around, revving up our motors while she blinked a submarine warning.

"Open the bomb hatch!" the skipper yelled. Forward in the bomb bay, the chief boatswain's mate searched the sea in hawklike concentration. It was war, at spitting distance off the Atlantic Coast, the old story of hunter and hunted, and as we hunted U-boats, the ships we had been escorting zigzagged away from the danger zone.

Our skipper was aggrieved because he hadn't had the luck, yet, to bounce bombs off (or at) Nazi conning towers. You don't fly over a sea streaked with the oil of sunken ships, or look down on fire-gutted hulks, without ■ deep sense of personal hunger for vengeance.

"I'm the only skipper in the squadron who hasn't had his little show," complained our lieutenant, adjuring the chief to keep a bright lookout; but our "contact" was a false alarm.

Most of the work of submarine patrol is just what we were doing—hard work, danger, excitement, monotony, with the accent on hard work. We spent the rest of the afternoon delivering our precious convoy to its destination. We breathed a sigh of relief when we saw the ships safe inside the submarine nets in the hands of harbor pilots. The sun was getting low, and it was about time for us to start back home—

The Nazis Pay High

Then, from a point far offshore, we got another submarine alert and without hesitation put to sea for another four hours of grueling work, in which we teamed up with the whole mechanism of co-ordinated antisubmarine activity in a large-scale operation.

This isn't the place to say what we did and what we accomplished. The thing to say here is that if it weren't for the Atlantic antisubmarine activities, U-boat sinkings would have mounted to astronomical proportions. As it is, thanks to blimps, destroyers, converted yachts, patrol boats and Army bombers, the Nazis have paid a heavy price, and their tonnage destruction has been kept within bounds.

It was long after dark as we crossed the line of surf and the bright-lighted coast. "Those lights," said the skipper, "are nice to navigate by—but the Germans use 'em too. I wish the coast was blacked out and that those motor fishing boats we've been seeing all day were tied up for the duration."

The hangar was in sight ahead. As we came in, we could see the ground crew crossing the field to take our lines.

I wish I had a blimp of my own—and had her out every day on the U-boat hunt.

THE END

Paleface Needs Pink Medicine

Whether we're youngsters or oldsters, we all pay Nature's price for over-indulgence . . . a sour, sickish, upset stomach. The situation calls for something soothing . . . Take PEPTO-BISMOL!

Never Upset an Upset Stomach!

An overloaded stomach needs gentle comforting . . . not harsh spurring with overdoses of antacids or drastic physics!

TAKE PEPTO-BISMOL! This pleasant-tasting preparation is neither antacid nor laxative. Its action is different. It spreads a soothing, protective coating on irritated stomach and intestinal walls . . . thus helping to calm and quiet common digestive upsets, and to retard intestinal fermentation, gas formation and simple diarrhea. Get a bottle today!

Three sizes at your druggist's, or by the dose at his fountain.

up a mortar emplacement with grenades and capturing (a) a telephone post and (b) a light machine-gun emplacement. No wonder the course is known as the Sgt. York Battlefield.

BOSTON NAVAL RECRUITING STATION. Arthur B. Colgate, of Medford, had a reason for joining the Navy. "I've got two grandchildren," he said, "to protect." . . . "You see," confided Tony Amaral, of Fairhaven, to the recruiting officer, "I had a job making bullets, then got a feeling I'd like to deliver a few personally." . . . Manuel Baptiste, a Taunton boxer, couldn't pass the eye test, so he got himself a fight, made the price of a pair of eyeglasses and got in on spec, so to speak. . . . Johnny Marsland, of South Attleboro, bought his way in for \$340—the cost of an operation and dental work examining medics said he needed. . . . Bill Fair, a Dedham window washer, announced he was sick and tired of watching a painter give his gleaming windows blackout coats. "They don't," he asked plaintively, "do that to port-holes, do they? Because I'm joining up." . . . And then there's Malden's Eddie Ferry, who's sitting around his home patiently waiting for a tooth to grow. Seems he didn't have two opposing molars, "but I've got a wisdom 'ooth' oming in right opposite 'is one 'ere," he pointed out. "When it comes in, come back," urged the dentist. "We'll save a Jap for you to break it in on."

PORTSMOUTH HARBOR DEFENSES. N. H. Camp Langdon's Pvt. John Oates—known to admiring buddies as the Dixie Bantam—asked for a three-day pass to visit his home in Virginia. Amazed by Johnny's economical request for government time the battery commander wondered aloud if three days would be enough. Pvt. Oates wanted to be honest about it. "Well, suh," said he, "if theah's a mule waitin' fo' me at the station, Ah can make it. But if theah ain't no mule, reckon it'll take an extra half day."

CAMP LEE. Va. Public Relations Officer Lt. Victor L. Cary's requisition for a 75-watt bulb for office entrance illumination bounced back promptly from S-4 Officer Lt. Col. E. L. Stewart, who wanted to know the whereabouts of the 100-watt bulb he'd furnished the lieutenant ten days ago. This lucid and simple explanation was offered by Lt. Arthur Goodfriend: "The 100-watt light bulb you ask about in response to the accompanying requisition was consumed by one Pvt. Robert J. Durham, a professional fire-eater who munches razor blades and light bulbs on the side. He visited this department and ingested a considerable amount of fire, in addition to the 100-watt light bulb, and would have eaten several more bulbs of varied wattage but was restrained in the interest of economy."

FORT BRAGG, N. C. Overcome with spring fever and bogged down on some religious service notices Typist Jacquelyn Richardson began doodling on her G. I. typewriter in the office of the Senior Hospital Chaplain. It came out this way (and about half this size):

Miss Richardson called the complete soldier at the right Herbie, and Lt. Col.

Henry N. Blanchard, her boss, liked the little guy so much he suggested decorating the office's bulletins with him. They no sooner hit the service club and recreation hall bulletin boards than would-be doodlers all over camp began to try their hands at Herbie. This resulted in an apparent shortage of typewriters and Corp. Clifford Uhl, who works nights in the office of the Main Post Service Club, growls that if he doesn't get to use his own typewriter soon he's gonna kill Herbie. But Herbie won't be killed at Bragg; he has multiplied too rapidly. Look:

CAMP WOLTERS, Texas. The lanky colored recruit had arrived at the Reception Center that morning at 4 A. M., at which time he had eaten breakfast. When he reached the Classification Section for his occupational interview it was nearly noon. Pretty obviously he was sinking in the middle and was getting a little gray around the jowls. He told the interviewer he had been a house painter in civilian life and the interviewer—a little hungry himself—was trying to prove that the colored boy was or was not a house painter. He was having rather a difficult time of it, because the interviewee had his mind on meat instead of paint. "Look," said the interviewer, pointing here and there about the room, "this building is rough carpentry. Could you paint it?" The recruit first looked pained, then alarmed. "Yo' mean," he whispered, "befo' Ah eats?"

DESERT TRAINING CENTER, Cal. This will settle the argument over which outfit is training in the hottest weather and toughest terrain: The men here win by about 30 degrees and 10,000 square miles. The Nazis are reported to have conditioned themselves for warfare in the Libyan desert by training in bakery ovens, or a reasonable facsimile, so General Marshall thought it would be a good idea to try it out here. He sent Maj. Gen. George S. Patton and other brass hats down to pick out the hottest, ruggedest and most isolated section of

the desert southern California offer. From Indio the a generally eastern dir four days without meet payer and swelteringly 180 miles long and "This," Gen. Patton astically, "is the spot. It's perfect! Most hor country I've ever seen." disagree with the latte say the coloring's marve mate "the most healthfu although it's rather war

Here, anyhow, the Arr its first large-scale tra warfare. In summer 120° or more, vehicles fi will be tested under fu ditions. Men will plo sagebrush and cactus, hills. Sometimes they w a gallon of water a day but the salt ration—to v tion—will be the larg units. Having compil desert fighting data fr German experiences, th paring facilities for trai officers and men at a ti be correspondence-scho on tap are Lt. Col. Rile back from 10 months a overseas desert warfare ficers and men who kno to condition and train tr in no shade whatever.

The going is tough and tougher, but newcomers gradually, and during th cool evenings they spr open and listen to old-ti the one about the engi a three-mile ponton lake before they found mirage.

the inside. Army Intelligence has a hunch that some of the pen pal gals have been working on 50 soldiers at a time, hoping to piece together small bits of information that might make a nice picture for their pro-Axis chums.

CAMP SAN LUIS OBISPO. The camp paper, Shot 'n Shell, coined: Skip the Blonde, Buy a Bond. From a blonde in North Little Rock, Ark., came a pert note: "Why not an armful of both?" Well, mused the editor, why not? Then, just to change the subject, he went poetic again and tapped out another slogan: MacArthur Won't Fail Ya in Australia.

MEANWHILE, Sgt. Loring Huntley, of an Obispo M.P. Bn., overheard a lieutenant questioning a soldier who had recently emerged from a café brawl. "The lady you were with," the lieutenant began. "Is she a relation of yours?" the soldier looked the officer right in the eye. "Yes, sir," said he. "She's my platoon sergeant's wife."

MOFFETT FIELD. Marines never enjoyed having the situation in hand more thoroughly than a leatherneck corporal stationed here. Speeding back from San Francisco to go on guard duty, he was howled to a halt by a state highway cop and bawled out—but terrific. Chin sagging, the Marine reported for duty and assigned to drive a jeep up and down the main highway paralleling the base. First thing he saw was the cop's car, parked smack beside an official Army sign: No Parking, Stopping, Loitering, etc., etc. There isn't much use going on with this story, is there? The Marine leaped from the jeep with joy and gave the state cop a couple of earfuls, squelching all argument with "My orders say nobody stops here, and that's you. Git!" The law gulped, grinned, and got.

MARE ISLAND, Vallejo. Hardest to crash of any in the San Francisco Bay region are the gates at the big Navy Yard here. Commanders and captains have to show passes and even the Navy's own cars are carefully looked over by the Marines who have the gate-guarding job. That's why two leather-necks pounced on Seaman Henry Smith when he waved breezily and started past them the other day. "Leggo of me,"

yelled Henry, "I have a pass!" He had, too. It was dated Oct. 13, 1927. Henry turned it in on a new model at the guard office, then headed into the yard to sign up for another hitch. "What's the idea," he asked the Marines, "trying to keep an old sailor from his ship? If I can find it."

HONOLULU, T. H. First thing reinforcements want to see when they arrive here from the mainland is a hula. Hawaii still has them. Then the newcomer wants to learn Hawaiian. He starts with *wahine*, which may mean a blonde or a brunette. Next he learns *homalimali* (applesauce to you) and *wikiwiki*, which signifies "hurry up," more or less. With that handy vocabulary the soldier can get by anywhere on the islands, because the natives speak good English besides.

GENERAL

IN KEEPING with the universal custom of taking a crack at the guy higher up, soldiers now accost sloppily dressed buddies as follows: "Been promoted?"

SOLDIERS will eat 27,000,000 pounds of potatoes this year, but only 3,000,000 pounds of ships' cargo space will be required, because dehydrated vegetables bought by the Army will save about 10,000 tons of room in the holds. Other concentrated food products recently included on the overseas menu for American troops are: Powdered soups, eggs and milk. A pound of dried eggs expands to three dozen McCoy hen fruit, a five-pound can of powdered chicken soup makes 25 gallons of liquid, and a four-pound can of powdered tomato soup will provide 90 servings of eight ounces each.

NOTE from a soldier-cartoonist: "I'm sorry the drawing for my last approved idea didn't please you. Maybe you'd better get someone else to do the job. I did it with stamp pad ink in a taxicab while crossing an American desert en route to an embarkation point and a country that begins with 'A' and ends with 'a.'"

WE COULD guess he means Australia, Alaska, Asia, Algeria, Argentina or Arabia. But no—we're keeping our trap shut.
G. W.

Grade-A Bee

Continued from page 58

the Apalachicola to River Junction, Florida; then up the Chattahoochee or the Flint into the Georgia and Alabama farm country. Here the hives are reopened and the bees have nothing to do but gather honey all the day and eat it whenever they feel like it. In dry years, when there are not many flowers, the bees are fed on sugar syrup. With cold weather they become dormant.

Nobody bothers the bees until January, when they are collected again and floated down the rivers to the Valley. In the warmer climate they become active and in March go to work on the black tupelo blooms. They make this variety of honey until the white blooms come along in mid-April. And then the hives are cleaned of all black honey, and the bees go to work in earnest. Some of the apiarists are on high ground; others line up their hives on long platforms in the swamps. Each apiary has an extracting shed, which must be bee-tight. The scent of the honey attracts the bees, and if there is only a small hole in the house they will get in by the thousands.

Production is terrific. One colony may produce twenty pounds of honey in a day. One apiary has a record of 90 colonies that produced 1,140 gallons of honey—almost seven tons—in three

weeks. J. A. Whitfield, one of the biggest operators and organizers of the beekeepers' co-operative, has about 700 colonies. One of his river apiaries with 326 colonies averages about 20 tons of honey each year.

This heavy work gets the bees down and they live only about three weeks. However, each queen is laying from 2,000 to 6,000 eggs a day and that keeps up the population. Even so, the bee army finishes up its 21-day stint much smaller than it started.

It's actually dangerous to get in the way of the bees when they're working. They will fly about two miles with a load—making the well-known beeline for their hives—and if anyone gets in the way it's just too bad. Each hive is guarded by sentinels. If a "foreign" bee, unloaded, tries to enter, the sentinels kill him. If the stranger has a load of nectar, however, he's quite welcome to fly in, pump his load into a cell, go out for more.

Just a tip: don't head for the Apalachicola Valley to get rich quick on honey. There are just enough white tupelo trees to provide nectar for 8,500 bee colonies. That's how many bee colonies there are at work.

THE END

Fireman's Daughter

Continued from page 22

even started going to fires with them. He's just plain silly about it."

I said, "Well, that just goes to show!"

Because he's forty if he's a minute. And fat. I wouldn't ever let myself get in the shape he's in. And I've been going to fires all my whole life, and practically existed in the Number Three engine house. I guess Arlene knew what I was thinking. She said, "Couldn't you be an auxiliary, Tommy? If—if anything really happened, that would be plenty dangerous."

I said, "Sure. But maybe you don't know you got to be eighteen to get in any of the protection sections."

She said, "No, I didn't know that."

I said, "Ah, the heck with it. If they don't want you, they don't want you, and that's all there is to it."

I got up to go, and Arlene said, "I'm sorry, Tommy. I guess you feel pretty bad about it."

I said, "Nuts. Maybe I'll be around tonight. Maybe we could cut out paper dolls or something."

She stood up too, and for a couple of seconds I thought about making a try at kissing her. But I was afraid she'd duck, and the way I was feeling, I couldn't have taken it. I just left.

WHEN I got home, the family were just sitting down to supper. Father looked at me over his glasses, and said, "Well! The prodigal returns!"

Janet, who is my older sister and will never forget it, sort of smirked, but Mother just looked worried. She said, "Please, Walter. Not now."

Because it's a family rule that nobody lights into anybody else till after meals. Father made it himself, but it doesn't keep him from telegraphing his punches. Which is no aid to digestion. When we got to dessert, he sort of sat back, and said, "Well, Thomas?"

I said, "Sir?"

He said, "I just happened to hear downtown that you were enlisting in the Army again. Is it true?"

I said, "No, sir."

He said, "Rumor is notoriously unreliable. Was it the Navy?"

I said, "Yes, sir."

Mother said, "Oh, Tommy!"

Father said, "I'll handle this, dear." Then he said to me, sort of wearily, "I think you understand my attitude on this matter, Thomas?"

I said, "I know what it is, but I wouldn't say I understand it."

He said, "We'll quibble about fine points of phraseology later. But first, there's another little matter." He looked at me hard, and I braced myself. He said, "I had a business prospect out this afternoon. Quite an important prospect. We got halfway to Holly Grove, and the car stopped."

He waited a minute, but I didn't say anything. He said, "It was quite embarrassing. Also costly. Ten dollars to be towed back to Runkle's Garage. The mechanic there, after exhaustive investigation, informed me that someone had been tampering with the carburetor."

Janet said, "Maybe it was sabotage."

Father said, "Please, Janet." He said, "What do you think, Thomas?"

I said, "Well—"

Father said, "Well, what?"

I said, "Well—we've only been getting sixteen to the gallon. You were—you were kind of griping about it yourself."

He said, "Perhaps I was. But did I appoint you to rectify the matter?"

I said, "No, sir."

He said, "Did you appoint yourself?"

I said, "Yes, sir."

He heaved a long sigh, and said, "Well, at least you've got a real respect for the truth—even if you do choose your own distance." He looked at me for a minute, and then he took his glasses off and sat way back in his chair. He said, "This isn't all as irrelevant as it seems. In fact, it illustrates a point I want to make." He waited a bit, and then said, "You know that I object strenuously to your enlisting in the

to the corner, and there came
This, screaming around on
els in the avenue. Flannagan
tain Hargan and all the regular

firemen were hanging on that swell, easy
way and sliding into their rubber coats.
And there was Mr. Bolton, Arlene's fa-
ther, clutching onto the back with both
hands, and looking half scared to death.

One block more, and I knew where the
fire was, all right. It was Dolman's De-
partment Store. It's not really a depart-
ment store—just a kind of overgrown
five, ten and a dollar. And old.

There were lots of other people in the
street now, running, and I could see the
front of the store, four stories high, and
the flames just whirling out of the top
windows. And I got that funny feeling
you get at a big fire. Wanting to laugh
and holler but feeling sick when you
think about there maybe being people in
there. Because there could be store peo-
ple working late, even if it was way
after hours.

I was only a block away now, and the
street was already jamming up with the
crowd. I didn't waste any time that
way. I've been to too many fires. I
ducked into Hazel Street, and then down
the alley that goes behind all the stores.
There wasn't any cop there yet, and I
went right on in. And just like I guessed,
Number Three was already back down
in there, with the crew throwing hose
like anything, and one line pumping
already.

I kicked out a couple of kinks in the
lead hose, and ducked on past the en-
gine. Nobody paid any attention to me.
They were too busy. There wasn't any
fire at the back of the store yet, but the
smoke was just pouring out. And right
off I saw where I wanted to be. There's
a twenty-foot alley between Dolman's
and the Elite Auto Supply next door,
but of course, the cops out front were
keeping the alley clear. The Elite's a
three-story, and Flannagan and another
guy were up there already with a line,
just beginning to get water on the fire.
And that was the place for me.

I jumped for the door they'd busted
open in the Elite, and practically fell
over Mr. Bolton, Arlene's father. He
was panting to drown out the engine,
and he had hose all around him like
snakes in the statue you see pictures of.
I could hear Captain Hargan hollering
at him to make a Two-into-One. That
means running two lines from the pump-
ing engine to go into one line to go on
the fire, so as to double the pressure.
Mr. Bolton had the right kind of cou-
pling, but he was trying to put it on
wrong end to. I stopped and said, "Here
—let me show you."

And I switched the coupling around so
the threads met and it could be screwed
home. Mr. Bolton huffed out a thank-
you, and then he saw it was me, and
made a grab and hollered at me to get
out of there. But I've been to more fires
than he ever thought of. I ducked into

the smoke, and found the back door of
the Elite, and beat it up onto the roof.

That was the place to be, all right.
The smoke was coming in big swirls,
and sometimes you could see the en-
gines and the crowd in the street, and
sometimes you couldn't even see the
wall of Dolman's, twenty feet away.
And up front the fire was beginning to
bust out the windows on our side, too.
Flannagan and his partner were up
toward the front, getting a big stream
into those windows. But there wasn't
going to be any saving Dolman's. That
was a goner. It was the Elite they were
working for.

I edged up along the roof, and Flan-
nagan saw me and hollered at me. But
he couldn't leave his hose, and any-
way I knew he didn't care. He'd even
let me hold hose with him at other fires.
But I moved away a little.

And right then I saw it. In the win-
dow directly across from me. Fire flared
up in the store behind the window, deep
red and smoky, and I saw them. People
in there. Women. Sort of huddled to-
gether by the window. And then the
smoke closed down again.

I hollered at Flannagan, but he didn't
hear. And there wasn't a second to lose.
I saw a coil of rope Flannagan had
brought up like they always do to haul
ladders and things, and I grabbed it. I
was thinking like a machine. And not a
bit excited. I just knew I had to do it.
There was an iron cornice right above
the window, and I made a big running
loop in the end of the rope, and chucked.
It was only twenty feet over and one
story up. I made it the first try. I
hauled the loop tight and leaned all my
weight against it. It held fine. I chucked
the loose end over, and it reached the
ground all right. But for a second there,
it looked awful far down, even if it was
only three stories. But then the fire
came up again behind the window, and
I could see those women's heads. I
didn't think any more. I went over.

IT TOOK forever, almost. I could hear
Flannagan hollering at me like crazy,
and right then the smoke must have
swept clear, because I could hear a big
yell go up from the crowd at the mouth
of the alley. But I was going now,
holding my feet out with my knees kind
of bent to take up the shock, and try-
ing to keep from spinning.

And then I hit. Hard. A lot harder
than I expected. It most knocked me
cockeyed. But I hung on, and then I
got my feet against the wall, and sort of
walked up against the pull of the rope,
like Flannagan had let me practice out
behind the engine house. And when I
got up beside the window, I kicked out
the glass with my free foot and went
in.

Right then, the smoke almost got me.
It was awful. I went down on my hands
and knees and crawled, and hollered at
them to come to me. I couldn't figure
why the stoops wouldn't come to the
window. Panic maybe. Just frozen. I
went about six feet, and then I hit some-
thing. It was a foot. A woman's foot.
Just standing there straight up. I gave a
yank, and something came down right
on top of me. Something in skirts.
Something very stiff and rigid. And
right then the smoke cleared a little,
with flames behind it, and I saw what I
was rescuing. I guess nobody that ever
lived had feelings quite like what I had
then. I took a good long look, and then
I crawled back to the window.

I was thinking just one thing while I
crawled. I was thinking, "... Maybe
nobody knows it was me but Flannagan.
Maybe I can fix it with Flannagan..."

I got to the window and reached for
the rope. It wasn't there. I looked up,
and I could see why, all right. There
were flames busting out all along the
roof, under the cornice. The rope was

burnt off. Gone. It was a very funny feeling.

I looked across to the Elite roof, and Flannagan was gone. Then I looked down, and the alley was just boiling. The whole Number Three crew. And Mr. Bolton, waving his arms. And, of all people, my father.

Captain Hargan was snapping out orders, and they were up-ending one of those big extension ladders. And I want to tell you it was a very, very pleasant thing to see. Father saw me in the window, and hollered, "Stay there, you young idiot! Stay there! Don't jump! Stay there!"

As if I didn't have sense enough! The top of the ladder hit just below the sill, and I swung down, and my feet just made it. Captain Hargan was starting up, but I hollered at him. I guess I could at least come down a ladder. And fast, because the flames were already beginning to bust out of the window. I hit the ground, and Captain Hargan grabbed me on one side and Father on the other. I couldn't quite tell if Father was shaking or hugging me. He said, "You crazy young idiot! You lame-brained, subnormal—"

But Captain Hargan yanked at the other side of me and yelled, "Come on now! This ain't no place for it!"

Because bricks and pieces of cornice were beginning to come down around us like rain. We beat it back through the alley, and Captain Hargan hollered, "You hang onto him. I got a fire to tend to."

SO THERE wasn't anybody but me and Father and Mr. Bolton. Mr. Bolton waved his arms and said, "I saw him going up there and I tried to stop him."

Father shook me—no mistake this time—and said, "What, in heaven's name, did you think you were doing?"

I said, "There were some women in there."

Father said, "Women! There weren't any women!"

I said, "No, sir. Just window dummies. But they looked like women to me."

"Dummies!" Father said. "Dummies! Well, at least, thank goodness, you didn't add to their number!"

He let go of me then, and said, "Listen. Tell me just one thing. One thing, and I'll be satisfied! Do you know now what I was talking about at supper?"

I said, "Yes, sir. I guess I do."

Father said, "You guess so! Oh, Lord, give me strength!"

He turned to Mr. Bolton with a kind of a gesture, and right then the smoke boiled down again, and it looked like a good time to go. I went out the alley to Hazel Street, and headed toward home. I wasn't really going there, but I just couldn't think of any other direction. And after about a block I heard someone running behind me. It was Arlene.

WHEN she caught up, she didn't say anything. She just walked beside me. Then, after about half a block, she said, "I—I was out in front, Tommy. I saw it, too."

I said, "Well, you must have got as big a laugh as anyone, then."

She said, "No, Tommy. Really."

But I didn't believe her. After another half block, she kind of put her hand on my arm and made me stop. She said, "Tommy—look, Tommy."

I looked at her, and there were almost like tears in her eyes. She said, "I know, Tommy. I know you really thought there were people in there."

I just looked at her. Because I couldn't believe that anyone could really understand. Arlene said, "Tommy—I don't care—I thought you were wonderful!"

She meant it. There wasn't any question she meant it. I kissed her, right there under the street light. And didn't care. And there wasn't ever anything like that before. She sort of pulled back a little, and there was soot all around her mouth, but she was the most beautiful thing you ever saw. I said, "Arlene—do you mean it? Do you really mean it?"

She said, "Tommy—of course I do."

I said, sort of all choked up, "Arlene—will you wait for me? Will you promise to wait?"

Because I'd thought a lot of times how it would be when I said that to her. Before I went away. To the Army or something. And then coming back, sort of hard and quiet, and maybe with that limp where the shrapnel got me. So I said it again. I said, "Arlene—will you wait for me?"

She said, "Of course I will, Tommy. Through—through school and everything!"

She thought that was what I meant. She thought I meant till we grew up! Even right now, in the most sacred moment of our lives, she didn't understand.

So what was the use?

But I kissed her again anyway.

all animals have natural im-
munity to the gonococcus. This is nice
news, but makes life difficult
for laboratory workers.
However, beside the point.

Dr. Mudd and Dr. Anderson took some rabbits and injected them with typhoid bacilli, and when the rabbits had had time to build up a fine set of antibodies, the doctors took their serum and mixed it with some typhoid bacilli of the same strain. Then after a few hours they stuck the mixture under the electron microscope and prayed. At worst they ought to get some good views of typhoid bacilli clumping together, they ought to see some of these long, flowing flagella that typhoid bacilli have tangling, as it were, in one another's hair. And if they were lucky . . . after all, the electron microscope did enlarge up to fifty times as much as an ordinary light microscope and the antibodies were certainly there.

The Big Germ Roundup

When they opened their eyes and looked, there were the typhoid bacilli all clumped together, there were the flagella all tangled, but there was something queer. They looked at some plain typhoid bacilli of the same lot and then looked back at the ones that had been mixed with the antiserum. The cell walls of the antiserum-mixed bacilli were all thick, the flagella were all thick too, as if they were coated with something. In some places the coating had raised bumps; in some places it was much thicker than others, as if the coating weren't a simple film but a lot of objects. It was too good to be true, but it was true. What they were seeing for the first time was antibodies, typhoid antibodies, surrounding the typhoid bacilli, clumping them together and generally going to work on them.

The theory, firmly supported now by the electron microscope, is that antibodies are protein molecules which the blood is capable of making in any quantity and to measure, as it were, to fight any specific germ that may get into the blood. They think they're a kind of protein called globulin, if you're feeling exact, and that they're shaped roughly like the petal of an African daisy. Chemists had measured antibodies by some abstruse method and come to this conclusion long before they were ever seen, and Dr. Anderson now thinks he's seen some individual antibodies in the raised bumps in the antibody coatings of the tobacco mosaic virus and the typhoid bacilli.

Immunologists think that what these antibodies do is rush to the germ and surround it. If there are only a few, they stretch out lengthwise around it and make a thin film, but if there are lots and lots of them so that, as it were, there is standing room only, they attach themselves to the bacteria like the petals on a daisy, in full fighting formation, and hold on until the leucocytes can get to the scene. Scientists can't be absolutely sure of this so far, but it looks that way. The stronger the solution of antibodies the thicker the film, for instance. Then there are those bumps and irregularities in the coating. And it all fits in with the chemical research that has been done.

Nobody has seen any antibodies at work neutralizing toxins yet. Nobody has seen them actually breaking down the walls of cholera bacilli, though they probably will before long if the electron microscope keeps on co-operating. But seeing antibodies at all is a big feather in the cap of immunology, and may be tremendously important in studying methods of protecting us and putting our antibodies to work most efficiently.

LET'S TAKE THE MIDDLE WAY

THE politicians in wartime Washington have been fighting the dollar-a-year men for some months now, and every once in a while a loud grunt from this battle echoes in the press or on the air.

Robert R. Guthrie's resignation from Donald Nelson's War Production Board, with claims that Guthrie was being hampered by dollar-a-year men with business-as-usual ideas, was one of these explosions. Comparable to the Guthrie episode was the clipping of the powers of Jesse Jones, a businessman in government, in favor of Henry A. Wallace, a mystic and an intellectual in politics. Things came to a point recently where Mr. Nelson said we may have to draft business executives for important war work because so many of them are unwilling to expose themselves to sniping from various politicians in Congress.

What's the meaning of it all? Where is it going to wind up? Those questions, we think, are of great importance to Americans, and here is why:

As we see it, this continuing fight between politicians and dollar-a-year men is one surface manifestation of a great change that began in this country when the New Deal got into its stride about eight years ago.

Businessmen—producers and sellers of goods, and their financial backers and helpers—used to have most of the power in the United States. They held the purse strings. It was tough sledding for any politician or thinker whose ideas didn't tally pretty snugly with those of the businessmen. The politicians, though most of them preyed on business as on the general public,

were essentially dependent on the businessmen.

That is radically changed now. The New Deal has taken away much of this power from businessmen and has turned it over to politicians. Maybe this was in line with evolution; maybe it was an outrageous though bloodless revolution. Whatever it was, it has happened.

So now, we think, we are in the "Where do we go from here?" stage and the excitement over the dollar-a-year men is part of that stage.

The politicians now riding so high, wide and handsome are as human as were the businessmen in their heyday. They like power, feel that they are entitled to it and want more and more of it. Naturally, they would like to push the businessmen entirely out of power.

The dollar-a-year men are executives from assorted business firms who have had successful careers in the art of producing goods fast, economically and efficiently to consumers. They have entered government service, in this war as in the other war, to put their producing and distributing skills at the government's disposal in the giant job of winning the war.

A handful of them doubtless still are working, consciously or unconsciously, for the interests of their old firms first and of the government second. This handful should be booted out of the public service as fast as they are caught up with, and with plenty of fanfare and publicity in each case.

But to accuse all the dollar-a-year men of thus undercutting the war effort seems absurd and unjust to us. That is exactly, however, what these men's bitterer foes among the politicians do charge them with, either directly or

by innuendoes which grow dirtier as the war goes by.

What will the harvest be?

We hope, for the wartime and postwar welfare of the country, that it will be a compromise between producers and politicians.

Businessmen for some reason don't make good politicians. But neither do politicians make good businessmen, good producers, good inventors or improvers of processes and machines. We'd hate to see for an example picked at random President Roosevelt's job. But the world is a spair of victory in this war if Harold G. Hopkins, another random example, were to take Girdler's job of turning out bombers by new production methods.

It boils down, we think, to the fact that neither the political group nor the business group can run the country alone, nor can either have a great preponderance of the power to steer the national course.

From all of which, the logical conclusion is that if this country is to fight the war and then go on to become a better country to live in than ever before, we should have a sort of Swedish "Middle Way" things, under which the special interests of producers and politicians can work for the general welfare.

If the politicians push the businessmen to complete helplessness, or if the businessmen make a comeback and hammer the politicians for their old-time weakness and dependence, we can see only a hampered and retarded future for the good old U. S. A.

How to Defeat Defeat

WE KEEP thinking off and on about Mickey Owen's article in a recent Collier's. Mickey, as the world remembers, is the catcher whose frightful missed catch in the ninth inning of a crucial World Series game last year turned the victory out of the Brooklyn Dodgers' bag and into the New York Yanks' bag in the twinkling of an eye. The Owen article in Collier's told of what happened to Owen afterward.

The aftermath was anything but tragic.

Mickey says he now has a world of friends, most of whom he has never seen, but who have written from the far corners of the earth (and from Flatbush) to tell him thumbs up. He's a better and a more philosophic man for the experience.

Necessarily, Owen was a bit puzzled as to how all this came about. We never see ourselves as others see us. What the world saw in Owen was a man who had had a hideous piece of luck but who didn't beef or whine or make

excuses about it. He took it as a defeat, but he was obviously grieved for his team but did not let one of the toughest in baseball history make an introverted baby or a coward out of him.

And that is the way to make defeats work for you; the way to turn them into triumphs. The world is more than pleased to kick a man who lets a piece of bad luck shove him down. But the world is just as pleased to shove out a helping hand to a man who doesn't.

Agfa Ansco
ACHROME FILM
 MADE IN U.S.A.

Isn't this a picture you wish you had in your family album? A swell picture of a swell kid! So sharp you can almost feel the texture of his corduroy pants! It was taken on Agfa Ansco Film—the *only* film guaranteed: "Pictures that satisfy or a new roll free!"

For detail, clarity, and sparkle in your outdoor

snapshots, try Agfa Ansco Plenachrome. Its extra margin of quality minimizes certain exposure errors anyone can make. Try it this week! Look for the orange-and-blue box. Your guarantee bond comes with every roll. *Agfa Ansco, Binghamton, New York. 100 years of Service to American Photography.*

DON'T BLAME YOUR BLADE

If you get poor shaves too often . . . if your beard doesn't always "come clean", or your face feels raw and tender and irritated, don't be too quick to blame your blade. Blades today are really well made. It might be simply a matter of getting the right cream for your face, so

Change your cream. Try Listerine Shaving Cream with the same blade you were complaining about! No matter how tough your beard, no matter how sensitive your skin, if you're not 100% satisfied with Listerine Shaving Cream, just send the partly used tube to the Lambert Pharmacal Co., St. Louis, Mo. Your money will be promptly refunded. That's how sure we are that this *different* shaving cream will delight you!

ANY WEEK

A FRIEND of ours who is now in what he calls the International Black Market Racket asks us not to be bitter in our estimate of Pierre Laval. Our friend isn't talking without a certain right. He used to be a Parisian journalist and told us once that French newspapermen were not, as often alleged, the most venal of men. "With perhaps three exceptions, the French politician is the daddy of all slick mercenaries. After all," says our friend, "Laval is merely demonstrating what a politician will do for a job. It wouldn't have made any difference to Pierre what nation had conquered France; he'd have sold out to anyone it might have been. When it becomes clear to Laval that Germany can't win, watch him. He'll cross up Hitler so fast, still hopeful of getting a nice political job out of it, that he will again become democracy's hero. Remember all the nice things you American journalists said about him when he was boss of the French government and visited President Hoover? You called him the symbol of democracy and America lionized him. Now that he's merely stooping to a stretch of traitorism to get back into office you're sore. But wait. Pierre will be back on our side and we will love him again as a symbol of democracy. So don't be too hard on Pierre. I talked to him just after he returned to France from his American junket and he said that for the politician, America was the land of opportunity. If Tammany Hall had Pierre it would still be running New York—and how."

AND from Mr. Jorge Campollo, of Mexico City, we have an appeal to the American people to be a little more careful of their personal appearance. Mexico is doing her official best to love the gringo government, says Mr. Campollo. She is sincere in her democracy and determined in her war upon the totalitarian. "But from the depths of a heart stricken with apprehension," writes Mr. Campollo, "will you please refuse travel papers to the otherwise beautiful and doubtless righteous American ladies who walk our streets and roam our roads in slacks and pajamas? Here in the capital of your sister republic we say nothing and yet we cannot close our eyes. At a meeting of our citizens but a few days ago, orators were arousing in us

a strong sentiment of fondness for you and your people, and success was about to descend upon our efforts. Instead, there descended upon us a large troupe of American tourists—the ladies in slacks and pajamas, wide of hip, large of bosom and of an age when one contemplates many years since the slimness and grace of youth. With these ample ladies in slacks and pajamas came their American gentlemen—most of them unshaven, in undershirts, in loose, hugely flowered print shirts like the coats of pajamas, to say nothing of sandals on the bare feet. Thus clad they enter our restaurants, our churches, our museums. The economic importance of the American tourist to Mexico is, like the tourists, huge. We try to be civil, hospitable. But if nothing can be done about the sagging informality of the American tourist cannot we at least limit the slacks and the pajamas to women of, say, less than the age of forty-five, or the weight of one hundred and fifty pounds?"

FROM Colonel Dudley (Silent) Haddock of Tampa, Florida, we learn something that we're hastening to pass on to Secretary of the Treasury Morgenthau. As we understand it, Mr. Morgenthau hopes to sell his War Bonds with dignity. Consequently he's not selling as many as he'd like. But there's a Spanish restaurant and bar in Tampa managed by a man who knows what it takes. He is advertising and his waiters are plugging a drink they call Slapajap. One of the many desirable things about Slapajap is that it costs you nothing. You order one, the barkeep pours colorless liquids from four bottles, adds ice and shakes wildly for a full minute. You put down two bits, get your drink and twenty-five cents in war stamps. When you've tossed off the Slapajap you discover that you've had a nice long drink of cold water. But you've also got the war stamp.

WE'RE a bit more confused, however, by what Mr. Sammel Kulopp of Fort Smith, Arkansas, has to say. We can't set it all down here but give you a sample. Mr. Kulopp's objective is to make us all more conscious of our past mistakes, and therefore, less liable to repeating them in the future. It's

Vol. 109, No. 22. Entered as second-class matter at Post Office, Springfield, Ohio, U. S. A., under Act of March 3, 1879, and at Post Office Department, Ottawa, Canada, by The Crowell-Collier Publishing Company, Springfield, Ohio, Publishers of Woman's Home Companion, The American Magazine, Collier's. Copyright, 1942, The Crowell-Collier Publishing Company, in the United States, Canada and Great Britain. Executive and Editorial Offices: 250 Park Avenue, New York, N. Y., 6 Henrietta Street, Covent Garden, London. Published weekly at Springfield, Ohio, U. S. A. Joseph P. Knapp, Chairman of the Board; Thomas H. Beck, President; Albert E. Winger, Executive Vice President and Treasurer; John S. Brehm, Vice President; William P. Larkin, Vice President; J. A. Welch, Vice President; T. L. Brantly, Vice President; A. H. Motley, Vice President; Denis O'Sullivan, Secretary. Manuscripts or art submitted to Collier's, The National Weekly, should be accompanied by addressed envelopes and return postage. The Publisher assumes no responsibility for return of unsolicited manuscripts or art. Price, \$5.00 a year, two years \$9.00, three years \$12.00 in the United States and Possessions, Argentina, Bolivia, Brazil, Canada, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, El Salvador, Guatemala, Haiti, Honduras, Labrador, Mexico, Newfoundland, Nicaragua, Panama, Paraguay, Peru, Spain and Colonies, Uruguay and Venezuela. Other foreign subscriptions including postage: \$6.50 a year. Remit by postal or express money order or check in United States funds to The Crowell-Collier Publishing Company, Springfield, Ohio. Changes of address should reach us five weeks in advance. Give both old and new addresses.

Fit as a fiddle?

to keep in good physical condition. We must be willing to work. When we do keep "fit as a fiddle" our job becomes easier—our whole outlook is more cheerful and optimistic.

For a program for keeping fit, the following are important:

Get sleep and rest. Most adults need eight hours of sleep daily, children need more.

Get a complete change from the work for both mind and body. Get a hobby! "When play stops, old habits begin."

Get food—in the right quantities, leisurely in pleasant surroundings, regular hours. *Over-eating and rapid eating* may be worse than too little food and wrong kind of food.

Get regular exercise. If periodic examinations show us to be phys-

ically sound, we are never too old to take some form of exercise.

Some of the troubles which we may avoid by observing these simple rules are: a general feeling of fatigue and poor health . . . poor digestion . . . constipation . . . insomnia . . . sluggish thinking . . . sickly appearance.

One of the steps toward fitness which you can take immediately is to get *sufficient exercise*. Perhaps you have a favorite game which gives you regular exercise. If not, *walking* is an ideal exercise, especially for adults. A brisk walk "wakes up" the circulation, stimulates the lungs to greater activity, and helps tone up a surprisingly large number of the body's muscles.

Walk at a vigorous pace! Try to get some walking into your daily routine. You'll enjoy it more if you have a definite objective: walk to work, to the store, to the station. If you are a desk worker, moderate exercise such as

walking will help you *relax* after a confining day's work.

Metropolitan will send you a free booklet which contains additional information about keeping fit. Ask for "Health, Happiness and Long Life."

"MY HAIR LOOKS NEAT WITHOUT DOUSING because I've checked dry scalp!"

"I WAS A DOUSING THOMAS!"

"I thought I had to douse my hair to make it lie down. Usually I looked like a wet seal at breakfast—and a bushman the rest of the day. But lately I've found something you don't have to douse on. Something that gets at the real trouble—checks dry scalp—makes my hair look neat and keeps it that way too...

"HERE'S WHAT I DO NOW!"

"Instead of dousing, I put a few drops of 'Vaseline' Hair Tonic on my comb and run it through my hair. Or I put a little on my fingertips and rub it on my scalp. The first difference it's made is to give me decent-looking, healthy-looking hair. The second difference is, I've really checked loose dandruff, and stopped that itchiness.

Every time I wash my hair, I massage it first with plenty of 'Vaseline' Hair Tonic, because it supplements the scalp oils that get washed away. Now my hair looks good—my scalp feels good—because I'm giving double care to scalp and hair."

FOR DOUBLE CARE...
BOTH SCALP AND HAIR!

'Vaseline' Hair Tonic is different, containing no ingredient that has a drying effect.

Vaseline HAIR TONIC

KEEP UP WITH THE VOR

By Freling Foster

One large company specializing in the manufacture of gadgets for practical jokers fills about ten-thousand orders a week for such articles as rubber candy, melting spoons, imitation bedbugs, dribble glasses, itching powder and stage money. The best seller for a decade has been the fifteen-cent Auto Scare Bomb that, when activated by the starter, "gives off two explosions, a shrieking whistle and a dense cloud of smoke."

As iron pyrite begins to rust on exposure to air, and this rust occupies thirteen times as much space as the pyrite itself, buildings constructed on soil containing such sulphide soon have a "heaving foundation." This trouble has been experienced by one large factory in Cleveland, where the basement floors were raised as much as twelve inches in the first twelve years.—By E. B. Radke, Fond du Lac, Wisconsin.

The only park of its kind in the world is Skansen, the outdoor section of the Nordiska Museum in Stockholm. Although only seventy acres in area, it contains a miniature reproduction of the chief physical features of almost every district in Sweden, including plants, animals and homes with occupants attired in their peasant costumes.—By Nils Ohman, Stamford, Connecticut.

Under normal working conditions, the average horse does only two thirds as much work as a one-horsepower engine. In cases of emergency, however, this animal has produced twenty-one horsepower, or more than thirty times as much energy.—By Thomas L. Marshall, New York, New York.

The first recorded game of baseball was played at the Elysian Field in Hoboken, New Jersey, on June 19, 1846, between the Knickerbocker Club of New York and the New York Baseball Club, the latter winning, in four innings, by the score of twenty-three to one. At that time, the teams had to play until one had made twenty-one runs.—By Robert C. Sidwell, Ann Arbor, Michigan.

The Army Air Corps near Dayton is equipped with 40,000 horsepower, rent induction motor of its kind ever constructed. The motor cannot be started without notice has been given to the company so it may prepare to handle this load, which is the capacity of one of its largest motors.

From about 1900, a "Jackson Army Office" was maintained at 1775 Broadway in New York. As mysteriously as it was built, its dozen gentlemen moved out on the morning of December fourth—before the attack on Pearl Harbor.—By J. B. Strickland, Georgia.

When becoming a person's face turns blue, depending on the cause, it becomes red, for one suffers from stroke when one is stricken with exhaustion, and blueing and electric shock.

Probably the oldest world that originated in the Pader source is the two that gush forth underground in the city of Padua. The city has been named after Bruno Schonfeld, a New York.

Between the 15th and 16th centuries, the plant more popular than because, when watered with a strawberrylike perfume, it is still used for Europe, one of the lawns being in the of Buckingham Palace. —By Anna Harvey, Lett, Canada.

Five dollars will be paid for this unusual fact except contributions must be a factory proof. Address World, Collier's, 250 Park City. This column is copied from The National Weekly. No reproduction without the publisher's permission.

IN TO WIN

is written, something
twenty thousand men
women are busy at war
under the Buick banner;
the you read it still more
s will have been put
rk

Buick folks range from
veterans to lately
men and women, all
their part in the most
dale task that the nation's
ris ever shouldered.

ne hing, though, they are
of a feather — from top
tton, from old-timer to
est hand, they're in this
to in!

means, first of all, quan-
Lot of things in big lots.
An we can report that in
major activity—aircraft en-
—we're ahead of rates of
uction set for us for a full
from now.

But it also means, to a Buick man, *quality*.

To hit the enemy, hard and effectively, the need is for equipment that gets there *and back*—then gets there to *hit again*.

In aiming at such quantity-with-quality, Buick folks set themselves a high mark. There are plenty of others working for Uncle Sam who really know their stuff.

Just the same, as they well know and understand, if it's "in the wood" we're out to top 'em.

We're not satisfied to produce better engines, tank parts, gun mounts and what not than our enemies—we're competing also with the best in the bunch, our friends.

How're we doing?

That's something better to be

answered by the goods we produce, and the men who use them.

We do know that day in and day out we're getting a gratifying measure of approval from the vigilant Government inspectors that must be satisfied.

We believe we have earned the respect of some able producers who work along with us—just as they've earned ours.

We know that if we found them topping us, in precision or quality, we'd move heaven and earth to reverse the picture—just as they would *expect* us to.

For as we said, we're in to *win*.

Not just to fend off, or hit back, but to *hit often* and *hit hardest*.

That, as we see it, calls for every one of us to do all he can to turn out both the *most* and the *best* for his embattled country.

FOR
VICTORY..
SAVE!

*Save gas! Save oil!
Save engine wear!*

**WITH
SEALED POWER
PISTON RINGS**

Now, more than ever, it is important for you to save gas, oil and engine wear. And here's the thrifty, sensible way to do it: install a set of Sealed Power Piston Rings. These rings—designed by the same engineers who create the piston rings for leading airplanes, tanks, cars, trucks and tractors—are individually engineered for your particular make and model of car. They restore youth to a car—as well as oil and gas economy. While you're having Sealed Power Rings installed, ask your mechanic to inspect your engine completely. Follow his advice. It'll pay in the end! Sealed Power Corporation, Muskegon, Michigan, and Windsor, Ontario

Piston Rings for all types of Automobile, Aviation, Diesel, Stationary, Marine Engines

ROBERT O'REILLY

Mechanics mount a Curtiss-made propeller on a Bell "Airacobra"—a rival of Curtiss' own P-40 pursuit plane

WING TALK

IF YOU'RE concerned about reports that all airplane factories are not going full blast, this might help to clear up some misunderstanding:

Each aircraft manufacturer has a contract with the Army or Navy calling for the delivery of so many planes per month. If there were an unlimited supply of materials and if the producers were told to push the throttle wide open and see who could turn out the most planes, the storage warehouses would be bursting with types that are easiest and fastest to build, and the planes that we need so badly now—bombers, and in enormous numbers—would be in critical minority, because it takes longer to build them and requires more materials.

Furthermore, the pilot-training program is divided up into specialistic fields such as bomber, fighter, torpedo-plane, dive-bomber and observation pilots, and the flow of planes from the factories must coincide with the availability of these trained airmen to take them over. An air force cannot be top-heavy with only one or two types. It must be well rounded out in accordance with the offensive and defensive plans of our High Command. The monthly rate of production assigned to each manufacturer is not the limit of his capabilities; it represents what the services need, because they cannot absorb any higher number.

Then too, the airplane people do not build the entire airplane—only the fuselage, wings and tail. Others build engines, propellers, instruments, guns, radios, wheels, tires, and many more parts. They also build to government delivery schedules.

Hundreds of subcontractors are working on aircraft items and the workers have no idea for what they are being used or where they are going. Yet a delay in such shops and plants can hold up the

final assembly of a bomber much as the absence of a propeller. So when these delays will for a while, speed in the aircraft factories work with.

Then, when there is plenty of everything at assembly lines are humming, a plane is shot down and body features in fire proof or performance superior ports from our far-flung of deficiencies in America some particular area, discovered over here be never under fire and never in war zones rare tropics almost to the Atlantic the changes go into slow down or shut down departments of the plant time to fabricate the chassis.

The aircraft industry people would pay no attention of idleness in aircraft factories knew the total number of that have been produced twelve months and the rate. So take the word plane builders that they delivery schedules and who delays in any particular they aren't going to turn craft workers into the streets.

★ These stirring times call for hard work
—and lots of it—but there must be an
occasional moment of rest and relaxation—
freedom for a day from work and worry—
the chance for friends and family to get
together and live life at its best.

used to the dining room and
le against the window. This
middle of summer, and the beach
n was entered with people in

practically every attitude of ease or violent exercise. He ordered a steak and had it, and was smoking his pipe over a second cup of coffee when Marsha and her party entered.

A highball made them all feel good, but even then Marsha stood out from them, more self-possessed, more colorful. The big blond lad hovered over her like the edge of a mountain and he looked down at her and seemed to be astonished at his luck. Bill Kittrick thought, "And so did I." Marsha's eyes turned to him once and he met that straight-on impact and the pit of his stomach caved in just as it used to do thirty seconds before the whistle blew in a game. He left his tip and moved out. The door was high enough for him but still, from habit, he ducked and

put a hand in front of him. He heard the blond lad say, "Where've I seen that tough egg before?"

As far as Marsha was concerned big men were expendable. They came and they went. "But I wish," he added to himself, "she'd throw the rest of that awful perfume down the sink." He had eaten a substantial meal and now set out upon the beach to work it off; training season never ended for a one-time fullback who could gain and lose thirty pounds at the drop of a hat. This day he had walked ten miles over The Head but now he set a steady pace until twilight dropped around him and then reversed his field, to walk back through darkness, past couples murmuring in the shadows. When a man was alone he got to noticing the way people paired off.

One of the women and the blond man were hands and knees on the floor, retrieving the nickels while Marsha stood by, amused

He remembered how Marsha, standing at the head of the stairs, had looked back at the blond man. She had been gayer at that moment than he had ever recalled; as though, after all the alternate moments of wonder and misery she had gone through with him, after all the unspoken hope and repressed bitterness, she had cut the last binding strand of the whole affair away. Now she was free.

How did you chop all that out of
(Continued on page 65)

Deep in the Heart-

By Quentin Reynolds

Somewhere in America there may be apathy and indifference to the war effort, but a famous Collier's correspondent, looking for it, fails to get the story. He got this one instead

At Wright Plant No. 1, Paterson, N. J., the author learns from Inspector Thomas Murphy how Cyclone 9 engines are produced in quantity for the Flying Fortresses

SHE was a little old lady no bigger than a soft whisper. Her hair was white and her cheeks were a bit faded but there was nothing faded about her eyes. They were large and blue and startlingly steady, and they told you that this was more than just another little old lady with white hair.

"Do you know how to make those Molotov cocktails?" she asked simply.

I told her that I knew a little about how to make them, and that you needed molasses and glycerin and dynamite and I told her that there were several ways of making them and that she'd better get some expert advice. Then I asked her what she wanted with Molotov cocktails in Dallas, Texas.

"Down here in Texas we're at war," she said simply, as though talking to a child. "Some of us read about how Russian women crawl up close to German tanks and then throw homemade bombs at the tanks and destroy them. We read, too, that English women living near the coast all have what they call Molotov cocktails ready to throw at the German tanks if there is ever an invasion. Now maybe we will never see any German or Japanese tanks going down the main street of Dallas, but it is just as well to be ready. All of us, I think," she added emphatically, "should have a few of those homemade bombs on our kitchen shelves just in case."

I returned from the war zone late in January and immediately began to read of the "complacency and unawareness" that existed among the people of our

country. Editorial writers, newspaper congressmen and radio commentators all sang the depressing song. It was quite disturbingly had confidently expected that his country were just as tough and as realistic as of Britain or of Russia.

It was so disturbing that I travel from southern California, from Houston from Chicago to Ketchum, Idaho; I st cities in fifteen states looking for it and unawareness, looking for much apathy toward our war effort. Did I

I found a little old lady in Dallas meant it when she told of how she would throw homemade bombs at the tamerity to pollute the soil of Texas sweating and toiling in aircraft and ries; I found them working as hard worked in Manchester or Moscow. students studying as no students I intent on hurrying the day when granted commissions and could get ice. I saw Negro Pullman car porters foiling from cigarette packages; a small but a bit of evidence to prove that war minded and that they are not thur and his men do it all. Two months around America, discovering America fully impatient with the writers and who so smugly talk of (Continued)

"Pretty lousy," I said. "Shooting holes into the air to kill the boredom. The officers are on leave half of the time, and the men are drunk all of the time. We could as well go home."

"How's the company? How is your corporal?"

"What corporal?" I asked. "André?" "Yes, and the other one with the funny Slovak name that I can't pronounce."

"Prokosh. You could pronounce it all right last time we were here."

"Oh-la-la, that's a lie. I simply called him chéri."

"Well, they are both all right—André and chéri—unless they have taken sick from yawning. You can convince yourself soon, 'cause they will be here any minute. Gimme an absinthe."

I SAT and sipped the absinthe. Now and again I caught a glimpse of Denise through the open kitchen door. She was busy scrubbing some copper pans.

Her movements reminded me somehow of Cécile, or maybe women have the same way of doing little things all over the world. Anyway, she was good to look at, Denise was. She seemed to me prettier than ever, and much prettier than Cécile.

"Denise," I called, "another absinthe. Please."

I drank the second drink quickly. It ran through my throat like a hot bullet.

"Well," I said. "Seems you have forgotten."

"Forgotten what?"

"Last week."

"Oh, yes. Last week."

"You promised to kiss me when I came back alive."

"Tonight," she said. "I kiss you goodbye tonight."

"You said the same thing two weeks ago," I said stupidly and helplessly.

"You know I am crazy about you. When will you be nice to me?"

"One day will come when all the blos-

soms spring," she sang and reached for a jar high up on the board. I could see the lines of her figure as she stretched.

"Denise, you can't answer me like that. I'm serious. This has gone on now for weeks and weeks, and you only make fun of me. It's not fair."

She turned round, her eyes blazing.

"Well then, sergeant," she said very calmly, "all of you think that I am that sort. But I am not. That's all about it."

"Look here, Denise," I said. "I have a hunch you're only pretending. But I am serious. We could marry, for instance. We could go to Lyon. I have my army pay, I have my security. I have my pension later on, or you have it when I die or when I am killed in action."

Slowly, she came round the counter and stood before me, musing. Her arms were folded over her chest. The smile had dropped from her face like ashes from a cigarette, and so had the anger.

New Northwest Passage

By Robert Thompson

Through mud and muskeg and mountain wilderness, U. S. Army engineers are forging an impregnable overland link with our northernmost outpost. The Alaska highway is nearing completion—and fast

SMOKE curled up from Frank Wort Beatton's old pipe as he watched out of his window. A United States Army jeep, a command car and some soldier-driven trucks growled and slued past in the northern British Columbia mud.

The four motors of an American bomber tore at the air, taking off from a field near by.

"I'm glad," the old Scotsman said, "that I lived to see it. Three hundred years, people have been talking and trying for that road. It's not a kind country up here. The closer you come to the Yukon and Alaska the unfriendlier it gets."

Overland passage to Alaska is a **MUST** in capital letters. Alaska up to now has been an island. Ships supply its 30,000 white population and an equal number of Eskimos and Indians. Just as in England, the population can't provide for themselves. They'd be washed up and in deep trouble within a few months if sea transport were cut off.

Then there are our soldiers and sailors in the fan of fortresses and bases. Let their communications be broken and you might have another Bataan.

So the United States is making an overland passage, safe from sneaking submarines and surprise attacks like that at Pearl Harbor.

Fifteen hundred miles of highway, even a pioneer highway without convenient hotels and neon-lighted gas stations is no beer picnic to build. To slam it through in a hurry, from the jumping-off place at Fort St. John, B. C., to Fairbanks, Alaska, is a push that will be a standout in all history. The boys say they will do it.

The venerable Frank Beatton, who agrees with them, is in a position to know whether or not they can succeed. He's a part of the country. For forty years he was a factor at Hudson's Bay Company posts through the wilderness the Army is traversing. Trading places in the Canadian wilderness were his homes and his jobs. Lathered pack horses and laboring freight wagons were his air mail from civilization. Indians twenty or fifty miles away were his next-door neighbors and white men were as scarce as falling stars.

Comparisons can make the magnitude of the Army's new wilderness road a little clearer. The history books cheer for our Civil War Wilderness campaign. It wasn't a patch on this one. Nature has lined up formidable substitutes for the Confederate Army.

Think back into history when our country was empty. Assign the Army a job of building a road from where New York City stands right through to the middle of Kansas; or order a highway built this year from Duluth, Minn., to New Orleans, La. Either one would span about the same distance as the Alaska undertaking.

Then make the job tougher. Assume that men and materials could be put to work only at the ends of the chosen route and two other places. No business of speckling the land with construction camps is possible. Our work forces in the North must hew for hundreds of miles before their individual handiwork can be joined into a defense life line.

That's a part of the problem. General Mud, who made such a name for himself in Europe, and General Muskeg, the slimy swamp denizen, and the subterranean General Frost are all lined up against our soldier-engineers. The clock and the calendar instead of being allies are formidable forces to beat. Easter and Thanksgiving holidays mark grim dead lines instead of events to celebrate.

The Army is well launched on its reverse-order wartime job of creating instead of destroying.

At the south end, Fort St. John is sixty miles north of the last railhead at Dawson Creek, B. C. A rutted grade which is dignified on tourist maps as a passable road connects the two places. The headquarters force began its work at Fort St. John.

Agreement for the road construction was signed by the American and Canadian governments about March 1st. By April 1st, the muskeg changed from a bridge of ice to a bottomless trap of slime.

Trucks to Replace Steamships

Our soldiers fought and sweated in 35-below-zero weather to jam their caterpillar tractors and bulldozers and trucks and graders and power shovels and fuel across winter roads before the sun in mistaken friendship melted the ground from beneath them.

Thus the bases are rooted in the wilds. At each one are combat engineers, medical units, pontoon battalions, quartermasters and other necessary forces. As this appears, they are digging, slashing, tearing and building a few miles of road grade a day.

Along with and behind the soldiers are engineers and workers of the United States Public Roads Administration. The Army men are opening and grading a pioneer road so that trucks may be substituted for steamships to Alaska, and no Japanese sword may slash our

supply line. The Public smooth and grade the that nautical knots may transit tables, and miles-per-gallon of gas ure the progress of vite our North Pacific basic

DAY OFF

By Erskine Caldwell

ILLUSTRATED BY EARL OLIVER HURST

This will give the neighbors plenty to talk about until Ma takes another vacation, next year. Meantime, Pa can be thinking up some new ideas

MA GOT up early and cooked our breakfast and left it warming on the stove for us. I was awake, but my old man still had his head buried under the covers when she rode off with Uncle Ben to spend the day with Aunt Bessie in the country. As soon as she had left, Pa looked out from under the quilt and asked me if Ma had said anything before she got in with Uncle Ben and drove away. I told him she didn't say a word, because she thought both of us were still asleep.

While we were getting dressed, Pa said we would have to try to manage to get along somehow by ourselves the best we could until Ma came back that night. Ma always went out to spend the

day with her sister once during the summer, and sometimes twice. She said it was the only real vacation she ever got, and that she would like to go more often if she wasn't afraid of what might happen while she was away.

"There's nothing like keeping batch," Pa said, "even if it's only for one day. It's a real treat sometimes not to have any womenfolk around."

After breakfast my old man went out into the sunshine and stretched. It was already hot that morning, and there wasn't a cloud anywhere in sight.

"This sure is a fine day," he said, turning around and looking at me. "The sun's shining, and we've got the whole wide world before us. It's a pity your

Ma can't get the chance to spend the day a lot more often with your Aunt Bessie."

He went over to the fence and leaned against it. I saw him looking out across the garden, watching some sparrows scratching under the cabbages. After a while he picked up a rock and threw it at them.

"Let's go fishing, son," he said, turning around. "This is a fine time to go. Hitch up Ida."

I went out to the stable right away and led Ida, our mule, out into the yard and began brushing her down with the currycomb. Pa told me to curry her good and then to hitch her to the cart.

"I'll be ready to leave as soon as I

get back from the store, I got to get me a sack of tobacco."

He went into the hen house and spanned a couple of eggs from them into his pocket tobacco.

"Curry Ida down until and-span, son," he said the street. "I want Ida a fine day like this."

"Who's going to dig it asked him."

He stopped and thought he said to tell Handso Negro houseboy, to dig

My old man went down the store and I called He

"Mr. Morris," Handsome said, standing up in the cart, "I done dug a heaping-big can full of the biggest fishing worms you ever saw. They'll be a big loss if we don't use them"

back yard, waving his hand at us and making motions for us to come along. We climbed out of the cart to see what he was going to do.

When we got to the back yard, I saw Pa get down on his hands and knees and crawl under the porch. I didn't know what he was doing under there, so I crawled under behind him.

"What are you looking for under here, Pa?" I asked him. "What's under the house?"

"Pieces of old iron, son," he said. He began raking the dry, dusty earth with his fingers. In a minute or two he brought up a piece of rusty iron that looked like a wheel from an old sewing machine. "There's any number of pieces of old iron laying around the place, and now's the time to get them together. There's a man downtown buying up all the old scrap iron folks bring him, and he pays good money for it, fifty cents a hundred pounds. I can't afford to let a chance like this go by without doing something about it. The man might not ever come back to town again, and it would be a big loss not to be able to make all this easy money. Let's get busy and pick up all the old pieces of iron we can find."

I TURNED around and saw Handsome crawling in behind us on his hands and knees. "What we doing here under the house like this, Mr. Morris?" he asked.

"Picking up old scrap iron," Pa said. "Get busy and help out."

"Who wants to waste time picking up old pieces of iron," Handsome said, "right when we's ready to go fishing?"

"Shut up, Handsome," Pa said. "Don't you talk back to me like that. Get busy and do like I said."

Handsome crawled off under the main part of the house mumbling to himself. I could see him stop every once in a while and feel around in the dust for iron, but he didn't look as if he cared whether he found any or not.

"Can we go fishing when we finish picking up the old iron, Pa?" I asked.

"We'll go as soon as we get it all picked up and sold," he said. "If everybody'll pitch in and work hard, we'll finish in no time. We'll still have the better part of the day to fish in before your Ma gets back tonight."

We found three or four pieces of an old cookstove, and an old iron tire from a wagon wheel. We carried everything out into the yard and threw it in a pile beside the fence. After that we found a lot of pieces of old iron in the woodshed, and Handsome found an old washpot under the porch steps. Pa found a heavy iron wheel and dumped it on the pile. We worked away as hard as we could for almost an hour after that, turning over the trash pile, collecting all the old horseshoes Ida had worn out, and looking everywhere we could for things made of iron.

In the middle of the morning Pa stopped and looked at the pile we had collected.

"There ain't near as much old iron around the place as I estimated at the start," he said. "We'll be lucky if all the scrap in that pile weighs two or three hundred pounds. We need about a thousand pounds to bring us some real money. A thousand pounds would bring five dollars when we sold it to the man."

"Maybe it ain't worth the trouble fooling around with, Mr. Morris," Handsome said. "We still got plenty of time to go fishing, though."

"Shut up, Handsome," Pa said. "I've made up my mind to make some money selling the man scrap iron, and I'm going to do it. Now, shut up and look some more."

He sent us around to the front of the house to look again, and while we were gone he walked out the back gate into

the alley. Handsome and I had found some old rusty door hinges under the front porch, and we threw them on the pile.

While we were sitting down resting, my old man came staggering through the alley gate carrying a big load of iron. He had the handle from a pump, a couple of sadirons, an ax blade, an iron washpot, and a lot of other things. All the pieces looked a lot newer than the things we had found around our house, and the washpot was still warm from having had a fire under it. He threw the load on the pile and went right back through the alley gate again.

When he came back the next time, he was carrying more than ever. He was weighted down so much that his knees sagged when he walked, and it was all he could do to reach the fence and drop the load on the pile. In the second load he had brought a set of shiny monkey wrenches, a pair of fireplace tongs and a poker, a heavy iron skillet, and a lot of smaller things.

"I don't see how you can find all them things, Mr. Morris," Handsome said. "I done my best, but I couldn't find nothing like it."

Pa didn't say anything, but he wiped his face with his shirt sleeve.

"What are we going to do now, Pa?" I asked.

"Drive Ida and the cart around here, son," he said. "We'll load up and then I'll drive down and collect the money from the man. I figure we ought to have a thousand pounds or more. That'll bring in a lot of money I hadn't figured on before."

Handsome and I led Ida around to the pile of scrap iron, and all of us pitched in and loaded it into the cart. When we had finished, Pa got a drink from the water bucket and climbed in and picked up the reins.

"Is we still going fishing today, Mr. Morris?" Handsome said.

"I'll be back in no time," Pa said, slapping Ida on the back with the reins. "I'll be back as soon as I get the money from the man."

Handsome and I sat down on the steps and watched Pa drive off. We sat there a long time, and the sun climbed higher and higher. After a while Handsome went inside to look at the clock. The sun was directly overhead by then.

WE WAITED another hour, and then I saw Ida's big ears bobbing up and down over the garden fence. We jumped up and ran out to meet my old man. He slapped Ida with the reins and turned into the yard.

"Is we ready to go fishing now, Mr. Morris?" Handsome said. "If we don't hurry and get to the creek, all the fish will stop biting for the rest of the day."

Pa climbed out, holding a brand-new pair of knee-length rubber boots. He put them on the ground while we looked at them.

"When I collected the four dollars for the scrap iron from the man," Pa said, standing back and looking at the rubber boots, "the first thing I thought of was this pair of boots in Frank Dunn's store. I've sure been needing them for a long time. I don't see how I managed to get along without them up to now."

"What is you going to do with them, Mr. Morris?" Handsome asked.

"Wear them like they was meant to be," Pa said.

"I ain't never seen it get muddy enough around here in this sandy country to need knee-high rubber boots," Handsome said.

"That's because you never took the trouble to notice how damp it gets sometimes when it rains," Pa said.

"Maybe so," Handsome said, "but it always manages to dry up half an hour afterward, and it would take that much

(Continued on page 45)

all over when he came hurrying Ida. Mr. Morris said we're Handsome said. "I've go fishing for a good

I was about to hand him the reins when he took Ida by the bridle and led her to a fence post. He tied her up in a hurry. "What's the matter, Pa?" I asked.

"Never mind about going fishing now," he said. "Fishing can wait. We've got to get busy doing something else right away."

"Why, Pa?" I asked. "Why can't we go fishing?"

"Mr. Morris," Handsome said, standing up in the cart, "I done dug a heaping-big can full of the biggest fishing worms you ever saw. They'll be a big loss if we don't go on down to the creek and use them. They're mighty fine worms, Mr. Morris."

My old man started off toward the

Collier's selected Charles E. Kerlee to take pictures of the United States Army Air Forces Ferrying Command in action. Mr. Kerlee flew across the continent in a bomber. Army regulations forbid naming the various points at which these photos were taken

Air Line to Everywhere

By Denver Lindley

The success story of the United States Army Air Forces Ferrying Command rests on a simple formula—plenty of money and plenty of brains. Just watch how it works

Three men of the AFFC going aboard a new B-24D bomber, with photographer Charles Kerlee. Left to right: Lt. Robert Neeld, copilot; Kerlee; Lt. Paul Herbert, pilot; and Pvt. Americo Procopio, engineer

The B-24D's crew (Procopio, Herbert, Neeld) consume milk and sandwiches during flight

All set for the take-off. AFFC pilots are ready to start on its flight this B-24D, named the Colin Kelly Ship

Expert airplane mechanics work repairs needed by the B-24D's

At a Western airport, the Colin Kelly Ship (second from right), in company with some of our Army's latest and most formidable warplanes, including North American's B-25C, Vultee's P-66, Douglas' A-20 and others

IN GETTING planes into India, we take account of the weather and the landing fields open to us at the time of the flight. If there are difficulties in one direction, we fly the ships around the world the other way."

This casual statement of routine was made at the headquarters of the United States Army Air Forces Ferrying Command in Washington—which is also the headquarters of the biggest air line in the world. Before any word of its accomplishments reached the public it had done things that, a few months ago, would have made headlines everywhere. Those achievements are now part of everyday operations. The Ferrying Command is the delivery department for the whole Air Forces. Combat units flying over its routes are under its jurisdiction. In addition, it has the job of delivering planes to the various Lend-Lease nations.

For this immense task, control of officers are necessary everywhere. The Ferrying Command has them—by the hundreds, in training and on post. Knowledge of routes, minute and far-flung organization, pilots, mechanics, navigators, equipment—all these are needed. It has them, too. But a system of this sort cannot be improvised overnight. Nor was this one. The fact that it is operating now with astonishing speed and efficiency all over the world is the direct result of the Lend-Lease bill—perhaps the only instance in which Lend-Lease has been of direct and immediate benefit to us.

The Ferrying Command came into existence suddenly, as the result of an order signed by the President on May 29, 1941, instructing the Air Forces to deliver all aircraft to the British with "the greatest possible speed." Within five days this command, under the direction of Colonel Robert Olds (now Brigadier General Olds), was placed on a war footing and was actually delivering planes.

Behind this bit of record-breaking action was the close teamwork of several men. Impelled by the impetus of the President's order, Harry Hopkins, director of Lend-Lease, co-ordinated the measure; Robert A. Lovett, Assistant Secretary of War for Air, championed the cause through the Air Forces; and General Arnold, Chief of the Army Air Forces, gave his support. From the first, General Arnold has enthusiastically sponsored the Air Forces Ferrying Command, seeing in it, first of all, a means of accomplishing the mission which the President directed and, secondly, an opportunity of giving experience in handling the latest types of aircraft to the war, were being assigned in rotation to the AFFC. Thus, not by the prompt and purposeful effort of various minds working together, the AFFC came into being.

Before its creation, deliveries to the British, under cash contracts, had been made by civilian fliers—and this system proved both expensive and slow. The Ferrying Command almost immediately reduced by about two thirds the time taken for delivery.

It started out with the huge advance of having plenty of money—from Lend-Lease funds. Hence the need for appropriations was done away with the necessity for co-ordinating other branches of the Air Force, entailing problems of budget. The need was discarded by the bale. It went overboard with an auctioneer's hammer.

Colonel Olds decided that he would use Greyhound busses, there were

sounds of consternation in Washington: the Air Forces had never purchased anything more elaborate than a light station wagon for ground transportation. Colonel Olds had the money and he got the busses. Later, when he required the services of civilians who could not pass the Army physical examination, he was able to hire them too—regulations or no regulations. He wanted a 4-engine school; it was established—near Albuquerque, New Mexico. He had more than money; he had carte blanche.

And so the Ferrying Command took shape in record time. Experienced cross-country fliers (all Army men) flew the first planes from the West Coast to Montreal. Soon, youngsters just out of the Flying Cadet schools were following the routes the veterans had opened up. The commercial air lines, giving complete co-operation, flew the crews back the minute delivery was completed. (Some pilots crossed the continent six times in a month—and thought nothing of it.) In Washington, a constant check was kept on every plane from before the time of completion at the factory until it was turned over to the British in Canada.

Let's follow one of these planes across the continent. It's a B-24D just coming off the assembly line at the factory. There are 200 inspectors on the payroll here and they have been busy checking the ship at every stage. Now the final tests are made by the flight inspector, the compass is oriented and the plane is taken up for a trial flight. The factory crew then flies her to the nearest "reception point" (this is always close to the factory) and there she is turned over to the Ferrying Command.

All Set to Start

While mechanics are going over her from stem to stern, checking everything, installing radio and seat belts, filling her up with gas and oil, the crew of five (since this is a four-engine bomber—intermediate bombers carry only three men) have packed their duffel bags and are ready to start. At this moment, in the operations room in Washington, a blue marker appears on a huge wall map. This map is crossed by black tapes indicating the secret routes of the Ferrying Command. The blue marker shows that a B-24D is on its way; if it were a Douglas DB-7, the marker would be red, and so on for the other types. By glancing at the map you can tell instantly what planes are in process of delivery and whether they are in flight or on the ground.

Planes are moved, so far as possible, only in the daytime and only when the weather is good, due to radio technicalities and for the sake of safety to other air traffic. The bomber we are following will land at Wayne County Airport close to Detroit. This is an "intermediate point." There the ship is equipped with the instruments that are not immediately necessary for flight. In this way, time is saved; the equipment does not have to be shipped to the Coast.

The next stop is Montreal, but long before the blue marker on the wall map in Washington reaches there, officials are checking with the air lines for a turn passage for the crew. Within a minute after the ship has landed, she is in the hands of the British, and within an hour, usually, the American crew is being flown back.

This is the basic routine for which the Ferrying Command was organized. Variations soon extended its routes to other points all over the country and, (Continued on page 54)

This is how the Statue of Liberty looked from the Colin Kelly Ship as the B-24D dipped its wings in salute

At the end of the trip Lt. Herbert turns over the papers for the B-24D to Engineer Hobart Beals, of American Air Lines

Back to the West Coast, by commercial air liner, Lt. Herbert is first to disembark, followed by Lt. Neeld and Pvt. Procopio

More Meat per Acre

By L. O. Brackeen

Fish planted in lakes have been disappointingly undersized. Now it proves to be all a matter of feeding. With proper fertilization of ponds we can produce loads of real whoppers

ONE day in May, 1933, a disgusted fisherman named M. J. Funchess grew tired of pulling minnows from an Alabama lake, hurled his rod into the water and swore that something had to be done about making fish bigger and better.

Luckily Mr. Funchess was in a position to do something: He was director of the Alabama Experiment Station and dean of the College of Agriculture of Alabama Polytechnic Institute, at Auburn. He called in H. S. Swingle and Dr. E. V. Smith, two of his research experts, and asked them to find out why Alabama's fish were so puny. Swingle and Smith went to work and in six weeks found out that farmers and fishermen all over the country were complaining that fish planted in ponds and lakes just wouldn't grow up into the traditional whoppers of boyhood days.

So the researchers set themselves the job of finding out why. It turned out to be a matter of food—most of the ponds and lakes didn't produce enough to go around. Other facts turned up—some of them surprising. For instance, properly stocked and fertilized ponds and lakes will produce more meat per acre than land will. A good pond of ten acres will produce twice as many pounds of fish as ten acres of good pasture land will of meat. Ten acres of good pond will make six hundred pounds of edible fish; ten acres of meadow will produce only half that amount of beef.

Many ponds are overstocked and contain insufficient food for fish to grow to legal size. Poor fishing is often caused by too many small fish. The only practical and economical way yet found to increase fish production is to increase the food supply. This has been done by fertilizing the ponds like fertilizing cotton fields. Home-mixed fertilizers containing 40 pounds of sulphate of ammonia, 60 pounds of 16 per cent superphosphate, 5 pounds muriate of potash and 15 pounds of ground limestone are applied per acre of water ten to fifteen times during the spring and summer months. Where commercially mixed fertilizers are used similar results are obtained by using 100 pounds of 6-8-4 plus 10 pounds of nitrate of soda per acre at each application. The fertilizer makes microscopic plants grow. These plants attract insects which are eaten by the fish.

The fish culturists have found that fish in ponds surrounded by fields of crops and pastures reap considerable benefit from fertilizer leaching out of the soil and draining into the ponds. Pond construction and fish culture are providing water for livestock and are encouraging recreational activities, especially swimming and boating.

Most fish are very prolific, so stocking ponds with a few large brood fish results in overstocking as soon as the fish spawn. Experiments indicate that, un-

der favorable conditions, one pair of bream will stock about five acres of water, one pair of crappie about seven acres and one pair of catfish about four acres.

It has been found best to construct ponds on small streams or so they will catch runoff water from terraces in near-by fields. When constructed on large streams the ponds frequently are flooded with muddy water which makes poor fishing and carries away much fertilizer and fish food. Where ponds are constructed on large streams it is best to detour the flood water around them.

During their seven years of experimental work with fish the Alabama fish culturists have found that farmers and sportsmen can breed and produce goldfish in small fertilized ponds, and worms in washtubs, old oil drums or abandoned bathtubs and other watertight containers.

For example, Dean Funchess produces goldfish by placing about ten brood minnows in each small fertilized pond and then transferring the goldfish to small ponds in his backyard.

Fish pond construction, fertilization and management are becoming popular with civic groups, sportsmen and farmers throughout Alabama. For the past several years members of the Auburn Outing Club have owned and managed a twelve-acre pond. Before the pond was fertilized the members caught 1,580 bream and 1,506 catfish in five years. After it was fertilized they have been catching an average of 2,000 bream and 1,750 catfish annually. This means that they are now catching more fish in one year than they had been in five years before the pond was fertilized. Similar ponds are being operated by clubs in Anniston, Montgomery, Selma, Enterprise and other Alabama towns.

Before the Selma pond was fertilized it was clogged with underwater lilies, which made fishing difficult. After the pond was fertilized the algae (microscopic plants) shaded out the lilies. Today the pond provides excellent fishing. Similar results have been obtained in other ponds. The culturists are not yet ready to name the underwater plants algae will shade out. They know it will kill several of those growing in the South.

Fish culture is spreading into the rural areas of Alabama. In Lowndes County more than 300 ponds have been constructed, fertilized, stocked and managed during the past few years. These ponds are now being used for fishing, swimming and boating and for supplying water for beef and dairy cattle.

Instructions for building these ponds are furnished by the Alabama Experiment Station and fish for stocking them are furnished by state and federal fish hatcheries. Pond construction is being encouraged throughout the state by county agents of the Extension Service. The state health department used a permit-and-inspection system that prevents pond construction and impounded water from becoming a health menace.

Today Dean Funchess is not complaining about catching small fish but enthusiastically tells his friends about the excellent fishing he enjoys. He predicts that in the future, fish production will be a big and profitable industry on American farms, with fish playing a most important part in the diet of rural people.

Samples of water are taken from each pond daily for testing. The water is analyzed for carbon dioxide and for the amount of vegetable matter.

Bluegill Bream, about 18 months old. The larger one is from a fertilized pond, while the smaller is from a pond that had been overstocked.

Fish Culturist H. S. Swingle, pioneer experimenter with fertilizer in fish ponds, exhibits Bluegill Bream with a Crappie in middle of string

Due to reflected light from the sky, the true greenish color of the water, so important a factor, is not apparent in these artificial ponds

In small ponds, fertilizer is strewn by hand. John Henry Oglefree, pond laborer, is shown doing his stuff. In small lakes, outboards are used

The others were coming after him and he could see some of the trucks burning and small figures at the side of the road

FLIGHT TO THE SUN

By James Aldridge

ILLUSTRATED BY HARRY MORSE MEYERS

The Story Thus Far:

JOHN QUAYLE, a young British flight lieutenant, and his associates in 80 Squadron—an experienced fighter unit under the command of Squadron Leader Hickey—leave Cairo and go to an airdrome near Athens. The “valorous” Italians are attacking Greece, in the air, and it is up to “80” to do what it can to smear them in the air.

The squadron goes into action; with the greatest ease, it sends down two enemy planes in flames. Then Quayle, in Athens, meets an American war correspondent—Will Lawson—who introduces him to a fine Greek family: Stangou, a liberal newspaperman (who has been in trouble with the authorities); his wife; his son, Astaries; and his daughter, Helen.

Helen Stangou is a lovely dark-haired girl. Quayle is instantly attracted to her. When she leaves the house, to send a telephone message, Quayle accompanies her. He questions her—learns that she is a university student; that she helps in a first-aid post in Athens; that in a short time she is going to Ioannina, near the front. Liking her, finding her a delightful companion, he asks her if he can see her again. And she invites him to lunch with her at her home on the following day.

But Quayle does not keep the date. Instead, he remains at the airdrome—Italian planes are active, and he may be needed at any moment. Late the next night he and his associates are ordered to report to headquarters. They obey orders, and the wing commander informs them that the squadron is to be sent to Larissa, near

the front. It will be outnumbered about ten to one, the wing commander says, but it must do what it can. . . .

Among Quayle's friends in the squadron are: Gorell, Tap, Finn, John Hersey, Vain (a young Australian—and, like all Australians, a great fighting man), Stewart, Constance, South, Brewer and Richardson. Like Quayle and Hickey, all are brilliant fliers; all are fearless, ready for anything that may happen. . . .

In Athens—where several of the members of the squadron are preparing to go to bed—Tap (one of the liveliest of the group) suddenly speaks up. “Any gals in Larissa?” he queries, as, seated on his bed, he flips the leaves of a book about insects! “Sure,” someone says, “but they’ve got a wall around them.”

Tap grins. “A detail,” he says, “a detail.” Quayle climbs into his bed. When he goes to sleep, Tap is still reading—about insects.

II

RUTGER, one of the ground crew who drove the station wagon, woke Quayle next morning.

“It’s five-thirty, Mr. Quayle,” he said, and Quayle was half-conscious of having to do something and then realized what it was.

“What sort of day is it?”

“It’s raining cats and dogs.”

“Did you bring the weather report?”

“Yes.” Rutger gave Quayle a slip of paper. It said: Cloud on Athens ten tenths, visibility nil, wind 40 m.p.h. at 5,000 feet, storm center moving east across Pindus from Missolonghi. It might pass over by midday.

Quayle went to headquarters to see the wing commander. It was too dangerous to phone him. The wing commander said to call it off for a day but to make it an hour earlier the next morning, so there would be more chance of good weather. They had to get there for certain tomorrow.

So Quayle went out to see Helen Stangou.

She was sitting at a table rolling bandages with a small wooden machine. When he came in she stood up and smiled. She was dressed in a pale yellow coverall, and her long hair was serrat against it on her shoulders. She was firm-cheeked when she smiled and her forehead was tight. Her eyes were low and dark, and their shape was made clear by her face’s proportion.

She said, “It is you. Come in.”

Quayle said, “I’m wet; drip. I couldn’t get here y sorry.”

She said, “Yes. I knew

The Pride of Possum Hollow

By George Morris

PHOTOGRAPHED FOR COLLIER'S BY GEORGE DE ZAYAS

He would be suspicious of anything that came any other way.

A product of that environment, Albert Gore knew that if he was going to Congress—as he had decided—he would work his way and not hitch-hike. He had no rich or influential relatives.

Completing whatever course it was the one-room log schoolhouse in Possum Hollow had to offer, he graduated from the Gordonsville High School. Next, he decided that the job of county superintendent of education would be a step toward Congress. To be county superintendent required a college degree. He entered State Teachers College at Murfreesboro at the beginning of the spring term. Thereafter until graduation he matriculated only for the spring term. The session ended in time to assist with late spring and summer plowing. He helped gather crops in the fall. He never attended college a full year.

After graduating he alternated between farming and teaching country schools. He was farming when word came that the vacancy he had waited for had occurred in the office of county superintendent of education. He "took out" his team, went to town, entered the race, and was elected.

His rule was never to turn down an invitation to make a speech. "No matter how poor," he says, "somebody will think it good." He spoke at picnics, clubs, barbecues and dedications. No school was too small or too remote for him to accept an invitation to address the graduating class.

Relaxing with his little daughter Nancy always proves a mental tonic when Congressman Gore fires of national problems

In 1934, he managed the primary campaign for an unsuccessful candidate for senator. Following the custom of placating the opposition, Gore was appointed chairman of the speakers' bureau for the Democratic nominees. With consideration and foresight, he was especially partial to the congressman from his district. He was billed to speak in the cities and larger towns of the state, where, Gore explained, he would have access to newspapers, radio and larger audiences. The congressman was not scheduled to speak in his own district. Gore accepted those engagements, and began to be "mentioned" for Congress.

After the 1936 election he was appointed State Commissioner of Labor, a position traditionally claimed by a representative of labor. He overcame vigorous objection by setting up a model unemployment-compensation plan. States failing to measure up to standard were advised by the government to study the Tennessee plan.

Shortly after accepting the state job and going to Nashville, he married Miss Pauline LaFon of Union City, Tennessee, a charming and ambitious girl.

While Superintendent of (Continued on page 44)

Trial by Marriage

By Vereen Bell

ILLUSTRATED BY ELMORE BROWN

The Story Thus Far:

WHEN his mother kills herself, in her deep Southern home, Duff Webster leaves his shiftless father (once a noted dog trainer) and takes to the road. For a time he almost starves. Fortunately, he encounters a runaway dog ("Judas"), captures him and takes him to the owner—testy old Amos Hawthorne, whose granddaughter, Lucie Sullivan, befriends him, gives him a job at Hawthorne's kennels, near the town of Tafton, Alabama.

Lucie is an attractive girl; Duff is an attractive boy. Within a short time they are in love. Hawthorne, however, regards young Webster as a lazy ne'er-do-well; he orders Lucie to have nothing to do with him. An independent person, Lucie ignores the order; whereupon, Delia Phillips—a Circe who takes what she wants (and she wants Duff)—inadvertently informs the old man that Lucie is disobeying him.

Hawthorne is bedridden, blind. He induces Duff to come to his room, where he tries to

shoot the boy. Duff escapes with his life. But the situation so created is full of peril. And Duff—feeling sure Lucie does not really love him—turns to Delia.

Unable to stand the shock of the death of a dog he loves, old Hawthorne dies. . . . Meanwhile, Duff has gone to work as kennel manager for a man named James Lampley—a dog breeder and plantation owner . . . and presently marries Delia. Shortly after his marriage, Duff is sent to Saskatchewan, Canada, where he takes charge of a training camp for dogs.

The camp—an old farm far out in the country—bores Delia; she and Duff have frequent quarrels. . . . Duff has one favorite dog: Judas. Hawthorne had always regarded the dog (a pointer) as too savage and ill-tempered to be trained; he had given him to Duff. Now, having worked over Judas for months, Duff takes him out for a trial. For a time, the dog is rebellious—he flushes four prairie chickens, excitedly. Then, scenting a fifth bird, he half squats and freezes into a beautiful point. "Hand me my gun," Duff says to his assistant.

Duff hit the ground running. "Wesley!" he shouted. Then, on the edge of smoke in the door staggered a man dragging a dying dog by the

VI

WITH the .410 gun, Duff walked stealthily toward the motionless dog, saying warningly, "Who-a-ap, now . . ." and sliding the tight check cord through his left hand. Judas stirred slightly, and Duff put a little more pressure on the line as a reminder.

Then, for the first time, a man stood beside a Judas point. Duff's left hand touched him, and slowly stroked him from his neck to the tip of his tail to quiet his nerves. The dog stiffened in anger under his touch but held the point.

Carefully Duff unbuckled the muzzle on Judas and slipped it off. He took one step ahead of the dog, and a prairie chicken jumped from concealment into the air, wings drumming. Judas sprang after it.

The gun went to Duff's shoulder and fired, and the chicken tumbled over into a buckbrush clump. Judas was upon it in one bound. Duff let him mouth the

bird for a few moments then he

him away. "See dere?" Wesley id to. "Ain't it a whole heap er to get chickens when you bet e yo see let Mr. Duff shoot 'em, a to run feet off up to de elbow ying to 'em? LUCKY STRIKE MEANS FINE TOBACCO!

One of a series of paintings of the tobacco country by America's foremost artists

A "stick" of tobacco after curing. Painted from life on a Southern farm by Arnold Blanch

We paid 41%* more in Hahira, Ga., to bring you fine, light tobacco like this

THE WEST of Georgia's vast Okefenokee Swamp lies a tobacco town called Hahira. Hahira is one of the scores of Southern towns where year after year, at auction after auction, the makers of Luckies go for the finer, milder leaf—and pay the price to get it.

For example: In Hahira at auctions of the 1939 crop, we paid 41% more—yes, 41% above the average market price, to get this naturally milder, better-tasting tobacco!

This was in no way unusual. We paid well above the average market price in 108

tobacco markets that season. And that 1939 crop, properly aged, mellowed, and blended with other fine crops, is in the Lucky Strike Cigarettes you buy across your retail counter today.

In a cigarette, it's the tobacco that counts—and to independent tobacco experts who know the facts, Lucky Strike means fine tobacco. With these experts—auctioneers, buyers and warehousemen—with these men who know tobacco best, it's Luckies 2 to 1.

Isn't that worth remembering... worth acting on, next time you buy cigarettes?

*41% more than the average market price reported by U. S. Department of Agriculture.

With men who know tobacco best—it's Luckies 2 to 1

Flight to the Sun

Continued from page 22

think about it because he did not want to leave Athens . . .

"It is you," Helen touched his arm as he watched a car slipping on the road.

"Hullo," he said.

"We will walk down here to a bus stop," Helen took his arm.

He said, "No, we'll get a taxi."

"Soldiers cannot afford taxis," she said with some gaiety.

"I am a flight lieutenant and I'm not married. I can afford it all right."

"How big is a flight lieutenant?" she asked him.

"The same as a captain in the army."

"You have enough money?"

"Yes."

"As you wish, then. But be careful how you talk in the taxi."

They walked along easily in the wet darkness and felt the cold reflection of water from the leaves of the trees and the concrete road. They found a ramshackle taxi. Helen told the driver in Greek where to go and he hit his meter with a small hammer and started. They went through the dim white and black wet streets to the Kephissia road, and Quayle could see the Pentelikon Mountains dark and above sight, stretching before them as if they were driving right into them.

HE PUT his arm around Helen's shoulders and grasped her wrist with the other hand.

"Not here, please," she said softly.

Quayle took his arm away. "Am I poaching on Lawson's territory?" he asked quietly.

"Do not talk." She took a firm grasp of his arm but kept away and sat silent while the bulk movement of the old taxi fell over the surfaced road in jolts. She stopped the taxi long before they were at her home and they got out. Quayle paid the driver when she motioned him to do so. When he had gone she said, "We can get you another to go home. We will walk. It is not safe for taxi drivers to know what you do."

As they walked along the muddy earth path Quayle put his arm in hers. She took his hand and both were warm.

"When will you have a chance to see me again?"

"Does it matter?"

"Yes," she said. "But if you can't tell me, it does not matter. It is better you do not tell me in that case."

"I just want to make sure I'll know where you are," John Quayle said to her.

"If you write to me at the Red Cross. Someone will write in Greek for you."

"But you are going away. When are you going anyway?"

"I think next week," she said.

"And what about this new place? Can I get you there?"

"At Ioannina? Yes. Do not forget Ioannina. Ioannina."

"I won't forget," he said.

John Quayle stopped her by pulling her arm. Then he pulled her firmly around to him and kissed her full on the mouth. She did not hold back. Her mouth was closed tight and was very warm. He couldn't feel himself any more. He could only feel heat in his head, and even warmth spread from her all over him.

When Quayle took himself away they turned around and walked on slowly. He did not say anything. He did not say anything because he knew it would be clumsy and he felt again that he didn't want to be clumsy with this girl.

"It is foolish," she said as they walked.

"Nothing is foolish," he said.

"You go away. I will go away. And we do this now," she said.

"Nothing is foolish. We will see each other." He didn't want to talk.

"I am not worried like that. I have concern because we start something that cannot go further."

"Why not?" Quayle tried to stop again but she walked on.

"Because it is too difficult," she said.

"And because you will go away."

"I'll be back," he said.

"No. I mean you leave Greece."

She was not hysterical and was behaving very calmly. He wanted her to be weaker in her reactions.

Quayle stopped her again and this time he could feel her lips beating like a tight blood pulse. He could feel her arm with flesh warmth around his shoulder and he was excited and kissed her harder, then very softly. Her lips were tight but very warm and full and soft, and her hand was warm on the back of his neck. She drew away.

"It is bad if we cannot do this for a

Below, there were great colors as mountains rose and valleys fell and kept falling until they had the mountains tied up. There was a low cloud hiding the peaks and, beneath them, the shadow of green timber that rolled heavily over the mountains and made more great colors. It was very fine from here at twelve thousand. But some day, Quayle was thinking, he would like to come back and see it from below—or see any of the country from below—and get back his normal sense of distance and time between places. But this particularly would be country to go over on foot.

AFTER the war it would be swell . . . after the war . . . He tried to veer off any thinking about after the war. He was looking at the instrument panel to confuse the thought about after the war, but it was there . . . after the war.

What would Gorell or Vain or Tap or Richardson or Stewart, Constance,

if he survives this, Quayle. He will grow into a large, thoroughly honest and complicated thought—so Vain, only Vain was A more real.

Vain was conscious of around him and he reacted circumstances. Vain was angular face, very quick, accent seemed like cockney. Vain had been indignant said that once. long time yet." She was still speaking calmly.

"You will forget?" he said.

"Perhaps . . . but I know it is bad for a long time to pass."

"It may not be. Please . . . it may not be."

"I don't know," she said. "I don't know."

They were near the entrance to her home. "Do not come farther," she said, as they came to the gate.

"Just as you say."

John Quayle kissed her once and she touched the side of his head with great tenderness. Then he swung around and walked away wondering how he would get home because she had forgotten to get another taxi for him.

IT WAS fine the next day. The flight took off before dawn and climbed to get over Parnes. It was bumpy from the start, and John Quayle kept climbing to get above the weather, but at twelve thousand it was still rough with a twenty-mile-per-hour headwind, and it was hard on gasoline.

South, any of them, do after the war? What were they doing before the war? He didn't know. He didn't know because he didn't ask them, because he had a rough idea that would give them liberty to ask him questions, and he did not want that. Why? What if they did ask? What would he say? He was at London University, being an engineering student; that was all right. But what had it to do with any one of them? Take Tap. Quayle knew what he had been doing before the war. He had been sitting around in London spending his money because he had plenty of it. He had seen Tap's name in the papers but was surprised the first time Tap had come to the squadron, and he had taught Tap a few extra Gladiator maneuvers.

And Gorell. When the war started, Gorell must have been very young, maybe eighteen. He had been at King William's College after Quayle had left. Quayle must have been there the same time as young Gorell but he couldn't remember the simple face, the clean teeth, the wavy hair. He will be all right

SMOKING MEANS INHALING. INHALING MEANS YOU NEED

what PHILIP MORRIS alone provides!

All smokers sometimes inhale. But—
your throat needn't know it.

Here's a vital difference you may not know exists. Eminent doctors compared the leading favorite cigarettes . . . found and reported that:

SMOKE OF THE FOUR OTHER LEADING POPULAR BRANDS AVERAGED MORE THAN THREE TIMES AS IRRITATING—AND THEIR IRRITATION LASTED MORE THAN FIVE TIMES AS LONG—AS THE STRIKINGLY CONTRASTED PHILIP MORRIS!

That's proved protection—exclusive with PHILIP MORRIS—added to your enjoyment of the finer-quality PHILIP MORRIS tobaccos. No worry about throat irritation . . . even when you do inhale!

CALL FOR PHILIP MORRIS

AMERICA'S FINEST CIGARETTE

ing the time they had been out for their position. They were over the last range and could start coming down in half an hour.

"We'll be going down in half an hour, Tap. So we might as well stay around here," Quayle said into his mouthpiece.

There was solid cloud beneath now, too solid to break into. He was trying to contact Larissa.

Quayle kept the flight up. They cruised around over the clouds for half an hour but there was no break. He told the flight to keep in close and not lose sight of him. Quayle cut the mixture and nosed down easily into the cloud. It was thick and white and as the flight came down in wide sweeps like a mountain road, the cloud didn't show any break.

THE flight was close behind and kept there until they were at six thousand. It got too thick in one place. A down-draft hit Quayle and he lost five hundred feet. He could see two Gladiators still behind him but the other two were missing. Vain and Richardson were not around. At two thousand, the cloud broke up and Quayle was under it. He looked around for the others. Visibility was poor. He banked and swept around toward the airdrome. He could see a white mist outline of the town below.

"There they are," he heard Tap say. "They can see us, I think."

John Quayle came in a wide circle and met them. He found the airdrome easily then, and the flight landed in formation over the wet heavy mud.

In Larissa township, Hickey had found an old house that was empty. Quayle, Vain, Tap and Richardson and young Gorell all took fiber suitcases and kitbags which they carried in the Gladiators. Hickey had a large car that he had got from the Greek general staff at the Larissa garrison. They went the two miles into town. The house was bare and wet. It was depressing because it was a house and it was so wet. It was all right for it to be wet outside, but being damp and cold inside a house like this one was very depressing.

Hickey said the Bombay transport would probably not come up that day because of the weather, and they

wouldn't get their bed rolls. They try to get a better place, but the element came up.

Richardson, Vain, Gorell, Quayle went into a restaurant that was dismal from the outside and painted wooden shutters.

lit by bare electric globes, marbled tables were under the dirty wooden floor. They sat at a table and a wide-headed waiter came up. He was dressed in a white uniform, but they didn't know

Then the waiter disappeared and smiling to them back with five small glasses of waterlike liquid in them. Before Quayle and the others his head quickly and said to Greek. John Quayle picked up and smelled it. It had a liquid

"Uzo . . . Uzo . . ." the Greek waiter said.

"All right," Vain, the Australian, said. "We'll drink." He lifted his glass.

They all lifted their glasses to the whole room and then to said "Your health," and drank.

"Ouch!" Tap said. It was strong.

The drink tasted of anise. The Greek waiter brought a bottle of the glasses. Then he brought cups of Turkish coffee.

again. The liquor spread inside. A priest came in and walked to Quayle and the others.

had long hair, long beards, robes with a square-topped

"Messieurs," he said.

"Monseigneur," Quayle said.

The priest said no more and called for another bottle of drink. He got a glass for each of them and kept filling their glasses as they drank.

Other Greeks in the room, clothed workers, and the priest's baggy pants and turned over. The flight wider and kept drinking, and the Greek priest came over and spoke to them on the back and spoke among themselves, during which

heard Inglis mentioned a Greek could feel himself getting better and happy. Vain was having a good time with the priest, drinking for glass with him, patting him back. There was a lot of

riest his glass and said d, "Ne" ry!" Gorgius said. was wonderful. They laughed

loudly and drank, because they had never drunk to victory before, and the Greeks took it so seriously that they laughed.

"Can we get something to eat here?" Vain asked Georgius. The priest was looking at Vain's Byronic features with obvious pleasure.

"No; but I show you a good place. I know a place."

"Ask them how much all this is," Vain said. He was delving into his pocket. Georgius asked the waiter in Greek but the others all spoke loudly at once and Georgius said, "They say it is not for you to pay anything. You are their guests. We are so happy you are here. You are our guests."

"Oh, no."

"They will be insulted," Georgius said. He rubbed his unshaven chin to emphasize the point. "Now come with me—I will show you where to eat." They stood up and the Greeks started shaking hands with them. They shook hands with all the Greeks and the Greeks clapped them on the back as they put their greatcoats on. Then they went out with Georgius, and the Greeks shouted "Zito Inglis" after them. They shouted "Zito Ellas" back to the Greeks as they walked across the square. It was only then that Quayle realized how drunk he was. His co-ordination was slow, and his reaction uncertain.

BY THE time they had eaten the thick Greek meal and found their way back to the bare house, Hickey had come back. Stewart, Constance, South, Brewer, Finn, and Anderson the doctor, all of whom had come up with Hickey in the first place, were at the house waiting for the others. They had shifted to the hotel they had found closed earlier. They had beds with mattresses but no linen because the proprietor had taken it all down to Athens when he had run away. So they all spent the night there.

They went to bed early because the drink, which Georgius told them was called *uzo*, started to react an hour after they had taken it and they were more drunk than ever. Hickey was not very pleased. They were all going on full patrol tomorrow because the Italians had started their expected bombing attack on the coast towns and roads. The Greeks were getting badly shot up and unless the squadron beat off the attacks the Greek army would probably fall back instead of going forward.

They were all very serious and aware of what they were doing the next day because they were self-conscious about being laid out by the white liquor. They

How's your "Pep Appeal"?

—by Siegel

Butch: Yaah! And you said your old man was a hot pitcher. That fast one of his couldn't even bust a window.

Red: It could too! Guess Pop just didn't feel like throwing hard—that's all.

Pop: We-e-ll! Looks like I'm just getting too old for that sort of thing.

Wife: You and your long grey beard! All you need, Glenn Wiggins, is a little more—er—more *pep appeal*—that's all! You're not eating right. Probably the only thing wrong with you is that you aren't getting all your vitamins! And you're going to start in getting them—right this minute.

Wife: Can't have pep without vitamins, you know! And right in this crisp, crunchy cereal are extra-rich sources of the two vitamins least abundant in ordinary meals—B₁ and D! Yep—right in KELLOGG'S PEP, made from choice parts of sun-ripened wheat!

Pop: Say—all your talk, and you never once said how *good* PEP tastes! Golly, if getting the *rest* of my vitamins is as much fun as eating KELLOGG'S PEP, that young fellow, Butch, isn't even gonna *see* my fast one!

Vitamins for pep! Kellogg's Pep for vitamins!

Pep contains per serving: 4/5 to 1/5 the minimum daily need of vitamin B₁, according to age; 1/2 the daily need of vitamin D. For sources of other vitamins, see the Pep package.

MADE BY KELLOGG'S IN BATTLE CREEK

SOLD BY GROCERS EVERYWHERE

went out to the airdrome, and Hickey got the maps out of the cement hut, which was one half a Greek operations room. The maps of the area were too small-scaled. They were all the squadron could get unless they had Greek-named maps.

The area they were covering was directly west-southwest to the coast town of Arta, which was the port entry and west road route supplying the coastal front. This meant flying over the Pindus, the mountain range splitting Greece from north to south. They would patrol the road area between Arta and north to Ioannina, and between Ioannina and Metsavo, which was atop the Pindus. They had no weather reports. The clouds were about five thousand feet strato-cumulus over the airdrome, which could mean anything. Because the Pindus range was about eight thousand feet high, they would be fighting pretty near the peaks if they met anything over them.

They took off in threes. Hickey, Hersey, Quayle and Tap were leading the flights. They climbed rapidly to about a thousand feet to get safety, then pulled their formation to a stagger running right.

They climbed over the low range and got height, following the Penicos River that flooded the plain between Karditsa and Trikkala. They hoped to hit Arta about the same time that the large flights of Italian bombers had bombed it yesterday.

There was snow on the tips of the Pindus, and that made Quayle feel colder than he was. It was bumpy and he wondered if Tap was getting sick. Quayle had Gorell and Richardson tight behind him. Tap had Vain, the Australian, and young Finn.

WHEN they could see the Pindus from the west side it was getting time to climb. Hickey didn't like to use phones because any Italian planes near by might pick it up, and surprise was the best chance they had in a scrap. So they had to do some good formation flying to keep in close. But Hickey's flying was so perfect and so simple that he made it easier on the others.

The squadron got over Arta. They turned north and followed the river which flanked the winding road, and this was the bombing target for the Italians.

The flight was all looking around now, waiting for something to happen. They had opened up its formation for attack and were holding height at fifteen thousand feet. Quayle didn't like the idea of scrapping over this area because the peaks were too high and too sudden and topped with cloud. Hickey rocked his machine, and Quayle looked around and down.

Below, heading toward the squadron, was the biggest flight John Quayle had ever seen. They were strewn out for ten miles. There must have been a hundred and fifty planes.

Hickey dipped ■ wing and Quayle knew it was beginning. Hickey put his nose down and the others followed. John Quayle could see them disappearing from in front of him. When Richardson went down, Quayle followed. He could see nothing but Savoias and CR.42s, and he was thinking, "This is going to be miraculous!"

By the time his nose was down far enough, Quayle could see Hickey was going onto the bombers right through the fighters. The others were following. Tap and his flight had stayed up top to get the squadron out of trouble when they got into it. So there were nine of the squadron . . . nine against this flock!

And then Quayle passed the fighters. He was going a billion miles an hour. He passed between two CR.42s and saw

both the pilots turn their heads to look at him.

The sky was filled with 42s and he couldn't see ■ Gladiator anywhere, but two 42s were coming beam on at him and he could see another one diving on his tail. He pulled up quickly and there were inches between the two 42s as they passed under him. The other one was still on his tail. Quayle dived hard and pushed the throttle open and kept pushing it because he was crazy for speed to get away from the Italians. He didn't look around. He pulled the stick back and roared up in a loop, straightened out at the top of the loop, then dived.

HE PUSHED hard on the throttle again but it was wide open as he dived and he knew he would get the 42. It was Hickey-trained calculation and he came down right on the 42's tail. Quayle was less than fifty yards from the 42 when he straightened out and the 42 didn't know Quayle was there. Quayle had the Italian's head in the sights when he pushed frantically on the button, felt

Then Quayle pressured the right rudder and closed the throttle until his right wing stalled. He slipped in a falling leaf under the 42. He pushed the throttle wide open and pulled straining up and got the 42's belly in his sights and swore aloud as he pushed the gun button and knew for certain that he hit his mark. He nearly crashed into the 42 as he banked and winged over out of the way as it burst into flames and fell.

Then Quayle seemed alone.

Far to the right, the sky was filled with mixed-up planes and he could only see 42s until he noticed one Gladiator hurtling down on two 42s and saw the guns' red and yellow streak and the tracers cutting into the 42. The 42 hung, then fell over, but Quayle saw a Gladiator on the left losing height and it seemed to be in trouble.

It was then he saw the Gladiator go down in flames right past him. He could see the figure still in the cockpit but couldn't make out who it was; but he knew the flier was done for. He looked up and saw the 42 that had got the Gladi-

the vibration, saw the tracers cut the Italian in half and his hand push through the glass panel.

There were still 42s all around. Quayle suddenly saw a Gladiator zooming, with a 42 firing close at him. He winged over and didn't look behind but pushed down on the 42 and ripped a burst into its tail. The 42 lifted its nose too suddenly and stalled and fell. As Quayle came out level, he could see a parachute burst way to the right and wondered if it was one of the squadron.

But it stopped there, because he looked below and was almost wing to wing with a 42, a little above him but closer than if they were deliberately formation flying. Quayle could see the Italian's face and its puzzled look because he didn't have a mask on. The Italian could see Quayle's look. They were so close and both instinctively looked behind to see if anything was on either of their tails and frantically kept level flight, waiting for the other to move and looking at each other. It seemed a long time but it was seconds . . .

ator, winging off. He was going after it when Tap winged in because he was nearer and he climbed after the 42. The 42 did an Immelmann and was nearly on Tap's tail, but Tap did the tightest, fiercest loop Quayle had ever seen, came out over the 42 and clung to the side of it, pouring burst after burst into the Italian plane, which was burning and falling off. Quayle knew Tap had run out of ammunition because he saw him put his hand up—a signal.

THEY headed for home. The two of them were all Quayle knew about now. He felt very tired and didn't look to see what had happened to the 42's which were away out, heading north. He didn't care if his flight had stopped the bombers or not. He didn't care about anything, but he was very tired and the strain had given him a tight pain in the stomach. He set a course for Larissa and climbed, because they had come down from fifteen thousand to three thousand feet. He had forgotten about the mountains during the scrap, and now they were there and very frightening.

Uncle Sam has far more

POWER

for War Production

than all these three together!

Hirohito and Benito probably aren't well these nights. They know that's growing and growing war production will turn the tide against them.

America can do it because America has electric power to do it. Electric power is production. Electric power multiplies power and drives the machines that make planes, ships and guns.

How much power has America? More than all these unwise dictators and all their

conquered countries combined—Albania, Austria, Belgium, Bulgaria and the rest of the long, tragic list. *Five times more* than we had in the last war.

No other nation even *approaches* America's power resources. And this has largely been accomplished the American way—by electric companies owned by millions of Americans and managed by American business men.

The practical experience, the people and the plants of all these companies are

dedicated today to making Uncle Sam so *powerful* that Axis aggressors will soon be nothing more than three busts in the Hall of Infamy!

As a chairman, Jerry is a flop

JERRY NEEDS A LAXATIVE. But he's chairman of a Defense Committee that meets at 10. "Can't risk interruption," he figures. "Better wait till tonight." Quick-acting laxatives are unknown to him.

IRRITABLE, UNCOMFORTABLE, JERRY finds it hard to keep his mind on the problems under discussion.

"They'd have got along better without me," he confesses to Mrs. Jerry later.

All's clear sailing for Bob

BOB NEEDS A LAXATIVE. He's got a Defense group meeting at 10, too. But he takes Mrs. Bob's advice: "Never put off till tonight the laxative you should take now." Bob takes speedy Sal Hepatica!

BEFORE HE LEAVES HOME, Sal Hepatica has brought easy, prompt relief! Bob faces the day's problems cheerfully.

His clever handling of the meeting wins praise from visiting officials.

Whenever you need a laxative —take gentle, *speedy* Sal Hepatica

WHY PUT OFF till tonight the laxative you ought to take this morning? Discover gentle, speedy Sal Hepatica!

This refreshing saline is the favorite of millions because it acts quickly—usually

within an hour—with no discomfort, no griping. Acts by attracting helpful liquid bulk to the intestinal tract.

Moreover, Sal Hepatica helps turn a sour stomach sweet again, helps counteract excess gastric acidity. Three out of five doctors recently interviewed recommend it!

Next time you need a laxative, take gentle, speedy Sal Hepatica!

get an ambulance?" Hickey asked him.

"No. Get him in. Keep him flat. Keep his head up," Anderson said.

They put young Gorell lengthwise on the back seat, and Hickey got in the driver's seat as the doctor sat on the floor in the back holding his medical kit.

"I'll come back. Wait here," Hickey said to the others.

"We'll go in with the crew," Tap said. Hickey said, "All right," roared the car to a start and went slowly off.

The others walked over to young Gorell's plane to see what had got him. His tail unit was just about shot away completely. The bullet that went through his neck had come in the back of the cockpit and finished up smashing the turn-and-bank indicator. There was blood covering the bottom of the cockpit and the seat.

They walked away from the plane. "How many did we get?" Richardson asked.

"I saw about two go down in the first twenty seconds," Tap said.

"What about Vain and Finn?"

"I think that was Finn who went down in flames," Constance said.

"No. I saw Finn getting hell from about ten 42s near me and I was away from that," Richardson said.

THEY heard the engine then and looked around. "That's a Glad," someone said. They couldn't see anything yet. They could hear it and were physically straining their eyes to see where it was. It appeared low coming from the north. There was a second one way behind it.

"Two of them . . . two."

When the planes landed they stood and watched someone get out of the first plane. They couldn't see who it was until he pulled his parachute off and walked toward them.

"It's young Finn."

The second one landed. "That's Vain's plane," Constance said. But they waited for him to walk toward them.

"It's Brewer," Tap said.

Now, only Vain and South to come. And one had gone down in flames. One by parachute.

Brewer was beating his hands together as he came over.

was fall; when they landed,

coming down in the basin of low moun-
tains under the cloud to the field that
Hickey had chosen. It just looked like
an ordinary field even from three hun-
dred feet. There were no runways, no
hangars, and a flock of sheep in the
middle of it which Hickey almost ran
into. It was worse than Larissa, thought
Quayle. This is the worst of the bunch.

There was a large camouflaged bus
waiting to take them into the village,
which was sprawled around one side of
a lake set in mountains. There was a
Greek driver in blue Greek air force
uniform with blue puttees and very
muddy. There was a tall Greek in an
army uniform near the bus.

"I am Captain Alexander Mellass,"
he said to Hickey.

"My name's Hickey." Then he in-
troduced the others.

"I am to look after you," Mellass said.
"I will take you in my bus into town."

So they got into the bus. Mellass told
them there was fine feeling in the town
about there being fighter planes around
at last.

They rolled along the muddy road
that was not surfaced and passed
through the damp, narrow streets of a
satellite village that had many people
waiting at each side who shouted as they
passed by. They went to the Acropolis
Hotel, which was the corner of a bombed
block of buildings. Mellass had a long
argument with the big porter, who was
drinking coffee behind his table. They
finally got three rooms among nine of
them. Quayle was thinking about
Helen. If this was the place, she would
be here by now. He would not give too
much thought to working out if this was
the place or not. He had a hunch it was.
Ioannina. Ioannina. Mellass said it
like Helen. This is the place Helen said
she was going to. I've been away about
a week. Maybe she's here already...
at a first-aid post. That would be the
hospital; this is the place.

QUAYLE asked Mellass where the
first-aid post was.

"There's hundreds of them," Mellass
said.

"Where's the head one?" Quayle
asked him.

"At the hospital, I suppose," Mellass
said. He told Quayle it was right up the
street, the only building standing over
the hill.

So Quayle went there. The girls at
the entrance were being anxious about
him when he went in, because of his
English uniform. There was a fine lot
of nurses and other girls around. Quayle
asked a girl at a desk (who said "Inglisi"
excitedly when he came in) where the
first-aid post was. She shrugged but
touched his arm and led him along a

passage. She knocked at a door. There was an elderly woman seated at a table. Now the girl said "Inglisi" again and the woman stood up.

"How do you do?" she said.

"Is this the first-aid post?" Quayle said. "How do you do?"

"No. I am the matron. This is a hospital."

"Excuse me, Matron," Quayle said to her. "I'm looking for the first-aid post."

"There's none here," she said and smiled. "What is it you want? Perhaps I can help you."

"It's all right. I want to check up on somebody... a friend of mine who said she was coming up here."

"Oh." The matron looked up. Quayle looked solidly at her.

"What's her name?" the matron asked.

"Helen Stangou." He spelled it in English. "I don't know if she's here or not yet."

The matron picked up a phone and spoke to someone. She spoke for a while—in Greek; then she turned to Quayle and smiled.

"Your young lady is not here yet. She will be here tomorrow perhaps, perhaps the next day."

IT WAS early-morning patrol next day. They were all out at the airdrome before sunrise. It was wet, and the basin of high hills around couldn't be seen for the breath of thick mist that was a strata flat over the field. The Greeks had put trees over each of the Gladiators, and the squadron was surprised when they pulled the camouflage away. They had to wait an hour for the Greek truck with the gasoline in drums to refuel the machines. Hersey went around with them to make sure they did it all right. The others walked around stamping their feet and looking at an old French Bréguet, a 1918 model, that was weighed down by Greek camouflage.

When the Greeks finally got the refueling done, the flight took off into the mist, climbed above it and met low clouds and bumps. They hit out toward Delvinakion right on the Greek-Albanian border, which was the front line at the moment in this sector. They crawled around the mountains, following Hickey because it was too thick to try getting over the clouds. Once you got above them you would never find your way back through them again. So they bumped down low through the valleys, banked around the snow-tipped mountains, climbed over sudden peaks and then got as high as they dared over Delvinakion.

They were over the area for an hour. Twice Greek front anti-aircraft guns opened fire on them but they didn't take any notice. They never knew whose lines they were over because there was no indication by either side where they were.

There was just thick timber and a road that slunk around the mountains. Quayle could see a thin stream of transports coming southward along the road. When it was about time to be going back he heard Hickey say, "We'll do some strafing. Keep your eye on that motor column and come off after me. Only one attack, then we'll pick up formation and go home."

They came low into a slight cloud and Hickey shook his plane, then winged over through the cloud and came out along the valley, machine-gunning the surprised Italian motor convoy. One by one they came off, and Quayle put his nose down after Brewer. He pushed his gun button the moment his sights caught a truck and, as he leveled out, with his sights blurring along the line of trucks, men, faces, objects, he kept it down and kept his nose down as long as he could and the gun shook. Then he strained his belly as he pulled out of

it. He blacked out for a second, then remembered the sides of the valley and the machine-gun fire from the convoy, and he pulled way up again until he saw the remainder of the flight ahead. He turned around and saw Tap coming up in a steep bank, climbing with one wing down to get up out of the valley. The others were coming after him and he could see some of the trucks burning and small figures at the side of the road.

They headed back to Ioannina through the valleys. Quayle was feeling pretty sick by the time they got back. They had eaten no breakfast because the staff of the hotel didn't get up until seven o'clock.

They were in a restaurant waiting for coffee when the whine of the air-raid sirens started. People passed quickly through in a crowd to the back of the restaurant where there was a shelter. They tried to get the squadron there but the fliers waited for their coffee until the

"They've got our markings. We've got no Fairey Battles around here," Tap said.

"They're Italians," Brewer said.

"They're Greek markings. We sold ours to the Greeks," Quayle said. "They're Battles."

"Only brave men fly Battles," Tap said. "The Greeks can have them."

They walked back to the hotel, still arguing about Fairey Battles.

BY MIDDAY they were all sleeping except Hickey. He was at Greek headquarters trying to get the Bombay up from Larissa with the ground crew and some equipment. He wanted the three Gladiators in Athens up in Ioannina too. When he came back he said the squadron was due for another tour over the lines at three o'clock that afternoon. They got up, had dinner at a restaurant and went out to the field. The Greeks had not shown up with the refueling

things in the last war," A Greek was putting the wheels to serve as chock. The engine was primed again.

"Contact."

"Contact." There was in the Greek version.

They had to repeat it several times before the engine burst open and started, with flame shooting out of the exhaust and nearly lifting the ground. The engine was the fitter was giving it fuel which made it roar. The squadron was laughing. Two Greeks came up. They both wore Greek army steel helmets. The small had no uniform on. He had two heavy overcoats on that laced up the front.

The tall one had a Greek was laughing at them when

"Kalymera," he said.

"Kalymera," some of the "You fly... you fly this to the Bréguet. He did much English the Greek

"Yes, I fly. Observe. I take pictures. See?" He little man with the laced laughed with a great he little man grinned and pul chute harness over the t The big bearded Greek helmet, opened up a hen been carrying and pointed were old boots and em bottles.

"WE HAVE no bombs. It is enough to make Italians." And he roared, his beard, and threw his put his arm around Tap when Tap slapped him on "You come this trip with pictures, uh, Inglis?" "In that?"

"Nay. Yes. It is good. No one sees from shoot badly from underneath. Greeks shoot get close to shoot at everybody."

"No, thanks," Tap said. bearded Greek laughed again. "I am Nitralaxis. I am Inglis. We fly together."

Hickey, who had been smiling so that his blo stretched almost to his introduced all of the squadralaxis and the little Greek name was Papagos. cook went down to the air-raid shelter too.

They went out into the streets and across to an open stretch from where men had been digging sand. In a bombing raid, the open was better than an uncertain shelter. A bomb had to be close to hit you when you were in the open. The debris always got you in the shelters. So they waited around in the white mist. They heard the echo of an engine from the mountains... several engines.

THEY sat down, waiting for the planes to appear. A flight of low-flying planes came out of the mist from the northeast. Immediately two Bofors pom-poms, which the squadron knew nothing about, opened fire somewhere out near the airdrome. As they got closer, the three planes widened out and they came over very low.

"They're Fairey Battles," Finn shouted.

"Don't be cockeyed," someone said.

truck, so they stood around in the mist waiting.

The Greeks meantime wheeled out the old 1918 Bréguet observation plane that had been weighed down by a couple of trees. They pulled the boughs off the fuselage, uncovered the cockpit, and a tall Greek climbed in. The other Greeks wheeled up a great wooden triangle and a stepladder. One of them climbed up the stepladder, attached the apex of the triangle to the airscrew, and another began to wind a handle on it. This turned the propeller so that it primed the engine and tightened a spring on the winder at the same time. When the Greek got down off the ladder, the one in the cockpit shouted, "Contact!"

"Contact!" the other shouted and pulled a release of the spring. There was a great twang, the spring released and the airscrew turned; the engine coughed, then stopped.

"What war is this?" one of the men asked.

"My father used to talk about these

THE AIRPLANE is not primarily an instrument of war. Even the longest-range heavy bomber is, first and last, a means of transportation.

But today our nation is engaged in a life-and-death struggle for its very existence, and the wonderful gift of flight is proving one of the strongest of all weapons for freedom. Every ounce of American energy must be turned to producing the airplanes needed for war—the airplanes that will in time spell Victory!

From the early days of heavier-than-air craft, Goodyear has been helping America to be swift and sure in the air.

Goodyear Airplane Fabric was in the wings of Wright Brothers' planes as early as 1903. And the first U. S. air-mail flight was made in 1911 in a monoplane equipped with Goodyear Airplane Tires and having wings covered with Goodyear Fabric.

That was in the years of peace.

Today, as in 1917, Goodyear is working for the U. S. Army and the U. S. Navy. Thousands of Goodyear airplanes are working night and day, building our arm in the air. Thousands of Goodyear airplanes are working night and day, building every essential airplane part—doing their best to "keep 'em flying."

This is in the years of war.

ll be a dove

... will not always be an eagle. It
... be a dove.

... the war will be won in the air, so
... of the world *after* the war be
... reckoning skies of the future ...
... of those skies has been assured.

... throughout the world. It knows no
... It erases time, distance and the
... mn and nature. Through free-
... is destined to bring to the world,
... t me, the true taste and proper
... fraternity.

• For heavier-than-air craft, Goodyear makes complete wing and tail units ... control surfaces, floats, fuselage sub-assemblies, magnesium and aluminum alloy wheels, hydraulic disc brakes ... as well as tires, tubes, bullet-puncture-sealing gas tanks and hose, and flotation gear for leading aircraft manufacturers. In the lighter-than-air craft field, Goodyear supplies barrage balloons and blimps to the U. S. Army and the U. S. Navy. Goodyear Aircraft Corporation, subsidiary of The Goodyear Tire & Rubber Company, Akron, Ohio.

AMERICA MUST BE FIRST IN THE AIR

Unless and until America is the most powerful nation in the air, our safety, our freedom, and our standard of living will not again be what they have been in the past.

winner in the derby stakes to come, and Duff worked him carefully. When Tequila was taken up they headed back to camp.

After supper, Delia and Duff drove four miles into the village of Leason. The sun had not gone down; an occasional hawk sat upon the crude telephone posts and watched them indifferently. On a rise to the left, Duff thought he saw a jumping deer. At the tiny post office was a letter from James Lampley, saying that he would be at Moose Jaw for the opening trial, and the Tafton Weekly Times, which Delia sat in the car and read while Duff went to the local poolroom for a package of cigarettes. Some of the town boys were organizing a game of pea pool; several of them had been stooking and were dust-covered, but liking it—the wheat crop was the first in years worth mentioning. Most of them had grown up hardly knowing how to work, for during the dry years there was nothing to do. But now there was a crop; and, too, there was the Army to go into.

Delia had finished the paper when he got back, and by her vacant expression Duff knew she was thinking that there was nothing to look forward to until next week when the Tafton Weekly Times came again.

Duff touched her hand. "Listen, in about another month we'll go to Moose Jaw for the trials. I think you'll like Moose Jaw."

She smiled at him. "I'm all right, Duff. Don't pay any attention to me."

As soon as they got to Moose Jaw, Duff began trying to make up to her for the lonely time she had spent. The town has a frontier exuberance of its own, and during field trials the dog men are in a convivial state of mind that is not altogether characteristic. There are gatherings in the hotel lobby, and in the rooms, and bottles of whisky and ginger ale are open on almost every dresser. Duff led Delia from one smoke-filled room to another, introducing her to the other dog men and women who sat upon the beds and on the floors and in the windows. Duff couldn't help thinking of Lucie, and how fine this would have seemed to her. For Delia didn't fit, and didn't try to.

"My Lord!" Delia said finally. "Don't they talk about anything but dogs?"

THE phone rang. When Duff lifted it off its cradle, James Lampley said, "Webster? How's it been going?"

"All right."

"You and Mrs. Webster are going out with me for dinner. Okay?"

"That's fine."

"Come on down when you get ready. I'm in the lobby."

They walked down Moose Jaw's long street, with its busy sidewalks and neon lights and bright show windows, and turned into a restaurant. The place was crowded, and the juke organ played the record *I'll Never Smile Again*. The juke organ was as magnificent as any in Bill's Tavern in Tafton, with a bright-hued peacock whose tail kept changing colors, and pastel tubes of bubbling green liquid.

"Well, Mrs. Webster, how do you like the prairies?" Lampley said.

"Wonderful," Delia said.

Lampley missed the sarcasm. He turned to Duff. "How's Tequila?"

"He's a mighty good prospect. I post-entered him in the derby, like you said."

"Is he steady yet?"

"Well, steady enough."

Lampley said, "I hear you've entered that outlaw dog of yours. That right?"

"Well, I may be just the money, but he's coming and I thought I might get him on the course. He's steady on point, but you him in the eye when you he'll go right on out with he thinks you're not v What I want to do is sta hunting season opens so l birds over both those dog "That sounds all right know more after I see the Delia lit a cigarette dis

Duff flushed the birds and sent him
on. The next time they saw Judas, he
was a half-mile ahead, again on point.
"Pumped dry, eh?" one of the men
said.

Another man rode up beside Duff for
a moment, and said, "I've been trying
to get hold of a dog like that all my life.
I'll give you twenty-five hundred dol-
lars for him."

"I guess not," Duff said.

When the heat was over, and Duff and
Paul had ridden Judas down and
brought him back to the dog wagon,
James Lampley joined him, and said,
"In that dog and Tequila we've got two
of the best prospects anybody ever saw.
I'm going to lease a place I used to have
in Tennessee, and we'll see what we can
do with those dogs. The kennels are
gone, but we can use the barn for the
dogs; and there are plenty of birds."

"Well, plenty of birds is what will do
the trick for these dogs," Duff said.

After loosening the girth of his horse,
he tied him to the back of the dog
wagon. He wondered what Delia would
say when she found out that instead of
going back to their cottage in Zurich,
they were going to live in a training
camp in Tennessee, nine miles from the
nearest village. He walked to where her
wagon waited for him.

A COLD rain was falling when Duff
and Delia reached the Tennessee
farm that was to be their training camp.
Water stood in the furrows of the bare
cotton field, and the ground was mud
five inches deep. From the front porch of
the old house, the rain dripped steadily.
A wet mockingbird sat on the bannister.
Beyond the house were old chicken
houses, and the barn in which they
would house the dogs.

"Are you sure this is it?" Delia asked.

Duff said, "Lots of birds here."

"What kind of birds—ducks?"

He looked at her quickly, for—he
thought with a little pain—it was some-
thing Lucie might have said, only in a
different way. "I'll drive in the yard so
we'll be closer."

"I was wondering if you were going to
make me run in through that rain."

He drove the car across the little

LONGINES

*the most honored watch
for your
Wife*

That blending of graciousness, beauty and dependability that you admire is echoed in this lovely Longines Model 550B shown here greatly enlarged. In 14K gold and set with 8 diamonds, priced at \$175.

Longines

THE WORLD'S MOST HONORED WATCH

Longines watchmakers are proud of their success in building dependable timekeeping qualities into even the tiniest Longines ladies watches. The dual virtues of elegance and excellence are the reasons for Longines' 10 world's fair grand prizes and 28 gold medals. For accuracy, Longines Watches have won more honors throughout the world than any other timepiece.

In addition to Longines Watches, Longines jewelers also sell the Wittnauer Watch a companion line of outstanding value, moderately priced and known for 75 years... product of Longines-Wittnauer Watch Co., Inc., New York, Montreal, Geneva.

Longines Watches have won 10 world's fair grand prizes, 28 gold medals

Ladies' Longines: left Tally-Ho, \$77.50; right Salina, \$75.00; men's Longines: above Pres. Garfield, \$150.00, below Robert Burns, \$55.00.

bridge, and, slithering, turned it toward the front steps. In the soft mud of the yard the wheels spun; the car crawled forward by inches, and eventually would go no farther.

"This is pretty good," Duff grinned, "being stuck in our front yard."

"Oh, it's very good," she said.

"Listen, if you'll quit that griping for a minute or two, I'll tote you in."

"No. I'll walk."

She opened the door and stepped down into the mud. Holding her skirt with one hand, and a newspaper over her head with the other, she floundered the short distance to the porch. One of her slippers came off in the soft earth but she didn't stop to get it, the stocking foot sinking ankle deep in the cold mud. Duff brought the slipper in when he came, and poured the water out of it and handed it to Delia. She looked at him in angry disgust.

"YOU think it would help your feelings," Duff said, "if I apologized for causing this rain, and for muddying up the yard, and everything?"

She said, "Have I blamed you?"

"You might as well," he said. "I have to listen to the complaints."

"Am I supposed to like losing my shoe in the mud?"

"It wouldn't be natural for you to like anything concerned with being married to me," Duff said slowly. "Delia, you've got to get used to being the wife of a man who makes his living from field trials. I guess it's like being the wife of a farmer and a traveling salesman combined. But there's no other way."

"You talk like it's all my fault. You don't ever seem to consider my preferences. All you care about is those dogs."

"They're our living, don't forget."

"How could I forget? It's all I hear." She looked around. "My Lord, what a place!"

Briefly Duff let himself picture Lucie standing there: *Isn't this something, though, Duff? Look yonder what a big barn for the horses. Look at that open rolling country, with all the plum thickets and lespedeza and bird cover. Gee, and this house—I always did want to camp out. I'll plant some flowers this spring, and put some grass out in the yard—then even a bum driver like you can't get stuck. Okay?* This vision was too painfully precious, and Duff forced himself to shut it off.

He patted Delia's back. "Listen," he pleaded, "let's make a new start, right here in all this mud and rain. We'll fix the house up, and plant some flowers around it maybe. What do you say?"

Delia smiled and turned her lips to him. "All right."

Duff kissed her lightly. She complained, "You don't kiss me like you used to."

"Sure I do," he said. "Look. When the big trials get started we'll take them in together. I might make pretty good dough if I'm lucky—five or ten thousand a year, even."

"While you go to your trials," she said, "I'm going to visit at home. That one in Moose Jaw was enough for me."

Duff poised on the steps before ducking into the rain to begin unloading their stuff. "Okay," he said shortly.

THE horses were stabled near the house Wesley and Paul were using, and the dogs kept loosely chained in the spacious main barn with its half-filled loft of old hay and its mule-chewed troughs. By the time they were ready to start working dogs, the weather improved, and it was soon evident that they had made no mistake in coming here, for the country was ideal—open, slightly rolling, and full of quail.

As the weeks passed, the birds that fell daily under Duff's gun gave the dogs a confident steadiness to add to the

hunting wisdom they had gained in Canada. Because Delia's continued dissatisfaction made home an unpleasant place, Duff worked harder and longer, leaving in the chill predawn and coming back after dark.

The dogs that seven months ago had been to Duff just a bunch of handsome, healthy pointers had long since become individuals, each with his own personality.

Of the Lampley-bred pointers, Tequila was brag dog, already rated as one of the best debys, quite steady now unless his brace mate crowded him too close on point, when he would spring in and flush the birds. Then there was May, a little firecracker bitch, and Fred, whom Duff nursed through distemper in the kitchen, against Delia's will, and Preacher, who spent his odd time chewing up his food pan, and indefatigable Nate, who never seemed to sleep for eagerly watching for somebody to come into the barn to take him out hunting, and wise old Sunshine Babe, the dam of Tequila and half the others, who lay against her chain post with half-closed eyes following the play of the younger dogs.

Judas, chained at the end of the barn, had acquired a certain irritable tolerance; he stood for no fondling or sudden movements, but he submitted to an amount of Duff's routine handling, such as the snapping on of a leash or even the tarring of his feet, with no more than a low, ominous growl like the warning rattle of a diamondback.

In the field Judas was now practically a broken dog; sometimes in the fire of running he forgot himself and left the course, but he eventually came back; and sometimes his lightninglike way of going to scented game landed him in the middle of the covey instead of on the edge of it. But in the main his errors were of overboldness, not meanness. Fundamentally, Judas was the same. His outlook had been changed, that was all; his spirit was not broken, or even bent. What he wanted of any day was to be allowed to hunt as much of it as possible—preferably all—and to be left strictly alone the rest of the time.

After his win at Moose Jaw, Duff decided to pass up some of the fall trials in order to point for the big southern stakes like the Continental, and the Free-for-All, and the Quail Championship, and then, of course, the National Championship.

In January, Duff managed to persuade Delia to go to the Pinehurst trials with him. "Just for luck," he said. The luck that came was of two kinds: Judas, obviously off his nose, ran well but found only one covey of birds. Tequila, on the other hand, was on fire, and he

won the two-year-olds' stive so that even the other mitted it. James Lampley see it, too, and to receive tions. But in the last ten heat, a broken sliver of rammed through the mus la's right hind leg, and h three legs.

Frank. He was a rugged rascal, big at

both ends and solid on his feet, and six

years old when they sent him to Avent.

They told Jim to win the championship

or bust a gut trying. Avent brought him

to Grand Junction, and got him into

the second series with that Paliacho

setter.

"This was on a Friday, and it was a

good day. The birds were out but scent-

ing conditions were bad, and the bird

work was sloppy. But old Frank was

putting it on anyway, working his

ground like no other dog before or since.

Only trouble, he was a sort of dark-

marked dog, and when he was just nick-

ing the edges of the course he was hard

to see. He kept Jim riding and squall-

ing from the time he was down until

they took him up. Paliacho ran fine al-

most to the last, when they caught him

and watered him; some say they did too

good a job of it and got him chilled, so

"My wife's given me a new job for the duration!"

Keep it clean! That's the Little Woman's order. She's talking about our car. Says the dirt and grease and road scum that's accumulated will raise Ned with the finish. I sure thought I was in for it. And me a block captain, too!

Jumping Jupiter, was I surprised when I found how easy it is to clean and polish our bus with Johnson's Carnu. Carnu does both jobs at once in half the time—cleans and polishes with one application. It slicks up chromium trimmings, too. Rub Carnu on just hard enough to loosen dirt—let it dry—wipe it off. Just like that, your car is sparkling with its original showroom shine.

No sabotage in our garage! Johnson's Carnu removes every trace of road scum, grease, bug juice—which can damage the finish. Deterioration is retarded.

For lasting protection—to make a Carnu polish last longer—save car washings and make upkeep easier—apply Johnson's Auto Wax. At better auto supply stores, service stations, regular wax dealers. If you can't obtain Johnson's Auto Wax, use regular Johnson's Wax—which you probably have in your home. It's almost as easy to use as Auto Wax. All Johnson's Wax Polishes provide positive protection.

Tune in Fibber McGee and Molly—Tuesday nights—NBC

Your car looks like new—when you use CARNU!

Made by the makers of Johnson's Wax

that he wasn't going right at the finish. Anyway, they named old Frank the champion. Next morning Jim went to the stall, and there was that gray horse laying there stone dead."

Another said, solemnly, "What I always remember is a piece of salt-pork rind a man found in the crate with his dog the morning before he was to run a second series for the championship. He knew his dog didn't have much of a chance after being given that salt pork, but he ran him anyhow. Not many of us knew anything about it, because this fellow wasn't one to go crying that his dog had been messed with. But I knew it, and when I saw the way that dog ran I got a lump in my throat. He hunted almost at his best and when he found birds he stood them solid as Plymouth Rock, regardless of his guts burning up. But he didn't find birds much though, because most of the time he was looking for water."

"I heard one of the judges say, 'I don't think I ever saw that dog do so much aimless running.' And, of course, in the end he lost, because he would've had to be at his best to beat the other dog. But he *had* beaten the other dog before, every time they met. When the judges made the announcement, the owner rode over to the other handler, whom he pretty well figured had given the dog the salt pork, and he shook hands with him and congratulated him, and you'd never guessed that he had been cheated out of something he'd've given an eye for."

"Seems to me," one said, "that if sporting animals could talk, they'd have a mighty sorry opinion to pass out on mankind. They go on pure guts, most of 'em, and you'd think it would improve man just to associate with 'em. But, no, somebody's got money to think about. So they feed the other man's dog salt pork, or they give his gamecock aspirin, or they shove a sponge up his race horse's nose."

THE talk continued through supper; and afterward, at the hotel, the club secretary had to rap upon the table for quiet. Gradually the room became attentive, and the order of the drawings was given. Judas was called for the third brace, which meant that he would run on Tuesday morning, against one of the few setters entered, Arnold's Mohawk Pride.

Afterward, Duff went to the drugstore and called Paul, in Leason, who was waiting for word of the draw.

"We go Tuesday," Duff said. "Put the horses on the truck first thing in the morning and come on down, so they'll have a breathing spell before the running. Take it easy now and don't be in too damn' big a hurry, because a crippled horse can ruin us. Be sure to have Wesley come."

"Yes, sir," Paul said, "he'll be a big help if that dog tries to cover all of Tennessee, like he's liable to."

Duff hung up the receiver. While he talked the crowd had begun drifting back into the drugstore. Sitting on stools at the fountain were Lucie and Teague McGinnis, having a lemonade. Duff nodded to them and would have walked on out, but Teague said, "How's your dog, since Albany?"

Lucie shook the ice in the bottom of her glass. Her mouth was moist from the lemonade; finally she loosened the ice with a straw.

"Just fair," Duff said. "I don't expect him to do very much."

"What's wrong with him?"

"Just not going like he should," Duff said. "How's Hotfoot?"

"He's been off some, since Albany," Teague said. "I'm scared he's got a little stale."

Duff knew he couldn't sleep if he went home, so he walked across the railroad

tracks toward the house of Mutt Sondern, where some of the boys were going to start a blackjack game. Down by the depot, an engine sharply sent a geyser of steam through the strata of station lights. Above, the sky was clear, and the stars stood out in cold brilliance.

That lying scoundrel, Duff thought. Scared he's got a little stale. He'll be stale, all right. But not too stale to run the feet off any dog here. Any dog but Judas.

The day Judas ran was bad. It was a dismal sort of morning; a morning, it seemed, of impending calamity. No calamity occurred, but the birds must have been affected, for they didn't move. Judas hunted hard and wide, and found just three coveys. His brace mate found only two.

As they went into the third hour, Duff

all day, without a soul to talk to? You go out at daylight, and you come back after dark, and when you're not too tired to talk all you can talk about is Judas, Judas, Judas!"

"Maybe if home was a little pleasanter, I'd be tempted to come in earlier," Duff said.

Her cheek whitened in anger. "Now I see! Now I see! You've been staying out on purpose!"

"Oh, you're crazy. I said—"

"I heard what you said." She was furious.

"You think I like being nagged at all the time?"

"You think I like living out here in this—this shack?"

"No. You didn't expect anything like this. I tried to tell you, but you thought you were going to be a sportsman's wife, and see the country, and hobnob

sleepily at the match Del of them, old Sunshine E perfunctorily, but quieted to. Judas raised his head, eyes were red in the match made her way slowly to a pointer lay. He rose at a growling warningly.

Now that she was within dog, Delia hesitated. The her fingers. Determinedly the chain and ran her hand the dog's collar. The deep das' throat rose a note, b unsnap the chain.

Delia did not realize she screamed until Duff came the house. She rose from where Judas, in his leap door, had knocked her.

"What is it?" Duff showed his light on her.

"He knocked me down pulling the hay from her hand."

"Who?"

"Your lovely Judas, that was."

Duff's light fell upon the chain. "Where's that damned."

"He got away."

DUFF went quickly to the straightened, and said: "You turned him loose!"

"What if I did?" she said.

"What if you did?" Duff

"I've worked a long time broke. Now he's running, and in one or two days of forget all I've tried to beat—if somebody doesn't show him."

"I hope somebody does," Delia said.

Duff's hand snatched at her. "You listen to me," he said. "The car's out front, hotel in Leason. You be away. Paul will come to truck in the morning with your stuff."

"Don't worry—I'll go and she said bitterly.

By the time Paul and Duff had their horses saddled, the lights of the car had disappeared. Duff paused before looking toward the dark wife had gone. He took and went into the saddle.

"Okay," he said shortly. "Rate and start riding. Make got off so far we can't call."

The three horses rode across the frost-covered cornfield.

In the barn, a spark from Delia had held worked its way up a straw stem. At the end was a frayed oat husk reached this, sputtered, a tiny flame.

Duff saw the fire glow sky. He stopped and listened. He heard the howling. He jerked his horse around him savagely. The horse struck him on the head and kicked him again, flattened out in a wild run.

Emerging from the darkness, Duff saw the white-red across the roof of the barn. The howling of the dogs. Riderless, a horse galloped his ears forward in fright, center. Wesley's horse.

Duff hit the ground running. "Wesley, wait!"

Then from the boil of the door staggered a man dragging a retching dog by the collar. The clothes suddenly burst in leasing the convulsive. Duff turned back toward the ran. "Wesley, wait!"

(To be concluded next week)

had kept desperately hoping for one more find. *We'll never be called back on three coveys.* Even until the last minute he hoped. But when the judges ordered the dogs up, the bird score was still three coveys.

"Well," Duff told Paul, heavily, as they put Judas in the dog crate, "that finishes us."

"Yes, sir," Paul answered in a sorrowful voice, "I reckon so. What we going to do now?"

"Go on back. No use to stay here."

"He ran strong," Paul suggested hopefully. "Might be they'll call him back."

"On three finds?" Duff shook his head. "Well, if they do want to call him back, they know where we'll be."

AFTER Judas' showing at Grand Junction, where he drew a bad day and found only three coveys, Delia's tongue grew sharper than ever.

"Thought he was such a great dog," she taunted.

"We had tough luck," Duff said gently. "Some time or other the breaks will begin going our way."

"Oh, sure," she said.

"Delia," Duff said, heavily, "losing out was hard enough. I don't see the point in trying to make me feel worse."

"How do you think I feel in this house

with the rich folks. You wouldn't believe you were laying your pipes to marry a plain workingman."

"Laying my pipes?"

"Listen, Delia. That trouble with Amos about Lucie—you caused it, and it wasn't any accident. I thought it was an accident until I married you and got to know you better."

Delia's face was colorless, expressionless, "You're crazy!"

"No. Not quite."

"I hate you!" she whispered.

She wheeled and went out on the front porch. She stood at the steps, breathing hard. The night was cold and clear. A frost lay upon the cornfield across the road, turning it white in the winter moonlight. Several minutes later, a cow came down the road, stopping to pull at the vines that grew on the fence. Delia leaned against the porch post, her fingers thrumming nervously against her sleeve.

She lit a cigarette, and smoked it angrily, in quick, hot puffs. Down at the barn, one of the dogs barked briefly and subsided. Delia stiffened. For a moment she was motionless, poised in sudden thought. Then she threw the cigarette into the yard.

Down at the barn, the chained dogs were bedded deep in their straw, and they raised their heads and blinked

Education in Smith County, young Gore drove 140 miles three nights a week for three years to attend law classes at the Nashville Y.M.C.A. Miss LaFon was working her way through Vanderbilt University Law School as a waitress in the coffee shop of the Andrew Jackson Hotel at night.

It was Gore's habit to go to the coffee shop for coffee before starting the long ride home late at night. They talked of law and other things, and were admitted to the bar at the same time.

So Gore, still very young, had a wife and a baby, and an important position in the governor's cabinet, when the congressman from his district prepared a statement announcing his candidacy for governor. Gore heard about it. The papers that carried the announcement also carried the announcement that Albert Gore had resigned as Commissioner of Labor and was a candidate for Congress.

The opportunity had come. But he began to doubt the wisdom of taking the step for which he had worked and waited from boyhood. He had a family to support. He had chucked the best job he ever had. He was faced with an expensive campaign of three months, and no money.

The Campaign Begins

One morning, sunrise saw him on the way to Carthage to mortgage his only possession, a small hill farm. The campaign was on. He hired what he called "a band," composed of two young men, equally proficient with fiddle, banjo and guitar, and two girls who could play the accordion and sing mountain songs.

While the band played, Candidate Gore mingled with the crowd. As the band concluded, he got out his fiddle and played while the band proceeded to the next town to repeat the performance—sometimes as many as ten or fifteen times a day. Laying down the fiddle, he discussed the burning issues of the moment to prove that he was a statesman as well as a fiddler.

His wife arranged speaking engagements. She called on every business house in each town and telephoned every person in the telephone directory inviting them to the speaking.

As returns indicating Gore's nomina-

tion trickled into Murfreesboro, all candidates had heard that the crowd began to clamor for Gore.

"As I rose to go," said the dignified old gentleman, "I laid my arm. 'Remember,' he said, 'the hour of victory that they have defeated candidates. I have come from the headquarters of picture of dejection. His This is his third attempt. will never be a candidate the end of his ambition.'"

"I lost my sense of elation. I think only of the defeat and their wives, and how I would have felt had I been them. So I spoke only of my late opponents and hoped that all of us could not have been defeated. I often wonder what I should have made of my admonition of that gentleman."

For seven months after he had been member of the House, Gore had let his speech be "nay," and occasionally was a shrewd observer.

"I saw members nibble at that came up," he said. "I saw them anywhere nibbling. I don't think I would hit hard."

While unknown to most of his leagues, he attracted national attention with a brief speech. The U.S. House had passed a bill authorizing the Federal Reserve Authority to lend \$800,000,000, amortized in sixty years. Gore's opposition had steam-rolled without trouble. Gore's opposition from Democratic speakers against the bill. They gave him time.

Democrats joined Republicans and defeated the bill. It was the nation's first setback in the spending experiment.

He sponsored legislation guaranteeing a minimum of 85 per cent for agricultural commodities for agricultural commodities, national defense and aid to the states.

"All farmers need," said Gore, "have assurance of a reasonable price for their commodities, and national pig will be fattened."

ome wit to the porch and the bog.

"Now, let this be a lesson to you," Pa said. "You ought to know better than to pick up just anything you find laying around. It may belong to somebody."

"Me?" Handsome said, shaking all over. "Is you talking to me, Mr. Morris?"

Pa handed him back the rubber boots. Handsome took them, but he let them fall to the ground.

"Take them boots down to Mr. Frank Dunn's store and tell him they didn't fit you," Pa said. "Then ask him to give you your money back."

"Me?" Handsome said, backing off. "You mean me, Mr. Morris?"

Pa nodded.

"Then when you get your money back for the boots," my old man said, "take the money and go over where the man is buying the scrap iron and tell him you've changed your mind and want the pieces back. Hand him the four dollars and then start digging in the pile and pick out all the pieces you sold him. When you get everything picked out, especially the pump handle, load them in the cart and bring them straight home. As soon as you get back you can take Mrs. Johnson the things she wants."

"You don't mean me, do you, Mr. Morris?" Handsome said. "Ain't you kind of mixed up a little. Them rubber boots ain't mine, and I—"

Pa picked up the boots and put them in Handsome's arms.

"You made me feel so ashamed of myself for buying rubber boots when it wouldn't be muddy enough to need them that I gave them to you."

"You did?" Handsome said. "When did you do all that, Mr. Morris?"

"Just a little while ago," Pa said.

"I declare, Mr. Morris," Handsome said, "I ain't never wanted rubber boots in all my life! That's one thing I never thought about!"

HANDSOME tried to give them to Pa, but my old man shoved them back at Handsome. Handsome stood trembling and trying to say something. "Stop arguing and do like I tell you," Pa said. "I'd hate to see you go to jail on a fine day like this."

He handed Handsome the reins and pushed him up into the cart. Then he picked up the boots and threw them inside.

After that he slapped Ida on the back with his hand, and she trotted out of the yard and turned down the street. Handsome went on out of sight holding to the seat with both hands and moaning so loud we could hear him until he got all the way down town.

My old man walked over to where the can of worms was and looked at it for a while. Then he picked up the can and told me to get the spade. We went around behind the shed where Handsome had dug them that morning and he emptied the can on the ground.

The worms started crawling off in every direction, but my old man got a stick and pushed them down into the hole that Handsome had dug.

"Cover them up good, son," he said. "Help them make themselves feel at home. It's too late to go fishing today, but the next time your Ma goes off to visit your Aunt Bessie, we'll do our best to make the most of it."

I covered up the hole while my old man patted the earth down tight so it would stay damp down where the worms lived until the next time we had a chance to use them.

THE END

"Sorry Boys, It's Not for Sale"

You can't blame the lucky fellow who's got a Schick Injector Razor for not selling it . . . *at any price!* He knows he'd probably be stuck without one for the rest of the war.

Though there are sufficient Schick Blades, there just aren't enough Schick Injector Razors to fill an ever increasing civilian demand. That's because war metal limitations permit us to make only enough razors for military demands.

If you—like the fortunate fellow on the left—already have a Schick Injector *be sure to take good care of it*—it is more valuable today than ever before.

No other razor will shave you so comfortably. No other razor has the automatic blade change. As a matter of fact the Schick Injector Razor contains the only basic improvements made in safety razor design in more than 40 years.

SHAVING IMPROVEMENTS EVERY MAN CAN HAVE AFTER THE WAR IS WON

LIKE AN AUTOMATIC PISTOL this razor gets into action fast. Just a pull and a push on the trigger of the Injector cartridge and out shoots the old blade and in slides a new one instantly!

TOUGH AS A COMMANDO, the Schick Blade has plenty of strength and backbone for steady vibration-free shaving. Twice as thick as an ordinary blade—3 or 4 times thicker than the paper-thin kind.

LIKE A TANK the amazing solid guide bar flattens the skin ahead of the blade, eliminating nicks and scratches. As the skin is stretched flat the whiskers pop up straight for a close, comfortable shave.

SAVE THE EMPTIES!

Don't throw away your empty Schick Injector Blade Cartridges. Give them to the Boy Scouts who are collecting them.

SCHICK INJECTOR RAZOR
MAGAZINE REPEATING RAZOR COMPANY
BRIDGEPORT, CONN.

Dollings gives Boxer Al Reid one of his famous rubs. Dollings says he's the best rubber in the world—and he isn't bragging

THIS cockeyed world is cluttered up with bald-headed barbers who have acquired chronic laryngitis from trying to wheedle customers into using their special hair tonic; dyspeptic restaurateurs who look as if a few meals at a rival's eating place would set them back on the right digestive path; and salesmen for reducing machines who haven't seen their great toes, except in a full-length mirror, for decades. But David ("Dai") Dollings, late of Swansea, Wales, is a walking advertisement for his profession. A trainer of athletes, Dai Dollings at the age of 83 is as fit as any of the numerous fighters, runners and swimmers he has conditioned and still leads a more active life than the average man half his age.

Lean and leathery, straight as a whip, his small, sharp blue eyes still able to function without artificial assistance, and his mind as keen as that of the other Welsh David, whose family name is Lloyd George, Dai Dollings is one of the physical marvels of the age. He still puts in six days a week at gymnasiums, getting fighters ready for their bouts. Several nights a week he works as a second, climbing up and down enough ring stairs in the course of a week's work to put him on top of the Empire State Building, if the steps were continuous. Until recent years, he scorned climbing through the ropes. He used to put one hand on the top strand and vault into the ring, like a boy clearing a fence. Then he broke a leg and had to resort to ducking under the ropes.

The training profession runs in Dai's family. One of his great-grandfathers was famous in his day as a trainer of fighters, race horses and greyhounds. His mother was an expert on the use of herbs for medicinal purposes. Dai himself took a crude course in anatomy when he went to work as a butcher boy at the age of 13 and helped to carve up beeves. Later he developed a rugged

physique swinging a hammer as a boilermaker's assistant.

Dai has done about everything there is to be done in the line of athletics. He was a star runner in his boyhood, a better than average swimmer, a good rugby player, a heel-and-toe walking champion, an oarsman and a bare-knuckle fighter. Many a time Dollings went up to the mountains, stripped down to the waist and fought some other Welshman, just for the sheer love of a brawl. Often there was a side bet of 200 pounds. He engaged in 30 bare-knuckle fights and 100 with boxing gloves. The only time he lost was when Morgan Crowther, another Welshman, knocked him out.

In the boxing world today, Dollings, oldest man in the business, is a legendary figure, known either by reputation or personally wherever the knuckle-dusting set gathers. His work took him to Australia, South Africa and all through Continental Europe before he

came to America and decided that this was the land for him. Ask anyone connected with boxing in Sydney, Melbourne, Cape Town, London, Glasgow, Berlin, Paris, San Francisco, Pontypridd or Manila who Dai Dollings is and the chances are you won't get a shoulder-shrug for an answer. They all know Dai and, what is more important in a business where backbiting and knifing are second nature, they all love and respect the old fellow, though he has never pulled an oral punch in discussing any of his contemporaries.

Magic in His Hands

Dollings is credited with being a miracle-performer. His taciturn nature and carefully guarded methods have helped along the legend that he performs black magic.

He has one authentic miracle to his credit. By means of massages and brine

baths, he restored life to the limbs of a nine-year-old who had been able to walk since a woman in middle life, she that she can get around human being to the Welsh who carries around in his gin many of Nature's own

Dollings, reluctant to reveal his trade secrets, was p only after much coaxing his weight-reducing met

"The principal thing to get perspirin' and then keep in'," he said. "Ow do I sor, I gives 'em an 'ot b soda. That opens the po out the pizen. Then I ma plenty of water while th the bath. It flows right system, like water flus takin' all the rubbish through the pores. No f ever 'as to dry out. 'E c water 'e wants while 'e's when 'e's eatin' or before

At a single rubbing, ously expert hands can r off the human frame.

"I usually rubs 'em f but I prefers an hour," sa fessor. "I rubs in two di same time, like this." (I a series of fast passes t like a magician palmin clubs.)

"You must 'ave a soi good rub. A bed won't do too much. I can rub all c tired because I uses only me body. I'm the best wurruld."

Dai isn't bragging. H what he believes to be sel Among the Welsh won acles is the feat of makin his own aged noggin.

"I made a stody of (Continued on p

Dai Dollings, 83-year-old trainer of athletes, lets you in on some of his training secrets

PHOTOGRAPHED FOR COLLIER'S BY IFOR THOMAS

Ten thousand to One

NEVER before in all history has so much depended on the *man behind the man* behind the gun. His battle lines are production lines; his weapons are the tools of his trade. Quotas be damned; whatever quantities are asked he must strive to exceed. His is the colossal task of changing "too little and too late" to "an abundance and on time."

There is an exaltation in mortal combat that drives men to heroic deeds. Medals of honor and a nation's gratitude justly reward their courage. For every hero so honored there are 10,000 unsung heroes in the battle of production. They are the men and women who toil without the spur of conflict in absolute devotion to freedom's cause. They are the *builders* of victory.

Final triumph will be won by the side that works hardest and produces the most. If all America matches the unrelenting efforts of the aircraft industry there can be no doubt which side that will be. Are your sleeves rolled up? Have you the right to consider yourself one of the ten thousand to one?

PRESIDENT, DOUGLAS AIRCRAFT CO.

The sun is the source of all energy...The energy of sunshine is crystallized in Dextrose sugar.

Life begins on Dextrose Sugar

THE mystery of Life is embodied in the birth of a baby. One thing is obvious from the moment of conception—life is expressed in terms of movement!

For the body is a miraculous machine. Yet it operates in much the same way as do the wonderful machines man has created. Fuel in the form of food is “burned” within the body to provide all the energy mankind expends in activity.

The chief fuel for bodily activity is a simple sugar called *Dextrose*. Dextrose is formed in Nature by the action of sunlight upon plant life. Human life depends on it for energy.

Much of the driving power of the body comes from Dextrose. It is added in some form to the feeding formulas of babies

and to the diets of children. Throughout life, it is the one sugar the body uses *directly* for energy.

Many of America's finest foods now contain Dextrose. Food processors have found that this pure white, crystalline sugar generally improves the quality, flavor, texture and food value of their products. Whenever you buy foods labeled “*Enriched with Dextrose*”, you may be assured of added enjoyment and genuine food-energy value.

★ *Dextrose is an ALL-American sugar, derived from American corn, refined in American factories, distributed by American companies.*

CORN PRODUCTS REFINING CO.
One of the Producers of Pure Dextrose Sugar

what?" said.

"Well, they are no good," he said.
"Rotten equipment. Poor training."

"Oh, you are drunk," I said. "What
do you know about Corap's army? And
then, they are only reserves anyway."

André looked over his glass. He
looked annoyed and kind of like an old
cart horse.

"You'll see," he said with his drunken
singing voice. "But don't say I haven't
told it . . ."

"Oh, forget it!" I said. Denise had
served Prokosh's drink as the last one.
Now she stood before him and said
nothing and smiled. The silence be-
tween them was much louder than
André's voice; it filled my eardrums
with a deafening din.

"Hello," I said. It probably sounded
very silly.

"Tonight," said Denise.

"Pardon?" said Prokosh. He said it
politely and as if slightly amused.

"Tonight," said Denise. "I kiss you
goodby when you go. All four of you."

Boche teaches you how to wash your
dirty faces."

One moment there was nothing, and
the next moment the whole world con-
sisted of a burning, flashing pain. Pro-
kosh had hit me over the forehead with
the flap of his silly little riding stick. I
ran for my bayonet, but Denise was
quicker. She opened the door and threw
the weapon with a wide fling out into
the night.

"There," she hissed. "Run after your
butcher knife. Run and don't let me
see your face again!"

I went out. First I could not find my
bayonet, but after a few minutes I found
it and strapped it on. I did not go back.

AFTER a few days we went back to the
line. There was no change out here.
Sometimes the Boches made a little
raid, just to keep the men busy, and
sometimes we made a raid, although
not so often. We did not care to give
orders like that. The men could have

the butt of his rifle which meant that he
had killed a man. I heard that he met
Denise whenever he was off duty.

I could have put him on trial, and the
outcome would have been a cinch. But
I did not like the idea. My business
with him was strictly private, and I
would settle it somehow. I was pretty
sure about that, and I even had a hunch
that it would be quite soon.

It came not so soon as I thought, to
be sure, but at last I did meet him in
the open. It was in the first weeks of
the spring, a glorious day with gentle
winds and a few high clouds; one of
those days that make you unhappy in a
certain way, because they are so perfect,
and life is so dark and so complicated.
A medical officer once told me that the
number of suicides goes up in early
spring, and I thought of that when I
started out. Prokosh had made a
sortie to find out what body of troops
was on the other side and, if possible, to
bring in a prisoner with his pay book
and identification tag. There was some
shifting behind the lines of the Boche,
and the division staff was dying to know
what it was all about. They always
played grand strategy when they got
tired of their drinking bouts.

Anyway, Prokosh did not come back
for quite a while, and the lieutenant said
that maybe somebody had better go
and have a look. It was not an order,
for the lieutenant very seldom gave
proper orders. He just said this or that
ought to be done, and there was always
more than one man to do it. He was
a mere kid, right from the military
school and so brave that it was almost
a sin. If he did not find anybody to do
things he did them himself, but he found
somebody for almost anything. With a
few thousand like him we could have
won the war, I believe.

THIS time I felt like a little walk, and
so I said yes, I would look around, and
checked out. I passed two listening
posts, and then I was in no man's land.
It looked like any other land, only the
air was somehow thinner, and one had
the feeling that there were eyes on you
all the time. Quite a funny feeling.
The sun was quite hot for the season,
and my invisible scar burnt as I marched
on. Tough break, I thought, if the Hun
should liquidate my friend Prokosh, and
I would stand like a dope with empty
hands. I prayed that he would live.

When I reached the ridge of a little
hill I saw him. He trotted along a nar-
row footpath down below, about eight
hundred feet off, the rifle dangling from
his hand in the way he used to carry his
stick. He did not have a prisoner with
him—maybe he had killed a German
instead and taken his papers.

I went down on one knee and took
aim. I had him on my gun sight, nicely
and squarely. It was like target prac-
tice with a recruit, one, two, three, calm
and steady, don't pull her too fast.

I did not pull her at all, for that
matter. I got up on my feet. My fore-
head was full of little beads of sweat. I
had a feeling of being dirty all over, as
you may have felt after a disgraceful
night in bad company.

"Well," I said to myself, "that's how
it is. Better put it off a little. The
Polack won't run away. You'll kill the
swine, sure enough you'll kill him. But
kill him when he sees you. It's no fun
when he doesn't see you."

When he marched up to me I came
out of my cover. He stopped short and
did not know what to do. He looked
very silly.

"The lieutenant wants to see you."

She said "all four of you" but she
looked only at Prokosh.

"We shall be very happy," said Pro-
kosh. He spoke his maddening high-
school French. He still looked amused.

"I like the soldiers," said Denise. Her
voice was a little dreamy. "I like them
because their life is dangerous, and be-
cause they are scared and yet brave."

SHE ran her finger playfully up the
buttons of his tunic. It always made
me crazy when she did that to me, but
it made me still crazier when she did it
to somebody else.

"Cut it out," I said. I did not feel
drunk, and I don't think I was. Villard
broke into a stupid laughter.

"Shut up," I shouted. "Stand at atten-
tion when you speak to your superior."

Villard kept on laughing. His eyes
were all wet and small, and tiny tears
rolled down the wrinkles of his face. I
stepped up to him and struck him be-
tween the eyes. He dropped with a
little funny sound like a killed pig. He
did not laugh any more. It was awfully
quiet in the room, and into the silence
rang a very distant single shot. Then
Corporal Prokosh said without raising
his voice:

"Sergeant, you've behaved like a
heel."

"Shut your trap," I said. "Your dirty
trap. You Polack. You swine. All that
stinky war business wouldn't have
started if it weren't for you Polacks
and Slovaks. It's about time that the

refused, some sections really had, and
then we had the mess of reporting and
court-martial. There were a lot of rumors
about generals who had conspired and
officers who had been shot. We didn't
believe it, and then again we did.

We did not care, in fact. We drank
our wine and played pontoon. Cécile
wrote from home that milk and eggs had
become very scarce. Wine was still
to be had, but it had gone up thirty-five
centimes the liter. She did not mention
her cousin from Brest any more. Prob-
ably they kept house like husband and
wife now, and there was nothing excit-
ing left to it. All her sentences sounded
like as many lies.

The bruise on my forehead disap-
peared very soon. But the funny part
about it was that the pain did not dis-
appear. It hurt as much as in the first
minute, not more, but as much. Time
and again I looked into a glass to see if
the red mark really had gone. There
was not even a scar. But it hurt. Some
Czechoslovak!

I did not avoid seeing him. There he
was, a little unobtrusive man, small,
wiry, with black hair and a tiny black
moustache. He did not carry his stick
any more; maybe he had given it to
Denise as a souvenir. But he still made
his risky little excursions as he used to
do, alone or with one or two men. Some-
times he brought back a scrap of infor-
mation or a young German soldier who
looked scared and refused to talk.
Sometimes he had only a new notch in

QUALITY BEYOND QUESTION SINCE 1864

corporal. I said, and we went back to the line. Neither of us spoke a word, and I marched in front of him all the way, just in case. I felt tired and exhausted. I had to control myself not to sicken like a boy who has smoked his first cigar.

NOW, it's a funny thing and hard to believe. But it is a fact that from that day on, the spot on my forehead did not hurt any more. I first could not believe it, I was bewildered and called myself names. But you simply can't tell yourself that you feel a pain where there is no pain.

Sometimes I even regretted that I had not shot while the shooting was good and safe. Sometimes I felt like a sore spot in the clean face of the army; and on some other days I was close to going out of my mind or to reporting myself to the colonel, which was about the same, after all.

"It's a strange world," I said to myself. "You, Gaston Daru, for one," I said, "you wouldn't care a hoot about bumping off a guy in a German uniform, or two or five or a dozen for that matter. You would only feel like a big shot. And they are quite nice and polite fellows, maybe, although they most probably stink of sauerkraut and beer. But when it comes to settling accounts with a dirty Polack, you shake in your shoes like a sissy, only because he's wearing a French uniform."

I could not understand it. Once we had sworn loyalty to the tricolor; it was long, long ago, and I had almost forgotten what it was all about. And it was not that, of course. It was simply a childish habit of the mind. But I couldn't get over it.

Once or twice I started talking to André about the whole business. He was a learned man, after all, and he ought to know. But I was afraid he would smell a rat, and so I changed over to something else. He was drunk most of the time anyway.

As to Prokosh, he still had not bitten the dust, and I still hated the sight of him. Or perhaps I only started to hate him now. It was like a woman who has lost her child. She can't cry for grief, and when she starts crying, the worst of it is over. I really did not hate the Slovak before that, or maybe my hatred had been so much part of me that I had no feeling of it. Now I felt the very thought of him like a pain in the neck. Never mind, I thought. I'll kill the beggar sooner or later, or at least plant a nice souvenir round his snout.

But sometimes I thought of other things too, and quite often of Cécile. Her last letters were sober, sensible and friendly. She had not been a bad wife as women go, after all. And the kids must have grown a little. I began to count the weeks again. There were about twenty to go to my next leave. Twenty weeks. A long time. A very long time.

I NEVER got this leave, for that matter. The Boche broke into Holland, and we were hastily entrained to meet him somewhere in Flanders; on the plains where generations of our young men had spilled their blood, twenty years ago, and hundreds of years ago, and ever since time has begun. That's why they are so fertile and overflowing with grain and flowers.

When we got off the trains, the roads were jammed with carts and trucks and refugees and corpses and everything that could roll or walk or creep or die. It was a gruesome sight, and the German fliers peppered into the marmelade like rain from a cloudburst. We had been sent to the front, but there was no front at all, only screaming and running people down below, and screaming and roaring birds of hell overhead; all of it

between a sheet of gray dust and a glaring and pitiless sky. It was like an enormous three-decker sandwich, made of human flesh. The officers disappeared one by one; only our little lieutenant stayed on the job, and he commanded soon a whole body of troops, although you couldn't tell whether it was a battalion or a regiment, because there were no such things left as battalions and regiments. It was a horrible mess.

We marched in a northerly direction. We shot at everything we saw, but we didn't see very much to shoot at. The planes mowed down soldiers like ninepins. Somewhere to our right the tanks had broken through. In front of us were the Britishers instead of the Germans, and in our rear the Nazi tanks instead of our supply trucks. Our march became a flight, and nobody knew where and why.

Near the coast we made our last stand. Long formations of Tommies passed us. It was the first time I saw them. They laughed and waved to us, full of mud and blood as they were, and they seemed to take the whole affair as a joke. We waved back, but we didn't feel like laughing. The sappers had prepared sort of field fortifications in a wide circle around the town. It was not much better than trenches with sand bags and some light artillery. The pride of the whole setup was a few antitank guns, and when I say few I mean it.

We had to hold the position at any price, and we settled down and held it. It was better than nothing, after all, and still better that we saw the Huns now at last. They came in clusters behind their tanks, green troops, apparently, and a pleasure to shoot at. It was a riot of noise: M.G.'s, artillery, hand grenades, motors and some deep-voiced big rifles from the sea. There were planes too, and quite a few of them; it was practically more planes than sky when you looked up. They emptied their vicious bullets into our trenches. We hated them for it and tried to get them by machine-gun fire. They probably told it back home as a good joke.

It must have been one of these slugs that got me. First I felt nothing but a slight pang on the right side of my chest, just about the spot where I kept the handbook for noncommissioned officers of the French army. The book did not do me any good; the slug went clean through it. When I took it out it was full of blood. I coughed and staggered slightly. The noise of the battle became a distant, continuous roar like water gushing from a broken main. Then I collapsed.

When I came to I was on the sea. I was lying on the deck planks of a little yacht or motorboat, and I felt the throbbing of the little engine right through the thick coat I lay upon. It was evening. The sky overhead was pale blue and clear like glass, but the coast far behind hid under thick layers

of yellowish smoke, broiling flames. I had a nas chest, that much was stretched my hand out I of gauze.

I tried to get up and look over the deck was jammed with poilus. Some of them were the railing and staring black shadows before the went on over there. Other over the deck in all positions and exhaustion, and all like a gang of hoodlums after a brawl in a bad place a husky French lance corporal, he behaved as if I Probably shell shock. At a short and paunchy g pants and black bobtail balancing on the back of looked very foolish. A paced the deck up and down stopped by me.

"Hello," he said, "coming?"

"Yes," I said. "What? Where are we going?"

"We are going to England."

We have evacuated Dunkirk, the men are already on the still shuttling back and forth bottles, to get the remainder of a job."

"Seems I am wounded."

"You are wounded all right. Shot clean through the chest. Never mind. The doctor is up nicely in Harley Street."

"What friend?"

"Fellow from your section, fellow, I should say. Caught in the jam in the good way, on his back like a sack through the surf to the corporal. Come over. Round."

PROKOSH came over. He before me and smiled at me the first time I had seen him.

"You," I said weakly.

"It just happened so," he said apologetically.

"I did not think you would do that."

"Well," he said, "in the trenches are all comrades in a way."

"You're a dope," I said. "You a poke in the face coming to you know?"

"And then," he said as he had heard me, "it's always working a good soldier who kills Boche again."

"So you think I am a Boche?"

"Yes," he said. "You are a guy, but you're a good guy. You don't know it."

I grunted and rolled over on my side. His accent still made me closed my eyes and pretended to be asleep. The little ship rolled gently on the ground swell, and then I

In public buildings at all over London there sig telling us what to do. er ad them. And if we do, hey say. No one actu- emstrated to us how to g t incendiaries." ow the West Coast I found

civil defense precautions intelligently handled. Often there were minor conflicts between civil and military authorities; San Francisco was one such city. But minor differences are as much a part of the American scene as is whole-wheat bread or bacon and eggs. They are not symbolic of anything except our innate love of arguing, making speeches and saying, "I told you so."

We have been at war five months. Two months after France fell six million of us were complacently sitting in London saying, "They'll never bomb us."

The enemy was only twenty minutes' flying time away but we laughed at the warnings of the military and civil authorities. When we got our baptism of night bombing on September 7, 1940, we were quite unprepared for it. It wasn't the fault of the authorities who had done everything possible to get us ready for it. We, in truth, were complacent and unaware. I found an entirely different state of mind on the West Coast of the United States.

R.A.F. pilots there, either to test new aircraft or to instruct, agreed with me that people on the West Coast were far more war-minded, far better prepared mentally and practically than were the people of London at the same stage of war.

The people of Seattle, Portland, San Francisco, Los Angeles, Hollywood are not saying, "They'll never bomb us." Soberly, intelligently they are going ahead on the assumption that sooner or later Japanese bombers will be over and the only sensible thing to do is to take out insurance to minimize possible losses.

Insurance against bombing is very inexpensive; it consists of alert, trained civilian defense organizations taking

suggestions and orders, without grumbling, from military authorities who know their business.

In Hollywood, that much maligned community, picture people sitting around Dave Chasen's or Mike Romanoff's restaurant were laughing a little bit at the show put on at the Warner Brothers studio. The Brothers Warner built bomb shelters large enough to accommodate all employees should an air raid come, either by day or by night. They held a rehearsal and, of course, had cameramen stationed all over to record for posterity the rush of employees, stars, technical men and executives toward the bomb shelters. The next day the pictures duly appeared in the papers.

I didn't laugh. I thought of the lives which would have been saved in Coventry had that sad city built shelters such as those I saw in the Burbank studios. I thought of the dead I'd seen in defenseless Southampton and in unprepared Plymouth and I could only mentally congratulate the Warner Brothers for their farsightedness and thoroughness in preparing for the worst. Other studios followed suit. The aircraft factories in the Los Angeles district have blast walls and shelters which would put the factories of Britain and Moscow to shame. Complacency? Unawareness? Maybe I'm a bum reporter but I could not find it on the West Coast.

In San Francisco I walked into the office of the Chronicle. I saw a telegram on the bulletin board in the city room. It was from the publisher of the Chronicle, now Lt. Commander Paul Smith, who works for Secretary Knox. The telegram was addressed to the staff of the Chronicle. Some of it might bear repetition here.

"Avoid being Pollyanna in heads and banners," it said in terse newspaper style. "Editorials and cartoons should strive for stark realism. Needn't be Gloomy Gus nor defeatist about ultimate outcome but war is going to be far tougher than anyone yet suspecting. Victory will exact tremendous price. Do your best to toughen our community for news ahead. Don't overplay our minor victories nor understate enemy position. . . . Cost of victory in blood, sweat, toil and tears is going to be colossal. This cannot be overemphasized. You are doing a good job. Keep it up and try not to fall into weaknesses of so much of the press today, such as blind Pollyannism or on the other hand blind defeatism. To win we must not only be prepared to give all, but actually to give all. Regards. Paul."

The Truth—Even if it Hurts

I never met Lt. Commander Paul Smith but he makes a lot of sense to me. He seems to be one publisher who isn't sitting in his office interviewing himself, thinking of new ways to criticize the government and our war effort. To me he seems to be a realist who knows we're in for a tough fight and who has confidence enough in the public (that's you and me) to use his newspaper to tell us the truth. To me, Paul Smith represents the state of mind of the typical American of today. Is that complacency he is preaching? If it is, I'm nuts.

Now take College Station, Texas. I've got to be careful when I talk about Texas. During the past ten years I've worked in every country in Europe. And been everywhere, but never in Texas. I just came from spending two weeks there and I walked out of the state

GUMS BLEED A LITTLE ?

then beware — it may be

GINGIVITIS

4 OUT OF 5 of you may contract it!

If your gums bleed a tiny bit when you brush your teeth or are tender to touch, *don't take chances!* This may be the start of Gingivitis—a mild gum inflammation which may strike at 4 out of 5 people.

If not combated—Gingivitis often leads to dreaded Pyorrhea, with its loosened teeth, which only your dentist can help. See him every 3 months. Then at home there's—

No Better Way To Help Guard Against Gingivitis

Massage your gums and brush teeth twice daily with Forhan's—the toothpaste known *first* for massaging gums to be firmer—more able to ward off infection and for cleaning teeth to their natural sparkling beauty.

Forhan's—formula of Dr. R. J. Forhan—even helps remove acid film that so often starts tooth decay. So start using Forhan's *to-day!* At all drug and dept. stores.

ARLINGTON MILLS, Lawrence, Mass.

laughing. I was laughing at Hitler and Hirohito and at the defeatists and enemies within our own borders. I was laughing at their insolence in thinking that they could ever conquer our country. Texas affects you like that. Texas didn't wait to be stabbed in the back. During the past two years, I've met kids from Texas on British destroyers in the Channel and in the North Atlantic; flying with R.A.F. bomber groups and with our own magnificent Eagle Squadron, No. 71, the first to go into combat; flying Curtiss-Wright P-40's in Libya, and I met them all places on the sorely beleaguered island of Malta in the Mediterranean. I'd never been in Texas before but I'd met Texans all right.

They sing a song down there, The Eyes of Texas are Upon You. Texas, putting forth her hundred-per-cent war effort intelligently, viciously, with hatred in her heart against those who would snap Uncle Sam's suspenders, has her eyes on the rest of us. If we lag in our war effort, Texas is liable to get mad and fight the war alone. Texas is like that. When I die I want to go to Texas.

Let's get back to College Station, Texas. You probably never heard of the place unless you're a football fan. There's nothing there but a college. College Station is the home of Texas A. and M., the great Texas Aggies. I doubt whether they'll have much of a football team there next fall. Those 4,500 students are too interested in learning ways and means of killing Japs and Germans to bother with football. They were just winding up spring football practice when I was there and Coach Norton was mighty pleased.

"They'll make great soldiers," he gloated, watching his tall, lean boys run to the showers. "Maybe football will help them a little."

"What kind of a team will you have next year?" I asked him.

"There's only one team that counts now," he said a little reproachfully. "That's America. A lot of our boys will have qualified for service by the fall. They're wonderful boys and they'll make great soldiers."

I sat up late with a bunch of those cadets at Texas A. and M. They are all cadets at Texas A. and M. Every one of those 4,500 boys will be in one service or another within a short time. I sat up with them and talked and listened to them and it was exciting. This is the generation that is going to win the war for us. It's a good generation. They've had their little fun with girls and with juke boxes and with a little beer on the side and with football and junior proms. But they were just killing time doing that and now they're Americans, and their country has said, "We need a little help, boys," and they're quite willing and very anxious and soon will be technically trained in the various ways of knocking the brains out of those silly Germans and Japs.

Young America is Ready

When you return from the war zone, you get asked an awful lot of fool questions. People ask you, "What is the truth about the Hess case?" They ask (as though two million Russians hadn't already proved it), "Can we trust the Russians?" They ask, "Are the British one hundred per cent behind their war effort?" (As though thousands and thousands of British civilians hadn't proved that too.) But those men from Texas A. and M. didn't ask questions like that. We sat for many hours and they asked, "What weapon do the British Commandos use? How do they sneak in places and kill Germans without rousing the whole German army?" I knew the answer to that and when I told them of the knives and the beautifully effective methods used by the Commandos, their

eyes glistened and their young hands clenched and you knew everything was all right with young America.

I could go on for many many thousands of words telling of my two-month quest for unawareness and complacency. But, so help me, I couldn't find it. So instead of a sensational story, all I can offer is an honest story.

I was in a gambling place in Nevada, in one of those small towns that are still "Wild West." I played a little roulette and shot a little craps and drank a little red liquor with the boss, who worked on a ranch in the fall and the summer.

"A lot of people think we don't take this war serious," the tall cowboy-gambler drawled. "Lemme tell you, mister, maybe in the beginning we didn't. Maybe England seemed a long way off and, hell, we hardly ever heard of them slap-happy Jappies. But take a look at the casualty list, friend. You'll find plenty of names on it from Nevada and Idaho and from hereabouts. That's brought England and Russia pretty close to us. We don't like our boys killed. We're pretty mad about it and from now on we're taking orders from the Boss. Whatever he says goes. We don't care what taxes he makes us pay. That dough is all going to kill Japs and Heinies, ain't it?"

It was that night I met the Negro porter. He brought me a drink and said, "Boss, ain't you low on cigarettes?"

I said, "Bring me another pack."

He brought me another pack and then picked up my old package. "Mister, you ain't got but one cigarette left in this old pack. Can I leave the cigarette here and take the tin foil outa the ol' pack?"

"Sure," I told him. "What do you want with it?"

"Well," he was a little embarrassed, "us porters got a kinda competition to see who can collect the most tin foil. So far this month I collect twenty-three pounds. The gov'ment wants tin foil so we grab all the cigarette packages we can find. I guess they make airplanes or somethin' outa the tin foil—"

Yeah, man, these here Americans are getting mad. A little punch-drunk after two months of one-night stands I scurried to Sun Valley, Idaho, to fall down mountains for a week on skis before the snow melted. One doesn't expect a sense of war consciousness at a resort like Sun

Valley but, surprisingly, Turner, deputy sheriff of Idaho, had organized a mandos from among t near-by Ketchum and St idea came from gnarl Spike Spackman, ex-ro and maestro of Western Valley. Spackman, Lou hotel man, and Grant Pacific Railroad spec Ketchum, act as the she This small group of th organized is well armed three hundred rounds of well equipped (the Uni nated trucks, automobile an expert skier, horsema rifle shot. I saw them i don't want any trouble v

the automobile industry in less
 ear than a manner of speak-
 ed its ack on plumbing and
 expert piano tuning. Today
 automobile industry is making the
 its ever side anywhere. Ninety-
 cent oil tank production is
 andled r companies which a
 o were making automobiles—
 e same workmen to do the job.
 ur plant I heard a man say in

Detroit, "we switched men from paint-
 ing automobile bodies to welding in ten
 days. They're good welders, too."

The automobile industry tossed away
 and scrapped thirty-four years of mass
 production and started all over again.
 One plant ordered to make guns had to
 devise 3,500 operations of manufacture,
 create 6,000 complicated tools and pro-
 cure more than 1,500 specialized ma-
 chines before it could start producing.
 That was ten months ago. Today the
 plant is exactly a year ahead of sched-
 uled production.

Consider the machine gun. The basic
 design of the machine gun and the pro-
 cess of manufacturing it had not changed
 since the last war. There was no reason
 why standard manufacturers should
 have changed either design or manufac-
 turing methods. The demand was slight,
 the result was acceptable and there was
 no reason for any short cuts in manufac-
 ture. Then that comfortable old world
 we once knew came to an end and the
 automobile industry was given the job
 of making guns. At first they made
 them as they had always been made but
 bright young men from technical col-
 leges and veteran foremen with years of
 practical experience in making things
 kept figuring out time-saving devices.
 The industry pooled its brains and if an
 engineer at one plant thought of some-
 thing new, it would be all over the in-
 dustry the next day.

Invention Marches On

Following this plan, someone thought
 out a conveyer system that would carry
 the gun barrel from machine to ma-
 chine, thus obviating the need for slow
 hand carting. Sharp metal edges had
 always been filed down by hand. Some-
 one dreamed up the idea of applying
 what is known in the industry as "tum-
 bling" (rotating parts in a drum together
 with oil, abrasive and metal slugs) and
 what formerly took hours now took sec-
 onds. Someone noticed that holes in the
 gun barrel cover were elliptical. This
 meant that they had to be machined, a
 slow process. The inquiring soul asked
 if the gun would be just as effective if
 the holes were round. He was told that
 it would. Now they are made round and
 one machine punches ten at a time. An-
 other punches all the holes on flat sheet
 steel, then rolls it instead of using tube
 steel.

Take the matter of shells. The auto-
 mobile companies are turning them out
 the way they used to turn out carbu-
 retors. They've streamlined the ancient
 business of shell making. Today man-
 ual handling is reduced to an absolute
 minimum. The steel bar stock is first
 moved from freight cars to bins by elec-
 tro-magnets, and then roller conveyers
 carry the shell to its ultimate destina-
 tion—a freight car headed toward
 some convoy port.

Six months ago the automobile indus-
 try couldn't spell Oerlikon. Now this
 marvelous gun first ordered by the Brit-
 ish from a Swiss plant is rolling off the
 assembly lines of Detroit. So is the
 20 mm. aircraft cannon, and tanks are
 crawling out of factory entrances as fast
 as shiny automobiles once did.

There may be something wrong with
 this country of ours but I couldn't find it
 —and I tried. Of course, there's some
 confusion, duplication of effort, blun-
 dering, misapplied energy but that is to
 be expected. Our country is now en-
 gaged in a brand-new business—the
 business of murder. That's all that war
 is. Hitler and Hirohito are professionals.
 We'll catch up to them soon. It won't
 be long. Look back over the 153 years
 of our country's life. Very often the
 country was in grave danger but always
 giants entered to lead it out of peril.
 There are still giants in the land.

MORE MILES PER QUART

of
OIL

SAVE OIL

If you drive with dirty engine oil, you buy *more* oil than you should—and, *more often*. The reason, in rather technical language, is this: dirt clogs the oil control piston rings, and they cease to perform their function as oil economizers.

One sure cure for this kind of expense is a new AC Oil Filter Renewal Element. It not only keeps oil clean, it also removes *discoloration*. Consequently, you can safely continue to drive as long as the AC Oil Test Pad (used by your AC dealer) shows that your oil is clear. Thus, you protect your engine, keep it on the job, and get more miles per quart of oil.

SEE THAT YOUR OIL IS CLEAN

Have your oil checked for dirt with an AC Oil Test Pad

Whenever you have your oil checked, ask the attendant to use an AC Oil Test Pad to wipe your gauge stick.

Then, look at the Test Pad. The spot on it will tell you whether there's dirt in your oil.

AC Oil Filters Get the Dirt

For engines not already equipped, there's a complete AC Oil Filter which your dealer can install in a short time.

LOOK FOR THIS SIGN
There's one near you

NOTE: Follow the recommendation of your service man as to when oil should be changed.

AC SPARK PLUG DIVISION
General Motors Corporation

as we shall see, eventually all over the world.

General Olds, the man who organized it, holds the rating of Command Pilot, Military Airplane Pilot and Combat Observer, with more than 5,000 hours' flying time to his credit. It was he, in 1938 and later, who led the long-range flights to South America, proving that, in addition to good will, we had planes that could go places with big loads—the four-engine bombers. For years, this type of plane has been Olds' special baby. In his new command, this knowledge was precisely what was needed—particularly since he was soon called upon to run a transatlantic air line.

This service was started last summer in order to get our diplomats to and from Europe; no small assignment, even in ordinary times. Under war conditions, with use of radio restricted, weather reports uncertain or unobtainable, and hostile aircraft to contend with, it was a formidable job. Let's look at the first trip: This was undertaken on July 1st, one month after the AFFC had been organized. It was a special mission to U. K. (The United Kingdom). The pilot was Colonel Caleb V. Haynes, the man who broke the altitude record for Flying Fortresses with full load at Dayton in 1939.

Extraordinary Achievement

He was also awarded the Distinguished Flying Cross in 1939 for piloting a bomber from Langley Field, Virginia, to Santiago, Chile, on a mercy flight with Red Cross supplies for earthquake victims. In February, 1942, he was awarded the oak-leaf cluster for "extraordinary achievement" in flying a four-engine bomber over three continents on a "secret mission" last fall.

The plane left Bolling Field for Canada, then took off for U. K. As it neared the British Isles, bad flying weather was encountered, with ceilings too low for safe landing at the scheduled airdrome. Colonel Haynes tried to get other airdromes by radio and failed. For two and a half hours the ship circled the British Isles looking for a place to land. No luck. Finally Colonel Haynes radioed the original airdrome: "We are coming in under the overcast." A message came back immediately: "The ceiling is 600 feet and you are on your own."

The rest of the story is in Colonel Haynes' own words from his report to headquarters: "I went out for three minutes, turned and let down to 550 feet, and then landed. This was the initial trip of the Atlantic Ferrying Command."

On the way back, at least one third of the trip was flown blind. Ice was encountered at 12,000 feet, and part of the trip had to be made at 22,000 feet.

The files in Washington are full of such laconic reports that give a quick glimpse of the moments or hours when the life of a plane and its crew and the success of a mission hung upon the nerve, experience and physical endurance of some pilot. For instance:

On August 29, 1941, Lieutenant W. N. Vickers ran into a tornado over Wilmington, Delaware. He was flying a four-engine bomber on his way back to Washington. His report indicates the tremendous force of the storm; with all power off and his landing gear down he was unable to lose altitude. This is the way he described it: "Encountered difficult weather at Boston but got okays from Newark and Philadelphia. Toward Philadelphia, weather became more

Air Line to Everywhere

Continued from page 19

turbulent . . . later became so violent that plane was tossed up to 13,000 feet and back down to 7,000 feet . . . with all four engines idling and landing gear down. Lasted twenty minutes. Airplane could not be forced to lower altitudes. So rough that radio headsets were thrown off the heads of the radio operator, pilot and copilot and could not be kept in position.

"Not even the Philadelphia control tower had knowledge of the storm one minute before the plane encountered it. After twenty minutes the plane came out of it okay and made landing at Bolling Field."

Lieutenant Vickers, by the way, is one of the few old-timers in the Air Forces with a background of barnstorming before he entered the service. One of his jobs now is to test planes for the AFFC.

On October 8th, Lieutenant James W. Anderson, Jr., established a record for which there is no place in the books: he kept his plane flying successfully despite a load of several tons of ice.

This happened on a trip back from U. K. It was pitch-black when he ran into the ice storm. His radio had been silenced by the aurora borealis; the course had to be set by dead reckoning. Many minutes later when they could take bearings, the crew discovered they had been carried far north into Labrador.

The pilot reported: "An hour and a half from Montreal ran into severe area of icing which came down in the form of large, supercooled raindrops and formed a hard, clear ice on the surface of the aircraft—two to three inches of ice—adding considerable weight to the plane."

"Whether due to weight of ice alone, skin friction, or a direct distortion of surfaces, the aircraft takes on a very sluggish reaction to changes in the controls, and there is a sensation of traveling down a river in a heavily loaded canoe. In other words, it feels as if you have control, but the ship's reaction is very slow."

The report goes on to say that these tons of ice did not seriously affect the plane's power. The de-icer boots were

able to shake off a good and the plane came in safely.

But the North Atlantic one of the routes that the Command was busy picking up. General Brett wanted to was flown there by America. That route has been full since then. However, peacetime job of the Air Command was the mission to Moscow. That was one of the two planes that went around the world.

A Well-Earned

The crews were assembled and made on less than a week. Two ships left Bolling Field, Canada, and from there, U. K. time, so far. But from U. K. the nonstop up to the Arctic down to Moscow where they delivered the mission. It was a magnificent flight. They have thought well of it, for the crews a breakfast consisting of, Crutcher, Crimean wine, cabbage, tomato-and-onion caviar—after which even if he'd like a beefsteak. Oumansky acted as interpreter. "There was fun all around."

After waiting for the mission, the two ships took on different routes. Ship Number O by Major Louis T. O'Connell, around the Mediterranean thence through Africa to the West Coast, to Brazil, Portugal straight to Washington. Some trouble with radio tions in Africa. Reich, accustomed to the excellent ports of the Russians; puzzled when he was uncertain African station bearings. He came down and discovered that the radio natives and that he had an old native custom—celebrating the festival month of October drinking all night and singing all day.

dividend Lend-Lease be me evident on Decem- e A Forces were faced with tagging jobs. They needed m; they needed precise e AFC was able to n as it has been supplying inc. No amount of money

could have brought these things into existence overnight.

It was on that day, too, that the stream of bombers crossing the continent from West to East suddenly reversed its direction. The ships on the East Coast waiting to hop to U. K. were ordered back and started on their way to Hawaii, Australia and the Indies. The Ferrying Command is able to make sudden changes like this because it has been kept completely liquid. From the start, part of its job has been to prepare for unexpected assignments. Now they are coming thick and fast. The AFFC gets ready for them by running an intelligence service of its own. You can't start ships off for a flight halfway round the world without accurate knowledge of what they're going to run into. When accurate knowledge is impossible the next best thing is expert foresight based on the latest available reports.

Reporting the Flight

For these reports the AFFC prefers to rely on its own men—control officers abroad and crews of ships that come back. An hour after a ship lands, reports from each member of its crew are on the desk of the chief of the Intelligence Section. Digests are made at once, and these supplement the short-wave reports and give headquarters detailed information that could not be transmitted any other way.

On April 7th, Brigadier General Olds relinquished the command of the AFFC to Brigadier General Harold Lee George, a cavalry officer in the last war who now holds the flying ratings of Command Pilot and Command Observer.

The insignia of the Air Forces Ferrying Command represents the delivery of aircraft from West to East. Luckily the Command itself is less rigid. As we have seen, it can reverse direction as quickly as you can put a plane through a 180° turn. If the theater of war changes tomorrow the AFFC will be ready—with pilots who know the new routes or, if there aren't any, are ready to make them. You can almost hear them say as they spit on their hands, "Fine, fine! Just what we didn't expect. We're all set!"

solo time and the instructor was sitting behind him, more for the ride than anything. Suddenly, well up in a wide circle for a landing, the plane went into a spin. Now, in such a case the instructor is supposed to yell "Jump!" and without any exchange of diagrams or explanatory notes both the instructor and pilot bail out. In this particular case the instructor yelled, and jumped; but the student, not having heard the order, just kept right on maneuvering until he brought the plane out of its spin and onto the ground. It was a good landing and the student was pleased. He looked around and grinned. Then he almost fainted. . . . For several days thereafter, the instructor turned a sort of maroon every time anybody said "Jump!" in his presence and he promises that, next time, he's going to yell a little louder.

MAC DILL FIELD, Tampa. With a target range 50 miles long and 45 miles wide, Air Corps men here believe Florida air units have the largest aerial gunnery territory in the country. Its eastern boundary is 12 miles at sea in the Gulf of Mexico off Venice and Sarasota where the boys toss lead at towed targets. Advance planes roam the range and warn stray boats to scam, but clearance regulations don't apply to cargo vessels and Air Corps pilots give them plenty of room.

CAMP BLANDING, Starke. The camp laundry has let it be known emphatically that it has its hands full cleaning clothes and doesn't want anything else to work on. The ukase was issued when the laundry bag of a newly inducted soldier arrived at the washing works stuffed with dirty clothes, gas mask, canteen, pack carrier, entrenching tools and mess kit, including knife, fork and spoon. "I want this back by Saturday," read a note enclosed. The customer got most of the stuff back much sooner than that.

THE transparent nail polish market in Starke and Jacksonville is doing all right. Last year the boys discovered the goo was good—or bad—for chiggers; a drop of it on a chigger bite coagulated over the burrowing bug and cooked his goose. This year the lads have discovered that the polish is so much like clear lacquer that it keeps buttons and ornaments shiny for weeks.

PAINÉ FIELD, Wash. One of the tents here was christened The Salami Bar when Pvt. Marvin Polakoff took it over. Seems an aunt of his who runs a chain of Chicago restaurants promised to send along any food he wanted, so, unashfully, Polakoff sent her a long list. Now, for fellow members of the 28-piece field band and for others who got wind of it, The Salami

Bar houses barbecue-à-la-Polakoff sessions. A percolator is filled with G.I. coffee, one of the host's tentmates goes foraging for meat sauce, and Polakoff sets to work with his self-invented barbecue spit designed to fit inside the Sibley stove.

Officially, Polakoff plays the bull fiddle and tuba, having got his musical start in high school when the orchestra leader wangled an appropriation for a new bass, then found he had no one to thump it. To keep the school board from discovering the waste of dough, the leader persuaded Polakoff to stand behind the instrument during concerts. "As long as I'm standing here, heck, I might as well learn how to operate this thing," Polakoff thought. So he did. Now he plays one in the Paine Field band's offshoot—the seven-piece dance ensemble. For a while, the orchestra had no bull fiddle and Polakoff had to borrow one from a near-by highway night spot whenever the boys got a date. Then, with company funds, the Army bought a beautiful blond-wood job for the oompa artist, and the instrument is stored in one of the barracks instead of a tent so it won't warp. This, of course is the source of much intellectual discussion among the boys as to the relative health value to the Army of a bull fiddle versus a Tent City soldier. "Nobody," said one, "seems to care if I warp."

(Continued on page 61)

The boys didn't mind. They were on a time job, with the warming sun signaling a close dead line. Baths and money and smokes and better quarters could come later.

Alberta and British Columbia citizens made them welcome with a hospitality equaling any in the United States.

The Honorable William Fallow, minister of public roads of Alberta, announced that "just as soon as the United States government tells us what is wanted in the way of connecting highway improvements, we'll build 'em."

Women of Fort St. John hurriedly took over a vacant store and opened a Red Cross hut for the lads. They put in a piano, some drums, a coffee-and-doughnuts bar, tables, writing paper.

They also put in a shower bath that is a honey. It consists of a tin water pail, hoisted toward the ceiling by rope and pulley. Draining down from it is a rubber hose and shower brush. There is a tin washtub for the boys to stand in. The hot-water supply comes from other big tin tubs kept heating continually on stove tops.

The route of this new road which our boys are spearing through the wilds to Alaska has been chosen for strategic reasons. The highway will travel well to the east of the Rocky Mountains all the way to Alaska. Probably it was planned that way so that air-borne sons of the Rising Sun would have to rise plenty high to get at it. From a large number of Canadian government airfields and bases it should be easily defensible. If Japan should try to cut it with a land force, that force would have very bad going because there are no resources to seize in the wilderness.

Settlers' horses buck and rear in fright at the strange jeeps and trucks and "cat" tractors on the wilderness roads but there is no complaint. So fine has been co-operation of the residents that General Hoge issued an order to our soldiers to reciprocate in every way they can. Mostly, the order wasn't necessary for our troops. But General Hoge told them, for example, that if they see any civilian vehicle mired in the mud they are to stop, hook on and tow it in.

The biggest job necessary to smash the Axis is to deliver supplies from our Arsenal of Democracy to our Allies in the Pacific, Russia and the Orient. This is another most important aspect of America's Alaska road, as Mr. Beaton reflectively pointed out. It may well become a new Burma Road.

FALSE TEETH *And True Love*

(OR) HOW GERTRUDE GOT HER MAN

*Although Miss Gertrude Gaines
had planned
To wed within the year,
Her gay romance was
nearly wrecked.
The reason? Lend an ear:*

1. Her false teeth, scrub them
as she might,
Got dingy, dull and dirty.
Twixt "Denture Breath" and
ruined smile,
They made her "old" at thirty.

2. "Get POLIDENT!"
her dentist said,
"Its no-brush, no scrub action

Make plates and bridges 'look like new,'
Gives instant satisfaction."

3. So straightway Gert got POLIDENT
Her wedding? *Very nice!*

THE MORAL:

*All who wear false teeth
Should take the same advice!*

Cleans, Purifies
Without Brushing
Do this every day: Add
a little POLIDENT
Powder to half a glass
of water. Stir. Put in
plate or bridge 10 to
15 minutes. Rinse, and
it's ready to use.

CLEAN PLATES, BRIDGES WITH

ATHLETE'S FOOT INFECTS

feet soaked in perspiration

Cracks
between
your toes
WARN YOU

The fungi that cause painful Athlete's Foot grow twice as fast when they feed on stale perspiration and dead skin. Then, when cracks appear between the toes, they can strike—through those cracks—and spread quickly. It's Athlete's Foot! Look between your toes tonight! Don't take chances. At the first sign of a crack, drench the entire foot with Absorbine Jr., full strength, night and morning.

1. Absorbine Jr. is a powerful fungicide. It kills the Athlete's Foot fungi on contact.
2. It dissolves the perspiration products on which Athlete's Foot fungi thrive.
3. It dries the skin between the toes.
4. It soothes and helps heal the broken tissues.
5. It eases itching and pain of Athlete's Foot.

Guard against reinfection. Boil socks 15 minutes. Disinfect shoes. In advanced cases consult your doctor in addition to using Absorbine Jr.

Get a bottle today. At all druggists, \$1.25 a bottle. FREE SAMPLE: Write W. F. Young, Inc., 201 J Lyman Street, Springfield, Massachusetts.

ABSORBINE JR.

Kills Athlete's Foot fungi on contact!

You gotta keep
after fleas!

—SAYS "OLD SARGE"

• Fleas are no problem in my outfit, because we keep after them. Regular baths with Sergeant's SKIP-FLEA Soap, and SKIP-FLEA Powder between baths—we get 'em all quick.

SKIP-FLEA Soap and Powder really kill fleas, help your pup keep normal health. The Powder's borated to soothe old itches, too.

Spare your dog the torment of fleas. Use SKIP-FLEA Soap and Powder regularly. Get them at drug and pet stores—and free Sergeant's Dog Book.

DOG MEDICINES**

said. "Did you know that 'air bleeds? And that the sap runs out of your 'air just like it does out of a tree in the fall? By massaging the scalp with olive oil and keepin' the 'air clipped close, so it won't kill the roots of the 'air behind it by chokin' it off, I've been able to restore me own 'ead of 'air."

The mere fact that science is baffled by a certain physical phenomenon doesn't stump Dai. For instance, the cause of caries or dental decay is a mystery to the dental profession—but not to old Doctor Dollings.

"Gas from the stomach rots your teeth," he proclaims with an air of finality that leaves no room for argument. "Eatin' before you goes to bed causes gas. If you go to bed with an empty stomach you'll never 'ave it."

Mention was made of rheumatism.

"I can cure it," said Dai immediately. "Rare bacon lubricates your insides, and washin' soda baths draws out the pizen, and your rheumatism is gone in a few days."

Dai has spent many a night after one of his fighters has been beaten, reducing a black eye, a swollen cheekbone or some other souvenir of the battle. He uses potions brewed from herbs and hot applications to bring such an ingrowing face back to normal.

A born dissenter, Dollings disapproves of the use of ice bags on black eyes and other wounds of the prize ring. Witch hazel and hot water constitute his remedy. Ice stops the circulation, he says.

The foundation upon which Dai's training system is laid is a clean and empty stomach in the morning, with which to start the new day.

Forget That Late Snack

"The food that you eats at night, sor, forms a jelly on the stomach and rests there," he explains, letting you in on Chapter I of the book on anatomy that he carries in his head. "You shouldn't put more food on top of that layer of jelly. So what I does is take a glass of 'ot water with a bit of lemon squiz into it. That cuts into the jelly and melts it, clearin' the stomach for the new food, sor."

"I knows all about the ingredients of food, sor, and 'ow long it takes to digest. I tried it out on meself first."

Dollings isn't the kind of Welshman to prop a newspaper in front of him, pour his saucer of tea, and then proceed to read the boxing news while blowing softly on his spot of oolong to cool it. Eating is a function that requires all the concentration that can be given to it, he says.

"I've seen men readin', eatin' and drinkin'," relates Dai in a tone of horror. "That's orful! When you reads, your digestive juices don't flow right. And when you drink while you eat, the food floats to the top. It don't 'ave no foundation. When you eat, you should get everything else off your mind, take no liquids and then rest for an hour."

Dollings has a cast-iron stomach that will digest railroad spikes. Yet, he is a strict vegetarian. He still walks 10 miles a day except in extremely hot weather and it isn't always to save subway fare. He chews with his own teeth, although he seems to have caught quite a bit of tartar along the route. The leg he broke is two inches shorter than the other but that doesn't hamper him in getting around.

Not long ago a young squirt started picking on Dai in a New York restaurant, thinking he had found a safe butt. Dai listened as long as a self-respecting Welshman should, then let the wise guy

have the straight right that he started to develop 65 years ago as a boilermaker's apprentice. On this occasion, youth was served, but right! The whipper-snapper picked himself up ruefully and withdrew respectfully.

"Position is the secret of 'ittin'," explains Dai. "Arf the fighters today is too close to their man. They don't get no power into their punches. And the fighters of today ain't got the endurance. I've never seen a mon that's got the endurance I 'ave. I can knock a mon out wit' me 'ead—the Liverpool, they calls it. I learned that un in the booths. There's the best school of all, sor. You 'ave to learn all the tricks or you'll get bloody well done for."

"Fighters today think they are doin' a lot of roadwork if they 'ave to run three miles. When I brought Matt Wells to America, we used to run 18 miles together, then come back and I'd put on the gloves with 'im. I'd like to see any of your bloody modern trainers do that. Trainers is what they calls themselves but all they know 'ow to do is hang around the gymnasiums and wipe a fighter's face between rounds. Trainers? Bah! They're all mouth and no 'ead. They couldn't train a blarsted flea!" Dai doesn't think there's one "bloody trainer" worthy of the blarsted name in the bleeding country.

One of Dollings' early jobs of

now a sergeant of police in N. J. Joe Borrell is a middleweight training him. Joe met including Harry Greb, George Chip and Jack Louis' trainer. But, just have amounted to so quit the ring and beca

"He'd knock out any day middleweights," said Borrell. weight-reduction was done on Matt Wells, an Englishman who really could fight. Matt came to Dai as a middleweight. The Welshman surveyed him critically, pinched his flesh here and there, then said: "You're too bloody 'eavy, lad. You shouldn't weigh no more nor nine stone seven." So, soon thereafter, Matt Wells was a lightweight. The amazing part of this was that Matt didn't lose any of his hitting power along with the 27 pounds he shed.

Personality Build-up

Nor are all the improvements Dollings brings about in fighters of a physical nature. He is credited with taking hold of Mike McTigue, a notoriously timid fighter, and making a lion-taming killer-diller out of him by building up his confidence in himself. Mike was never much of a hitter until Dai taught him the secret of how to deliver a punch to best advantage. McTigue was one of the least interesting fighters to watch until Dollings took hold of him. The records show that, after spending about 15 years in the ring and getting nowhere, Mike in his middle thirties became a crowd-pleaser after finding Dai. Mike's game showing against Jack Sharkey is still recalled with a thrill by those who saw the "old man" in action against the sailor boy who soon thereafter won the heavyweight title. Mike was winning the fight until one of Sharkey's punches drove a gold dental crown deep into Mike's gum, causing him to have a severe hemorrhage in the ring. The referee had to stop the fight and award it to Sharkey.

The prize fighter who might have become the greatest, in Dai's opinion, is

mental ignorance of the they follow the metho falling into a clinch. cedure is to hit, then repeat ad infinitum.

"Today's fighters," spoken disciple of the Good-Old-Days School old-timers like hothou posies that grows o They're not intereste Why," and here Dai's tone of one about to scandalous, "they don't many bones they 'ave 'ands!"

Dai waited a minut. But no one asked him: lings, how many bones hand?"

MAKING the rounds at Custer is the following note: "With the rationing of tires and lack of all electrical appli- ances, typewriters, cameras, radios and almost every article made of metal, ci- vilians are having a tough time. To bolster civilian morale, soldiers should write home more often."

CCHEERING news for the man still awaiting draft call is the solemn pro- nouncement from Custer that "exercises before breakfast are not recommended by the Army as it is apt to weaken the body which is at a low state of efficiency upon arising." On the other hand, the statement lists the following feats as the minimum standard performances expected of soldiers:

100-Yard Dash—14 seconds
Running High Jump—3 feet, 9 inches
Running Broad Jump—12 feet
Push-up from Ground—20 times
Basketball Throw—60 feet
Baseball Throw—125 feet
Bar or Fence Vault—4 feet
Quarter-mile Run—87 seconds
Half-mile Run—3 minutes, 15 seconds
Pull-up (chin)—6 times
20-foot Rope Climb—20 seconds
Try those on your torso.

GENERAL

NAVY censors are plenty thorough. A Tampa, Fla., girl opened an en- velope from her Pacific Fleet boy friend the other day and extracted a narrow slip of paper on which was written: "Your boy friend still loves you, but he talks too much." It was signed: "Censor."

"JUST read about Pvt. Andre, of Baton Rouge, the civilian deep-sea diver who is now an Army hospital helper," writes a Camp Shelby private. "He hasn't much on me. For 11 years I was a commercial photographer. Drafted, I was first sent to the Field Artillery School where I studied surveying for three months. For the rest of my first year I drove a truck. But I'm a photog- rapher. Could you help me get a job as a carpenter?"

WHAT do you wanna do—build a shutter? G. W.

"You got a permit to carry concealed weapons?"

Mario Moreno, temporarily abandoning his "Cantinflas" character, dines with lovely Dolores Del Rio

Cantinflas is a sentimental fellow. The family album, which he studies here, plays a tune when open

Mexico's Charlie Chaplin

By George Creel

Eight years ago Mario Moreno was a tent-show buffoon getting a dollar a day. Now he's Mexico's "Cantinflas"

AFTER a hundred and some-odd years of catch-as-catch-can debate on every known subject, with no holds barred, seventeen million Mexicans are at last in fairly happy agreement. Down to the last barefoot *pelado*, all are enthusiastically convinced that a young harlequin called Cantinflas is the greatest comedian in the whole wide world. Greater even than Charlie Chaplin! The high adore him no less than the low, and wild-eyed radicals actually forgive him his frequent lack of social significance.

What's more, other Spanish-speaking republics support Mexico's fond conviction, for Neither Blood Nor Sand, the first important Cantinflas feature film,

has been acclaimed uproariously in Central America as well as Cuba. It outdistanced by three to one, and also raised such previous record-holders as *Reb With the Wind*. His latest, *The Unk Gendarme Desconocido* smashed even and its mere announcement is known to have spawned an uprising.

Quite a change for Mario Moreno. Only eight years ago he was a little tent-show buffoon playing vaudeville, glad to get a dollar a day Mexican annual income of \$50,000, and a studio with his own company, high-class and a stentorian director with horns and highly polished puttees. The Unk sight unseen, for large amounts, from Brazil and the Argentine to buy

Hollywood big shots have pursued with tempting offers, confident that he will flourish—Los Angeles English, at least. But until recently, Moreno had shown no intention to leave his native heath. When Neil LaBute was shown in Hollywood last year, he pronounced him the greatest comedian since Lorentz, the queer spot's newest and director, made him the best offer—dragged down for his last film.

The contract is signed, the picture is a Mexican and an Okie who explore the world on a good-will tour, a good Cantinflas.

Like Chaplin, thirty-one-year-old Cantinflas is a pantomimist, using eyes, hands and same exquisite sense of timing. Most scenes are played without a spoken word, lie, too, he never varies his character, the down-and-out *cargador*, or public blunders into every variety of incredulity, only to pull out in the last reel with impudence and a beguiling grin.

An Edge on Chaplin

Here and there, however, the Mexican edge on Chaplin, for in addition to the can of parts, like Chaplin, he is an ordinary and has a voice with as much organ. According to his own modest confession, crack his vocal cords like a whip.

To complete his biography, he is married, has children, and is probably of Indian descent. He speaks some English and Russian, plays the guitar like a wizard and dances sublimely; loves baseball and has a team, made up of actors in his company, a boxer and bullfighter; used to clowning. Favorite authors—Shakespeare and Cervantes. He has made five features and many more.

As near as can be gathered, Mario Moreno was a droll dog and simply stayed that way. All through his public school and even at the high school he was a hard-working letter carrier of a father's preparation to become a doctor, the incubator of his teaching. Caricature was his meat, and it is generally conceded that everybody shook hands all around when he decided against a profession and wandered off to do what he liked to do.

In Mexico the *carpa* or itinerant show is an institution, moving from town to town in custom in Spain and Italy centuries ago. In the beaten tents, for a few centavos, the swart villains, sob over the tribulations and scream with laughter at the and pantaloons. This was the training ground for every well-known comedian. The audience, ants, laborers and soldiers. They were actors had to be ready. Boisterous hecklers, cracks, contributions from drunks and ics made up the fare. Cantinflas had and handled the crowd most deftly, favorite. It was rare training for a actor was in large measure his own and ing his part according to his talents.

Nimble-witted and a born satirist, good, but a dollar a day fell far short requirements of a robust appetite. good amateur boxer, he deserted the prize ring and toured the provinces beanie. Lightning-fast and possessed of he seemed headed for the lightweight of the country. But soon the tent-came running with the princely offer a day. His patrons were clamoring for their beloved little bum.

"And did I jump at it?" Cantinflas' pressive eyes as he recalls the

the medium in which Boeing Flying
do their appointed work. Boeing

engineers, designers and research men have made it possible for guns to fire, bombs to fall, motors to run, propellers to drive and men to work in regions where even birds are left behind and only stars disturb the ghostly reaches of the sky.

The triumph of the airplane over altitude represents years of research by Boeing flight engineers working six, seven, and more miles above the earth. No other group has spent so much time so high.

And the job is still going on. Today Boeing flight research men bring many of their problems down to

earth — to the Strato-chamber, a sealed laboratory designed by Boeing engineers to reproduce at one time the intense cold and the extreme low-pressure conditions of the stratosphere.

In this experimental chamber — the first of its kind in aviation research — Boeing engineers daily explore new ways by which men will win new kinds of freedom.

The conquest of cold is only one of many different projects that form a constant part of the Boeing engineering schedule.

the night before, ■ middleweight had hit me in the nose with fifty straight lefts, and in spite of my polite requests, stubbornly refused to scatter his blows."

Back under canvas again, Mario developed the costume that has become his trade-mark—dirty undershirt, battered hat and ragged pants dripping insecurely from a point well south of the hips. How he keeps them up is a secret known only to him and a million other sag-tailed *pelados*. The rope tied around his waist is typical of all his costumes, whether garbed as a bullfighter, in evening clothes, or as a tramp.

He got the idea from the Mexican *cargador*, who carries loads of hundreds of pounds on his back, with ropes fastened around his forehead. It's the heaviest and worst-paid work and typifies for Cantinflas the underdog, as Chaplin's tramp does. It is natural for the worst things to happen to this sort of fellow, and his efforts to achieve ■ better place in life or a bit of happiness arouse a sympathy that is transmitted unconsciously to the actor. In this way, both Chaplin and Cantinflas start with a predisposition to be regarded with kindness, and when they are such geniuses of pantomime or persiflage, their universal appeal is accounted for in large measure.

His talk on both screen and stage is madcap gibberish delivered in a solemn manner and made up of double-talk, innuendoes, unfinished ideas followed by equally incomplete ones, and words nonexistent or mispronounced. His long speeches are usually of this type, ad libbed in the W. C. Fields manner, but his repartee makes sense and is sharp.

He explained how he got the idea for this talk: "Once, when I first joined the tent show, the announcer was sick. I'd been doing memorized bits but they shoved me on to do his stuff. I was scared and started to say something, but they laughed and I got stuck. I began something else, tangled it and finished as in a fever. I ran off and found they were applauding." A keen student of his audience later, he even then realized he had something there and cultivated it, applying it to political problems in the day's news.

Another acquisition at the time was ■ wife, pretty young Valentina Subareff. The daughter of famous circus performers in Russia, she had reached Mexico by way of Siberia and Japan and counted herself lucky to find work in the tent theater at fifty cents a day.

"As I was getting three dollars," Cantinflas confides soberly, "I still think she married me for my money."

A year or more rolled by and the little company, cheered by provincial success, decided to invade the capital. Not on any *avenida*, of course, but in ■ dingy backwater where the poor swarmed. At the same time a certain shrewd operator of the shabby Folies-Bergère heard of Cantinflas. He decided to visit the tent and take ■ look. One was enough. An offer of five dollars a day was also enough for Cantinflas.

During the last elections, in 1940, he would call a fellow down from the gallery and invite him to cast his ballot, announcing, "Here we have complete democracy and equality of suffrage. You may go into this booth on the right and vote for Avila, or into this on the left and vote for Camacho." The government candidate was Avila Camacho, the present incumbent. His rival Almazan, one of whose supporters owned the theater, had it closed for the outrage of assuming that he had no chance. When Cantinflas asked him "Would you like me to tell them what really goes on?" it was reopened.

The fame of the comedian spread far and wide, and the very best people

fought with day laborers for the privilege of buying seats. The smart entrepreneur paid off his mortgages in no time at all, began eating at Sanborn's and had his cigars made to order.

Señora Cantinflas—for by this time the name of Moreno had become a memory—set up housekeeping and even took the chance of buying furniture on installments. Why not? The photos of her man were in every third home and he figured in editorial columns. When a politician, for example, talked much and said little he was contemptuously dismissed as "cantinflasque!"

At this point, one Santiago Reach came upon the scene; a go-getter, for he had been trained in the U. S., many important industries sending him over Latin America to introduce their products. Returning at last to head his own advertising agency in Mexico City, he had many American accounts. One in particular, however, proved a headache. He just couldn't popularize the cab-over-engine truck, for they wouldn't have these *chatos* (meaning pugnoses) at any price.

Rolling 'em in the Aisles

Out of painful brooding over this failure came a bright idea. Why not use Cantinflas, idol of every truck driver? Hiring the largest theater, Señor Reach put on a sound film portraying the overwhelming superiority of the *chato* and engaged Cantinflas as an added attraction. Only truck drivers were admitted on showing their union cards and Cantinflas rolled 'em in the aisles.

Señor Reach saw that he had something. Thrusting a fountain pen into the hand of the comedian, he signed up Cantinflas for five years and then scurried around for a suitable play. Blood and Sand was being shown at the time, getting many laughs that were not expected, so the brisk impresario had another brilliant idea. If Latin Americans waxed wildly hilarious over the serious acting of Tyrone Power what would they do with a real out-and-out burlesque of the Ibañez drama? Bright young men were put to work at once and Neither Blood Nor Sand was the result.

Called on to play two parts, Cantinflas not only portrayed the lovable bum with his usual finesse but also gave a brilliant characterization of Manollette, the strutting, vainglorious toreador. It is

as the *cargador* that in the arena at a *gana* breed a particularly bull. He is called upon of the lot. The scenes no sound except the sh and the blare of the tomime at its best. In terror, despair and fir tinflas discovers he is s and growing confiden numerous jolts of tequ end, when a lucky strol the bull, does he awak tion of what he has b then, looking down at t passes out cold.

ew that was nothing to kid her "Sorry brought it up." t's all ight," she murmured. were yo to know?" u should take steps with a fellow at." quires to take steps."

They went into the hotel taproom and stood at the bar. He wigwagged for a pair of beers and he rested his elbows on the bar and slid a dish of peanuts toward her. He had great shoulders and heavy arms and there was no fat on him at all. His hair was short and coal-black and he had gray eyes set deep, and solid jaws and an expression which, when unlighted by a smile, was on the gloomy side. He dipped his beer glass at her and said "Luck," and watched the way her eyes took on a glow of hope. "Same to you," she murmured.

"No," he said, "I don't want any," and took a drink.

Now she really looked at him.

"Bill, why so sad and solemn? Why don't you want luck?"

"Luck is a feast that always turns into a famine."

"Ah," she murmured, "that's it. Now I can be sorry for you."

"Don't let anybody use your heart for a trapeze, Jennie."

She looked at his hand and laid her own above it. "You're a rugged creature."

"But not tough."

"Was that the complaint?" she asked. Her nose had a faint up-tip to it and it had a freckle or two. She was a gentle girl and a sweet one; she had a sort of mild fragrance to her and she was easy to get along with.

"Jennie," he said, "how could you miss? What's the matter with the guy?"

She shrugged her shoulders and looked at him in a way that made him regret his question. It was one of those dark glances behind which something lay all smashed up. The bar suddenly got noisier than usual and voices began to push through his indifference. A coin machine spewed out coins from the jackpot and a woman shrieked; and he looked around and saw Marsha's party at the machine. One of the women and the blond man were hands and knees on the floor, retrieving nickels while Marsha stood by, amused at the spectacle. Big Bill Kittrick hauled his eyes away from her and took another drink of beer.

JENNIE was observing the party and pretty soon Bill Kittrick looked that way again and met Marsha's glance. She had been watching him, her eyes half closed and now again seeming jade-green to him. She had quit smiling. Bill Kittrick turned his back to her. He thought, "She pulled up her stakes, so what's it to her?" He felt a stinging at the back of his neck, which was blood moving up, and Jennie now watched him with close interest. He put two salted peanuts on the counter and squashed them with his thumb. "Let's move on."

"I get it, Bill."

They left the taproom and strolled toward the beach, not saying anything. He had a big man's rambling walk and he put his head down and stepped out until he felt Jennie's arm pull him down. "Where's the fire, Bill?" She looked up at him and she was laughing, but it was a gentle laugh, as though she knew all about this.

He said, "What does a man do around here to kill time?"

"Lots of nice country roads to ride through."

"I'll pick you up at nine-thirty in the morning."

She turned him back toward the street end and she said nothing until they had reached the front of the hotel. Then, suddenly, she said, "Good night, Bill," and left him. He stood still, observing her drift through the steady flow of people on the walk. At the bowling alley

He dressed and went dinner and he asked himself: ou for t things like that?" e into the dining room with about the time he had fin-sat snewhere behind him uld he known she was in

the room if he had never seen her. Her presence was that strong. He moved to the lobby and bought a paper and he sat low in an easy chair and read the sports section through. He looked at the funnies and the stock market and the next thing he knew he was reading Dorothy Dix. He thought, "Well, for the love of Mike!" and left the hotel.

He had no intention of going to the bowling alley, nevertheless he found himself drifting that way, drifting with the heavy crowd. He stopped outside the place, arguing with himself. Jennie would be in there, waiting out her luck, and she wouldn't want him around. But it was difficult staying away from her and he had about decided to go in when he saw young Fleming come down the street. Bill Kittrick stood back on the edge of the walk and he watched the doctor from the corner of his eye, and when the doctor turned into the bowl-ing alley Bill Kittrick felt like reaching out and walloping somebody on the back and shouting "Hallelujah!" Pretty soon the doctor came out with Jennie, and Bill saw how soft and pretty and strange Jennie's expression was—and he turned sharply on his heels.

He moved back to the hotel and noticed that Marsha and her party now stood at the pinball machines, killing time and having fun at a nickel a throw. He stopped at the counter and said, "I'm checking out," and paid his bill, and continued on to the stairs. When he turned the stairs he saw Marsha below him, watching him, and he thought: "It's your hotel," and reached his room.

He felt wearier than if he had played sixty minutes in the Rose Bowl. He packed his grip. He put a dollar on the dresser for the chambermaid and he filled his pipe and lighted it and left the room. It wasn't any good trying to run away from the thought of Marsha. The thought just went along. Neither was it any good trying to play a game over. The whole thing was done and the scoreboard said zero for him. She hated the sight of him and the thought of him.

He noticed that the door of her room was open and when he came abreast of it he saw that she was in the room. She stood back from the doorway, facing him—and that stopped him. He had a last word he wanted to say:

"Next time you take a vacation let me know where you're going so that I won't be there."

"It is so considerate of you to spare my feelings."

SHE had hit that one raw spot on him too many times; he couldn't stand it again. He put down the valise and he went into the room. He reached back and he shut the door so hard that the crash sounded all through the flimsy hotel. The back of his neck began to sting and he had the same feeling that he used to have when some lad on the other team had given him the knee once too often.

"Listen," he said, "you've scraped all the hide off me there is to scrape."

"Your hide," she said, "is a foot thick. I ought to know. I have tried everything but an elephant gun. Nothing gets through."

"Now that it's all over," he told her, "I can let you in on a secret. You had me on the ropes most of the time."

She gave him an intent glance and her stormy and scornful expression changed to a wondering regret. "I don't believe it," she murmured.

"I don't cry in public," said Bill Kit-trick.

"If," she said in a sudden lift of tone, "you had ever cried out once, or hit back once, if you had ever shown a single human emotion—"

"Sure," said Bill Kittrick, "you wanted to see blood—"

"You were dumb rock and patience. You were very kind, but you might as well have been a stone Buddha."

"I wish," he said, "I could forget you but every time I breathe I can feel a sore spot you left in me. But the fight-ing's over. Now you can pick another chopping block like—"

Somebody knocked and the door opened behind Bill Kittrick. He turned to find the blond lad in the room. The blond lad wasn't smiling. He gave Bill Kittrick a tough going-over with his glance and looked at Marsha. "I could hear this bird clear down the stairs. What's he shouting at you for? You want me to clear him out?" He got angrier with each word and hunched his shoulders at Bill Kittrick. "What you shouting at her for? How'd you get in here anyway—"

"Scram," said Bill.

"Ah," said the blond lad, "tough, hunh?" He dropped his shoulders and he took a step forward. But he was a little too leisurely in his preparations and Big Bill, stepping forward, swung his left hand upward with his weight and caught the blond lad on the chin. The blond lad went backward like a tree; his fall shook the hotel.

Marsha cried, "Stop that!"

"Shut up," murmured Big Bill, and watched the blond boy come off the floor. The blond lad was grinning, the light of joyous battle was on his face; and Big Bill knew then it would be a beautiful fight.

"Bill," said the blond boy, still grin-nig, "thanks for the Christmas pres-ent and here's one for you—"

BUT Marsha was between them. "Hank," she said to the blond lad, "that wallop was meant for me."

"He'd hit you?" said the blond lad in astonishment.

"Nobody likes the fellow who steps into a family quarrel. Close the door on your way out."

The blond lad stared at Marsha with complete astonishment. It took him a moment to bring his thinking up to date. When the situation finally became clear to him he suddenly laughed aloud. Still chuckling, he left the room.

"Bill," said Marsha, "it is the first time I really knew what was in your heart."

The scorn and bitterness and the re-sentment had left her face; it was like a gate being drawn aside. "All I ever wanted was to be loved, Bill. Kindness isn't enough." She raised her hand to him and she opened it, and he saw that she held the engagement ring he had tossed out of the window. "I spent two hours on my hands and knees looking for this. On my hands and knees. That's the way I have always felt about you. I just wanted to know it was that im-portant to you."

"I guess," he said, "it's going to be feast and famine the next forty years. We never do things the easy way."

"Oh, Bill, I'll never hurt you again."

"The heck you won't," he said, and reached out for her. She was a beauti-ful girl; she was round and solid in his arms and the kiss brought everything back as it had been in the beginning. He wasn't alone any more and he didn't feel brittle and broken up. He had what he had never ceased to want.

Pretty soon she stepped back and a swift cloud crossed her face. "How'd you get mixed up with that undernour-ished female I saw you with in the tap-room?"

But he knew now how to handle this sort of situation; he drew her back to him. "Look," he said, "did you come down here for a debate?"

"No, Bill," she said, and sighed and forgot her question, "not really. This is nicer, isn't it?"

Turkey-Neck Pitcher

By Arthur Mann

ILLUSTRATED BY GILBERT DARLING

IT WASN'T an ordinary lovers' quarrel, because the retorts lacked the snap and dig of complete emotional upheaval. Moreover, they lingered in the booth long after the drugstore clerk had removed the luncheon dishes, and they twisted each other's fingers in a pleasant sort of stalemate.

"Ellen, it's the answer to everything," he argued, trying another tack. "Four thousand dollars would be a cushion. I could save another thousand from the summer baseball salary. We could almost get by on what I'd make over and above the P-and-S scholarship. By the time I got my medical degree, we'd be set. It's a big-league ball club's gamble—the same as if I got hurt right after getting the bonus."

She had begun shaking her head of black curls halfway through his plea, but it was more a gesture of doubt than stubborn refusal.

"And supposing you were hurt pitching summer baseball," she reminded. "Your hands, Don . . . a stiffened finger. With all your plans for surgery, what good would five thousand dollars be then? Besides," she added, wincing, "they're buying more than your pitching. They expect loyalty. If you told them beforehand—"

"Oh, Ellen, you make it so tough." He sighed and ran a big hand through a mop of red hair. "I wouldn't be the first. Other players have pulled out, and the ball clubs never make a squawk. In fact, they half expect it."

Perhaps, she murmured, but not from medical students. Somehow a deliberate scheme seemed beyond true medical ethics and seeking an easy way like this was dangerous. She wanted least of all to be the cause of it. Yet, she didn't feel equal to defying him openly. He was headstrong, proud of his work in the medical course at Monroe, and proud of the way he could beat college baseball teams.

"After all," he reminded, "Pottsy says it's okay and he's the best friend a guy ever had, Ellen . . . the way he got big-league teams bidding for me forced Chicago into a bonus agreement."

She rose at the sound of the coach's name, because she didn't like him. He was loud and fat and brassy. "You'd better be getting over to the field," she said.

"All right." He fished through his pockets. "Here's your ticket . . . an extra one Pottsy had." He gave her the ticket and cupped her tiny chin in his big hand. "And I'll show this Joe Rourke enough today to make Chicago give him a bonus for signing me."

IT WAS early when she reached her reserved seat in the little wooden horseshoe, but the Monroe undergraduates and a swarm of townspeople filled the seats quickly.

For the first time, as he came out to warm up before the game, she wasn't rooting for him. She hoped that somehow the State Aggies would hit his sneaking fast ball, as people called it, and hit it hard. A few innings of that, and the Chicago scout, Joe Rourke, would keep his money. At least, it might delay things a while.

But Don Wheeler wasn't hit hard or at all, not at the beginning of the game, anyway. He threw a chest-high fast ball across their letters and three Aggies batters returned to the bench in dismay. She sighed. That's the way it usually happened for three hitless innings. The next three would bring a couple of hits, but no runs. When they finally solved the mystery of his puzzling fast ball, Monroe would have hit the opposing pitcher for enough to make Don a winner.

Her alternative was to hope that Monroe wouldn't score, and they didn't in the first two. She was hoping just as hard in the home half of the third when the vacant seat at her left was taken by a puffing, burly figure who wasn't enjoying the heat of late May. He lowered his hulk into the seat with a grunt, removed a hat from a head of thinning hair, mopped his florid face with a damp kerchief and ran the cloth around the soaking sweatband. She noted the initials J. R. The hat was from a Chicago store, and she

guessed immediately that this must be the Chicago scout, Joe Rourke. Of course it was, since his ticket, like hers, had come from the Monroe coach.

His eyes wandered toward hers. He smiled, nodded and muttered something about the heat. She smiled in return and they watched the ball game. After more than an inning of silence, curiosity overcame her. Perhaps if she could influence him—

"He's certainly turning the batters back today," she ventured.

The man nodded. "Pretty fast. Got a few innings to go, though. Anything can happen."

She wasn't the least ashamed of finding comfort in this possibility. If quick money for marriage had turned his red head, then perhaps fate or something would set him to thinking right. But fate was very tardy, because he turned in two more brilliant innings after allowing a scratch hit in the fourth. He seemed to be getting stronger and, when the Monroe sluggers bunched four hits for a pair of runs in the seventh, her hopes dwindled. She turned to the scout.

"Looks like his day," she said and, as he nodded, she went on: "I guess the big leagues are lucky to get him."

He turned quickly. "You a friend of his?"

"Oh, I'm a student here. But I've met him. Why?"

He listened to the crowd roar and said, "Ever hear of a turkey neck?"

"I've heard of chicken necks. Any difference?"

He leaned toward her and pointed. "Look at this Wheeler's right arm when he pitches. Behind that flip of the wrist is a flip of the elbow. See it? It's like a wriggle. We call it a turkey neck."

"Is . . . is that good?"

"Anything but," he muttered. "With steady work, it means a sore elbow. If he ever reaches the big leagues, they'll have to correct it. That means an unnatural delivery, an a sore arm. Pottsy Miller brings me all the way from Chicago to see a turkey-neck pitcher!"

She fought the feeling of terror that rose suddenly.

She tugged at his coat sleeve. "Could he be a big leagues?"

Rourke made a wry face. "He could be a college teams with his fast ball, but"

The last words trailed off as she saw her way through the spectators and shoe. Now it was all changed, and to reach him first. Giving this news his dreams and smugness, would be deeper than he deserved.

She walked in the shade of the bleachers, listening to the cheering that rose with his increasing success, deepened until she wanted to cry for

THE game was over. She waited for him which he would march triumphantly to the adjacent clubhouse. There she was waiting for Rourke, who was greatly surprised to see her again. An instant later he charged through in a parade of hysterics, trooped into the clubhouse. Don and the coach trailed at the end of the line, the game had been lost. The coach

"The heat's got him!" he muttered, and pitched to where they stood. "Tall! Tell him he's nuts . . . claimin' he won the body!"

"I'm not crazy!" Don exclaimed. "Ellen. 'I . . . I did a lot of thinking there I . . . I seemed to get a clearer idea of it's still okay, we'll take the hard way."

She clung tightly to his sweat-soaked arm, turned her head to look at Rourke who had seen enough ball games to know what he was doing. He grasped the situation perfectly.

"The last thing we want in Chicago is a dissatisfied ballplayer. But if you get in touch with me. Come on, Pottsy, to your second baseman. We can use him."

He leaned toward her and pointed. "Look at this Wheeler's right arm when he pitches. See it?"

NEW CAR RATIONING RULES ANNOUNCED BY O.P.A.

Now—you can buy your new car and enjoy Chevrolet's low first-cost, low operating cost, low maintenance cost.

Here are some of the relaxed rules covering proof of necessity for all eligible buyers:

1. That the applicant must travel quickly and would be better able to do so by automobile than by other means of transportation.
2. That he must transport passengers or heavy or bulky tools or materials.
3. That he would have to spend at least one and one-half hours in going to and from work without a car, and could save 45 minutes by using one.
4. That without a car he would have to walk at least three miles in going to and coming from work.
5. That his work is arduous, or his hours unusually long, or that he must travel late at night.
6. That local transportation services are overcrowded.
7. That his physical condition would make it a hardship for him to use public transportation facilities.
8. That he clearly needs an automobile because of other circumstances.

Editorial Communiqué

HERE is a brief report of what we think about how the war is going, from a recent extensive tour of various shipyards and war factories, generals' and admirals' offices, and other focal points of United States war energy:

This country's war-production machine is rolling—and we mean rolling.

Exact figures on production of planes, guns, tanks and ships are military secrets, of course. About plane production, though, it is permissible to state that it is now phenomenal, that no reason has yet appeared why the President's huge goals cannot be reached on schedule, and that there is more than an even chance that they will be surpassed.

Tanks are coming off the assembly lines at rates which remind you of automobile production in boom years—and this is only a start.

The Axis submarines off the Atlantic Coast have been taking some fat bites out of our shipping and that of our allies and friends. The big bottleneck in the United Nations' war effort since we entered the war has been shipping. But our shipyards, by and large, are now turning out huge tonnages per month, smoothly and efficiently and with a minimum of labor trouble. If our Navy and naval air forces can't lick the submarines (which in time they probably can) the overwhelming weight of our shipyards' output will.

Smaller bottlenecks are always developing; but as fast as they develop, agile brains and dauntless hearts go to work at smashing them—and succeed.

American civilian morale—the will-to-win—is high. Especially impressive is the way in which women are going into war plants and doing work hitherto believed strictly men's work. About 1,000,000 women, from all walks of civilian life, are believed already to be working in war plants and doing a superb job of it. Incidentally, most of them draw wages equal to those paid men for the same sorts of work—and properly so, we believe.

Much of the credit for the magnificent showing must go to the businessmen and production experts whom Thurman Arnold & Co. have been kicking around and trying to smear for political purposes. These men out on the firing lines of the home front have already earned the undying gratitude of the American people; and will collect it in time, we are convinced.

In short, this nation has gone to war almost 100%. Seeing the giant of American industry shelling out planes, tanks, ships and guns as deftly as a capping machine slaps out beer or soft drink bottles ready for the ultimate consumer, you cannot help being confident that the Axis is going to be bitterly sorry that it ever tangled with us. Indeed, you come to feel that there may be something in the more optimistic of the military, naval and air men's flat assurances that this war is two thirds won already.

Thumbs Down on John L.

JOHN L. LEWIS has launched a scheme which, if it goes to its logical conclusion, will make him food czar of the United States. He can control a nation's food supply, who can control a nation's food supply strangle hold on that nation's throat. Lewis is trying to haul, first, all the farmers in the land, and then all the other farmers—hold your hats, now—his United labor organization. These alleged farmers turn over to him, in addition to getting rid of the power to deal for them with the middlemen. Thus Lewis would have an American food supply setup.

What some farmers think of the idea is indicated by the fact that a bona fide farmer in New York State, where Lewis is making his big drive, has undertaken to insure his farmers up to \$10,000 for any barn burned by "peaceable organizers" union. What kind of union is it when members begin to insure against good and hoodlums the moment it sets off its blessings?

We hope this bid for dictatorship will be in the teeth.

Special applause, we believe, is due to E. Dewey who once broke up a lot of racket in New York City and has now taken the fight one up and down New York State with courage to fight even a phony union.

We hope the various farmers' organizations exhibit no less courage. United and strong, they will lick Lewis. Divided and timorous, they will be meat—and we'll all suffer for it.

War Bonds as Investments

WITH the Treasury Department's efforts to sell War Bonds, people are wondering just how good these really are as investments.

Certainly some Washington radicals, who see a new revolution after this their best to make these bonds better. There is a way, however, as we mechanics and arithmetic of the situation these bonds the solid investments now. That way is for all of us who want them to buy as many as we can.

If the majority of us are loaded with bonds, the majority of us will naturally to the inflationary and taxpayer-crazed that are the stock in trade of the more bondholders there are, the more the fight they can put up against for making the bonds worthless.

It may happen that our economy simply cannot be either paid off in full. In that case, some readjustment must be made. If most of us are holding time, that readjustment will be made possible for all of us. If only a handful of bonds, the majority will most likely go gogues into some foolish kind of non-vamping which will hurt us. The majority won't realize that, until it is all have progressed too far to be halted.

It's the old story: We've got to get together, we don't want to hang separately, and the financing as well as for the fighting of this war.

ANY WEEK

WE ARRIVED in Los Angeles just in time to take a purely observer part in the Sand Can Save Us campaign. It is working nicely now, but there were a few deplorable incidents at the beginning. A policeman with ambitions to write was telling us. Los Angeles had discovered that the citizenry lacked sand in quantities sufficient to fight possible incendiary bombs—a visitation which is not impossible. Therefore, a large number of volunteers chugged away in trucks to the beaches, returning with sand enough to suit almost everybody. This happened just as sugar rationing set in. The council became aggressively efficient, announcing that the sand should be dumped in the immediate vicinity of the sugar ration card depots, which, in turn, were near grocery stores where rationed sugar would be doled out. All this would save tires by clustering the places tires would have to roll to. The efficiency almost got out of hand. To get your sand you had to bring rubber or metal junk, which would be swapped for sand and turned over to the government. It was at that time, while a considerable number of housewives were swapping junk for sand, getting their cards and buying sugar—all in the area of a block—that two ladies began to exchange pleasantries. One of the ladies was the wife of a grocer. To her the other lady said: "Please don't take all that nice white sand. You need only a little to put out incendiary bombs. I suppose, though, that most of the sand you're taking will soon be sugar in your husband's store." The grocer's wife kept calm long enough to reply: "No, I was thinking of taking a little extra in case you were too busy gossiping to come over, and that you'd need a few pounds to feed to that husband of yours. Heaven knows he needs a little sand." The two ladies moved toward each other but our policeman interfered. He said: "Just a little misunderstanding. Just a little misunderstanding."

HOWEVER, it was just east of Albuquerque that we saw a most venerable motorcar trying to catch its breath at a filling station. What held it together we don't know. All we know is that across its rear it had a large sign reading: "Don't laugh—four new tires, sucker."

GETTING around the country is less simple than it used to be. We got the heave-ho out of two planes, the Army deciding with some justification that it was more important to get soldiers to the West Coast than that we should be filling valuable plane space. But there was one gentleman on our plane who declared that it was more important that he should get to California in the morning and that he'd be hanged if he was going to surrender his seat to a corporal. It was while he was explaining this to a pleasant young man in the air terminal that a porter appeared lugging two huge bags—the gentleman's. "Where you want these bags, suh?" asked the porter. "You want them checked or will you take them to the hotel for the night, suh?" Seldom have we seen one of our fellow citizens so angry. The plane had taken off. He demanded to know the name of the person he could complain to—and he wanted no words with understrappers either. "Well, suh," sighed the porter, while holding the bags, "I dunno that you could do any better than to go straight to President Roosevelt. So where do you want these bags while you're gettin' him on the phone, suh?"

WE DON'T know how it came out. We caught a train and ran into a lot of flood trouble. We debouched, by-passed and detoured Kansas, Colorado and New Mexico floods, stopping frequently at lonely little waif stations to look around. It was at one of these little farm-bound prairie towns that we saw a crowd at the station seeing off a large, awkward, red-faced youth who had been inducted into the Army. He was still in overalls. He carried a little old satchel. He was terribly embarrassed, completely wordless, probably a little scared by the thought of what life beyond the farm had in store for him. They told us that he'd never been away from home before. But hopping around him, his hands clenched, too excited to know what he was saying, was the big kid's cricket of a father. "He ain't never been nowhere; he ain't never been nowhere, he ain't," Paw was repeating over and over as he danced. "He ain't never seen nothin'; he ain't never seen nothin', he ain't."

BUT he will. W. D.

"Bet she married him for his Silvertowns!"

UE that people look at their tires in a
gh today. A few months ago they were
T day they're *treasures*—to you, and
country.

are lucky enough to have Silvertowns,
e a right to be glad. But you have an
on, to—to keep them rolling as long as

your tires are gone, you'll have to walk.
y ne seem so bad, until you consider
more and more tires wear out and can-
eplayed, our whole war effort will be
and lapped.

If you are permitted to buy new tires for your car or truck, your obligation is *doubled*. For you can do much more than the average driver to conserve America's rubber.

And remember—this is no time to put up with inferior tires that waste rubber. If you can buy new tires for your truck or car, your best buy is Silvertowns.

All Silvertowns—including the famous Speedliner truck tire—are still made with Duramin. That's the B. F. Goodrich discovery that keeps rubber young and lively, makes tires wear longer.

And—if you can't buy tires? Then we'd like to

have you keep Silvertowns in mind until you can. We can't tell, today, whether they'll be made of natural rubber or synthetic. We can't even guess *when* you can buy them. But we do promise this—there won't be a better tire on the road when that time comes!

TIRE INFORMATION HEADQUARTERS

The enemy smiles when you waste miles! And we've got a new booklet for you that tells how to avoid being a rubber-waster. Ask for "Will America Have to Jack Up Its 29,000,000 Automobiles?" See your B. F. Goodrich Dealer or Silvertown Store—or write direct to B. F. Goodrich, Dept. C, Akron, Ohio.

Lot of new things for newlyweds—and everyone else!

IN ORDER to serve you better, even though you probably can't buy tires, many B. F. Goodrich dealers and Silvertown Stores are now displaying attractive new lines of merchandise for home and auto. All types of sporting goods, bicycle and

auto accessories, batteries, radios, garden tools, luggage and even kitchen equipment! All high in quality—all low in price. Come in today and look around. We don't think you can find better bargains anywhere!

In war or peace

B.F. Goodrich

FIRST* IN RUBBER

*And first to offer American car owners tires made with synthetic rubber.

to conserve vital metals

the Mennen Company has voluntarily discontinued packaging Brushless Shave Cream in tubes. Glass jars are now being used. The price is the same (50¢), but you get more for your money—the new jar is 25% larger than the tube.

MENNEN
Brushless
SHAVE

It's a Cream

Not a Grease

A recent survey revealed that more dermatologists use Mennen Shave Products than any other brand . . . more than the next two leading brands combined. This personal preference on the part of the highest authorities on skin care can only be attributed to the consistently high standards of quality maintained in Mennen Shave Products for over half a century.

KEEP UP WITH THE WORLD

Freling Foster

One of the greatest chess players was Kempelen's Mechanical Man, a midget who, disguised as an automaton, toured Europe during the late 18th century and defeated all leading players of the time. He and his partner Kempelen were able to fool the public because he was very small and legless, played with mechanical movements and wore a costume having little doors that, when opened, revealed only turning wheels.

Studies made by the War Office in London have shown that an adult human being will not be killed by the force of a bomb explosion that will demolish a brick wall 13½ inches thick.—By Adalin Padway, New York, New York.

One of the largest single moving jobs on record was the transfer of an artificial silk factory from Hopewell, Virginia, to São Paulo, Brazil, in 1934. There were seven shiploads of equipment and machinery, and some of the pieces were so large that the railroad hauling them from Santos had to move one of its stations out of the way.

The America's Cup, the yachting trophy, did not get its name from this country because our vessels have won all of the seventeen international races. It was named in honor of the schooner America which won the first race in England in 1851.

The world's largest flowering plant, the *Amorphophallus titanum* of Sumatra, which sometimes reaches a height of more than eight feet, has blossomed, while under cultivation, in only eight known cases, the last two being in the New York Botanical Garden in 1937 and 1939.

During complete blackouts in England, many deaf persons, when away from home, now wear a luminous badge bearing the word "Deaf" so strangers will know that they cannot hear signals and warnings or carry on a conversation in the dark.—By J. L. Ladd, Danville, Kentucky.

Many natives in still bury their severed hair in the belief that it is of themselves and should be returned to the earth with their entire bodies.

The most isolated world is Bouvet Island, a small, uninhabited Norwegian possession in the South Atlantic. It contains one thousand men, or 3,146,000 square miles, there is no other land.

Once every fifteen years more than 500,000 members of the sect in India gather in Sravana Belgana for a ceremonial worship of their seven-foot statue of the goddess Matreshvara. From the scaffolding scores of Jain priests pour ghee and water on the figure and then show offerings as dates, sugar, coins and gold.

Many members of the New York Stock Exchange have unusual occupational backgrounds. For example, the roster includes a former undertaker, a magician, prize fighter, army general, baseball player, club singer, dancer, and a night club singer. There is also an officer of the Reverend Church of the Apostles, who bought his seat in the church in 1929 and preaches every Sunday in the Church of the Sacred Advent in Eatontown, New Jersey.

The bloodhound gets its name from the nature that is impervious to the heat of the sun. It was the first to have a pedigree "bloodhound" was simply to indicate it was purebred, or "blood" or "blooded."

Five dollars will be paid for this column. Contributions must be accompanied by a check or money order payable to the order of the National Weekly. The National Weekly. No reproduction without the publisher's permission.

Please don't keep this confidential—

1. "I have it from an absolutely reliable source that this country ...

2. has plenty of all *three* of the things needed to produce large quantities of ...

4. We have adequate resources of high quality crude oil and ...

5. superior refining processes that were developed by America's petroleum industry and ...

high octane gasoline for warplanes and other mechanized equipment.

7. Put those three things together and you know why we and our Allies have the best fighting fuels. "

All of which means:

American built warplanes will—plane for plane—outfly and outfight Nazi and Jap machines. For better gasoline makes it possible for the engine designer to build a better engine.

Today our nation is reaping the benefit of the petroleum industry's many years of peacetime research. Part of this job has been the years of effort by the technologists of the Ethyl Corporation in helping to develop better fuels and engines. It is our privilege today to offer our product, our technical experience and our research laboratories to the cause of American victory.

WILLIAM T. HOFF

Pan American's 82,000-pound
American Clipper comes in
port. Beaching Chief Lee
Tyler has taken the "bridge"

FOR recreation, our aircraft manu-
facturers, engineers and air trans-
port operators putter around with
ideas about the kind of flying and the
size of aircraft to come after the war.
But they don't want the erroneous im-
pression to get out that they are tying
up valuable technicians, floor space and
man hours building airplanes for use
after a war that has not yet been won
or for use in a world that may be vastly
different from the one they left on the
afternoon of December 7, 1941, East-
ern Standard Time.

Here are some random thoughts you
can pick up from these people:

It has taken two world wars to make
the airplane what it is today. The en-
thusiastic universal support for aviation
now, with unrestricted use of funds,
plants and people everywhere to create
more and better aircraft, has given the
airplane a rapid thrust forward that will
never slow down to the dogtrot of mid-
summer 1939. (The airplane is here to
stay!)

Two major peacetime activities have
already been assured: World-wide pas-
senger air service and freight-hauling
by air.

The present daily use of four-engined
flying boats by Pan American Airways
and the Navy, and Boeing B-17 Flying
Fortresses and Consolidated B-24 land
bombers by the Army, for dependable
and quick ocean crossings, has estab-
lished these types as proven vehicles
of inter-continent travel.

The future role of air freight likewise
is not founded on expectations, the
Army Air Forces having settled every-
thing by carrying more air freight to its
widely scattered bases in the past two
years than all the airlines in the coun-
try combined. The Navy, with less dis-
persal of aircraft and bases, has also set
up a long-distance heavy-hauling air
system under its own operation.

We were just getting going with
four-engined landplane passenger service
when called a halt. Then the Stratoliner
(now in Army service), the new Douglas
troop transport) and Lockheed Constella-
less also will go to the airlines are capable
to 50 passengers plus mail and express.
ships was dictated by being what they could
efficiently operate, acquiring some valuable
experience with when the Army called
duty.

For over-ocean transport has been made
boats, the largest of 82,000-pound four-en-
used regularly across Pan American Airways
China-Clipper type, much in operation in

Pontiac Reports to the Nation on Arms Production!

30th, at 11:50 P.M., Pontiac de-
s 11th automatic anti-aircraft
to the United States Navy.

The contract covering this important war
assignment called for the production of only
11 guns up to that date.

Thus, Pontiac deliveries of these vitally-
needed weapons have exceeded the rate of
production specified in the contract by
12 times and the time specification by 7
months.

rate dive bombers with a spray
shells, the 11th cannon was
dream of a 11th ordnance
day guns of the same type—but
designed as better built and less expen-
ing pressed into immediate service
ships of the U. S. Navy, the 11th
n 11th that sail the seven

me of volume production on this
ward weapon is but one salient in
production of arms. Concurrently,
on a at work on six additional
involving the elements of victory
at and in the air.

ent N. 2 calls for the production of
11 11 mm. anti-aircraft
the U. S. Army. In a 11-acre plant,
proceeding, ahead of schedule, which

calls for the delivery of the first gun before
1st.

Far exceeding in complexity either of the fore-
going is Pontiac assignment No. 3—one of the
most complicated instruments of attack devel-
oped in the history of warfare. Comprising over
4300 separate parts, its production in quantity
is a challenge which we at Pontiac have eagerly
accepted. Previously, its maximum total produc-
tion in this country was at
a rate of only 1 a month.
According to schedule, we
will be producing 1 a day
before 1st, 1941.

Supplementing these
major activities are 3
others, widely different in
character—each calling for special organization,

facilities and personnel.

They involve respectively: the current produc-
tion of 11 heavy-duty 11 engine inter-
assemblies a month—which will be quadrupled
in 11 months; the manufacture of vital transport
mechanisms at a rate of 1 a day; the produc-
tion of 1 large tank unit-assemblies a week in an
especially tooled 11-acre plant; and, finally, the
crating each 24-hours for overseas shipment of
11 heavy-duty military vehicles being produced
by an allied member of the General Motors
family.

This is Pontiac's first report to the Nation on
its progress to date in the production of arms for
victory. In making it, we wish to point out that
long since we all pledged ourselves: that brave
men shall go well armed; that victory shall not
be over long in waiting. In this, we can not . . .
must not fail!

Awarded on January 20th,
1942, to PONTIAC for out-
standing production of Navy
ordnance.

Seeking to cooperate fully in the war effort,
Pontiac has voluntarily censored this
advertisement.

Pontiac DIVISION OF General Motors

The Beginning of the End

Drawn for Philco by Arthur Szyk. Copyright 1942—Philco Corporation

Arthur Szyk gives us this interpretation of America's will to win. His cartoon is one of a series being drawn for Philco by America's leading editorial cartoonists. They are being posted before Philco's soldiers of industry . . . the men and women who are engaged in the production of the weapons of victory . . . as an expression of their spirit and a reminder of the glorious purpose of their work.

★ ★ ★

THE industrial might of America is at war. Its hands and brains have given America more motor cars, more radios, more refrigerators than *all the rest of the world combined*. Now they have turned with avenging fury to the task of giving the cause of Democracy that same overwhelming superiority in the weapons of victory. What they have done to make America great, they will do to keep America free.

Here at Philco our share of the task is to produce radios for tanks and airplanes, communications equipment, industrial storage batteries, fuzes and shells. Our incentive and inspiration are faith in Victory and *abundant future*. We know it is not all waste, this *emphasis on the engines of destruction!* There is some salvage for mankind from the ruins of war. We see our part of it taking shape today in the Philco laboratories. In a few short months, grim necessity has achieved *progress in electronic research, holding untold promise for the days of peace.*

Looking to the future with faith and determination, Philco's soldiers of industry have made their pledge . . . *"More! Better! Sooner!"*

Free Limited Offer . . . While available, a full size reproduction of the original drawing by Arthur Szyk will be furnished gladly upon request. Simply address Philco Corporation, Philadelphia, Penna., and ask for Cartoon Number 6C.

PHILCO CORPORATION

Through its national service organizations, Philco offers to its millions of owners throughout the land, at uniform and reasonable charges, the means of conserving and prolonging the use and enjoyment of Philco Products.

Then, a girl's voice broke in, plead-
ing: "Jeep . . . Chubby . . . please—"

"Who you shoving?"

"I'm shoving you, soldier—"

"Oh, stop them! Somebody come and
stop them . . . isn't there somebody to
stop them?"

"Yerse!" said Fireman Dunnevan.

"No, Tim—wait—"

But Fireman Dunnevan, lumbering
through the sand like a battlegon in
heavy weather, moved into a tense, dra-
matic scene:

Item One: A small, thin youth wear-
ing a marine private's uniform and a
ferocious scowl, with his fists cocked.

Item Two: A small, pudgy young man
in the uniform of a coast artillery pri-
vate, with his fists cocked.

Item Three: A beautiful, starry-eyed
maiden wearing an ethereal topknot of
sun-burnished hair—burnt-chestnut
color, to be precise—and dressed in col-
legiate sports clothes. Her fists were not
cocked. She stood wringing her hands
and looking right and left for help.

Tim Dunnevan stepped between the
Marine Corps and the Army.

"You want me to stop 'em, Miss?"
he asked politely.

"I definitely do!"

"No fight, you guys," said Fireman
Dunnevan.

It was said with authority. Marine
and soldier staggered back.

"Why, you—"

"What right have you—"

"The Navy! Butting in again!"

"So you're her hero, huh, sailor?"

These ripostes came so fast that Fire-
man Dunnevan blinked. The girl sprang
to his rescue.

"Thank you, Mr. Sailor!" she said.
"I'm just livid with shame. If Jeep and
Chubby weren't such unutterable drips,
they'd be ashamed, too. The idea of a
soldier and a marine fighting each other.
Isn't that simply putrid in the ex-
treme?"

"Now, Polly—"

"You shut up, Jeep Saunders! And
that goes for you, too, Chubby. Just
look at them, Mr. Sailor. If they act
this way, fighting among themselves,
who's going to defend us?"

Fireman Dunnevan had the answer
to that one. (Continued on page 57)

"To Tokyo, Dammit!"

—MAJ. GEN. BRERETON

By John R. Morris

FAR EASTERN MANAGER, UNITED PRESS

CABLED FROM NEW DELHI, INDIA

THIS boy with the pale eyes and stiff blond hair stood in the shimmering sunlight of India and listened to the hum of a Flying Fortress over America's principal air base, somewhere east of Suez and west of the bomb-splintered pagodas of Moulmein.

There was a streak of grease across his tanned cheek, and his fingers still were tight around a wrench that he had used efficiently on the big bomber a few minutes earlier. He turned to answer my question.

"Me? I'm from Missouri. And let me tell you, mister, a year and a half ago I thought that Indians lived in Oklahoma and that bombers were something you read about in the newspapers. Now I'm nursemaid to a Flying Fortress—and here we are in India!"

A hot cloud of dust swept across the airdrome—hotter than either of us had ever seen arise from the cornfields of Missouri—and he raised a brown arm to shield his eyes.

"I've learned plenty since then," he went on, squinting again at the bright wings overhead. "But there's one thing I want to know, mister: Where do we go from here?"

Standing there on the scorched airdrome with the temperature at 102 degrees, I realized that I had come a long way—Tokyo, Shanghai, Manila and Java—without hearing anybody put the question more concisely or dramatically than this tough young grease monkey from my own home state; this guy from Missouri whose job it was to keep 'em flying 10,000 miles from home.

There were various answers to his question, but the best one was in the words of his own chief, Maj. Gen. Lewis H. Brereton, commander of the United States Air Forces in India, whom I had seen in action in Java before I flew with his staff and Gen. Sir Archibald Wavell to India. Brereton's answer really is in two parts that illustrate the swift change in America's fighting forces in the Far East within a few weeks' time.

"The retreat stops here," Lew Brereton said, soon after he climbed from the LB-30 (Liberator bomber) that carried us to our new address at New Delhi. And he has been busy proving it ever since by offensive counterblows, including hard-hitting raids on the Japanese at Rangoon and the Andaman Islands, where the general himself handled the controls of his aerial flagship as high explosives were dumped on an enemy cruiser. The second part of his answer came weeks later as I was finishing this dispatch for Collier's.

"Where do we go from here?" is no thoughtless question. With our strength in Australia increasing and the Japanese flood surging over Burma, the United Nations began preparing early this spring to fight one of the great battles of the war in defense of India. India's defense against the Japanese now concerns our political and economic interests and our opportunities for winning this war against the Axis plunderers to a degree that may be difficult for Americans to realize. These interests were symbolized this spring, however, by the presence here not only of the United States Air Forces but of high American officials.

Col. Louis A. Johnson who, as the personal representative of President Roosevelt, carried authority transcending that of an ambassador, said that "we consider this a world war, not a European war with an Oriental sideshow. We are going to resist the enemy wherever he attacks and attack him wherever he is found vulnerable."

Ambassador Clarence Gauss, our envoy at Chungking, made a hazardous flight here to New Delhi late in April to confer with Johnson on military relations with India and our aid to China. "You may be sure that Chiang Kai-shek will continue the war against the Japanese aggressors," he said. "In this we are assisting and will continue to assist."

These men made clear the attitude of our government. But it remained for Brereton and his bombers to back up their words with high explosives.

So let me tell you something—as much as mili-

Major General Lewis Brereton is commander of the United States Air Force in India.

tary regulations permit—about the men of the American Air Forces in India, what they did over Bataan, Macassar, Malang and Jokyakarta and what they are going to do now.

To understand their mettle, it is necessary to go back a little. Anybody who has seen what our fighters have done against impossible odds can begin to understand what they are going to do when the odds are more nearly equal.

It was only the remnant of our Air Force in the Philippines that remained after the first Japanese raids. It was a fighting remnant, and Capt. Grant Mahony of Vallejo, California, who was then a lieutenant and is now aide to Brig. Gen. Francis M. Brady in India, was one of them. Mahony's good friend, Lieut. Robert Hansen of Oakland, California, had been killed during the bombing of Manila airdrome, and the Vallejo pilot was tight-lipped and sore when he took his reconnaissance plane up on the day before Christmas. He did his reconnaissance job and then decided, for luck, to take a whack at a number of enemy planes on the ground near Legaspi.

"They were sweet targets," he said later. But as he approached, nine Japanese fighters dived on him

from 15,000 feet. Mahony pounced on the planes, while bullets from the enemy came around him so thickly that they damaged his craft on the ground perhaps as much as in the air. Mahony streaked for the near-by mountains. The Japanese roared after him around the peak again, Mahony discovered he had some ammunition left, so he dove, grounded planes and swept on to the ground. He found that the Japanese had broken up his game, so he brought his plane down to a low level and got it back to Manila. A base in India now, available for our fliers the fine points of confusing the enemy.

About the time Mahony was over Bataan, Douglas MacArthur decided that he would withdraw from the Philippines to the Philippines, with most of the Air Force remaining. In Java, it was believed then, that the Air Force would be reorganized and get reinforcements for more effective operations. That was the beginning of a long retreat that imposed heavy losses on the Air Force. Ton, Brady, Col. Eugene Eubank and others. The three of them, with the late

who was then Brereton's aide, left Manila is Eve. They had to hunt all night for the plane as it was to take them to Java. When they found it, the plane was wrecked as they took it was not until the following day that they found another seaplane and flew to Surabaya, Java base.

Clark Field near Manila, Col. Emmett O'Donnell, Jr., of New York, succeeded Commander of the bombardment group, led the first squadron of Flying Fortresses to the Philippines in September of 1941. On his orders, Rosie O'Donnell moved his team peninsula because Clark Field was unsuitable, but there were no adequate fields and his show was over almost as soon as though the late Brig. Gen. Harold George with a few patched-up pursuit ships on bomb cradles were built.

Air Force in the Philippines literally was not a plane, men who had been trained to handle pursuit ships and bombers ifles to aid in the defense of Bataan when most of the personnel was ordered to. The transfer was made at night under Japanese dive bombers, which sank the ship as it lay at anchor in a cove between Mindanao. The second ship was not got through with the loss of two men. The airmen fell in alongside American soldiers fighting a kind of guerrilla war with the Japanese, until O'Donnell was ordered to skilled specialists and move them to Java. The order was simple to give easy to execute. There were thousands of men to cross, and the best plane available was a two-engine Douglas B-18, with fuel capacity to reach the nearest safe airdrome. That night, they called in Captain Brodine, a flight engineer who was later killed in Australia, and he went to work to make nothing of nothing. Six gasoline drums were in the cabin as reserve tanks. Somebody produced a pump, and an enterprising Filipino put up with a piece of garden hose. When he had it all patched together with the Filipino joint, baling wire and chewing gum, it looked like work, except for the fact that there were no tanks to be supplied and only one piece of hose.

Nothing so trivial as that was going to stop them. They hacked a hole through the floor of the cabin and looked around for their man. They found him in Lieutenant McLaughlin, who weighed 120 pounds and was built on the lines of a jockey. They lowered him through the belly of the plane and gave him the end of the hose. From the hills of Mindanao to the coast at Port Darwin, McLaughlin carried the fuel hose as needed from one tank to

McLaughlin played a weird role in a goofy flight. Maj. Clyde Box of Nevada, Texas, was

O'Donnell's co-pilot, and Capt. Edward Green, now in Australia, was navigator. (Box later came to India as aide to Brig. Gen. Earl Naiden, the chief of staff of our Air Force here.) The B-18 missed Japanese squadrons raiding the Dutch naval base of Amboina by a few minutes. Then a Dutch fighter pilot mistook them for Japanese and was about to dive on them when they fired an identity flare.

A West Pointer in 1928 and later on the school's football coaching staff, O'Donnell at 35 is now in G-3 at Brereton's headquarters where he lives for the big bombers and gripes loudly against flying a desk.

Brereton furnished the only heavy bombers—Fortresses and a few Liberators originally built to British specifications—in the Dutch East Indies area. The Liberators lacked the superchargers built into this type of bomber for the United States Army in order to make them suitable for daylight raids, and their fighter protection was always inadequate, compared to what the enemy soon had within striking distance.

With small Dutch bombers, they scattered the Japanese invasion fleet in Macassar Strait, but two of five Fortresses operating in the same area later were destroyed by enemy naval Zero fighters. The Japanese descended suddenly from three directions, concentrating first on one and then on another big bomber. Two went down but the other three jettisoned their bombs and escaped.

Protection for Bombers Lacking

The most disheartening losses were planes destroyed on the ground in Java and Bali because of lack of fighter-plane and antiaircraft gun protection. Sometimes it seemed that our big bombers which might have struck many more heavy blows at the enemy were merely pot shots for Japanese attack craft. But the American Air Force was always trying, regardless of the odds. And when the fate of Java appeared already sealed, the United States Navy dispatched the aircraft carrier Langley to Chilachap, on the southern coast of Java, on the obviously slight chance that she might deliver a cargo of pursuit planes. The Langley and her desperately needed fighter craft went to the bottom of the Indian Ocean under a rain of enemy bombs.

It may be revealed now that in the last days of the battle of Java, the decision to move the American Air Forces to India was made and almost completed before Washington knew about it.

Lieut. Gen. George Brett, now head of the United Nations Air Forces in Australia, and Brereton made the decision at Bandoeng and submitted it by wireless for approval by the War Department at Washington. Before they could get a reply, the situation became such that they had to act, and Brett told Brereton: "Move to India." The War Department's approval of the move was handed to Brereton later as he stepped from his plane at Dum Dum airdrome at Calcutta. The same message appointed him commander in India.

I came out of Java with the remaining Air Force that retreated to India. Two LB-30's carried most of us and General Wavell, too, landing at Colombo on the island of Ceylon, after we had made the acquaintance of Charlotte the Harlot. We had been scheduled to take a Flying Fortress from Bandoeng, in the Java mountains, to Jokyakarta on the south coast, but just before we went to the airfield a Japanese plane dropped a bomb squarely on our plane and blew it sky high. Unfortunately, that was the last plane at the airdrome at the time, and it looked as if we might wait there for the Japanese. But Brereton ordered a second Fortress in from Jokyakarta, and that turned out to be Charlotte, with her name emblazoned across her nose and a cocky, daredevil pilot at the controls.

Charlotte the Harlot came into Bandoeng in a hurry and paused only long enough for us to clamber aboard before whizzing away again down valleys and through narrow passes to the one remaining American air base in the East Indies. There were too many enemy planes around for time-wasting. Twenty-seven of us, including Brereton, boarded a Liberator at Jokyakarta for the flight to Ceylon. My seat was wedged in between the pilot and co-pilot, but we were so crowded that the only way I could get into it was to face aft. So by force of circumstance, I faced in the general direction of the enemy during the 2,300-mile retreat from Java.

There was nothing very exciting about facing the enemy at 200-miles per hour in reverse, and most of the exhausted passengers slept. But as we approached Ceylon, I lay down in the transparent nose of the bomber for a bird's-eye view of India. The co-pilot, his eyes red with lack of sleep, stretched out beside me, and we watched the shoreline of a great continent emerge in gentle splendor from the sea.

The man beside me didn't say much, and what he did say concerned the futility of hoping to hold back the Japanese with inadequate equipment, but what impressed me most was his willingness to keep on trying when his expert knowledge and experience told him it wouldn't work. I knew that, only three days before, this same ship and crew had dumped bombs on the enemy off Bali and that, after they landed us at Ceylon, they were going back to Java to do it again. These men, given such forces as we peace-loving Americans were willing to provide before Pearl Harbor, had done all that any men could have done and often more.

But here was India, a vast, restless, divided land of 350,000,000 rich and poor, potentially as great a bulwark against the enemy as the Chinese or as easy a victim as the Burmese. Could the young flier peering through the nose of a bomber and the half dozen generals dozing behind us find here the means of meeting the enemy on something like equal terms? Where do we go from here?

In the next few weeks, we began to get the answer. Scholarly Sir Stafford Cripps flew out from London to offer an independence plan for the greatest possible Indian war aid. But (Continued on page 61)

MAPS FOR A NEW WORLD

By George T. Renner

PROFESSOR OF GEOGRAPHY,
TEACHERS COLLEGE, COLUMBIA UNIVERSITY

Here's a brave new world redesigned for lasting peace—a world from which war-breeding frictions are gone, where all nations live secure and unafraid, thanks to the new science of political geography

THE democracies are almost certain to win the present war but it is an unpleasant fact that they may lose the peace that will follow. Whether they win or lose the peace will depend largely upon what kind of new map of Europe they are prepared to draw at the peace table.

It is possible, of course, that through some stroke of fate, the Axis might win this war. In that event no one would pay any attention to our plans, and the German blueprints would be followed instead. What these German plans are like is no secret; they were shown specifically on a proposed map of Europe which was published and discussed recently in Collier's. They were also outlined in general terms in Hitler's book *Mein Kampf*. The German-made map

of a future Europe is to the democratic mind both nasty and unreasonable, for it is full of hates which would gnaw at the entrails of human society for centuries to come.

Any draftsman can draw a map if he be given an original to follow. But to construct an original which expresses the things we really want is a difficult scientific task. It requires an intimate knowledge of peoples, languages, cultures, resources, business, transportation facilities, and historical claims and priorities. It is certainly a task not to be entrusted to amateurs—not even to the amateurs of the state departments of the various nations of the world. Yet every map or blueprint for peace so far has been drawn by self-appointed amateurs. Even when the intentions in the

minds of the statesmen are good, there are always huge differences between the things in their heads as they sit at a peace conference and the lines which are finally drawn on the map. Such discrepancies may be the seeds of the next war.

So far, the only official statement about what kind of postwar plan the United Democratic Nations would want has been the Atlantic Charter—the eight points outlined at the Roosevelt-Churchill meeting. The Atlantic Charter is a noble statement but it is and will remain only an idea in a vacuum until it is translated into the form of a map. The process of translation from idea to map is a difficult problem in human geography.

The Germans take this problem seriously. Years ago they began the systematic study of the science of Geopolitik or—to use an American term—political geography. Germany has produced a whole line of able political geographers—Kant, Humboldt, Ritter, Maull, Sölch, Banse, Haushofer, and so forth. The Germans have left nothing to chance. It was the geographer Herr Doktor Professor Haushofer who drew the blueprint for Hitler's New Order as set forth in *Mein Kampf*. Moreover, he helped to draw up the maps of military strategy by which this New Order was to be achieved.

The result of using this scientific geography has been morally bad but it has been so good strategically that it has enabled an otherwise hopeless scheme to succeed pretty well so far. This does not prove that political geography is wicked; it merely indicates in one more way that the German state has used most forms of science for ignoble purposes. The strategy behind German successes has mystified and terrified some Europeans and Americans. Yet to the American political

The map of Europe has special attention because it has long been both the new and the trouble center of the world. Europe is not and cannot be sufficing; it requires Africa must be drawn. Consequently, a second trouble center as a source of materials and markets must also be drawn. This is a third trouble center to be remapped.

squealed loudly, and Mus- thumped deafeningly that its present miseries to the Versailles. This is ninety per cent of course, but there is a cent of irritating truth in

In defense of Versailles did that never before was written which came as expressing the natural map of peoples in the form of an ideal map as did this one. There were features of Versailles map which made impossible in Europe.

about two thirds of Europe occupied by Slavic peoples, the third by Germanic and Mediterranean peoples. Peace was a ramshackle empire in Europe known as Austria-Hungary on an alliance of Britain, Russia, organized to keep an enemy. The first World War broke down to a pile of blasted

of Versailles did two lines were drawn from Petcha to the mouth of the Danube, roughly the longitude line of Russia. Russia was shoved eastward and isolated from European peoples. West of it were all those peoples—including millions—who were more or less Roman in their culture. Then, west of the political boundaries were to conform more or less to languages.

ling weaknesses existed in the Finns (Karelians) east

of the line were left out of Finland. Millions of White and Little Russians west of the line were included in other countries. Millions of French and German-speaking peoples were left out of France and Germany. The Austrian Germans were denied Anschluss with Germany, and Austria was artificially maintained as a puppet state. An insulting Polish Corridor was cut through Germany to the Baltic, although a much more reasonable corridor could have been cut around the eastern edge of Germany, via Memel.

The synthetic country of Belgium, comprising French, Dutch, and German peoples, was maintained in order to provide a pad or buffer in the west. France held the Italian island of Corsica, and Yugoslavia the Dalmatian Coast, rendering Italy totally insecure on either flank. Britain held the geographically French Channel Islands, the Norse Shetlands and Greek Cyprus. Italy held Greek Rhodes, and France held what should have been Italian Tunisia. Sweden had no northern outlet, and Russia was denied access to the Dardanelles by the device of maintaining a small piece of Turkey in Europe. The Basques were split between Spain and France, while many Spanish Catalans were included inside France. A more or less artificial Portugal, a vast Dutch colonial empire and Greece were maintained solely by British naval power. A whole flock of small new countries was created and released in the political and economic world, without even feathers of experience in political intrigue to protect them.

Post-Versailles Europe contained no less than 35 independent countries and five colonial dependencies—40 political units in all. The dependencies included one Italian and four British possessions.

For a time, it included three other artificial states—the Saar, the Zone of the Straits, and the city of Fiume—but these three died violent deaths along

the way. Obviously, 43 political units (or 44 if we include the Vatican State) in a continent the size of Europe, with no regulated relations among them, was a fertile breeding ground for war. And, sure enough, it did breed war.

A EUROPE OF LARGE BLOCS—MAP I

About one fourth of all Europeans are Russians. Aside from them, the Germans are the strongest ethnic bloc in Europe. The nub of most of the continent's troubles hinges on trying to ignore that fact. All European politics since the day of Napoleon have been based upon keeping these two strongest groups of people weak. This cannot be kept up any longer. Europe can go on warring interminably, but Germans and Russians will continue to breed their kind. An alternative is to form a United States of Europe but, in any such union, the Germans and the Russians and their allies would dominate it. Consequently France, Britain, Holland and the Scandinavian countries will have none of it.

Nevertheless, Europe as it has been during the last twenty-five years is so suicidal as to be almost unbearable. Recently it has become completely impossible. There have been two strong nations and many weak ones in western Europe to oppose Germany. The weak ones cannot be kept in line and are a constant bait for aggression. The two strong nations, Britain and France, have recently discovered that they are no longer strong enough to checkmate an aggressive Germany.

Twenty-five years ago, the British Overseas Dominions and the United States intervened to preserve western civilization in Europe. Today they are again compelled to intervene. Fortunately, a German error in timing involved Russia in the struggle, and hence the world's political structure may again be preserved. But the next time, nothing

on earth is likely to save European civilization as we now know it, unless a new type of political organization is set up after the present war is finished.

Europe, however, is not ready for political union. For one thing, England could no more afford to participate than we could. It would cause her to lose her overseas dominions if she were to join any such union. Without England, such a union undoubtedly would be dominated by the totalitarian countries and, consequently, might easily be led into a long world struggle with the Anglo-Saxon powers.

Fortunately, such a continental union is not at all necessary to achieve the desired goal. It is entirely possible to have a strong united Germany surrounded by eight other strong European nations, any one of which would be tough enough to discourage aggression. A Europe consisting of nine strong nations would constitute its own framework for achieving stability.

The first of these would be the Fenoscandic Union consisting of Iceland, Norway, Denmark, Sweden, Finland and Estonia. All of these are culturally similar and have at times enjoyed union with one another.

A second bloc, a West Slavic or Czecho-Polska state, is already being planned by the Czech and Polish governments-in-exile. If this be expanded to include Lithuania, with which Poland has been associated in the past, a fairly compact state with ocean frontage would result.

In the southeast, the thoroughly chastened Balkan states are now more nearly ripe for a federal union than ever before in history. Such a state would unite the South Slavs, the partially Latinized Slavs of Rumania, the Albanians and the Greeks. Some trouble may be expected from the Bulgars but even they can be expected to fall in line if proper territorial redistribution is made and cultural autonomy is assured them.

Italy should be given Dalmatia, Tunis, Corsica and Nice, so that she would be made secure from attack within the Adriatic and Tyrrhenian seas. A strengthened French Republic should include all French-speaking peoples of Europe. An Iberian Union should be set up on republican principles. Russia should be compensated for losses of territory to Finland by an outlet to the Gulf of Riga on the Baltic and to the Dardanelles in the south. Germany should include all the German-speaking peoples of Europe, and its perennial ally Hungary should be attached to it. Hungary, however, should be accorded full cultural autonomy.

The new Dutch-Flemish state should be invited to full dominion status in the British Commonwealth of Nations. This would accomplish two ends: It would protect England's continental flank and would save Holland from German aggression. It is not at all incompatible with facts, either. For more than a century the British Empire has protected Holland's vast colonial holdings. Politically, religiously, racially and commercially, the Dutch are closer to the British than any other European peoples. Moreover, the Dutch have no close affinities with any other peoples except the Germans and do not want union with them.

A Europe of this kind would thwart no one, not even the Germans. It cuts across no major cultural lines. It would be a long step geographically toward peace on the world's bloodiest continent. It would be doubly successful if it were preceded by a redrawing of provincial or state boundaries and a transfer of minority populations. It would also provide the needed background for the settlement of the problem of colonies which is discussed on the following page.

MAP II. Post-war Europe as the Versailles Treaty left it consisted of 40 political units and made any lasting peace an impossibility

MAP III. Redrafting of Africa's present crazy-quilt keeps geographical as well as political realities in mind, consolidates colonial holdings and redistributes wealth more equitably

EUROPE'S AFRICAN COLONIES—MAP III

A glance at any political map of Africa should convince the average reader. It is a bigger mess even than the map of Europe. Grandmother's crazy quilt was simplicity compared to the results of Europe's scramble for colonies in Africa. The work system has four general faults: The small size of the colonies have been the cause of rivalries and frictions. The colonies are too expensive to administer, so that the natives' needs are neglected. Some weak nations, such as Portugal, have immense and potentially productive colonies, while others, such as Germany, have nothing. Lastly, Britain's Red Sea route has been constantly threatened by France's holdings along the coast of that sea.

In drawing a new map of Africa, there are at least four realities to be kept in mind: First, there is the reality of the present African nations. Liberia, traditionally the ward of the United States, should continue in that status; Ethiopia should be completely surrounded by British territory; Egypt should be organized as a sphere of British interest; the Union of South Africa should be extended northward to the Cunene, Cubango and Orange rivers.

The second reality is that Germany should receive territory in central Africa to include what is now the German Congo, Belgian Congo, Portuguese Angola, and Northern Rhodesia. This would yield her an immense tropical raw material, and the temperate highlands suitable for white colonization.

The third reality is that all colonial holdings should be consolidated into large units. Those of France should be grouped into French West Africa and Madagascar. Those of Britain should be consolidated into British West Africa, British East Africa, and Anglo-Egyptian Sudan.

The fourth reality is that the Mediterranean power should have colonial control over the opposite sections of Africa. Spain should have control over the Mediterranean islands lying between Africa and America. France's domain should extend from Algeria to the Senegal River and all offshore; France's domain should extend from Algeria to Dakar and the Guinea Coast; Italy's holdings should extend from Bizerte to Bengasi and sweep southward to the Cape of Good Hope. This would render her secure in the middle Mediterranean and for empire-building in constructing a trans-Saharan highway. Greece should be given Cyprus (Cyrenaican coast) opposite Crete. Britain might have Malta and Alexandria as fueling stations, for in the future they will have no value as naval fortresses.

A NEW ORDER IN ASIA—MAP IV

The need for a new order in Asia is apparent to anyone who looks at the map. But the Japanese prescription written in blood and powder is no acceptable answer. Here again (Continued on page 17)

Eat and Look Young

By Henry Schacht

ILLUSTRATED BY GEORGE DE ZAYAS

"What should I include in my diet to keep my hair from turning gray?" That's what people asked Dr. Agnes Fay Morgan. Here are the answers

Many nationalities are curious about the antigray vitamin. Queries come from Latin America, England, Africa and other lands

Doctors are sampling the new vitamin themselves—to improve their bedside appearance

One man asked if the vitamin would make his head look as young as his heart felt

WHEN gray hairs show up among the blond or dark ones, most people think nothing can be done about it. So it may surprise you to know that by choosing certain foods you have a good chance of preventing gray hair just as you can reduce your weight by cutting down on certain foods. Scores of people will testify that they've tried it and obtained surprisingly good results.

They trace their success to daily doses of a new vitamin. If your hair is gray or graying you'll certainly want to know about it. The story of its discovery starts quite by accident back in 1930. Dynamic, red-haired Dr. Agnes Fay Morgan, head of the home-economics division at the University of California College of Agriculture, had obtained permission from the parents of 80 junior high school children to use them in a test of the value of wheat germ in child diets. She divided them into two groups of forty. Both received the same diet with the one exception that half of them also got daily doses of wheat germ. In six months they gained twice as much height and three times as much weight as the others.

Looking over these results, Dr. Morgan decided that if wheat germ was that good, more children should be eating it. Officials of a large commercial company heard of her test and agreed. They set about producing a wheat-germ cereal. Today that cereal is one of our best-known breakfast foods. Yet at first it caused trouble and more trouble. Three years were spent in preparing it for market. Then grocers complained that it spoiled in the packages. Company technicians went back to work and finally decided they'd have to toast the cereal. Then it occurred to them that heating might lower the food value of the wheat germ. They wrote Dr. Morgan for the answer to that one. She admitted she didn't know but promised to find out.

This was 1935. She put two groups of glossy jet-black rats on a delectable diet of washed casein, salt mixture, fat, sucrose, and cod-liver oil plus a daily dessert of wheat germ, heated for one group, unheated for the other. It was a simple experiment. Compare the growth of the two groups and you'd know how heat affected the germ. But after two weeks had passed, Dr. Morgan noticed a peculiar and unexpected development.

Patches of hair on rats in both lots were turning a mousy brown. Soon they took on a metallic coloring. In another month they were completely gray. Dr. Morgan was frankly puzzled. Nothing like this had ever been reported. Heating the wheat germ couldn't be the cause since all the rats showed the same symptoms. The only thing to do was go back over the experiment, step by step, looking for the clue that might break the case of the gray-haired rats.

Finally the chase narrowed down to the B vitamins. The rats were getting all the B vitamins in the basic diet. The only others they had were B-1 and B-2. At that time only B-1 and B-2 were discovered and they were both in white. "There must be something right," said Dr. Morgan, "there must be a vitamin we don't know about."

To prove this theory she cut wheat germ out of the rat diet and substituted an extract of wheat germ. She had used it before as a source of B vitamins. The rats had never turned gray. To her surprise, she found that it contained the missing vitamin. She should be able to bring the rats back to their original color. Sure enough, within a few weeks they were their normal glossy black selves. Dr. Morgan had discovered the B-vitamin group that in rats at least, kept hair from losing its natural color. It was enough for a scientist and for a time she called the antigray factor might do the same for humans. Just now there was other work to be done.

A Rats' Fountain of Youth

First she built up a list of other sources of B vitamins. This included rice bran, brewer's yeast, and unrefined cane molasses. Next she fed rats to determine all the symptoms of B-vitamin deficiency. She found that they fed on a pattern. In 1937 before the annual meeting of the American Institute of Nutrition she folded the whole amazing story.

She told her assembled colleagues about her new vitamin she called B-12. It turned out to be a month in life. In life, B-12 could produce thin and graying hair, wrinkled skin, as well as damage to the thyroid, and sex glands. She pointed out that all of these symptoms were typical of old age. Later, she actually aged her rats. Yet by giving them concentrated doses of it she could return them to normal color and thickness, put flesh on them, and repair the damage to vital glands.

Refusing to crawl out on any hands, Dr. Morgan said nothing about human experiments strictly to rats. But the listening scientists were so interested that many things first tested on rats proved effective on humans. Several and within a few months confirmed experiments of their own.

Meanwhile, she dived back into her work with used dogs and guinea pigs, getting the same results as with rats. A man gave her (Continued on page 19)

"Helen," Quayle said, "here is the squadron. This is Hickey, our C.O." Hickey smiled quietly and put out his hand

puts Helen in a bus and takes them

out to the field, where he introduces them to a
laughing Greek flier—one Nitralaxis—and his
assistant, a small but very spunky little fellow
named Papagos. The members of the squad-
ron look on in amazement as Nitralaxis and his
small friend prepare to take off on a reconnais-
sance flight in a wobbly old plane—a 1918
model!

The Greeks complete their preparations.
They climb into the old crate. They start.
After a time they disappear in the mist that
surrounds the area.

"That is the end of them," Brewer says
quietly. The others are silent. They climb into
the bus and go back to the hotel.

III

JOHN QUAYLE went straight up to
the hospital and asked the girl at the
desk if he could see the matron. She
shook her head and Quayle guessed the
matron was busy. He was going out
when someone called. He turned around.
It was Helen Stangou.

"Hullo," he said. "You got here."

"Hullo," she said. "So it is you."

John Quayle felt the warmth already
when they shook hands firmly.

"You did get here," he said again.

"Was it you asking for me . . . from
the principal? Yes, I got here all right,"
Helen said.

"I came up here looking for you. I
got talking to the matron," Quayle said.

He was smiling at her because she
looked serious.

"You should not have gone to the
matron."

"Why? The matron's a friend of
mine," Quayle said. "Come on. We'll
go see her." He took Helen's arm and
walked toward the matron's room.
"Come in and meet her; she's all right."

He knocked on the matron's door. She
called "Embros," and they went in. She
looked up from a table full of large white
cards.

"Hullo, Matron," Quayle said to her.
"I have something."

"Ah. My *Inglisi* . . ."

"This is Helen Stangou," Quayle said.
He indicated Helen.

Helen said something quickly in
Greek and the matron nodded.

"Excuse me," Helen said. "I was
apologizing to the matron."

"She is a fine girl," the matron said
to him. "She apologized for you."

"Thank you. I hope you do not think
me impertinent."

The matron laughed and said, "Cer-
tainly not! Now go on out, you two,
and walk in the muddy streets."

"I am still working," Helen said in
English to the matron.

"Go on. I will explain," the matron

said in English. Then she said some-
thing in Greek. Helen replied in Greek
but the matron said something quickly,
and Helen touched Quayle's arm and
they went out.

"Goodby," he said to the matron.
"And I'll look after her."

"She will look after you, *Inglisi*. She
will. Goodby."

"*Au revoir*," Quayle said. They
walked down the passage and he heard
the matron laughing quietly.

There was quiet mist and darkness
making dismal the brown mud on the
streets. They walked slowly toward
the town. Helen had taken his arm—
the first time she had done it easily and
familiarly—but she did not speak.

"How did you get up here?" Quayle
asked her, to break the silence.

"With Lawson. He came up in his
car to see the front."

"I see."

She looked at him quickly. "What
do you see?"

"Nothing." He was jealous and felt
unfriendly.

"You take everything too seriously."

"I hope you do."

"I take the right things seriously," she
said. "Not these things."

"These are the right things," Quayle

said. He pulled her around and kissed her.

"We will get put in jail if anybody sees you doing that."

"Yes? What sort of people are you?"

"We are all right but our Fascisti are not. Please be careful."

"I apologize."

"Now you get serious. Please be with sense."

"All right," Quayle said; "I'll try to be good."

She leaned over and put full lips on the side of his unshaven cheek.

QUAYLE took Helen to the restaurant where the others had told him they were going. When he walked in he saw them make cracks to one another. They would meet Helen sooner or later, so it might as well be now. He took Helen's arm quietly and walked to the table. Hickey stood up first, after looking hard at Helen and noticing her pretty uniform. The others stood up too, so that they made her conspicuous in the whole room, and Helen did not feel comfortable about it either. Quayle could see the surprise on all their faces.

"Helen," Quayle said, "here is the squadron. This is Hickey, our C.O. This is Helen Stangou."

Hickey smiled quietly and put out his hand. Helen was used to Greeks, who merely bowed, so she was behind time in putting her hand out. But she laughed a little and it pleased Hickey.

Then Quayle introduced Tap, Hersey, Richardson, Brewer, Constance, Stewart who clicked his heels and bowed, Finn who said, "You surprise us, Quayle," when Helen smiled. Someone got a chair and they all sat down and there was silence.

"You speak English," Tap said slowly.

"Yes, in a strange way. I lack grammar," Helen said, and Tap was surprised and looked at Quayle.

"Are you a nurse or something?" Brewer said.

"No. I'm in a first-aid post here."

Quayle let it all go on because Helen would fit in her own place with them. It was no good his trying to tell them what and who she was.

John Quayle ordered something to eat through Helen, and she ordered something for herself and he knew it was merely coffee because she knew she was on exhibition, and eating would be too difficult under the circumstances.

"Do you live here?" Hickey asked her politely.

"No. I have been here only last night. I live in Athens."

"Hickey, I reckon she ought to be attached to the squadron, don't you?" Tap said.

Quayle knew something like that was coming and he knew Helen would not be pleased about it.

"Yes," Hickey said in his quiet voice. Quayle didn't like it at all.

"Miss Stangou, would you join our squadron?" Tap was being very jovial.

"What can a woman do?" Helen also was trying to be jovial.

"Can you cook? Well, we get shot up sometimes too. It would be a pleasure with you around."

"Then I will not come. I would not want to encourage you to be shot."

"We don't need much encouragement," Finn said. He was sitting next to Helen and was looking at her full in the face.

It went on while Quayle ate his dinner and Helen drank her coffee. Tap was the worst of them, because all women were anybody's property and had only one thing in mind, and Tap worked on it quickly.

"Where do you live?" Tap asked her.

"At the hospital," she said.

"May I come up and see you?"

She looked at Quayle. He didn't indicate anything. "It is difficult," she said.

"Well, then, you must have dinner here with us," Tap invited.

"I will try," Helen said. "And now I must get back."

Quayle stood up with Helen. He asked Tap to pay his bill. They all stood up when Helen left, and Tap shook hands with her and smiled carefully. When Quayle and Helen had said good-by and were outside, Helen said, "It is hard to believe."

"What?"

"They are young."

"The younger you are, the better the flier. You've got to be young."

They walked on through the yellow mud; light rain was making night more dismal. At the door to the hospital he stopped and asked, "Will you come out later on?"

"No," she said, "I can't. It is too difficult."

"Everything is too difficult."

"Some day you will see."

"It doesn't seem to do us much good up here," Quayle said.

Another war correspondent came down the small steps from the first floor and nodded to Quayle.

"This is Milton Woll. He's a correspondent," Lawson said.

THEY shook hands. Woll was a small dark American with Indian features and a vigorous body.

"Say, who did you lose that day when you got all those Italians?"

"Vain."

"Vain . . . the Australian?" from Lawson.

"Yes. Was he a friend of yours?"

"I knew him," Lawson said. "But I know a gal in Athens who is going to feel pretty bad."

"Wasn't there someone else?" Woll asked Quayle.

"South," Quayle told him. "He bailed out. We think he's all right."

"Is that true about back?"

"The last I heard the way to Derna," Woll said.

"I guess the Greeks it," Quayle said.

"The Greeks are about when they took Koritza."

"Did they take Koritza know what's going on?"

"Yes. That's the way too," Woll said.

"Well? What are the to do?" Quayle asked.

"Nothing . . . not yet."

"They'll wait for the spring they will invade England."

"I don't think they'll land," Woll said.

"I guess they'll hold on and went back upstairs tomorrow."

"Sure. Good night," to him.

"Good night," Quayle his room and undressed on the bed. He thought and he was sorry he had when they were on the And then he was wonder and little Papagos had old Bréguet.

"All right," he said. "Good night." He didn't touch her but turned and walked quickly away. He heard her open the big door and go inside and he kept walking into the now heavy rain.

WHEN Quayle went into the Acropolis Hotel he saw the newspaper correspondent, Lawson, who was standing with a pair of muddy boots in his hand talking to the porter in French.

"Hullo there," he said. "So this is where you got to."

"Hullo," Quayle said tersely.

"You certainly disappeared. We wondered what had happened to you all."

"We've been around," Quayle said.

"Was that your crowd that got those fifteen Italians the other day?" Lawson asked.

"Yes."

"They went mad down in Athens. You're heroes down there."

"That must be the guy we passed in Larissa," Woll said.

"Short, medium sort of person?"

"He had a beard. He was medium, though. He had bailed out. That was South all right," Woll said.

"Was he all right?"

"He had his arm in a cast. The Greeks had picked him up, I think."

"Will you tell our C.O. if you see him?" Quayle asked.

"Sure," Woll promised.

"Say, Quayle," Lawson said. "I brought a friend of yours up."

"I know," Quayle looked casually at Lawson and nodded. "I know."

"She was worried when you disappeared."

"We couldn't tell anybody about going," Quayle explained.

"I told her that. I thought you had gone back to Egypt for the new push there."

Conclusion

THE Negro stopped, and then saw
the fire climbing up his coat. He
tried to get the coat off, but it
seemed that in his excitement his hands
fumbled. Later Duff found out that
Wesley's hands were burned.
Duff threw his mackinaw around
Wesley, and bore him to the ground.
"Be still, Wesley! You're afire."
"Git de dogs before too late!"
"You be still," Duff commanded.
Above the crackle of the flames and
the howling of the dogs, he now heard
the hollow hoofbeats of Paul's horse.
"Stay here with him," Duff shouted,
as Paul sprang to the ground.
"Git de dogs!" Wesley said. Paul
knelt beside him. Duff could get no
closer than the door. Now the smoke
carried tongues of flame, and the heat
threw him back. He heard the rattling
of the chains as the dogs fought them.
He ran around to the back of the barn,
but this was no better.
The flames of the burning hay in the
loft now spouted geyserlike through the
holes in the roof, and the fire crept down
the frame walls, like a cat backing down
a tree, so that a pocket was left in the
center of the barn where the dogs were
—a pocket filled with heat and smoke.
Duff pried a board from a side of the
barn where was fire was thinnest—only
to have the opening immediately closed
by yellow flame. Farther down he pulled
off another board but the fire licked out
and singed the hair off his hands.
Finally Duff went to the house and
got his shotgun, and a box of shotgun
shells. He tore the box open as he hur-
ried back to the barn, spilling part of
them.
Standing as close to the big door as he
could, Duff unbreeched the gun and

shoved two shells into the barrels. He
fired both barrels through the door.
Then he reloaded the gun and fired
again. A dog's howl shut off abruptly.
Then another. Duff kept shooting.
Finally, except for the dull roar of
the fire, there was silence.
NEXT morning Duff called James
Lampley and told him what had
happened.
"You mean every one of them?"
Lampley said incredulously.
"Yes, sir," Duff said painfully, "I'm
afraid that's right."
"Tequila too?"
"Him too."
Except for the continuous hum of the
country phone, the wire was silent.
Then: "Webster, I can't quite grasp it.
You mean, my bloodlines that I've
worked on twenty years are completely
wiped out?"
"Yes, sir, that's the way it is."
Another silence. Duff rubbed his fin-
ger around the broken edges of the
mouthpiece.
"Well," Lampley said at last, "I guess
you're out of a job."
"I don't blame you."
"No, you don't understand. It's all
right. It wasn't your fault. Perhaps my
fault for not letting you build tempo-

rary kennels. It's just that I'm washed
up," he said heavily. "I haven't got the
heart to start over."
Duff paused. "I'd offer you half in-
terest in Judas, only I don't know
whether I'll get him back, or whether
he'll be ruined."
"No. He's a fine dog, and when I had
the others I wanted him. But he's not
my creation... like Tequila. I planned
Tequila eighteen years before he was
born. You see how it is? I made him.
Now... he's gone. I just haven't got
the heart any more."
Duff rung off, and walked slowly
through the house. Delia's trunk was
locked, and her things in it, except for
a piece of peach-colored underwear he
had overlooked hanging in the closet.
The smell of fire was thick in the
house. Duff stood on the back porch and
looked out at the smoking ruins. The
red cedar tree, thirty yards away, was
burned bare and brown. Stepping over
the rubble, he went to what had been
the entrance of the barn, and stood
by the heat-whitened well bucket Wes-
ley had dropped. Of the barn, little was
left, only the brick foundation, and the
iron supporting posts, and heaps of
charred, smoking rubbish and ash.
Duff slowly walked into the wreckage.

The grip shown at the left got Craig Wood nowhere—making him a right-to-left pull hitter. So he adopted this new grip (right), which enabled him to “fade” his shots with a left-to-right spin

Drive Does It

By Craig Wood

NATIONAL OPEN CHAMPION

Exploding the theory that “they pay off on the putt,” our National Open golf champion says the thrill is in the tee shots

PHOTOGRAPHED FOR COLLIER'S BY W. EUGENE SMITH

IF YOU hang around a musty locker room while nerve-jangled golf pros are dressing for a big championship, or if you hobnob with neck-craning spectators clustered about the green, you're bound to hear somebody say, “Pounding that pill a mile off the tee is exciting all right but, when all is said and done, they pay off on the putt!”

I'd be the first to admit that the golfer who can't get his club length putts down with reasonable regularity won't be up there on the red-carpeted dais when the glistening silver trophy is being presented by the U.S.G.A. president, but it doesn't follow that a hot putter is the open sesame to golf's hall of fame.

In any championship field, you'll find ten or more competitors who are holing 'em from all distances and angles but only one of these red-hot putters bags the title. As a general rule he is the guy who blends distance with accuracy on his tee shots.

Yes, sir, in my book they pay off on the drive. I'll string along with the fellow who is hammering 280-yard tee shots down the middle alley with the space-eating range and geometric precision of a siege gun. Such a man makes things easy for himself by reducing the average approach to a point-blank pitch. What my old friend Fielding Yost of Michigan said about football applies with equal emphasis to golf: “Position is the decisive factor.”

You hear golf critics talk about “the art of finishing a hole” but in my opinion it requires just as much art to start a hole properly. Well begun is more than half done, in this tantalizing game. It's a cinch that the golfer who sprays his drives promiscuously about the landscape won't be able to pull in the slack on the putting greens.

That bromide about “paying off on the putt” contains just enough truth to becloud the vital importance of driving. Time was—and not so long ago either—when putting did play a dominant role in the National Open, but the tightly wound “rabbit ball” of today, plus the vogue for power hitting, has distorted golf strategy and placed a premium on distance.

The comparatively short hitter—Paul Runyan for example—is hobbled on the 6,800-yard courses which are picked for championship play in this era of glorified slugging. Paul is like a man shooting a popgun against fellows armed with a cannon. Big hitters like Snead, Thomson and Nelson outrange him from thirty to fifty yards off every tee. That's a lot of yardage to give away, even for such a master of the high-soaring spoon as “Little Poison.”

Everybody loves a slugger. The desire to whale into a ball with a club is rooted deep in human nature. The thrill is in the tee shot, and that's what they pay off on in these days of high-compression golf balls and heavy-headed, power-shafted clubs. My friendly rival Gene Sarazen, whose competitive career links golf's “dead-ball era” to the modern free-wheeling game, shares this opinion. So does Tom Armour, former British and American Open champion,

“If the average duffer will analyze his game,” says Craig Wood, “he'll discover that his troubles usually start in that elementary phase of golf, overcoming distance”

and Jesse Sweetser, the first native-born Yankee to win the British Amateur. Though skill on the greens is a substantial part of a champion's equipment, putting is, after all, a namby-pamby, wishy-washy phase of golf suited to frail women and elderly men. Anybody can become a pretty fair putter if he devotes enough time to practicing this species of croquet.

But a thwacking drive is the high-tension missile that sends the ball down the fairway—bracketing man's sport! You've got to be weighing about 14 ounces an hour clip in order to slug like Snead, Little, I won't include Jamie Sparke, the burly Scottish-American class apart. Nobody ten yards of braw Jan into a typical Thon straightens out his chest.

Spark photographs of the flat show the hard ball like a hen's egg at impact, almost three miles a minute. That leaves the club head brute force plus hair-torn.

Now let's get down to broke the ice on the jur Country Club course at mer and won my first title because I hit the wasp-waisted fairways more than any other competitor.

Sure, I holed some pinches—and so did a lows. Those trolley-wheels but they wouldn't have the bacon if my putt hadn't softened up the par-4 holes.

The Winning Formula

The fairways at Colonial were narrower than a snake's hide. Standing on a tee, you looked down a creek formed by pecan trees, and sagebrush jungles. I can't say I was a golfer, but I was a slugger.

Just to make things higher, a hearted tournament on the hog's-bristle rough the right of way, so from the tee. Thus the bottlenecked at precisely where a long driver's lands. Thanks to this the big hitters were p heavily than short drive and Metz, who couldn't rows.”

Distance plus direction is the winning formula down there. Cause of my left-to-right technique, I hit the jack right-to-left power hook Hogan, Sam Snead and wound up among the pe the brook that chases puppy across the sun-baked flats.

No hooker will ever wish ship golf, for my money, for pinch-bottle fairways. Hookers of the Hogan every ball with a right clean up on the sprawling courses which are as w gold-rush mining town, it's another story when is tossed onto one of the National Championship where the fairways resemble streamers rather than pools.

Glance down the list of champions since 1930 and that most of 'em were ma Bill Burke, Gene Sarazen, Tony Manero, Ralph G Nelson, Lawson Little, these blushes—yours truly Johnny Goodman and I. (Continued on page 54)

Take the Day Off

by Mario Dorrance

Mr. Whippy Mullins,
newshawk. If you
in the same busi-
ness you'll be safe—

It has been just as easy for
me to go to Wilgate myself. Long
decided there must have been
some low barometric pressure in
the air that particular day.
I never have sent Whippy
off to Wilgate and spent the
day wondering what might
have happened if I had gone myself.
See, I'm state editor of The
Herald. Whippy once was my assist-
ant editor for a hundred and twenty
years. They call themselves corre-
spondents scattered across the state,
from two-family villages
to towns like Randall Falls and
Condon.
Correspondents send us per-
sonal news notes, but mostly
letters, I'm sorry to say. The
rate is two cents a line for every-
thing. Most of it's deader than
a whip catalogue, but folks
in these towns like to read about
the Herald picks up extra
on the way. You should see the
wallow through, though,
out the meat.
This tasty item from Lyndon-
ville. Mr. George Coombs gave me
a letter yesterday evening at her
new white house she and her
husband built next to the one that
belonged to Mr. and Mrs. Vlasek.
They got a job in the blanket mills
in Ludlum. The gracious hostess
baked cakes to her neighbors.
The piano selections Miss M.

Nickerson was prevailed on to play
was . . .

See how it goes? Words by the
pound. Then I boil them down into a
compact, gooey mass, keeping all the
names and not much more. The Herald
carries a full page of out-of-town per-
sonals every morning.

Most of my correspondents would put
a sensitive newspaperman into a psy-
chopathic ward within a year if he didn't
have a spot-welded constitution like
mine. But one of them did almost suc-
ceed in making me bust open a bit
around the seams, which is an incredi-
ble feat. I shall never forget E. Matti-
son, the most startling puffwit who ever
dropped a batch of unintelligible per-
sonals into a mailbox.

Usually the stuff arrived on old scraps
of brown paper—people are frugal in
our state—composed with a limping
typewriter that didn't have any "h."
That's a fact. The letter "h" was just
missing. E. Mattison used to go over
the pages afterward and write all the
"h's" in with a pen, which made the
final product look like a page from
Beethoven's Fifth Symphony.

Day after day, this E. Mattison beat
me back to the ragged last ditch of san-
ity. I remember vividly the time we
had a report on a church supper at Wil-
gate. In the last sentence it said that
the organist played Onward, Christian
Soldiers. At eleven o'clock that night,
while I'm down in the composing room
watching Whit Noble lock up the out-
of-town page, in rushes Whippy with
a collect wire that cost The Herald
seventy-two cents. "Please correct my
story on church supper," it said. "be-
cause the organist didn't play Onward,
Christian Soldiers at all like I wrote. It
should have been Lead, Kindly Light,
and Rev. Belcher will be put out if story
in The Herald isn't right. E. Mattison."

I groaned. Whippy looked pale. "I

didn't know," he said. "I thought it might be important, so I accepted it."

The pay-off blossomed a few nights later. I was at the Starlight Tavern, leaning over the bar rail in a familiar pose, and gabbing with a friend of mine who's district supervisor for an oil company. This keeps him out on the road five days a week. "Gee," he said, putting his glass down on the stain-soaked mahogany, "I sure saw a funny thing last week."

"Yeah?" I murmured, without any burning interest.

"Passed through Wilgate," he went on. "Little burg no bigger'n a matchbox. The whole place was in a lather. Seems an oil heater exploded in the basement of a house and blew three people right out through the walls. Greatest miracle I ever heard of. They didn't even get a scratch and yet the house was ruined."

"Yeah?" I said again, this time with the rising inflection of conventional surprise. "Where was this?"

"Wilgate."

The landscape began to glow red in front of my eyes and I wanted to put my fist through the top of the bar. "That dope," I shrieked. "That colossal and unmitigated..." The rest was robust, unkind and strictly categorical.

Doubling back to the office, I sent off a smoking wire that night. The answer came next morning, collect as usual.

"Did not think explosion worth a story. No one got hurt. E. Mattison."

The iron was white-hot and ready for striking. "That guy," I informed Whippy, "is probably an ape. He's a leftover from the paleolithic age. His arms hang down to his knees. And I'm firing him right now!"

"Sure," said Whippy. "Sure, Chief." He knew I hated to be called "Chief," but Whippy was just fresh enough to have the makings of a good newspaperman.

"We're not gonna hire any more lunkheads by mail, either," I went on. "Somebody ought to go up there and find a smart correspondent who has all the letters on his typewriter. I'm getting old, Whippy. I want peace with my age." Actually I'm just in my mid-thirties.

WHIPPY chewed at the end of a copy pencil thoughtfully. He was a good-looking kid with a thin face and dark eyes so bright that sometimes I thought he must be burning up with fever. His hair was curly and soft blond, and more than once I've seen the girls in the business office downstairs follow him with their eyes as he went by.

"Look," I said, dipping into my battered card file, "here's a letter we got from a guy at Wilgate the other day. He wants to know if we plan any change of correspondent and suggests it might be a good idea. Sounds okay to me. His name's Morgan Olney. Maybe we better look him up."

"Okay, Chief," drawled Whippy. "How long will you be gone?"

This was something I hadn't yet thought about. It's a short trip to Wilgate, and I saw no reason for not going. I'm single, no home ties, and often go junketing across the state, covering various stories.

"I don't think it'd be safe, kid," I decided. "One look at this Mattison dope and I'd commit an exquisite job of mayhem."

"Okay, Chief," said Whippy, in the same monotone. "How long will I be gone?"

I could see now that he'd been squirming to make the trip. Wilgate is about fifty miles upstate, and over into the hills. Whippy's a good youngster, I told myself suddenly. He'll appreciate the change of scenery.

"I could do the job in a day," he de-

clared, almost pleading. "Easy in a day. Can I go?"

"Sure," I said. "Sure you can go. Take the day off."

And that was where I changed his life for him.

WHIPPY MULLINS used The Herald's car, a tired-looking coupé with a clutch that made it lurch off like a kangaroo. He arrived in Wilgate about noon, which means he must have taken all the turns at a good clip. Wilgate is a small town with a village green and ten houses sitting around it like people at a dinner table. Presiding is the white steeple of an old Congregational Church.

There are no paved roads in Wilgate. Just dirt and gravel, rolled flat. "Hey, bub," yelled Whippy, addressing the first person he saw, "where do the Mattisons hang out?"

The man was standing by the corner of the green. "Yonder," he said, raising his arm. Whippy saw a small house

into four. "Just read a magazine or something," the woman had suggested. "If you'll pardon me, I have to look at some pies in the oven..."

Then he heard footsteps on the stairs and E. Mattison came into the room.

"Hello," she said. Whippy admits he never knew which harpooned him more, her figure or her face. Even in the dim light of the parlor he could see enough of both to put his heart into a spin. She was trim with incredible perfection, and her blue eyes had a playfulness that was almost a challenge.

"Hello," said Whippy. It wasn't the voice he had planned at all. The two syllables bounced around in his throat before they broke clear. "Are you... Miss E. Mattison?"

She glided across the room and sat stiffly on the edge of the sofa. "Yes," she admitted. "Yes, I am. You're from The Herald." It was a positive statement, not a question.

"We... we didn't know," began Whippy. "I mean, down at The Herald

"Wilgate?" I reached for my file, and then remembered to," I told Jerry. "Mullins went there this morning to let me try and reach him on the phone?"

Jerry looked at a sheet of paper in his hand. I could see it was a type from the state capital.

"The governor's going to rest for a few days," I said. "There's something in the air in Washington."

"Sure," I said, learning the first time.

"There may be a good break," went on Jerry. "The Globe-Press got it." The Globe-Press petitor. "Give Mullins a call. He's still there. Tell him and cultivate the governor's sister. Gail Mrs. Emma Mattison."

I wrote it down. "Emma Mattison..." somebody had pushed into a storage vault. "Holy Cow, turning the color of a f..."

"You bet, Jerry," I yelled, reaching for the phone. "That I turned over the phone smiled. 'Hangin' around again, I see,' he said, to..."

"Look," I growled at him. "I want to talk to Mr. W. Mattison. See if you can reach home of Mrs. Emma Mattison. Quick, sister..." I felt inside at the quaint sight of the Herald firing the governor's sister. "Our state, anybody who crosses a Republican bigwig like me might as well go live in a cave surrounded by poison."

That wait was an awful experience.

WHEN the operator's voice was cool and calm, "Mr. Mullins is not at the house, sir. He is expected later. They didn't know how to reach him. There was no point in calling Emma Mattison. Maybe she told her yet. I was in with a jittering dither."

"Well, keep trying," I said. "For Pete's sake."

What I didn't know, that Whippy and the governor's niece of the moment whirling around in The Herald's coupé, magnificent moonlight and ing boldness, each other.

What Whippy did not know, Miss Edwina Mattison who was both her mother and the governor of the state, was blandly certain Morgan Olney, made as much headway as he desired, possibly and a potent right.

And Miss Mattison, too, had no idea that her local swain, had received The Herald asking for a theory that if she lost it, an annoying yen to be a woman. This career-striver told him, stood irrevocably of marriage, kiddies and round the door.

But Whippy measured in her eyes. Whippy of and piercing eyes was newspaperman whose in at the moment giving harrowing, if fanciful, news. Edwina Mattison reacted stirrings in her bosom.

What happened or where ride in The Herald's car. Herald's gas, I shall never know. (Continued on p. 46)

"Lucky for us Cousin Pete's boy is in the Navy, Kennesaw"

REAMER KELLER

with white pickets and a green lawn. It had a front porch and the Spartan architecture of straight lines, softened by curving rose bushes up trellises. "Thanks, bub," said Whippy, and the coupé leaped up to the house in three quick jerks.

The front door was open, but he knocked with a shy restraint that I can't quite imagine in Whippy.

A smallish woman came to the door, wiping her thin hands on an apron. A wisp of graying hair passed in front of her eyes, and nervously she smoothed it back.

"Can I find Mr. Mattison here?" asked Whippy.

"Mr. Mattison?" asked the woman. "Yes," insisted Whippy. "E. Mattison. I'm from The Herald."

"Oh!" The woman smiled. "Won't you come in?" She went ahead of him into the front parlor, fussing at inconsequential things like imaginary dust on the slip covers that shrouded sofa and chairs.

Then she went to the foot of the stairs. "Eddie," she called. "Eddie, there's a gentleman down here to see you. From the Herald."

Whippy waited. Two minutes merged

we thought you were... that is, we didn't know you were..."

"A girl?" supplied Miss E. Mattison. "No, I always felt that women should compete equally with men, and I wanted you people to think I was a man."

"Sure. Well, sure," agreed Whippy, still in the stratosphere. "We... we always enjoy reading your stuff, Miss Mattison. Down at The Herald, we always read it."

"Please call me Eddie," she asked softly. "It stands for Edwina, Mr..."

"Mullins. Oh, call me Whippy."

Eddie smiled. "Wouldn't you like to stay for lunch?" she asked.

"Well, gee," he stammered in ecstasy, "gee, yes—I would."

THAT night, while I was sitting at my desk rewriting some of the double-jointed sentences from my dear correspondents, Jerry McConnell came out of his office. Jerry's the managing editor. In addition to a youngish, fresh Irish face, he has two very admirable characteristics. Jerry's a born newspaperman and he can put away a pint of rye with all the dignity of a grain elevator. "We got a correspondent at Wilgate?" he asked me.

ELTRICIAN'S MATE
ARL W is in the small ante-
to the plotting room. A big
omes one corner and blows
the steroom into the mess
ests here, dazed. When he
e to ide he sees the main
ptur and steam billowing
e crals. He walks along the
ting or life jackets. "I'm
an els to him and Barlow
Ch Boatwain's Mate
rontowski. The starboard
has been blown to pieces al-

most in the mate's face. He has a
broken leg, broken hand and severely
cut face. Barlow drags him to the execu-
tive officer's cabin and tries to make
him comfortable on the floor. Fronta-
kowski's face and jacket are covered
with blood. "My chest hurts," he says.
Barlow looks at the man's chest and
finds a fragment of the whaleboat
wedged between the injured man's chest
and his life jacket. "Now, how the hell
did that get there?" Barlow says, pull-
ing the piece of wood free. Fronta-
kowski breathes more easily. "That's
better," he says.

L T. (JG) REUBEN N. PERLEY is in
the director room. His first job, as
damage-control and repair officer, is to
go below, find out how much damage
there is, judge if the ship is sinking and
if she can be kept afloat. He rounds
up eight or ten men and goes down to
the total darkness of the ship's interior.
The torpedo hit on the starboard side
between the bridge and the forward
funnel. Perley finds four feet of water
in the plotting room, but the maga-
zines below it, and the forward engine
room, are all right. The bulkheads
forward and aft of the forward fire
room are holding but need shoring up.
The men get to work. Ensign Roy
A. Norelius, assistant gunnery officer,
comes down. "The captain wants to
know if we can stay afloat," he says.
Perley answers: "I'm not sure yet. The
damage looks terrible. But the ship
feels good. She's almost cut in two—
still, she feels good." You can tell some-
thing about a ship by the way she feels,
the way she rides the waves. You keep
close watch on her; on the bulkheads
and on the bow and stern to make sure
they're acting together. Any time you
see the bow begin to rise while the stern
stays put you know the ship is coming
apart.

THE Kearny is crawling at three knots,
trying desperately to get beyond the
light from burning ships, star shells,
signal rockets. There are eleven dead
(seven were killed in the forward fire
room) and eleven injured. Down in the
forward engine room, Chief Machinist's
Mate Aucie McDaniel is working ex-
pertly with his crew, winning himself
the Navy Cross. He cuts off broken
steam connections, and in half an hour
he has steam up. The forward engines
are cut in and the Kearny speeds up
to ten knots. Hurrying aft, Radioman
Bland bumps into another radioman
coming forward from the emergency
transmitter. "I can't get on the air," he
tells Bland. "All the antennas are
down." Bland rigs up a transmitter and
gets it working. There is no doctor
aboard the Kearny and the first mes-
sage he sends out is a request for one.
Word comes that a destroyer is on her
way to meet the Kearny, bringing a
doctor. The pharmacist's mate thinks
he can take care of the wounded over-
night, so the Kearny's officers decide
to wait for the doctor and not hold up
the escort. They signal her to never
mind. The chief steward gets coffee and
sandwiches together and everyone be-
gins to feel better.

When the doctor gets aboard next
day, he is worried about Torpedoman
Third Class Samuel R. Kurtz, who was
standing on the starboard side of the
bridge and had both legs broken. The
doctor asks for blood plasma and a
Navy plane brings it out, drops it by
parachute to the sea. A boat from one of
the destroyers picks up the package and
a blood transfusion saves Kurtz's life.

A SWITCH IN LULLABIES

"Some flew east—some flew west—
Some flew over the cuckoo's nest."

—(Old nursery rhyme)

Somewhere beyond the Southern Cross above the Seven Seas,
Along the bitter far-off roads, their pinions catch the breeze.
Their wings are black against the sky, by desert, surf and dune,
The ancient lullaby is lost against a rougher tune—

Some flew east—some flew west—

And some will fly no more;

Far, far out from the eagle's nest

Their mighty motors roar.

And wing by wing their rule will grow

Above all sea and sod,

Until they strike the final blow

For country and for God.

Faintly, I hear the old, old song when golden dreams were young.
But louder still I hear the wings where sudden death is flung.
Bravely the eagle rides the air, but in my fading dreams,
The dim, lost lullaby returns—how far away it seems—

Some fly east—and some fly west—

They take an endless track.

Through flame and steel they face the test

Around the world and back.

Their golden youth blots out the sky,

They let the comets plod,

As each one flies to live or die

For country and for God.

GRANTLAND RICE

The Army Needs Your Skill

The pay problem has been keeping men out of the Army who should be in—men who have made good at their civilian jobs, whose skill is badly needed, but who have families to support. And this mechanized war requires skill as no past one has. New, complicated methods of communication, transportation and attack put the premium on the man who has years of civilian training.

For that reason, the Army is working constantly to see that the experienced electrician doesn't spend his enlistment baking bread. For that reason also, the man who has special ability that earns him a living in normal times will advance rapidly in the Army. He may soon replace a good part of his former salary with a technician's or a sergeant's pay. There is no minimum time before advancement; and a private can become a sergeant without ever having been a corporal.

Figure it out with the table on the right. If you have what is needed (see partial list) you'll probably find you can do your duty by your family as well as your country by getting into this fracas. But whatever your job, be sure to notify your local draft board of any intention to volunteer in the Army.

NOT many days ago, Chief Electrician's Mate Barlow leaned over the side as the Kearny—speedier and stronger than it was before—slid out to sea again. "We have a score to settle," he said. "They got the first round, all right, but we'll see what the judges say when the fight's over."

CAMP CROWDER, Mo. Car-bines are to replace pistols here before long. The Signal Corps boys aren't expected to lead in offensive fighting but they'll be able to take care of themselves. One recent arrival, who said his shooting had been confined to a news camera, ran up a 93.5 over-all average firing score, and the first picture he sent home showed him wearing a marksman's medal. Another newcomer balked at the idea of even holding a pistol. Said he was scared by a gun when he was a kid and was allergic to them. One day on the pistol range cured his allergy.

FURLOUGH applications at Crowder, and requests to the Red Cross for loans to go home, frequently relate to deaths of "kin." When that word is used and a Southern address is mentioned, further inquiry ensues. Sometimes the deceased proves to be a third or fourth cousin once or twice removed, and the recruit is advised to wire his regrets.

PVT. A. JUSTMAN, Co. A, 32d Bn. (Barracks 647) at Crowder says the boys are having a fierce time furnishing their day room and wants to know if any civilian reader of this column would be interested in sending Co. A a used radio. Would any?

GOWEN FIELD, Boise, Idaho. Pfc. Woodrow Watson, base headquarters information clerk, was talking over the phone to Pvt. Harry R. Taylor on

sentry duty. Watson suddenly heard a loud crash and Taylor's shout: "Call the guardhouse!" The guards found Taylor's sentry house slightly off base and the sentry lying in the road still clutching the phone. Seems a civilian driver (we won't mention her sex) swerved to miss two soldiers and smacked into the sentry house. When he came to Taylor admitted he thought it was a tank attack.

FORT DOUGLAS RECEPTION CENTER, Salt Lake City. When a local radio commentator sounded off with the assertion that some of the noncoms at the center were "trained in vulgarity and subjected the men to a type of language and treatment that leaves many a scar on a newcomer" he really kicked a hornet's nest. The draftees themselves held a protest meeting and said all they'd heard was a little well-placed cussing but nothing abusive. One private, not so long ago a civilian, complained that "Civilians don't understand Army life; they take everything they hear too literally." Officers quietly pointed out that the Army doesn't tolerate abuse; that noncoms who try to pull any are busted pronto; that only 10 per cent of the permanent personnel at the center is made up of Army Regulars; and that, after all, the Army is no young man's finishing school. One citizen wrote in to say he hoped the Army was as tough as pictured. A bunch of aviation cadets who happened to be going through the center at the time found the noncoms to be reasonable human beings and took the opportunity to lay out the radio commentator with several well-chosen words, none profane.

PAINE FIELD, Wash. Allen Nehrboss started Army life in the comparatively easy capacity of a bugler ("You (Continued on page 45)

Here's How You Fit

A FEW OF THE SEVERAL
HUNDRED OCCUPATIONS
CLASSIFIED BY THE ARMY

ACCOUNTANT

Clerical or bookkeeping is not a great need in the Army, but some statisticians and accountants are finding places in the Army.

ADMINISTRATOR

A degree from a high-grade college—plus experience—leads toward a commission in the Army.

*AUTO (TRUCK) MECHANIC

Present demand is for 18 of each 1,000 men, but only 14 have been entering the ranks.

BLACKSMITH

Small need nowadays, only 7,000 currently enlisting, but that many are getting into the Army.

CHEMIST

Chemical Warfare service is relatively small in numbers, but positions await some graduates.

*CIVIL ENGINEER

Plenty of work for qualified, experienced engineering school graduates.

CONSTRUCTION FOREMAN

The Army needs two every year; is getting; this need may later after rush of new buildings.

*DENTAL LABORATORY TECHNICIAN

Enlisted men with some experience in dental work will get fine training. Currently 3 out of 10 are men, one-sixth that number are women.

*DIESEL ENGINE MECHANIC

Requiring 1.5 per 1,000 men, the Army is getting only 0.5 per 1,000. The need for them will increase.

DRAFTSMAN

Various specialized opportunities for those with some training.

*ELECTRICAL ENGINEER

Only 1 out of 10,000 enlistees come in as electrical engineers. Army needs 4 in each 1,000. Civilian engineers should present data to Corps Area Headquarters.

*ELECTRICIAN

Shortages in several positions of electrical workers now exist. The Corps and other branches need more trained men than are enlisting.

*EXPLOSIVE OPERATOR

Experience as hoist operator, stationary engines, traction engines, etc., is a big aid in advancement.

INDUSTRIAL ENGINEER

A limited number find work in the new "industrial" branch.

*Currently among the most needed in enlisted ranks.

MENT MAKER,
IRIAN

Only one comes in where three are needed. Rating as technician is a good prospect if you have the skill.

TH

A big demand (13 per 1,000 men entering) and small supply (0.5 per 1,000) make locksmiths welcome for service.

ST

Also on the Army's wanted list and most popular with recruiting officers.

HAIC

They need two and a half times as many as they are getting. General, all-round training is most acceptable.

HAICAL
NR

Particular types of experience interest the Army greatly. Submit qualifications and see if you are the right one.

ALURGIST

Education and experience are valuable in many duties concerned with procurement of weapons, equipment.

CE MACHINE
AOR

The Army needs 1.5 card-punch operators per 1,000 new men, is getting 0.5 per 1,000; needs 1.2 tabulating-machine operators, is getting 0.5 per 1,000; needs 1.3 card punching and sorting specialists, is getting 0.1 per 1,000. New men are quickly trained.

ONEL
NIAN OR
SUTANT

Experience in this field is highly valuable as the Army works hard at finding its right men for the right spots.

ICT
CTONICS)

Specialists in electronics are currently rare and badly needed; submit data.

HAING EXPERT

Background in this work puts a man in a strategic position for key work in the Army—today's biggest buyer.

ICIAN

The need—15.5 per 1,000; the supply—0.5 per 1,000. Either amateur or professional skill interests the Army.

Needing 3.5 and getting 1.5 per 1,000, the Army wants to see you if you have this training in the radio field.

VEYER,
RUMMAN

Special skill of this type may interest any of several administrative and supervisory departments in the Army.

EEH

Eleven times as many are needed as enter the ranks. The lack is made up through training, but previous experience is most valuable right now.

PHNE AND
GRPH REPAIR-
INSTALLER

The Army needs 1.2 per 1,000 new men, gets 0.5 per 1,000 now entering.

Demand outweighs supply by 6 to 1, with good prospects ahead for the skilled man in communications work.

FIK EXPERT

Transportation problems are among an army's greatest. Specialists in traffic work should submit qualifications.

ly among the most needed in enlisted ranks.

New Rates of Army Pay

Men with dependents	Base Pay	If serving abroad	If serving abroad on flying duty	Rental and Subsistence Allowances
CAPTAIN	\$200.	\$220.	\$300.	\$132.
FIRST LIEUTENANT	166.67	183.33	275.	117.
SECOND LIEUTENANT	150.	165.	247.50	102.
WARRANT OFFICER (JUNIOR)	138.	165.60	248.40	102.
MASTER SERGEANT	138.	165.60	248.40	*
TECHNICAL & FIRST SERGEANT	114.	136.80	305.20	*
STAFF SERGEANT				
TECHNICIAN, THIRD GRADE	96.	115.20	172.80	*
SERGEANT, TECHNICIAN, FOURTH GRADE	78.	93.60	140.40	*
CORPORAL TECHNICIAN FIFTH GRADE	66.	79.20	118.80	*
PRIVATE, FIRST CLASS	48.	57.60	86.40	*
PRIVATE	42.	50.40	75.60	*

*All food and lodging supplied.

These rates are soon to go into effect. Higher rates for privates were under consideration at time of going to press. In addition, a bill now going through Congress provides payment to dependents of enlisted men in this way: the soldier allots \$15 monthly out of his salary; the government adds another \$15 if he has a wife but no children; \$30 to a wife and one child; \$40 to a wife and two children; \$5 a month extra for each additional child. Another bill with the same purpose provides slightly more liberal allowances.

SUBMIT qualifications, get information, at Office of Commanding General, First (Second, Third, etc.) Corps Area Headquarters, using these addresses:

First Corps Area Headquarters, Boston Army Base, Boston, Mass. Area includes Maine, New Hampshire, Vermont, Massachusetts, Rhode Island and Connecticut.

Second Corps Area Headquarters, Governors Island, N. Y. Area includes New Jersey, Delaware and New York.

Third Corps Area Headquarters, United States Post Office and Court House, Baltimore, Md. Area includes Pennsylvania, Maryland, Virginia and the District of Columbia.

Fourth Corps Area Headquarters, Post Office Building, Atlanta, Ga. Area includes North Carolina, South Carolina, Georgia, Florida, Alabama, Tennessee and Mississippi.

Fifth Corps Area Headquarters, Fort Hayes, Columbus, Ohio. Area includes Ohio, West Virginia, Indiana and Kentucky.

Sixth Corps Area Headquarters, Post Office Building, Chicago, Ill. Area includes Illinois, Michigan and Wisconsin.

Seventh Corps Area Headquarters, New Federal Building, Fifteenth and Dodge Streets, Omaha, Nebr. Area includes Missouri, Kansas, Colorado, Iowa, Nebraska, Minnesota, North Dakota, South Dakota and Wyoming.

Eighth Corps Area Headquarters, Fort Sam Houston, San Antonio, Tex. Area includes Texas, Oklahoma, Arkansas, New Mexico and Louisiana.

Ninth Corps Area Headquarters, Presidio of San Francisco, Calif. Area includes Washington, Oregon, Idaho, Montana, Utah, Arizona, Nevada and California.

Here are the averages a man with special skill can beat. What happens to 1,000 soldiers in their first year of training . . .

417.3 remain privates; 582.7 move higher
307.0 become privates first class
94.9 become corporals; 275.7 go into positions of command
88.0 become sergeants
46.4 become staff sergeants
22.4 become technical sergeants
9.0 become master sergeants
5.0 become warrant officers
10.0 become second lieutenants

1,000.0

Maps for a New World

Continued from page 16

there are unpleasant realities which must be faced by the mapmakers of the democracies: Japan feels insecure within her own Sea of Japan. Russia is cut off from a warm-water port. China is weak. India is rebellious.

Japan should be given *all* lands about the Sea of Japan. In exchange for this concession, Russia should receive a warm-water outlet through Manchuria and the addition of Outer Mongolia. China should be strengthened. Thailand should be expanded to include all of Indo-China except Tonking which should be returned to China. Thailand should also receive part of Burma in exchange for the Kra Isthmus. India should be divided into the two self-governing dominions. Northwest India should be joined to Baluchistan to form a Moslem India. The remainder should constitute a dominantly Hindu-Buddhist India. A strong Jewish commonwealth should be set up in Palestine, and a Christian state in Syria. The formation of a strong Moslem confederation, extending from Moslem India to Egypt, should be encouraged in the interests of order in southwest Asia. A Philippine Commonwealth must be continued. The Malay-East Indies area should again be a British-Dutch colony.

A map of the Pacific basin shows the same familiar pattern of interlocking colonial fragments making for friction and rivalry. It would be a comparatively easy task to zone this great ocean into quadrants of political control.

Draw a line following the Equator from the Galápagos Islands to a point just north of New Guinea. The United States should own all islands north of this line as far west as the International Date Line. Japan should control all west of that line except for an international zone extending from north of New Guinea to the Formosa Strait and northward along the China coast to Port Arthur.

South of the Equator, Chile should control the area westward to the 125th meridian. West of that line, Australia and New Zealand should own all the islands save those of the international zone. This does not mean abandon-

ment of freedom of the seas; it simply means a natural division of colonial ownership and it should go a long way toward stabilizing Pacific politics.

NO COLONIES IN THE AMERICAS

A last bit of geographical housecleaning is in order. European colonies in the Western Hemisphere must go. The Falkland Islands must pass to Argentina, their naval base being transferred to the United States. British Honduras, Bermuda, Trinidad, the Bahamas, Jamaica and the British Antilles must be transferred to Canada. The Dutch Leeward Islands must go to Venezuela. The

French islands must be attached to the French-speaking province of Quebec in Canada. Our own dubious possession Puerto Rico should be induced to become a state in the Republic of Cuba. Greenland should be annexed to Canada. The Guianas should be jointly administered by a Pan-American Commission. Thus the decks would be cleared for a badly needed new order.

BY WAY OF RESUMÉ

Europe can and must be stabilized by the formation of nine great nations. These must not be set up arbitrarily on politico-economic or military premises,

but must be constructed from cultural groupings of each with its own speed fully safeguarded. The cleaned by the transfer. Russia must be given to the ocean. The pattern must be reestablished.

The political control colonies must be reorganized.

Colonialism must be abolished in Asia and strong China, a secure Russia, a strengthened state, two Indian a Jewish state, a Ch Syria, and a strong nations in the southwest.

At present there is the British Empire is for world peace. For a maintained world peace of us but it was unable in 1914.

The other Anglo-Sax forced to intervene to peace and the British E ent we are again compelled even though ultimate v off. Certainly neither t nor the dominions inter definitely, intervening save the British Empire too costly and inefficient world order.

An entirely new set bilized Europe, a sta zoned Pacific, an Americanism, and a repartit the only alternative. In der, a round-the-world will no longer exist. Br colonies will consist of rican and East Indian p nected by a line of fuel this is not enough for a dominated British gover not help it. We will by busy paying off our ow worry about a Britannia wears a world crown.

CHON DAY

Flight to the Sun

Continued from page 20

hospital in Athens and he wrote a letter to Hickey thanking him for bringing him back and asking what was going on. And they were saying he was being sent back to Egypt.

Mellass kept them amused with his stories about when he was in exile, though they didn't believe him. He told them too about the special squad of raiders he had, that dressed up as peasants and went behind the Italian lines and set fire to camps and stores. He would disappear for days and when he came back he would tell them he had been on a raid. But they did not believe him. He seemed to be answerable to no one and he had a fine time with Nitralaxis, who laughed at his stories and said he had never heard such stories even in Baron Munchausen's biography. But he went away, too, and they didn't know where he went.

It was a good letup. They shaved every day and got clean for the first time since they had been in Greece.

John Quayle went up to the hospital every day. When Helen was not busy they would walk through the mud and

snow behind the hospital and through the village out toward the high Mitsekli range. They did not argue very much now. They were very gay instead.

Quayle and Helen were very fine with each other during that time. He still avoided being clumsy with her and not once did their reserve break down.

They were very fine days . . . and both of them were relaxed.

THE peacefulness ended with the bombing raid on Ioannina. Quayle heard the siren about five o'clock in the morning. He did not get up because the sirens went every time there was any plane in the vicinity. He drowsed off but the hotel shook with the first bomb and he heard Tap in the next room shouting to Brewer to put his boots on because there was a raid. Quayle pulled on his flying suit over his pajamas and put his flying boots on, as the hotel felt the shake of bombs. He could hear the planes now and wondered how far away the bombing was.

They got out on the open field toward the hospital. He could see the bombs

spilling out of the first plane that was high in the new light. He flattened out with Tap and tall Richardson as the bombs came down and burst somewhere in the village. He felt the noise and the earth shake . . . and then came the rest of them. He turned on his side to look up and saw the whole flight of Savoias and the small fighters winged on top of them, and Tap said, "This is going to be a dose!"

It had come down thick. The string of bombs came right along near the hotel, and a hundred-pounder hit the mud between them and the hotel. Quayle felt the whole earth heave up and its mess come down all over them; he heard only the earth shake in its tracks and the end of silence forever, until there was the individual sound of shrapnel winging off the cement front of the hotel and coming around in great high cries.

It moved forward from them toward the hospital, and another bomb landed farther up and then farther as the earth shook again. He could see the hospital through mud going up and coming down,

and he saw green grass c in the air, with the boom cry of shrapnel.

The next lot of bomb right, and pieces of tir from some of the build ing around in the air Quayle pushed harder int felt the continuous move its reception of the noise mission through itself t til it quieted. He look or forty planes were win the airfield and he saw cluster of bombs come field. He knew they had British had not, in any flaged the planes or the the ground crew lived, camouflaged. In the brig Italians couldn't help see

"They finally know the Tap said.

How about a nightcap when the final's put to bed?

MANAGING EDITOR: A highball? You bet I will! The minute the last edition goes to press.

US: Fine—and we'd like to propose something *very special* in the way of a nightcap. Which brings us to a question: have you tasted *today's* Four Roses?

MANAGING EDITOR: As a matter of fact, I haven't—though I've been meaning to for a long time.

US: Then tonight's the night—and we promise you one thing: As a newspaper man you've known plenty of thrills...but you're in for still *another* when you discover what wonderful things have happened to *today's* Four Roses. You've never tasted such full, rich magnificence...such mellow softness...such glorious flavor!

MANAGING EDITOR: Are you by any chance trying to hint that today's Four Roses is sort of a seven-star final in the way of perfection?

US: *We are—and it is!* What's more, when you taste it, we're certain you'll agree that the virtues of Four Roses should be praised in the biggest headline type there is!

MANAGING EDITOR: If you're right—in fact, if you're only *half* right—what a whiskey it must be! Where's my hat—let's go!

*Four Roses is a blend of straight whiskies—90 proof. The straight whiskies in Four Roses are 5 years or more old.
Frankfort Distilleries, Inc., Louisville & Baltimore.*

t what'm in," he said. "Bring k aft breakfast."

They left Masters in the restaurant and went with Hickey to headquarters—a cave—to get the orders for the day. The orders were waiting for them when they got there.

The squadron was directed to head for Elbasani and wait around there for bombers. Reconnaissance showed that Italians were operating from there and had brought up about three new squadrons for a big counterattack they were starting on the central front. Actually it had already started and the bombing this morning was part of it. The Italians seemed to be going about this one in a big way.

THE squadron took off in between the bomb craters and climbed into an easy stretch, heading north into the high sky that was without cloud except the white around the peaks caused by the sudden rising warm air.

Brewer and Finn were in John Quayle's flight, and Tap was tailing the squadron because he had done a good enough job in the last dice, when he had waited and come down when they were all lying around. They were at fifteen thousand when they came over Elbasani, which was in the neck of a deep river gorge and in deep shadow of a

bomber and it was Constance hitting the pilot that crashed the Savoia. It went straight down without any preliminaries and crashed.

The Italians had come in close and the tracers from their guns amidstships were wild because they knew they were trapped since they were so low. They were less than a thousand feet when Richardson came beam on into a bomber and almost cut it in two. It stalled as the nose went up and it fell quickly away. Quayle got onto another one but the pilot was smart and side-slipped away. For a moment Quayle thought the Italian was going to crash into another Savoia, so he pulled hard on the stick and right ruddered so that he banked in a half rolling climb and got away, but the Savoia straightened out.

The Savoias were waiting desperately for their fighters to come up and help them. The Gladiators were waiting for them too because it would be no fun scrapping at this height. Quayle was less than five hundred feet, and with no pull left in his climb because Hickey had not climbed. He had winged around and at the bombers again as Brewer and Finn came down in their initial dive on them.

"A short refresher course and she was ready for action again"

GEORGE PRICE

wide U-shaped mountain. It was a small place and the airdrome was about the first thing Quayle saw. There were so many Savoias and smaller fighters on it that it was like a flag waving them to it.

There were about twenty bombers and a group of fighters lining up to take off in groups. It was miraculous that nothing came up at the Gladiators as they swooped lower over the town. They were at eleven thousand before anything started, and then the black anti-aircraft started bursting around them. Between Hersey's wings Quayle saw Hickey shake his plane and nose over. Quayle took a quick look below and saw the first flight of bombers just leaving the ground.

The Gladiators came down through the black anti-aircraft which twice was near enough to bump Quayle's plane, but Hickey was leading them carefully and they were down through the barrage. Then they headed steeper, and Hickey pulled out right on top of the first ten Savoias that were climbing desperately and firing wildly at the Gladiators even before they were in range. Hickey held his fire until he was right on the bomber, then gave it and held it in a long wide burst of fire. Constance came after him, attacking the same

Tap was on top waiting for the trouble to get to the others. But Hickey came right around in the middle of the climbing Savoias, who were firing everywhere wildly and dropping their bombs on their own airfield to get rid of weight. One Savoia climbed a hundred feet over the others, was escaping when Brewer and Finn both went after him, came at him from both sides and poured everything they had into him.

By this time the Italian 42s had left the ground and were in among the squadron. The first to be attacked by them was Finn, and Quayle came around and shot a 42 away from his tail just as he was about done. Quayle could feel another 42 on his own tail as he leveled out—the most dangerous moment in a fight—to get at the 42 on Finn's tail.

QUAYLE saw two 42s go down, and about all he could see were 42s. When Tap and the other two came down to help them he knew it was time to get out. Quayle climbed as Tap came in a wide bank almost straight down. He was waiting for Tap's leading edge to peel off when he leveled out and he could see the terrific wide burst of Tap's 303s flying around everywhere. But he could only see Italians when he banked

... until he climbed two hundred feet; then he saw even more.

It was strange to see so much level flying in a scrap because everybody was so low. Two Gladiators were out of it above Quayle and another one was a way off to the right. Tap was coming up after his dive with his flight still hanging on to him.

Quayle could only see one Gladiator down there after that. The Gladiator was trying to get height but there were at least fifteen 42s around him and two on his tail. Quayle started out in that direction but they were all flat out and he pushed on the throttle. He saw Hickey streak by him as if he had got some human element into the plane so that he got extra speed out of it.

But Hickey was too late.

The Gladiator suddenly turned over and fell in a left spin—quickly, then wildly. Quayle waited without breath for whoever it was to jump but there was no jump. He saw it hit the ground and the black smoke and red flames spread over it.

Quayle pulled up desperately because it was time to get out of this. He kept pulling around until he could see three Gladiators which he thought were Tap and his flight. Then Hickey came in over him and they all started for home. Quayle had not seen any other Gladiator go down but he could only see five besides himself around and he wondered who had crashed.

IT WAS always slow getting back. John Quayle called into his phone a couple of times but no one replied, so he did not try again.

There were four Gladiators in when he got down... Hickey, Constance, Hersey and Richardson. None of Tap's flight was back—Brewer, Finn and Tap himself.

"There was quite a mess when I left," tall Richardson said.

"Who went down?" Quayle asked, as he came to the four of them. They were sitting on the running board of the station wagon with Anderson, the doctor.

"We don't know. Richardson says it was Tap," Hickey said.

"Tap!" Quayle was surprised at the big feeling within him.

"I saw him come out from about twenty 42s and when I turned around the next time I thought I saw him caught again, and then he went down," Hickey said.

"Did anybody else get it?" Constance asked.

"I didn't see anybody," Quayle answered.

"Was it you that came on the 42 that had me?" Constance said to John Quayle.

"Yes."

"That's getting to be a habit of yours," Hickey said.

"I just run into it," Quayle told him.

"Here's somebody now."

"His flaps have been shot away," Hickey said.

The Gladiator came low very fast and hit the field. It bounced. The earth splashed from its wheels. It floated high and fast. The nose dipped a little. It came down again and slid very swiftly across the field. Quayle could see the pilot was afraid to put his brakes on in case he should tip, nose down. The Gladiator stopped just at the beginning of the rough area. The pilot climbed out... undid his parachute. Quayle saw then it was Finn. That left Tap and easygoing Brewer still away.

"Was that Tap that went down?" Quayle asked Finn.

"I don't know... I didn't even know anybody went down. Who's not back?"

"Brewer and Tap."

"I didn't see anything of them," Finn said. "I got my port aileron shot off

e to go now anyway." Quayle a hiccup and they walked up

ospin. He left her there and e held. The others were wait-

ing for him. They got into the station wagon and drove out to the field.

When the flight was almost over El-basani village, Quayle began to feel sick. His stomach was tighter than usual. They were cruising above the cloud at twelve thousand feet and it was not bumpy. Hickey had warned them about being surprised, but Quayle was very surprised when he saw the swarm of 42s coming in from about fifteen thousand feet on their starboard in a sweep.

"Hold it," Hickey yelled through the phones.

WHEN the 42s came close, Hickey pulled away up and the others followed. They had been struggling to get height. The 42s met them almost head on because Hickey had pulled them up and around. As the 42s came in their sweep, Quayle could see the wing shadow of two 42s straight before him and could see the white flame spurting from the machine guns in the wing stubs, and the tracers coming over his head. Then another 42 came at him from behind. He tight-looped out of the way and looked around for Gladiators. He saw two of them in a mix-up with about twenty 42s away off to the right. He pushed the throttle wide open and went out to them.

Quayle got in an initial attack on a 42 that was following a Gladiator down in a spiral spin. The 42 pulled out of it and kept going flat to earth and burst into flames. The Gladiator was flat-spinning too. Suddenly Quayle saw the pilot hurl himself out of the cockpit like a black ant and the white burst of his parachute spreading in a puff.

Quayle looked around and then he saw a 42 diving toward the parachute. He saw the white burst of the 42's guns and the tracers. . . . He saw the parachute collapse and its slow speed become a lightning streak; he saw the figure of the Gladiator pilot hurtling two thousand feet down into the black earth. . . .

Quayle winged over and put the Gladiator into a straight drop. He didn't take his eyes from the 42 that had shot at the parachute. It had pulled out and was climbing. . . . Quayle straightened out a little so he would meet it head on. As soon as he saw it in his level sights, he pushed on the gun button hard.

He kept it down and kept the plane

How's your "Pep Appeal"?

—by Siegel

Mrs. A: I should have known better than to let you go to the party as a clown! Clowns, my love, are supposed to make people laugh.

Mr. A: I know, I know. I was a first-class flop. But, gee, I just don't have the old yen for parties any more.

Mrs. A: "Yen," my eye. All you lack, my unhappy husband, is your quota of pep appeal. My hunch is that you're not eating right—not getting all your vitamins. And right now is a good time to start getting them. Let's go raid the pantry.

Mrs. A: Just dip your spoon into this bowl of KELLOGG'S PEP! It's a crunchy, toasty cereal made from choice parts of sun-ripened wheat. And in it are extra-rich sources of the two vitamins least abundant in ordinary meals—vitamins B₁ and D. You can't expect to have pep without vitamins, you know!

Mr. A: Ummmm! Why didn't you tell me how swell-tasting it is? If getting the rest of my vitamins is as much fun as this—say, I may turn out to be the life of the party yet.

Vitamins for pep! Kellogg's Pep for vitamins!

Pep contains per serving: 4/5 to 1/3 the minimum daily need of Vitamin B₁, according to age; 1/2 the daily need of vitamin D. For sources of other vitamins, see the Pep package.

"Look, Myrtle—let's do it this way instead"

JOHN F. KAPPA

ON THE historic walls of the entrance hall of the Cadet Gymnasium at West Point these brilliant words are etched where all West Pointers can see them—"On the fields of friendly strife are sown the seeds which, in other years on other fields will bear the fruits of victory."

This quotation was written by athletic-minded General Douglas MacArthur, today's number one American Soldier, while he was Superintendent at West Point. It could have been conceived only by an *American* who believed in athletics and who recognized the importance of the American way of *sports* to the American way of *life—and of WAR*.

On gridirons, baseball diamonds, cinder tracks, tennis and basketball courts, and many other "fields of friendly strife," our American boys develop the strength and stamina,

the speed, the coordination, the fighting spirit and the "will-to-win" that make them great athletes and the world's finest potential soldiers, sailors and airmen.

Without our vigorous competitive sports, America *would* not be and *could* not be the *fighting* America it *must* be to defeat the legions of Democracy's enemies.

heading at the 42, shaking under the gun vibration. He kept it heading toward the 42 until his madness relaxed and he pulled up over it and tight turned around and came in fury to get at it again. But the 42 was a black flame, on the way down . . .

The 42s pulled away and Quayle saw two Gladiators heading homeward . . .

Quayle wondered who had gone with the parachute. He had been too far away to see what had happened to the others. He tailed the two Gladiators who were far ahead of him. He was so mad about the 42 shooting down the parachute that he had tears in his eyes. He felt helpless that he had only shot at the plane to bring it down. It was not enough. He wanted the personal death of the 42 pilot. If only I could have seen him close up and got him, he was thinking.

QUAYLE was the last to land. He came down after a tight loop over the field and doubled up with stomach pain when he got out of the plane and stepped on the ground. Rutger and Williams, the rigger and the fitter, took hold of him.

"Are you hit, Mr. Quayle?" Rutger asked.

"No. I've just got a bellyache. I'm okay."

"Fine. We thought you were gone this time," Rutger said.

"You did? Who isn't back?"

"Mr. Hersey. They say he went down in flames. And Mr. Richardson."

"Richardson bailed out and an Italian shot his parachute up," Quayle said.

He walked to the bus where the others were sitting inside waiting for him.

"We thought you got it, John," Tap said.

"No. Did you see what happened to Richardson?" Quayle said.

"Hickey saw it. Was it you got the hound that did it?"

"Yes."

"Fancy doing that! Fancy shooting up a parachute. The bloody skunks." Young Constance felt madder than Quayle. He spoke in a wide Oxford accent and it was absurd to hear him as he added a few stronger words.

"How did Hersey go down?" Quayle asked. Hersey—it would be strange without old Hersey.

"Just got too many around him . . . Was I surprised when they came down on us?" Tap said, as the bus lunged over the bad road.

"I'm sorry, fellers. . . . We should have been up top, too," Hickey said.

"You warned us, Hickey," Quayle said to him.

"How many did we get? How many did you get, Quayle?"

"I got two for sure. Maybe another one."

"That makes a total of six altogether—all 42s," Hickey said. "HQ is going to feel fine when I tell them."

"HQ? What are we supposed to do? What if the bloody Germans come in?" Tap said. "Fat lot of good we'll be."

Quayle was looking at Stewart, Constance and Finn. They were the only ones left of the new batch. He felt awkward thinking of it. With Hersey gone, it left himself, Hickey and Tap as the only long-time members of the squadron.

"Did you get any today, Finn?" he asked the blond boy, who smiled at him.

"One."

"You've broken your duck, then."

"Yes. So did Stewart."

"You did?"

"Yes," Stewart said.

Quayle thought that must have been the first time he had ever heard the boy speak. "How did you get him?"

"Came up from under him," Stewart said. "I was surprised to see him, as a matter of fact."

"I think you always are," Tap said. "I am . . . I'm always surprised."

"I'll shoot every bloody Italian that bails out from now on," Finn said. "Fancy Rich getting it like that!"

"It won't help to do that," Hickey said quietly. "This Italian is an exception. We don't want to start a feud like that."

"I suppose you're right," Finn agreed.

Hickey got out at the headquarters cave, and the others went on to the hotel. Quayle took his flying gear into his room, then went straight out and walked up to the hospital. It was getting toward the long light of evening. He was not going up to see Helen because she had asked him. He was going up because he wanted her now . . . when he thought of Richardson and Hersey and the conversation in the bus. It was catastrophic . . . He wanted something that would absorb what was in him. If he could yell his head off and eat the earth madly, that would be it. He had read that somewhere, and it would be fine . . . But he wanted Helen now . . . just to know she was there as something real. He found her in the common room, packing bandages in a small first-aid kit.

"Helen," he said abruptly, "can you get away? I want us to talk." He took her overall in his fingers and tugged it quickly.

"Just a minute." She went into the small room at the side. She came out with her overall off.

"Come on, then," she said. "I've only got a few minutes."

They went outside. It was automatic that they walk to the field where they always went.

"We've got to get married," Quayle said.

She only looked at him.

"It's the only thing. I know what I want."

"Yes?" she said slowly. Then she smiled at him.

"We've got to, Helen. You know we have . . . I don't care what you say . . . I know it!"

"You just can't say it and do it," she said. "It's very difficult, John."

"Why not? I don't care. We will. Why not?"

"We just can't, John . . . When you leave here . . ."

"We'll be lucky if we ever leave here," Quayle said viciously.

"I have a family . . . You forget. I want to, but I cannot."

"But why let moralizing hold it up? I love you . . . I want to marry you now."

"I want to marry you, John. We should. It is right. But it is not simple. Let me think about it . . . please."

"Haven't you thought about it?"

"Yes . . . but let me think about it . . . now that you say you want it. Please, John!"

"Till when?"

"I don't know . . . tomorrow . . . tonight . . . just until I think it out."

"Tonight . . ." Quayle said. "I want to know, Helen."

"All right. Please, we will go back now."

"Yes."

They turned from the field and walked apart up the muddy path to the hospital.

"I'll come tonight," he said, as she opened the big door.

"Yes . . . but think about it too, John."

"I have," he said. "And I know . . . you think about it."

"Yes . . . goodbye."

"Goodbye," he said and turned away.

QUAYLE knocked on Hickey's door and walked in without waiting for an answer. Hickey was getting undressed to have a bath.

"Can I talk with you a minute, Hickey?" Quayle said to him.

"Sure. Sit down. Say, that was bad business today."

"Yes."

"I didn't think anybody would ever do that."

"Tough on Richardson," Hickey half frowned. "You're pretty good too. You depend on him."

"Yes. Say, Hickey," Hickey said, "I came in to see Helen."

"What about her?"

"Just formal. Is it all right if we get married?"

Hickey looked up quickly. "Well! Who would have thought of that?"

Quayle smiled too. "I thought it was indicated the way you were with them, and the similarity of Hickey as a mixture of serious and wild actions. Hickey always careful and always half-smile of Hickey's thing that went with his eyes, and there was Hickey."

HICKEY could see Quayle too. Their thought was almost identical. Hickey did not do anything the air, that he was serious on the ground, that he was his years.

"I know," Quayle said. "Do you?" Hickey said.

"Sure. It amuses me."

"Well. You didn't have it in the book of reference?"

"Do you always stick to them?"

Quayle laughed at Hickey and they both felt very good.

"When are you getting married?" Hickey said.

"I don't know. Tomorrow."

"We've been ordered tomorrow," Hickey said.

Germans are expected in Hurricanes have moved.

"What are we going to do?" Quayle asked.

"I don't know. We'd be up here. Six Gladiators."

"Will we get replaced?"

"We're talking easily and Hickey said."

"I don't think so," Hickey looks like the end of the world."

"You mean we'll get replaced?"

"I suppose so," Hickey know, I'll be sorry, John."

"Why?" Quayle looked surprised.

"So will you be. Hickey speed and no aerobatics. on every turn and you take a loop."

"Don't be romantic. Hickey's at it."

"I know," Hickey said. "I know as well as I do that Hickey is about the last fighting there is. I'd so want. Flying scads of Hickey being second pilot in a battle."

"I suppose so," Quayle said.

"Yes. I'll be sorry," Hickey won't be sorry for this. They're better off in fast."

"Who?"

"Oh, Finn, Constance, seems funny without Hickey these new ones."

"Yes," Quayle agreed. "I don't see."

They were quiet for a moment.

"How are you going to Athens?" Hickey asked.

"I don't know," Quayle somehow. Can you do anything?"

"I might be able to. I pose I ought to congratulate you."

"Thanks. When is the back . . . if it's going back?"

"In a couple of days, it will go after us."

"Maybe she could get it?"

"I'll see."

"Thanks, Hickey."

"That's all right, John. Hickey smiled broadly. (To be continued next week)

Roll Call of American Four-Engined Land-planes and Flying Boats of 20 Tons or More

another development of the two-engined PBY which the Catalina. Fully loaded 6,000 pounds.

Recent aeronautical scientists tell us that we have not yet entered the ultimate form of the aircraft.

Portrayals of future aircraft designs familiar to most Sunbeam readers, have included designs along with blown-up of present familiar types. The designs lean in the direction of

no fuselage, no tail. On a small flying wing airplane recently being pursued by

Boeing Aircraft, Inc., of Hawthorne, Cal., as things are being learned

the appeal of the big airplane in the number of swimming

how baths, cocktail lounges under domes along with travel in

cabins), 10,000 feet above the earth to five hundred miles per hour.

the airplane people think in more terms. They discuss such things

and eight engines, buried out of the wings or located at some

powerplant station as in a ship, connecting shafts driving propellers

the trailing edges of the wings and known as pushers. One great

to all the possibility of having power or spare engines to be

others are shut down for re-flight. New sources of power

are also fingered lightly. At the moment, these same

are working overtime endeavoring to another mile or two

sand miles of range in our best combat aircraft of today. And what we have, has come about through a long, slow process of trial and error. So, think many close to the subject, the big airplane of tomorrow will develop about the same way.

Private flying? Returned airmen, thousands and hundreds of thousands strong, will determine the nature of private flying of the future, just as they did at the end of the last war, but with much more encouragement. While they are now at the front, a few persistent people are at work on helicopters and other vertically rising and descending aircraft, notable of which is Mr. Igor Sikorsky, who, with iron hat firmly fixed on head, hovers low and slow over the countryside in his helicopter, all the while reliving again his pioneer flight in his native Russia to convince the world that his big 1912 model multimotored bomber was sound in theory and fact and that bigger airplanes were surely to come.

Some day, these helicopter-type craft, which can stand still in mid-air, move forward or backward and go up and down like an elevator, will grow up and transport great loads of people and merchandise with the speed, range, and comfort of the modern luxury liners of the skies. But most likely, they will come from the fertile minds of our younger generation of aircraft designers and builders.

So brace yourself for the radical and freakish stuff which will be just as radical and freakish as the original Kitty Hawk model of those irresponsible Dayton boys almost forty years ago.

Trial by Marriage

Continued from page 21

Here was a chain, and at the end of it a pile of bones. This was Nate, who had sat tirelessly watching the door for someone to take him afield. Now he was dead without ever having got enough hunting to suit him. But then Nate never would have got enough hunting to suit him.

The next pile of bones was Preacher, and near by his battered, tooth-marked food pan. Next, Fred, with a buckshot hole in the top of the well-shaped skull. Then Tequila, the hunting heart burned out of him, nothing but leathery cooked skin and whitened bones left of twenty years of scientific breeding.

Duff stood in silence. There was his kennel—nine chains, nine piles of bones.

Washed up. Yes, that was the word for it. Duff looked at the road that ran in front of the house. Somewhere down that road, perhaps, was forgetfulness; no memory of a ruined marriage and a burned Negro and a gun firing buckshot and a fine, reclaimed dog turning outlaw again, no memory of a girl who had lied to set him free. . . . Down that road, maybe things were different. He recognized the road—it was the one he used to travel, before he had got the idea that he might make something of himself. Now the idea was dispelled, and the only thing to do was to travel that road again.

He went inside and began packing his old suitcase. When this was done he went outside and set it down on the steps. And there on the front porch lay Judas, asleep. Not running wild, but come home of his own accord, asleep on the porch!

"Judas!" Duff said, in quick exultation.

The dog raised his head. Without thinking, Duff reached out to stroke him. Judas bit him through the hand.

Duff swore; the blood unhurriedly rose in the bluish tooth holes. Judas watched him placidly.

Slinging the blood from his hand, Duff straightened. "If I've put up with you," he said slowly, "I guess I can stand anything."

He took his suitcase back into the house.

AT ELEVEN o'clock, a small blue coupé drove up outside, and Lucie Sullivan, close-wrapped in her tweed coat, got out. She unfastened the gate, and strode down the walk.

"I just heard about it, Duff," she said. "I had to come see you."

"Wasn't any need for that," he said. "I had to come, Duff," she said simply.

"To see me on my back?"

"No," she said. "I wanted to help you."

"I'll make out," he said.

"Duff, don't be so darned stiff and stubborn. I know you're hurt, bad; I see it in your face. Please let me help you. Let me do something."

"There's nothing to do that I can't do."

"Oh, you're just crazy."

"Can't you understand anything? I don't need any help. I appreciate your coming, and that's the truth. But I'll make out."

"All right," she sighed. "Will you take me to see Wesley?"

Wesley lay in bed, wrapped to the chin in white bandages. Paul stood by him, attending him, and following the doctor's directions as carefully as any nurse.

"Miss Lucie," Wesley said, "I can hear 'em right on, just howling and crying for me to come git 'em out, and

I couldn't do it, Lawd, I just couldn't git 'em out. The closest was old Babe, and I got her chain undid, I can feel it hot in my hand right on, and I drug her out but she was done too far gone." He lay still, his jaw slack. "De first time, I never even got in good, had to crawl out and lay dere, coughing and spewing, and my clothes had cotch, and I beat dem out, and chokedlike, couldn't do nothing else."

"Next time," Duff said, "you keep your fool self on the outside."

"Yes, suh, dat's de troof," Wesley said. "Only de good Lawd knows how long dey had been a-barking and a-crying when I look back and see de fire. Maybe not so turble long, but when I come a-running, de fire was just a-going at it, mostly in dat hay in de loft. Den I run to de well and drawed water, and

"Stay wid me, son."

"Right here, Papa."

"Stay wid me."

When they got back to the house, the phone was ringing Duff's number, four longs and one short. He picked up the receiver.

"Mister Webster?" the operator said, above the buzzing wire, "Hold the wire for Grand Junction."

Then came the voice of the field-trial secretary. "Webster? This is Scott. Sorry to hear about your misfortune. All of us here send sympathy," he said. "I called to tell you the judges want your dog Judas here day after tomorrow at eight-thirty."

"What for?" Duff said stupidly.

"To run in the second series, what you think?"

"I can't run. My dog's been out on

"I can tell you exactly McGinnis will think. He'll had your share of bad break help you can get will be ok. He'll think it's okay for r win with a dog my grand. The others may think it's not Teague McGinnis."

"Maybe."

"Suppose you let me han of it."

IN the first series, four dogs and it seems to be a unanim that the judges were in calling back these four: Pineview Sue, the spectator, Hotfoot, and the mu Judas. Of these, Judas has bird score, but the judges into consideration that he when the birds were not out quarreled with this fourth.

Almost as soon as the series dogs were announce became leaden and by night before Daydreamer and P were to run snow began fall day, the temperature had degrees above zero. But judges deemed it satisfactory and Daydreamer and Sue were given their chance two dogs ran industrious quate heats. It remained to superdogs, Judas and Hotfoot what a championship heat like. . . .

About dusk, Duff went to market and supervised the a pound of steak for Judas the butcher put it in an ice ton, because wax paper some integrated and got mixed up. When he fed Judas, he saw there was adequate straw, cold and the wind was blowing.

There was considerable town, with more cars arriving cars with steamed windows, ing to see the champion run holds of Grand Junction there was not an empty bed.

AT THE drugstore, the night was on. The young men their heavy-handed kidding play out of their systems week. But the older ones of recalling the great dogs, ers had not tired of listening.

"This weather," one of the minds me of that 1915 ch Lucie, I guess you heard yo ther Amos tell about it man; Besita was one of his real i think he would have given have been her handler, tho less not even little Bee could planted Ambling Sam in hi She was a Llewellyn, the fifth Champion sired by old Co stone. I remember her clear once you ever saw this fir setter bitch, you never forg was just about medium-siz and white, and she acted li full of steel springs all the

"Well, that 1915, the something like this has turne The dogs in those days, the just wasn't any quit in the all in this little Bee. After s her heat through all the ice everybody figured she had w the judges didn't make any ment until that night. Me Hochwalt and Fred Stephe up to the room of her handle zell. And there on the floor Beazell, tears streaming dow

By Larry Reynolds

dey just kept on yipping and barking, and I hollered at 'em, 'Jes' a minute, Preach, old Wes is coming; jes' a minute, Mary; jes' a minute, Teak.' But I knowed dey couldn't hear me; for all dey knowed I was asleep in de bed widout caring where dey was afire er not.

"I poured de water, and it didn't do nothing but say 'psht.' Ev'y now and den I let out a holler, so maybe somebody happen to hear me and come he'p . . . but didn't nobody. Den I went in, and drug old Babe out, only she never even had de strenk to stand up."

"You stay on the outside next time," Duff said. "We can raise more dogs, but they've quit making your brand of feller."

"You reckon I'm got to listen to 'em fum now on?" Wesley said. "Barking and barking and barking. Den Mister Duff shooting and shooting and shooting."

"No. You'll forget it after a while," Lucie said gently.

"Just can't believe my dogs is gone," he mumbled. "Paul?"

"Yes, sir."

"You wid me, son?"

"Right here, Papa."

an all-night hunt. And neither one of my scouts can come."

"Somebody here will scout for you."

"It takes somebody that knows this fool dog of mine," Duff said, sweat standing on his lip. "I just don't see a chance."

"You don't want to scratch the National Championship, do you?"

"No, but . . ."

"Well, work out something, boy."

DUFF stood staring at the broken mouthpiece of the telephone. He gave the crank a turn to ring off; the last note of the bell faded away.

"Duff," Lucie said, "I could scout for you, if you'd let me."

"What?" he said uncomprehendingly.

"I could help you run Judas."

"Where did that idea come from?"

"Listen, Duff—and try not to be so all-fired stubborn. I can ride a horse as good as anybody, and I know Judas. Is that true or not?"

"Maybe so, but you're—"

"That's all there is. No maybe to it," she said determinedly.

"You wait. Teague McGinnis is the man you're going to marry. What'll he think?"

WASTE CAN KEEP A THOUSAND BOMBERS GROUNDED

GALLANT MEN died today—fighting your fight. Died in steaming jungles and arctic wastes—died in fox-holes and flaming seas. Because we—arsenal of democracy—have thus far sent them too little—too late.

Could you have made it different? Could factories straining every effort in America's behalf have turned out more planes—more guns—more shells today—if you had let them?

Did you keep a bomber grounded—lacking just one vital part because of something you had wasted?

CARE OF YOUR CAR IS A PATRIOTIC DUTY

It's un-American today to say "Maybe they won't let me drive much longer, so why spend money keeping up my car?" America must have transportation to keep our war effort going. Don't let neglect of your car waste the precious miles built into it.

Do you know that there are more than 30 points that may be overlooked in lubrication by someone not trained to give you a proper job? Get lubrication regularly—and get it from someone who knows your car.

Do you know that there are at least 5 places where too much grease or oil can do as much harm as too little? Go to an expert!

Do you know that your engine "manufactures" acid which collects in the crankcase and corrodes parts unless oil is changed regularly?

Do you know that even top-quality oils and greases like Alemite are cheap compared to repair parts? And that shipping repair parts steals transportation urgently needed for war materials? And that a well-lubricated part lasts almost indefinitely?

Do you know that lubricants that were "good enough" in peace-time when you could replace your car may be all-too-costly luxuries today! Only the best can be counted on to see you through.

Today, waste has become treason. Because it can cost the lives of fighting men and postpone victory. Because it steals production time from busy machines—robs us of materials essential to the grim needs of war.

How much waste goes on, unnoticed and unchecked, in your own home today? Are you wearing out parts of your refrigerator faster than need be—through sheer neglect? Or in your car? Or washing machine?

Remember that the machines that once made Alemite systems and fuel pumps and other parts for passenger cars are now working night and day at grimmer tasks . . . as are the machines of every other maker of cars and accessories and scores of other peace-time products.

And a repair part for your car is steel that could have been a shell. Even getting spare parts to you takes shipping space desperately needed for guns and bombs and tank parts.

Will you help the enemy by such waste . . . when a little oil and grease—a little care—a simple adjustment by a service man, made in time, could easily make the old parts give the longer service they can give?

Find those unread instruction books—on your car and every other machine you own. Take the simple precautions they suggest. Give the service man a chance to prevent damage instead of repairing it. Every hour you save our hard-pressed industries brings victory an hour closer.

THIS MESSAGE is published by Stewart-Warner Corporation, Chicago, Ill., solely in the interest of speeding American victory. We have no ax to grind . . . our machines have been converted to the making of essential materials for war and war production. We hope that we may soon serve civilian needs again. But until this war is won, those needs must wait. There's a bigger job to be done.

holding La Besita in her lap. Bill could hardly speak, but finally he managed to say, 'Bee's got pneumonia.' About that time somebody knocked on the door and told us, 'The judges called back four dogs. La Besita's to run against Lewis C. Morris, tomorrow afternoon.' Bill said, 'We'll be lucky if she's alive tomorrow afternoon.'

"They sat up all night, swathing that little bitch in hot lard and turpentine, and giving her stimulants—not thinking about the championship any more, just trying to save her. Well, next day Bee was better, and it looked like they had stopped the pneumonia, if that's what it was, before it really got her. For the first time they began to wonder if they mightn't let her run. Beazell was against it, but Stephenson, who owned her, said to try her, and if she didn't go right they would take her up.

"The morning dogs didn't do anything much, so they knew the championship was still open. Well, they put her down, and from the way that little bitch started out, she could have run all day. When they had been down a half-hour, Bee made a spectacular find of a covey Lewis had just passed by without scenting, and the judges ordered the dogs up, and announced that La Besita was National Champion."

"From the way the weather looks outside," somebody said, "tomorrow might be another pneumonia day. Them pointers will be wishing they was setters."

"I wouldn't worry much about the two that's running tomorrow, if I was you. That Hotfoot, he'll be too busy bird hunting to notice the weather, and that damn' outlaw of Duff's is tougher than harness leather."

DURING the night Duff heard the wind blowing against the pane, and he put on his sheepskin coat and went downstairs. When he flashed the light into the woodshed, Judas was curled deep in the straw; the dog raised his head and his eyes caught in the light and blinked coldly. Duff went back upstairs. He looked at his watch, 3:14. Before getting into bed, he went to the bathroom to get a drink of water, but the faucet was frozen.

He looked out the window to see if he could tell anything about the weather. The sky was black. He got under the thick covers, but no sleep came to him. At six o'clock Duff rose, shivering in the cold room, and dressed. He put on heavy underwear, a sweat shirt beneath his whipcord shirt. The boots were stiff as he pulled them over the woolen socks.

The kitchen was even colder than the bedroom. He was looking for the coffee when Mrs. Tufts came in, squinting her eyes. She wore an old robe and a nightcap.

"You're starting mighty early," she said. "I'll make you some eggs."

"I didn't go to wake anybody up. Just thought I'd fix a little coffee."

"I was about ready to git up," she said.

When he had eaten, Mrs. Tufts said, "I wish you luck, Duff," and he went out to the woodshed to get his dog.

Judas apparently guessed what was up, and he shivered with nervous impatience, and Duff knew enough to be careful about handling him. When he had the leash on him, Judas walked on his hind legs all the way to the car. Duff put him on the back seat.

The starter turned the motor heavily, and finally it caught. Duff switched on the lights, and backed around. The wind blew a paper across the street. At the corner house he saw Lucie's light on. She came out, running for warmth, her breath frosting.

"Hello," she said, climbing in beside him.

"Hello," he answered.

Daylight was showing above the bare treetops when they got to the field-trial grounds. Judas kept yawning nervously on the back seat.

"It's sure going to be a rucktious day," Lucie said. "What are you going to do with that check cord, Duff?"

"I'm going to let this dog take some running behind the car."

"Right before he's due to start?" Lucie asked incredulously.

"You look at him and see," Duff said. "He's hot as a mail-order pistol."

"Aren't you afraid it'll take too much out of him?"

"He's got to have some of that taken out of him, or we'll spend the first hour hunting for him."

"You're the boss."

After tarring his feet, they put the long leash on Judas, and Duff leaned out the back window and held the other end of the leash. Through winding sand roads Lucie drove at a speed to keep Judas running. Not that Judas seemed to mind. Once or twice Duff said, "Better go a little faster. He's got the line slack again and liable to get tangled in it." Finally Duff decided that Judas'

wanly at him. "Duff, I wish you luck."

Duff felt a sudden warmth for her that almost overwhelmed him. He said, "I wish us luck, Lucie."

Now they were ready, the judges waiting up front. Judas dragged Duff through the gathering gallery, while Lucie followed with the two horses. Teague McGinnis, leading Hotfoot, muttered, "Hope it don't take 'em long to make up their minds. This ground's froze enough to cut a dog's feet plumb off."

THE judges looked at their watches. Time, 8:49. Temperature, 28. Sky overcast, variable winds shifting to the southwest.

One of the judges blew his nose, and said, "All right, let them go."

Duff unsnapped the leash, and Judas jumped away. Both dogs ran hard, straining to outdistance the other. Then they broke apart and swung out bird hunting, but without slowing. In a few seconds Judas disappeared over a hill, and to the left, Hotfoot disappeared too.

"Them dogs might as well be running on the pavement as this froze ground,"

wire edge had been run off, and he stopped the car. Judas breathed rapidly but without laboring. "I'll walk him around and let him blow a minute, and then we'll go on back," Duff said.

As Duff allowed Judas to pull him around, he listened to the gusty winter wind that rattled the stiff bare trees. He looked at his watch: 7:44. They were due to turn the dogs loose in forty-six minutes. Day seemed only halfway there; no sign of the sun. Judas was walking on his hind legs.

"Well, I see we didn't run him too much," Lucie admitted.

"He pulled me at a trot all the way up that road and back."

WHEN they got back to the starting ground the hostlers had come with their bunches of horses, and had fires going. The cars were arriving. "Here you go, boss, best saddler in Lardermore County. Just git on him and take a try, Cap'm; he's a Tennessee-walking scoun'l."

Lucie and Duff supervised the unloading of their horses from the truck. They minutely examined their horses' feet and legs, and bridles and girths and saddle billets.

"Okay?" Duff said.

"Okay," Lucie said. She smiled

a man said. "And for all the birds they'll find, too."

The horses' hoofs struck with a hollow clapping, and their breath fogged from wet nostrils. Duff and Teague sat loosely in their saddles, occasionally passing a casual remark to show the judges they had complete confidence in their dogs' willingness to stay on the course; but their eyes were sharply searching the terrain ahead. Hotfoot appeared momentarily. "Yon's my dog, Judge," McGinnis pointed out, and his confidence became genuine, while Duff's eyes narrowed. Lucie looked at him questioningly, but Duff shook his head.

They surmounted the rise, and Hotfoot could be seen skirting the woods line off to the left. Somebody whistled softly, and told his neighbor to look at that dog go. Duff now rode erect, and made no remarks, casual or otherwise. Then, incredibly far ahead, he made out a spot of white. It might have been a log, because it didn't move; or it might have been a dog.

"Yon's my dog, Judge," Duff said, "and he's on point."

The judges stood in their stirrups and looked, but they could see nothing. "If you see a dog," one of them said, "you've got better eyes than I have."

"Well, he's there all right."

"I see him," said a man suddenly. "Before God, where he is at!"

Duff spurred his horse, long squall of assurance Judas. There was a minute to traverse the and arrive at the patch cedars where Judas stood high and his head back cracked in a cocky grin. In one hand and his quirt Duff waited until the judge then he strode rapidly knowing by the elevation head exactly where the bird was. They rose close-bunched yet left their roost place tilted out and back, and over Judas' head. Judas about-face, but didn't check.

There's the dog they break, Duff thought, as he of Judas' collar. With a bling threateningly, Duff pads of his feet; they were

Now Judas was away again in that carefree, tail-Ahead was a cornfield along a branch swamp, a edge of it was a continuing weedy cover. Running followed this all the way to at the far end of his cast whirled and darted back and abruptly stopped, on They all saw it, and looked other significantly when Judas wing and shot. Two covey minutes of each other, or morning when the birds posed to be moving.

Hotfoot's groundwork fully capable, and there was about his manner of running the illusion of tremendous disappeared behind a roll swung back in beyond it. later Hotfoot made his find Judas crossing the field, a hundred yards away and back. Duff looked at Duff and thought, *There's the boy going to break.*

THE sun came up, and the ground had thawed. In ad of there was a coating of cold mud upon the earth, and places the horses sank over terns. The wind rose, burned faces of the men. later, as if the day weren't enough, a thin, stinging sleet, half rain came with it it grew colder again. The looking at each other. But gradually the sleet that seemed to settle the. Not that the dogs mind them ran with the air of bright fall afternoon, and difficulty of finding birds well have been. But after his third covey, Duff saw were now cut and slightly half-frozen mud matted toes. *I guess now's the time some of the guts you're so full of.*

Instead of slowing his seemed to quicken it, through a cold branch back around and then lev the fields ahead; and pointed, he did it with such intensity that even the ten novice was jolted up saddle.

"You reckon the judges to put a stop to it?" one asked, after a while.

"Mister, if them judges a same dog race I am, you c 'em with a blizzard."

that great open flat, Judas soon demonstrated that he was at his best, for he smashed across those vast lespedeza fields, his great mottled form silhouetted on the gray background of trees and sky, always appearing somewhere ahead just when the judges would begin to wonder. . . . In less than twenty minutes he had the entire gallery with him. Not that Hotfoot was outclassed, for this dog is hard to beat any time, and impossible to beat some of the time. His work was done in his usual scintillating fashion, and the mistakes he made were negligible. But the weather seemed to hamper Hotfoot somewhat; not much, but a little. On the other hand, Duff Webster's fiery pointer seemed contemptuous of the killing weather, contemptuous of the gallery, and even contemptuous of his handler.

As this heat wore on while the judges were trying to find enough difference in the dogs to reach a decision, it became apparent that in this mighty pointer we were seeing one of the great dogs of the year, possibly even of all time. . . . Just when we were deciding this about Judas, he cast over some hills and in a little hollow Hotfoot was seen to flash into point. As McGinnis came up, the dog seemed to realize that he was pointing downwind, and then he did a piece of work very much like an expert chicken dog will sometimes do. He made a swift dash downwind and came back with the wind in his face, not in a crawling, creeping manner, but with snap and decision; in another moment he froze. The birds were there, and he was steady to wing and shot on this, his fifth covey.

Judas retaliated a few moments later, with his superb, inspirational handling of the covey in the gully. . . .

Occasionally both dogs were out of sight for several minutes, and the scouts rode out wide, searching. At first Duff had been doubtful about Lucie's ability to keep up with Judas; but she soon proved that she knew what she was to do, and more important, that she knew what Judas would do.

SHE rode back in and joined the gallery, and whispered to Duff, "How are we doing?"

"All right."

"Just all right, huh? You're crazy." She said it with the old lilt, and Duff liked it.

The course became almost serpentine, and every time they made a turn Duff was in a nervous sweat until Judas, guided by the rolling *Ha-a-ay, Jude!* bent around and appeared ahead again. Once, after a five-minute absence, he showed again at exactly the right place, and a man rode up to Duff and said, "If he wins, I'll give you five thousand dollars for him, and you to campaign him for me and take the winnings."

Duff said, "I'll think about it after he wins."

The man turned his horse, then came back, and said, "I'll pay it whether he wins or not."

"I'll think about it."

"Boys," an old man said, "you watch this race and remember it, and tell your children, because you've never seen one like it before."

"I saw Doughboy run in 1924," another answered.

A lawyer from Cincinnati said, thoughtfully, "Gentlemen, you take a careful look at that dog, Judas? Take a look at him. That's no Judas. That's old Ambling Sam come to life again!"

They looked, even the judges; and they saw it. For it did seem to be a reborn, rekindled Ambling Sam.

"You see it, Miss Lucie?" someone asked. "Isn't it so?"

Lucie said, "Yes, it's true!"

"Look at him hit those birdy places. You remember his crossing over to find

that last covey in the briar patch in the middle of that cottonfield? When he did it, I said, 'Now what dog was it used to pick out places like that?' and it came to me. Then I could see it in that short-coupled gait, and the way he cracks his tail."

THEY watched Hotfoot across an opening grass area where a covey had flushed wild, and saw him cast nervously about several times before going on; then Judas swung over and passed the same place and gave the lingering scent only one fling of his head, knowing the birds were gone. Five minutes later Lucie found Judas pointing on the edge of a series of gulleys. On the other side, where the dog was looking, was a weed patch which conceivably held the covey.

Well, you've picked a damned good place to cut your throat, Duff thought uneasily as he drew his gun from the

drawn in close. As he got back to his mount Lucie was grinning and winking at him, knowing, as he did, that the judges were on the verge of telling him to take his dog up, and that he had won. Then a long halloo reached them. On the far hill was Teague McGinnis, and McGinnis' hat was raised high—signaling a point for Hotfoot.

After that there was nothing to do but run them longer. Now the sun was out, and there was no wind. Both dogs reached out to the horizon in their casts, and the day had suddenly, now that the race was in its last stage, become almost pleasant. Quail were moving—the gallery rode up several coveys.

The course made another right-angle bend, and the handlers squalled at regular intervals. Five minutes passed and neither dog showed. Far out to the side, Lucie could be seen riding hard, searching and calling. Duff signaled her farther out to the left.

saddle scabbard. Judas stood as if on tiptoes, his nose high, his breath sounding audibly, the cold, wet hide of him stretched tight over his flared ribs. Duff skidded down the side of the gully.

As he started up the other side, a shadow flickered across his vision, and he looked up to see Judas pass overhead in a great leap. "Hey!" Duff yelled, and swore in bitter anger. But there was no whirr of wings. Duff climbed the wall of the gully, and there stood Judas. He had landed on point in the patch of grass.

There was hardly room for a covey of birds, but Duff kicked around in the cover. Nothing happened. Puzzled, Duff gave a sharp blast on the whistle. Immediately Judas leaped, as if touched with a hot wire, across a second gully. He landed in a half-crouch, tail-up, frozen. And this time Duff knew the birds were there. He crossed the gully and flushed them, and they boiled up from all sides of the motionless dog.

Out of the corner of his eye, Duff saw the judges conferring, their horses

"Durned if I ever seen two dogs have the pure hair run off of 'em, and still be tough enough to get lost!" somebody said.

THE judges and the gallery stopped and waited. Another five minutes passed, and still no sign of either dog. Duff and Teague now rode the surrounding woods desperately, kicking their horses without mercy; all of them knew that, in all likelihood, the first dog found would be given the stake.

Then, in a heavy cover beyond a chill branch, Duff saw something white. As he approached he knew it was a dog. The horses splashed through the branch and galloped up the hillside; and there, half-hidden in the brush, stood Hotfoot, pointing birds.

Duff rode back out into the cornfield and held up his hat. The gallery broke and came toward him. To the right of them, Teague McGinnis appeared, and Duff motioned to him.

"Yonder's your dog, pointing," Duff said to Teague.

"My dog?" Teague said, him.

"Right yonder," Duff said on out to continue the search but there was no hurry, for was over and Hotfoot was champion.

A few minutes later Lucie found Judas nearly a mile away, on the course, on point. Now the gallery, Duff walked up to Judas a moment he stood there beside watching him. A big drove passed overhead, swerving a bare treetops. Somewhere in the distance a crow cawed. Duff walked front. The covey whirled up and leveled his gun and pulled the trigger and a cock quail fell out of the flight. Judas retrieved the quail and Duff let him eat it.

"Duff, you told me to go left," Lucie said.

"It wasn't your fault. I was wrong, I reckon. All we need was follow the course; he was where he was supposed to be

WHEN they got back, most of the horses were gone. The hostlers were waiting. Two men were getting a rearing horse into the corral. Fires smoldered here and there, and the hostlers had waited.

Duff took Judas' muzzle out of the trunk of the car and put it so they could dry him off without being bitten. Lucie while Duff rubbed him with a sack. She stroked the dog's head. Judas didn't like it.

"Duff," Lucie said thoughtfully, "just had to report Teague's dog didn't you?"

"Sometimes I think I don't have a sense."

"But you had to do it. You simply ride on past and keep looking at your own dog. No, not you, Webster," she mused. "That's right. But I knew you were long ago. I guess that's why you love you."

He stopped rubbing. "I'm sorry, Lucie. I'm used to it."

She answered, "It doesn't hurt. It isn't."

"Honest, Lucie?"

"Oh, Duff, you know it as well as I do."

He kissed her hard on the cheek. All the months of missing her were consummated. "I thought I'd never see you once, Lucie, but I'm different. Things have been different, but they're straight now."

Lucie suddenly took his hand and kissed the back of it, in the way she remembered. She said, "Duff, think things might be the way to say they would? About such a Canada on the prairies, and calling the dogs round the circuit that you used to tell me about table and the amber studs?"

"Yes, that's the way it will be. Then he added, "And now we'll win this championship."

Lucie looked at him. "What's that, Duff?"

"Next year," he said determinedly, "we're going to win this championship."

She smiled softly and sadly, remembering that her father, Amos Hawthorne, had every year. "Yes, Duff," she finally, "next year we will win it."

Duff said, "Hold him still and dry him under here."

Judas stood still while Duff rubbed his belly and legs with the crock. The dog was growling, but in a sent-minded sort of way, for he was looking out toward the sedge that bordered the pond and the sedge that bordered the pond.

ENID ARMY FLYING SCHOOL.
Okla. To keep the Air Corps cal-
isthenics program distinctive. Capt.
Charles Marr, officer in charge of physi-
cal training for the Gulf Coast Training
Center, B. E. Phillips, civilian member
of the toughening-up department, and
Dr. P. V. Karpovich, of the Research
staff at Randolph's School of Aviation
Medicine, put their heads together and
cooked up an imaginary airplane flight
of seven exercises for the daily warm-
up.

Exercise No. 1 is known as the Motor
Warm-up in which the cadet swings his
arms in imitation of a spinning prop.
No. 2 is the Take-off, chiefly a leg work-
out, ending with a leap into the air.
Twisting the body in imitation of a
Climbing Turn is No. 3. The infantry's
side-straddle hop—a jumping and arm-
swinging exercise—is No. 4, the Strato-
sphere Hop. No. 5, Power Dive, is a
quickly executed body bend in which
the head is thrust vigorously toward the
ground. Blackout, No. 6, is a squat-
ting exercise in which the cadet yells
while grabbing his knees hard and press-
ing them against his abdomen and chest
(actually recommended to pilots for
fighting off the blacking-out effects of
power dive pull-outs). No. 7, Landing,
is a forward lunge with a bouncing mo-
tion that stretches muscles in legs and
sides. They're good for you—but watch
out for a crack-up if you should happen
to be soft.

CAMP WOLTERS, Mineral Wells,
Tex. One guy who isn't grouching
about the uniforms now being handed
out is Corp. Ed. Baxter, 43, back in the
Army to finish a job he thought was
done in 1918. "In 1917," says he, "we
wore hobnail boots with so many studs
attached you could skate from one end
of the barracks to the other. They felt
like a ton of scrap metal and if you got
'stuck in the mud somebody had to pull
you out. And the dog tags—round, and
a quarter-inch thick. Coupla millstones
around your neck. Our raincoats were
also our shelter halves—square pieces
of tarpaulin with a hole in the middle
for your head. We never could decide
which was worse—a raincoat without
sleeves or a tent with a hole in the
top."

KELLY FIELD REPLACEMENT
TRAINING CENTER, San Antonio.
The Civil War may have been called
off on December 7th but there's still a
lot of good-natured guerrilla warfare
going on in the Lone Star State. When
a new arrival from Yankeeland checks
in at this field he's generally snared by
a Texan upperclassman who demands
to know: "Why did you come here, Mis-
ter?" Only approved answer is: "I came
here, sir, to be a Yank in the T.A.F.
(Texas Air Force)."

CAMP BARKELEY, Tex. Sec-
ond Lt. W. M. Blanchard, Co.
A, 57th Bn. Medical Replace-
ment Training Center, isn't sure
whether he's a poor teacher or whether
circumstances were to blame. Anyway,
in a class in scouting he had 13 men
stand in the classroom aisle and pass a
message from one to the other for the
purpose of seeing how well it would be
translated and transmitted. The origi-
nal message read: "The enemy is on
hill 30, north of the old school." It came
out: "The enemy is in hell, 30 miles
east of the old school."

WISHFUL thinking, no doubt.

Take the Day Off

Continued from page 24

both of them came back with eyes soft and shining, and stood an unnecessarily long time in the porch shadows before entering the house. Whippy Mullins, with hospitality due an important visitor, was put up for the night in the west guest room, which connected through a bathroom with the east guest room wherein, tomorrow, would be the governor.

"The Herald was trying to reach you, Mr. Mullins," said Mrs. Mattison, "but I'm afraid our local phone operator has gone to bed by now. Wilgate is a pretty quiet place after 10 o'clock."

"That's all right," declared Whippy with the breeziness of a big man. "Just a routine call. Probably checking to see if I got here. A newspaper always has to know where it can reach its men."

"I want you to make this your home," continued Mrs. Mattison. "My brother will be coming tomorrow to spend a few days with us, but I do hope you can stay until tomorrow evening and have one of our real old family-reunion dinners."

"That's swell," said Whippy, thinking of the phone call from The Herald, of me, and of his job. Then he looked at the blond sleekness of Edwina's hair and that it-can't-be-true shape. The scales just didn't balance.

"Gee," grinned Whippy. "I'd love to stay. . . ."

ABOUT eleven o'clock I knew there wasn't much point keeping after the phone call. People in places like Wilgate use party lines, and a call to Whippy at that late hour would bring every ear into action. And they'd hear plenty—mostly that The Herald was telling its man to spy on the governor.

"Yeah," said Jerry. "You're dead right. Better send a wire and have him call us first thing tomorrow. This thing could boomerang if the Globe-Press ever got their mitts on it."

So I sent a telegram: "Please phone office at first opportunity. Need you for assignment."

That was a bad choice of words, but then how was I to know that Edwina Mattison was enough to make even my tough old heart turn over like a flapjack on a hot griddle?

The wire was at his plate when Whippy came down for breakfast the next morning. He ripped it open and read without emotion. Edwina watched apprehensively, her blue eyes wide, because a telegram is still an instrument of dire news in places like Wilgate.

"Nothing," said Whippy, pocketing the yellow paper. "Mere routine stuff." Yet something told him inside that he was flirting with unemployment.

The governor arrived at 11 o'clock, accompanied by two motorcycle troopers and a cloud of fine, white dust. But about a quarter-hour before his whirlwind entrance, Whippy met Morgan Olney and a scene boiled up that might best be described as dramatically tense. It was so tense that Morgan popped Whippy on his thin, sensitive nose and Whippy popped Morgan into the fine, white dust which, up to that time, had just been lying in the road minding its own business.

From all symptoms this Morgan Olney was, to phrase it in the vernacular, a louse. Usually he divided his time between Wilgate and Bellington, which is where the Globe-Press is published. He lived with his mother in Wilgate but, like Edwina, Morgan Olney also had a distinguished uncle, albeit a Democrat. This uncle owned the Globe-

Press. Morgan's excursions to Bellington invariably eked petty loans from his mother's well-heeled brother, although "loans" is a weak description. Morgan never had anything to pay them back with except further loans from the same uncle—an obviously unsatisfactory arrangement for the Bellington publisher.

Edwina, as certainly indicated by her writing prowess, was no mental marvel. This was undoubtedly why she committed the volatile error of introducing Whippy to Morgan when they met him walking down a gravel path near the one-room post office. Whippy didn't quite catch the name.

"HOW are you, Mullins?" asked Morgan, lurching forward to clasp his fingers in a hydraulic-press handshake. Whippy never liked people who called him by his last name. "It's okay if they want to say Mr. Mullins. They can call me Whippy or Snooks or any obscene but friendly thing they want," he once told me. "But, gee, how I hate to be called just plain Mullins."

"Well, dear, how did the war go today?"

BARNEY TOBEY

"Oh, a reporter, eh?" said Morgan. "Pretty dull place for The Herald to send a reporter, isn't it? I don't suppose the governor's visit could have anything to do with your staying at the Mattisons?"

"The governor?" asked Whippy, with authentic surprise. "What do you mean?"

Instead of answering, Morgan Olney laughed. "A very naïve chap, sweetheart," he informed Edwina. It was her turn to be surprised.

"But Whippy—didn't you know? I mean, about Uncle coming here for a few days?"

Whippy felt something mounting up inside that seemed suspiciously like the fumes of anger. Probably more than anything else, they were generated by hearing Morgan call Edwina "sweetheart." "Listen," he said pugnaciously, "I don't like your hint. I knew nothing about the governor coming to Wilgate. The Herald doesn't have to sneak its news."

His final slam had an instant reaction: "What makes you think the Globe-Press does, chump?" Morgan Olney's jaw was as far out as Whippy's, and they looked like a couple of school-

boys fighting to decide who'd carry the little blond girl's books home. The quick defense of the Globe-Press gave Whippy a flash hunch and for the first time he realized that here was the writer of that letter I had taken out of the files—the one applying quietly for Edwina's job.

"That comic sheet!" snorted Whippy. Morgan Olney's right hook went into motion. "You can't talk that way about my uncle's paper," he said calmly. It was all rather unexpected. Whippy, although not going down, definitely lost ground. Edwina gave a funny little squeal like a baby puma.

"It won't do you any good to start pumping the governor," added Morgan. "He isn't going to tell you a thing about that federal highway until he's ready. The Globe-Press has all the facts, anyhow."

"Now," declared Whippy, retaking the ground he'd lost, "I'm quite sure I don't like you. Quite sure." It was over in about three seconds. Morgan Olney sat straight-legged in the dust, and watched Whippy take Edwina's arm

Washington? The cigar snuff. Besides, I can never the taxi drivers are gyp-

Morgan Olney was insistent. "Governor," he argued, "the the Globe-Press are citizen state, and entitled to know not the federal government build that superhighway."

Whippy sat on the porch listened hostilely. Edwina him. The governor had cl out on the porch in his favorite chair, and there was no word from Morgan from leaning over the rail except with a burst of. Unfortunately the Mattison friends of the Olneys.

"What superhighway?" as with blunt curiosity.

The governor took his pipe pocket and knocked it again. "It's a new project, Mr. N explained. "The state wants to cooperate with the federal government federal funds—to build highway, the length of the the spine of the mountains provide a valuable transport for national defense."

Whippy whistled softly. The Herald, eh, Mullins?" said with ostentatious glee.

"We've tried to keep it private said the governor. "I guess I been up to some detective work in Washington, Morgan. Since you been a reporter?"

"Uncle sometimes calls me special stories," replied Morgan. "Now, look, Governor, I want you to say is yes or no. Washington okayed it?"

THE governor held his tongue in one hand and was filling meticulously, paying almost no attention to what had been said. "What do you say?" urged Morgan.

"Look," said Whippy, finally. "Go peddle your papers elsewhere. You oughta be able to doesn't want to talk."

The governor shook his head. "I'm afraid the answer's no, son."

Morgan's face lit up as the one had built a bonfire inside really mean it's no, sir?"

"You heard what I said," nor was concentrating on that flickered over the bowl.

"Well, say, thanks a lot Morgan Olney. "Thanks a vanished like a snowflake breaking into a run at the end."

Whippy watched him go with resentment. All he could think the Globe-Press is an after giving it a clean twelve-hour The Herald. Besides, the state on the press wire out of capital tonight if the Globe-Press it.

That was a consolation. Criers were always getting excited nothing. Sure, The Herald to have the whole story by time. Whippy looked at weighed duty against devotion once in his confident youth without an answer.

It was right after I'd sent wire and put in another phone Wilgate that I saw Jerry come out of his office like a on its way to an oil-tank explosion. "Where's that guy Mullins screamed at me. "Where is headed moron?"

"What's the matter?" I ask

patronizingly. "Come, sweetheart," said Whippy.

"You shouldn't have hit him," she protested.

"He shouldn't have hit me," tallied Whippy, and Edwina found his logic sound. "Morgan has a terrible temper," she explained. Whippy's interest was mounting like an August thermometer. This had the smell of a good story. Why should he go back to the office for some midget assignment? He could always pretend the wire never came.

And about that time the governor skidded up in front of the Mattison house with all that inexplicable haste that governors usually exhibit, even when they're just going somewhere for peace and a little rest.

THE governor was a large man with a frankness that had won him both friends and the election. When he looked down at Morgan Olney, who had come to interview him, there was a keen twinkle in his gray eyes.

"Look, son," he said, "I've come up here to Wilgate because I've had a tough week in Washington and I need a rest. Did you ever spend a week in

do of a trapped rabbit. "Mattered Jerry. "Matter? Look came in on the evening plane ington." ow at you, sir?" I muttered in ent toes. "Whippy, you better e Jerry." My voice was sugared cumstance.

led to pair across the newsroom rry's face, and I noticed that ma's head was tightly in his. The nor ead his heavy frame through ttle do way, and a silence settled us all e an arctic winter. Down- I cou hear the matrices clicking e linopes.

Then about three of us got the same idea at once and tiptoed over to the water cooler that stands just outside Jerry's office. I fumbled the first paper cup onto the floor and had to take a second one. You could hear the conversation inside plainly.

"And I'd appreciate it, Mr. McConnell," said the deep voice of the governor, "if The Herald would give the people of this state the real story. I have been grossly misquoted by the Globe-Press and, as this wire I received tonight shows, Washington has granted full approval of the highway project. Contractors' specifications will be issued next week."

We all reached for a second cup of water and nodded smugly.

"You see, Jerry," piped up Whippy's younger voice, "the governor said no to this Globe-Press man, meaning that the federal approval hadn't come through yet. But the dope thought that no meant the project had been turned down. That's how it happened."

Then we heard the governor speaking: "When the State House called me late this afternoon at Wilgate and said the Globe-Press was out with the exact opposite of the truth, why, Mr. Mullins—I mean Whippy—persuaded me that I should come down here and give you the real picture."

Before we had a chance to get back to our desks, Jerry was at the door. His face was transfixed with the beatific smile that only a newspaperman can have when he's up to his armpits in a hot story.

"Everybody hold up what he's doing," bellowed Jerry. "We're puttin' out an extra. Pat, I want you on rewrite. Jim, go get me everything on the governor that's in the morgue." The room whirled with action. Jerry sat inside his office, beating out a lead story on his typewriter and interviewing the governor at the same time.

After the excitement had bubbled down to routine and we had the front page all redummed, the governor and Edwina left. Whippy vanished with them and was missing maybe five minutes. When he came back, I was in Jerry's office getting my out-of-town page revised to take care of some of the runover from page one.

"Whippy," I said. "Two things: First, get that lipstick off your right cheek before someone less understanding sees it."

He blushed gracefully. Jerry was smiling.

"Second, Whippy," I said, "how did you ever persuade the governor to come down here from Wilgate with you?"

HIS grin was moronically happy. "And why," he asked me, "shouldn't the governor do a little thing like that for his niece's fiancé?" It left me with as little wind as a hot August night.

All I could say was, "Well, kid, I hope you'll forgive my nasty remarks. It'll be good to have the governor's nephew-in-law working with me."

"Working with you—my hat!" snapped Jerry. "Whippy's going to the state capital. He's our new correspondent there."

But Whippy Mullins, who married the governor's niece and got his picture in every paper throughout the state, including the Globe-Press, was too smart a youngster for plain newshawking. By now he's worked up to be state road commissioner, and that's only a start. The kid's going to the top, wherever it is. But sometimes when I'm down lifting an elbow at the Starlight, I get very philosophical and begin to wonder what would have happened if I'd gone up to Wilgate myself that time instead of giving Whippy the day off. E. Mattison was sure a pretty girl.

THE END

IT'S THE TALK OF THE TOWN AND A FAVORITE ON THE FARM

IN CITY dwelling or in farm buildings, it's the efficiency of your insulation that counts most.

That's why Masonite* Cell-U-Blanket* is a favorite in both town and country. This remarkable insulating blanket makes possible cooler structures in summer—more warmth with less fuel in winter.

Many home owners are using Cell-U-Blanket and Presdwood* wood-fibre hardboards to convert

idle attic space into comfortable, livable quarters since this versatile insulation can be applied to roof rafters from the inside, bringing the attic within the insulated area.

On the farm, Cell-U-Blanket is readily adapted for insulating various barns, poultry and hog houses and other service buildings . . . to eliminate wide temperature variations . . . increase the efficiency of agricultural production.

LIGHT WEIGHT . . . EFFICIENT . . . PERMANENT

This blanket of feather-light Cellufoam comes in easy-to-handle rolls. Quickly installed—just cut, apply and staple it to studs, joists and rafters. No settling, shrinking or sagging. Cell-U-Blanket has sturdy water-proofed coverings—provides a positive vapor barrier, is wind-proof, moisture-resistant and permanent.

The lumber dealer in your community who handles Masonite Presdwood Products has Cell-U-Blanket Insulation or can procure it for you. Secure his advice on your insulating problems or write direct to Masonite Corporation, Dept. C-6, 111 W. Washington Street, Chicago, Ill., for FREE sample and further details.

Radio's Hawkear

By Frank J. Taylor

Noyes McKay, new kind of detective, started correcting radio speakers when they murdered the King's English. Now his roster includes the names of most of the big-time broadcasters

NEXT time when you catch President Roosevelt or Raymond Gram Swing or your favorite newscaster murdering the King's English over the air—something the best of them unwittingly do, it appears—don't dial him out in disgust. Instead, put Hawkear, the Radio Detective, on the trail. All it takes is a penny postcard.

"The Hawkear," in case you don't know him, is Mr. Noyes McKay, a stoutish, graying, voluble scholar with spectacles and a goatee, residing in Berkeley, California. There he spends most of his waking hours in front of a small but highly selective radio receiving set. His other sleuthing props are dictionaries, gazetteers, assorted handbooks, a midget xylophone, a stop watch,

a telephone, a letter file, and a card case known as "the spook file" and filled with evidence of assault and battery on innocent radio listeners' eardrums by some of the biggest shots on the air.

Ordinarily, Mr. McKay is a mild, affable person, but when some broadcaster, announcer, or radio star begins butchering words and diction or using his mike for a tom-tom, Mr. McKay sees red. He has seen red so much in the two years since he took up radio bug catching that his ire has smoldered into a one-man, nationwide crusade to "fumigate the nits and lice out of broadcasting," as he puts it, and make it easier for the millions on the receiving end of the barrage of words from newscasters, commentators, announcers, speakers, and preachers.

An odd angle to McKay's sleuthing is that he is paid, not by the radio listeners who benefit most by his work, but by the very men he is on the alert to catch in error. They include such top-flight broadcasters as Raymond Gram Swing, Fulton Lewis, Jr., and H. V. Kaltenborn in the East, and on the West Coast such radio personalities as Bob Andersen of KSFO, Phillip Stearns of KFRC, Bob Garred of KNX, Hollywood, and dozens more. Most of them just wouldn't believe they were butchering language until Hawkear caught

them cold in from thirty to forty errors of pronunciation or diction per hour. Some newscasters even ran over sixty "boots" an hour, at which point Hawkear refused to clock them any more.

McKay contends that though the average listener may not be able to put his finger on boners of speech, he recognizes and appreciates smooth, easy-listening language.

"Suppose someone handed you a magazine or newspaper with all the capitals, commas, and periods put in the wrong places," he exclaimed. "You'd have a tough time reading. In radio, right pause and inflection are the punctuation of broadcast speech, and the secret of easy listening. The air audience is entitled to look to our broadcasters as a source of correct pronunciation, too, and not of more bad habits. Johnny Q. Public may not know why he doesn't like your speech, but he can shut you off in a hurry with the twist of a knob; and those twistings make or break radio reputations."

Brooklyn born, McKay has been a linguist since his Harvard days. His sensitive ear catches the slightest deviation from the right sound in English words or names, and in foreign names in French, German, Spanish, Russian, and nearly twenty other languages found in the war news.

Noyes McKay, doctor of diction, lectures to a group of pupils: (left to right) Bob Andersen, ace air salesman of KSFO; Yvonne Peattie, "Adrienne Day" of "House"; Willard Homan, manager of the CBS West Coast Bureau; and Bob Andersen of KSFO, whom McKay considers the most accurate speaker

"No broadcaster needs to be a foreign tongue," says Hawkear. "He needs to do is find the a and learn how to read diacritics."

During his years as a broadcast efficiency engineer, the Hawkear's mission was language. Words were sheer beauty; words were monstrosities.

With time on his hands in the Berkeley home to which he retired, McKay turned his old pump got fancy, "McKay" for amusement to a study of international affairs, relying upon his keen ear to keep him abreast of events every time he tuned in a news analyst or a public speaker, the

"Remember the days
before you went away?"

"Lonesome for you—Ginger"

SIT HIM EVERY WEEK IN *SNAPSHOTS*

WHEN he's away from home—snapshots fill a need nothing else can fill. So tuck a bunch of them in your next letter. Make a practice of sending them every week. They'll put a big wallop in his mail. To him they're the next best thing to a visit from the home folks.

And because these are mighty important snapshots—don't take chances—load with Kodak Verichrome Film. The great majority of snapshooters all over America prefer it.

Verichrome's tremendous popularity is due to its remarkable "range." This great range takes care of reasonable exposure errors—

gives you a longer snapshot day—results in good snapshots even when the sun is behind the clouds.

Ask for, and see that you get, America's favorite—Kodak Verichrome Film. At your Kodak dealer's . . . Eastman Kodak Company, Rochester, N. Y.

EVERY SOLDIER WANTS A KODAK—

SEND ALONG THAT EXTRA ONE OF YOURS

Cameras are a big "want" among Service men. If you have an extra Kodak or Brownie, even an old one—make some soldier happy by sending it to him, with some film. Every camera Eastman makes is designed and built to last for years.

Accept nothing but the film in the familiar yellow box—Kodak Film—which only Eastman makes.

Send him Snapshots every week

PAZO RELIEVES THE TORTURE OF SIMPLE PILES

Don't just suffer the agonizing pain, torture, itching of simple piles. Remember, for over thirty years amazing PAZO ointment has given prompt, comforting relief to millions. It gives you soothing, welcome palliative relief.

How PAZO Ointment Works

1. Soothes inflamed areas—relieves pain and itching. 2. Lubricates hardened, dried parts—helps prevent cracking and soreness. 3. Tends to reduce swelling and check bleeding. 4. Provides a quick and easy method of application.

Special Pile Pipe for Easy Application

PAZO ointment has a specially designed, perforated Pile Pipe, making application simple and thorough. (Some persons, and many doctors, prefer to use suppositories, so PAZO is also made in suppository form.)

Get Relief with PAZO Ointment!

Ask your doctor about wonderful PAZO ointment and the soothing, blessed relief it gives for simple piles. Get PAZO ointment from your druggist today!

in the pronunciation and diction of commonplace words and names stung his eardrums. The weak confusion of inept delivery and the negligent butchery of foreign names exasperated him.

McKay clocked and recorded the errors of radio speakers for weeks on end. His study showed that each broadcaster hit about the same percentage of boners, program after program.

"Somebody ought to tip the boys off," he said. "No one can correct what he doesn't know is wrong."

But when he tried to tell them, he found there existed no means of scoring these mistakes scientifically. Whereupon McKay worked out his own rating system, the first evolved for measuring speech efficiency. It worked in this manner:

When a broadcaster mispronounces a word, McKay scores one error against him; for using a second-choice pronunciation, he scores half an error. Repetitions of an error in the same program are overlooked. Then McKay scores one error for each law of right delivery broken by the speaker during his program.

The total faults and the minutes talked are entered in the "spook file," and the broadcaster's speech efficiency rating is his average number of errors per hour of solid speech.

When the Hawkear consulted the speech savants of near-by universities to obtain the accepted laws of delivery: he was informed, to his utter amazement, that no such thing existed. So he researched them by listening for wrong effects, and set down the simple laws his findings evolved. "But when anyone disputes one of these 'laws' he doesn't argue with me," says the Hawk. "I step aside and let him fight it out with Old Man Logic—and nobody has been able to dislocate one of them yet."

McKay found that only five basic elements are used in oral delivery: pause and inflection, the verbal punctuation; emphasis; and changes of pace and pitch. Mishandling these, he says, results in only about six different mistakes, aside from the faults of swallowing syllables and slurring-in-the-joints which exist in the no man's land between pronunciation and diction. These six delivery faults are: Wrong or omitted pauses and stresses, and the mistreatment of four kinds of word groups—series, parentheses, appositions, and the source-lines which tell where facts or quotes come from.

McKay found that the right or wrong handling of these few dictional elements determines why, irrespective of good pronunciation, some broadcasts come over the radio clear, vibrant, and colorful, while others are "so befogged and monotonous that you can use them to put babies to sleep."

McKay's Report Cards

With this simple technique worked out, McKay scored dozens of unsuspecting broadcasters, one after another, recording their errors on cards kept in his spook box. From time to time, he mailed these spook cards to the men behind the mike. Along with the critique invariably went a letter, explaining modestly what McKay was up to, no less than a one-man campaign to eliminate bad English from the ether waves.

"It was the first time they'd had pictures taken of how they really sounded at the mike," laughed McKay. "At first they thought I was a new kind of nut. When they tried to smack me down, they found I had the goods on them. We

settled all pronunciation arguments by the dictionary."

McKay had a naive idea that radio stations might jump at the chance to use his scoring and correcting system for their announcers and broadcasters. They didn't. Next he propositioned the broadcasters themselves. Some were not interested; some were too busy. But one up-and-coming newscaster, Phillip Stearns, of the Mutual network's station KFRC in San Francisco, a former actor who had always worked on the stage with a coach, engaged McKay to "catch bugs" during his two daily turns at the mike.

Stearns soon interested others in the critiques, and before he knew it, without leaving his den in Berkeley, McKay had become a professional radio Hawkear whom his victims dubbed "The Hawkear of Berkeley Hills."

Then troubles began piling up. Jawbreakers like von Brauchitsch, Dnepropetrovsk, Svobodnyi, Saracoglu and van Leeuwenhoek were creeping into the daily newscasts. Since pronunciation of many of these tongue twisters was not in reference books McKay enlisted the aid of foreign-born experts, in more than twenty languages to solve the problem. They were exchange students and professors from the countries involved, whom he located at near-by colleges and at International House on the University of California campus. Now McKay has a volunteer staff of nearly forty that can, in a two-minute telephone huddle, handle the name of any town or general turned into news by the war-mad legions of Hitler or Mussolini or the Mikado.

Next McKay organized a volunteer corps of two-score skilled auxiliary listeners—professors, writers, radio speakers—all intrigued by his pure-speech drive. They listen in their own homes as deputy-Hawkears any time McKay calls on them for a corroborative opinion.

War in the Pacific has kept the radio sleuth on the alert from seven A. M. until after ten at night. The newscasters have been having a bad time with Far

East names. McKay catching Hi-rohito, when the en's name is He-Ro with a faint guttural KI Lin-GAY-enn, when the pine battle ground is L. They spoke of smiling, Kurusu as though he were the singer, when his name just as the ex-ambassador NO-mura; and the Japanese YAH-wa-tah, not Ya-Wa ear's authority on Japanese Chitoshi Yanaga, of the California faculty.

Another jawbreaker is coglu, the Turkish prime name, the radio sleuth he isn't pronounced SOO-kr glue, as most of the radio but Shü-CRÜ Sir-Roge lieve it or not, with two the first name.

Newscasters' News

Hawkear has the news themselves to sleep at night the Russian names, even such as Moscow, which the bovine ending, but while Budenny is, or was, ny. Sevastopol isn't Se but Sye-vas-TAW-paw. RZWAWFF; and Ore is like Max O'Rell. Dicta—Tailor Made

Raymond Gram Swing, whom rates ne of the smoothest and urate speakers on the American d th group, as did H. V. Kal-and ulton Lewis, Jr., whom had a break of a slap-dash to w "Thatsthetopofthenews-fromreladiesangentlemenun-owewinggoodnight." "Now," Kay, Lewis bows himself off stag like a Barrymore." With ng, o averages only about s in ch 2,000 words poured mke nder pressure, the Hawk-er interesting arguments aim. Swing prefers the Ox-tiona as an authority and stander falls by the Merriam-for fit reference.

r, McKay is the critic for college ts, leurers, campaigners and figur, as well as for news-and anysts. He coaches public akers y telephone.

ay has ound that his fees for hing ust vary with the broad-ability to pay. One of his pet s the or wages the radio sta-ay to many of their hard-

working announcers and newscasters. If a radio artist, or even occasionally a be-ginner, looks like a comer, McKay con-siders his income and budget, decides how much the client can afford for self-improvement, makes a deal whereby the fee goes up as the salary increases.

McKay did some of his best bug catching, he thinks, during the Roose-velt-Willkie presidential campaign, when the Baltimore Sun assigned him to compare the radio efficiency of the President and Wendell Willkie. This turned out pretty badly at first for Willkie, who was no match at the mike for an old campaigner like F.D.R. In his acceptance speech at Elwood, Indi-ana, Willkie stumbled and booted him-self into the ranks of McKay's "minute men" with the phenomenal gross score, including duplications, of 88 errors in fifty-five minutes, an hourly total rate of 96. This included 38 mispronuncia-tions and second choices such as "me-DEEeval" (for "medieval"), "sacrifiss," "owepressed," and "awratory," and nearly 50 bad slurrings. One of Willkie's prize slurs, says McKay, was the very job he hoped to land, the "Prezthiny-nitedStates."

McKay Clocks F. D. R.

In spite of his experience and his mel-lifluous diction, President Roosevelt scored a net rate of 20 errors per hour in his acceptance speech. However, Mc-Kay found that Mr. Roosevelt was something of an in-and-outer, and in a later Fireside Chat, Hawkear chalked up 34 total mistakes on the President for a gross score of 54, and a net rate of 26. Typical Roosevelt radio bugs are "a-gayne" and "EYE-ther," which Mc-Kay calls Britishisms, "uhfficiency," "my-nority," "moe-rale," "duh-tail," and "uhmergency." Once, McKay cas-ually mailed a critique on F.D.R. to the White House. Missy LeHand, the Presi-dent's personal secretary, acknowledged it with thanks. McKay doesn't know whether or not this was the reason, but in his next speech at Charlottesville, Mr. Roosevelt bettered his batting av-erage by over fifty per cent. It didn't last, however.

Even so, it was Willkie who made the really amazing improvement in radio style. When the defeated candidate de-livered his Armistice Day farewell talk to his supporters, the most Hawkear could detect was five net faults of lan-guage and diction for a net hourly score of 12. On the same day, F.D.R. batted 14 net errors an hour at Arlington.

Another McKay gripe is radio preach-ing. Every Sunday McKay listens to as many sermons as he can stand without swearing, and just about wears out his xylophone scoring what he calls the whining twang of the radio ministers.

The Hawkear has some results to show in this field, too. Dr. Chester C. McCown of the Pacific School of Reli-gion has invited McKay to help on a program for turning out a supply of cheerful preachers.

McKay is also scheming to enlist the high schools of the country in his cru-sade to purify the language. He has several near-by California high-school English classes already monitoring local announcers by his scoring system. "Ra-dio is the magic microscope for studying English," he says. "Simply turn a knob and you can bring in cross-sections of speech on all manner of subjects by all types of speakers from everywhere, for comparative study and analysis. Teach-ers using the method say it is the first time their classes have taken a dynamic interest in correct English. I hope to place our school system in the position of the policeman of radio. Then watch our studios touch up their sallow speech complexion!"

THE END

It costs us more to make
OLD TAYLOR
but we mean to keep it
worthy of this signature

THE man who first made Old Taylor
fought to have bottled in bond standards
written into federal law.

And no other kind of whiskey
has ever been made in
the Old Taylor distillery.

It produces a costlier whiskey.
But we believe it is worth
it. And millions of
men who know
fine bourbon
heartily agree.

Within the ivy-covered
walls of this distillery
no whiskey other than
Old Taylor has ever
been made.

Brood mares and their foals at the government Remount Depot at Front Royal, Virginia. Covering 5,000 acres, this is the Army's principal Remount Depot.

A FOAL AND HIS MOMMY

PHOTOGRAPHED FOR COLLIER'S BY GEORGE DE ZAYAS

MODERN war needs the horse almost as much as it does the jeep. There are still some things a horse can do, places it can go, ditches it can jump, that a jeep can't manage.

The Russians recognized the value of the horse in their war machine. Their counteroffensive against the Germans, big horse-users themselves, was carried

on horseback as well as tanks.

One of the Remount Depots at Front Royal, Virginia. It was set up in purchase of 5,000 acres of land. The primary function of the Remount Depot is to receive and issue horses as

Hutwick with her foal, born March 21st. The sire was the track-famous Battleship, whose services were donated to the Depot by Mrs. Marion Dupont Scott

the only hookers to win the big prize in the last decade but it takes an exception to prove any rule. Goodman allowed for his roundhouse hook at North Shore in 1933 by aiming his drives toward the rough on the right, but this oblique sighting method let him down badly early on the last lap and he barely staggered home ahead of the fast-closing Guldahl when the intended hook didn't come off.

I was a hooker once myself—and how! From 1933 through 1939 my permanent address was "somewhere in the rough on the left." That's where golf architects with a grudge against hookers stick most of their traps. I visited all of those bunkers.

After failing to qualify for the 1938 Open, I went into a huddle with myself and decided to revise my whole golfing technique. That took considerable courage. It isn't easy for a 37-year-old golfer to ditch a habit-formed swing and revamp the mechanics of his game, but desperate situations require drastic remedies. As a right-to-left pull hitter, I was going nowhere fast. Sports writers had tagged me "the great runner-up." That sarcastic label rankled. Nobody ever remembers the guy who finishes second.

Now, mind you, I never felt sorry for myself nor did I share the rather general opinion that I was a victim of fate. If a golfer is honest with himself he knows it's his own fault when he repeatedly misses major victories by one thin stroke. I didn't deserve to win the close ones because I wasn't hitting the ball soundly enough. That rabbit's-foot stuff is just a pride-salving defense mechanism.

Well, when I changed from a hooker to a fader, my luck changed too. Whereas I had formerly opened my club face at the top of the swing and shut it at impact by rolling my wrists, I now reverse this process. Today my club face is shut on the upswing and slightly open as the ball is contacted, producing a left-to-right spin.

A fade is more easily controlled than a hook. In the lingo of the dice shooter, I had my rivals "faded to a frazzle" on those pinch-bottle Colonial Club fairways. If I live to be a hundred, I'll never forget the last drive I hit at Dallas with some eight thousand excited spectators milling along both fringes of the 18th fairway.

Resisting an Impulse

Standing on the final tee, I was comforted by the thought that a bogey 5 on this 427-yard hole would beat Denny Shute's posted figures of 287. Nobody else out on the course had a chance to tie that total.

How narrow that 18th fairway looked, framed as it was by a human border! I was tempted to ease one up there, but I resisted that safety-first impulse, remembering that a steered ball seldom obeys the rudder.

The moment called for devil-may-care abandon—what Tom Armour so pungently terms "the full treatment." I decided to shoot the works and throw everything into one explosive smash that would leave me merely a mashie flick to the green. Because I let myself go with no hint of flinching or any mental reservations, that was the best drive I've ever hit in tournament golf. My caddy paced it off later and told me it measured 306 yards.

The friendly Texans cut loose a rebel yell when that tremendous tee shot split the fairway. I was in—after all those

years of frustration. Dick Metz, my playing partner, was 50 yards behind me on his drive.

A half flip with a number 8 iron left my ball twenty-five feet from the flag. The mob stampeded toward the green like a herd of longhorns before a dust storm. Their example was contagious. I found myself running too.

For twenty years I had dreamed of standing on the final green in a National Open Championship with three putts left to win the title. Now that dream had come true. Shouldering a path through the tightly packed crowd, I said to myself, "Craig, this is it!"

But I didn't need those three comforting putts; nor the conventional two, either. The knowledge that I had a safe margin encouraged me to go boldly for the back of the cup on that twenty-five-foot gobble. "I'll finish this job with a flourish" was the thought which flashed through my mind as my blade rapped the ball. Well, that putt was in the cup all the way.

The ball had scarcely clucked in the tin before I snatched it out again. No souvenir hunter was to get his paws on this pill. It had a rendezvous with a glass case in the Winged Foot Golf Club trophy room.

As long as I can remember, I've wanted to be a golfer but, unlike most of my colleagues, I didn't get the chance to play regularly until I was twenty years old. My dad, who supervises Adirondack timberlands for a large paper-pulp mill near Lake Placid, New York, wanted me to be a civil engineer. Father frowned on golf as a trivial pas-

time for chronic invalids or retired businessmen.

Dad did his best to make thumber and tripod squint I attended Dean Acaden Clarkson Tech, but I'm afi was on bunkers, divots rather than on integral calc mechanics and quadratic e stead of boning up on tri used to sneak away Sund and carry clubs on a near-

se the are occasions when

Lady Luck can intervene. Naturally, it
was Walter Hagen who figured in one of
these strange occurrences.

This happened on the very last hole
of the 1926 P.G.A. championship in Dal-
las. The Haig, trailing one down with
only two holes to play, got a new lease
on life when slim Joe Turnesa three-
putted the 17th, the 35th of the match.
Then The Haig strutted to the tee—and
got away a soaring slice that curved
around the barn into what everyone knew
was knee-high rough. Turnesa coasted
his drive superbly down the middle.

The Pay-off Stroke

For about four minutes Turnesa
thought he had Hagen in the bag, but
when the march around the barn was
completed, the marchers had no trouble
finding Hagen's ball. There it sat, bright
and bold, on a lovely little patch of grass
in a turf nursery. The Haig had sliced
onto the only spot where he could get
a good lie. In fact, he had a better lie
than Turnesa and, to prove it, he
slammed a spade shot onto the green
and holed about a 12-footer for a win-
ning birdie 3.

Yes, the drive is the pay-off stroke.
This should be good news for three mil-
lion Sunday golfers who enjoy clouting
the pill. If your drive is properly placed
and long, the play on any hole is made
relatively simple, but if your tee shot is
a dribble, a slice off into the rough and
wilderness, or a hook into a bunker,
you've got two strikes on you right
there.

People talk incessantly of putts as if
putting were the all that counted in golf.
But since the ordinary week-end player
is not a bad putter at all, since he'll get
around a course taking only 34 to 38
putts, and since the topnotcher can't
depend upon averaging any better than
30 putts (when his putter stroke is
whetted to a razor edge), there is a tre-
mendous gap between the star's low 70
score and the ordinary player's middle
90, that isn't explained by the difference
between their putting.

True, the average duffer sprinkles his
shots helter-skelter about the course
but if he'll stop kidding himself and
really analyze his game he'll discover
that his troubles usually start in that
most elemental, that elementary phase
of golf which is overcoming distance.

I'll go even further and say that if
the average player had a dependable
drive that would put his ball 200 yards
out from the tee and somewhere on the
fairway, the day would be rare when he
didn't break ninety. Give him a drive
of 220 yards consistently and he gets
down in the low eighties. Give him an
average of 230 yards off the tee and he'll
score in the seventies. One whose sole
skill lies in putting just doesn't get any-
where in golf.

People seem to overlook the fact that
a fairway 50 yards or less wide is a small
target. Except on full brassie or spoon
shots, the normal-sized green is rela-
tively easier to hit than the fairway,
from the tee. A green 20 yards wide and

It May Not Again Be So Easy to Own THE HARVARD CLASSICS

Read How You Can Have The Harvard Classics
At An Extraordinarily Low Price and On
Most Liberal Terms

Here is an extraordinary chance to own Dr. Eliot's
Five-Foot Shelf of Books. Now this supreme library
can be had at a cost per volume one-third the price
of current fiction.

Dr. Eliot, Harvard's most distinguished President,
has brought together in The Harvard Classics from
his lifetime of study the pure gold of the world's
literature. Dr. Eliot realized the need of a library
offering everyone the culture which a university
strives to give. THE FIVE-FOOT SHELF OF
BOOKS is the magnificent result of his inspiration
and knowledge. These volumes are the criterion of
all literary selection. Through them people have
found that the classics are far from dull—but in-
tensely stirring—contain lively, stimulating modern
thought with vital application to our everyday life.

DO NOT MISS THIS GREAT BARGAIN

Brentano's, the famous booksellers, recently stated
that for only the partial contents of The Harvard
Classics in ordinary clothbound editions, the cost
would be \$402.00—yet in a beautiful edition, hand-
somely printed and illustrated, and uniformly bound,
you can obtain these superlative writings at a frac-
tion of that cost.

This is a most rare opportunity. Here are the com-
plete marvelous contents of Dr. Eliot's Five-Foot
Shelf of Books. Fifty volumes, 22,407 pages of
superb reading, 418 of the world's masterpieces,
the Lecture Volume, Daily Reading Guide, and
Index of 76,000 entries, costing \$50,000 to prepare
is the key to the treasures of The Harvard Classics.

YOURS FOR ONLY 50¢ A WEEK

Today for an initial payment of as little as \$2.00,
you may have a complete, luxurious edition in your
home with all shipping charges
prepaid by us. No one thus
needs to wait one day longer to
own The Harvard Classics.

FASCINATING BOOK—FREE

A SPECIAL PREPARATION FOR SHAVING

FOR THE 1 MAN IN 7 WHO SHAVES DAILY

It Needs No Brush Not Greasy or Sticky

Modern life demands at least 1 man in 7 shave *every day*—and men in service must get clean shaves, too. Yet daily shaving often causes razor scrape, irritation.

To help men solve this problem, we perfected Glider—a rich, soothing cream—not greasy or sticky.

SMOOTHS DOWN SKIN

You first wash your face thoroughly with hot water and soap to remove grit and the oil from the skin that collects on whiskers every 24 hours. Then spread on Glider quickly and easily with your fingers. Never a brush. Instantly Glider smooths down the flaky top layer of your skin. It enables the razor's edge to *glide* over your skin, cutting your whiskers close and clean *without scraping or irritating the skin*.

ESPECIALLY FOR THE 1 MAN IN 7 WHO SHAVES DAILY

For men who must shave *every day*—doctors, lawyers, businessmen, service men—Glider is invaluable. It eliminates the dangers frequent shaving may have for the tender face and leaves your skin smoother, cleaner. Glider was developed by The J. B. Williams Co., makers of fine shaving preparations for over 100 years.

SEND FOR GUEST-SIZE TUBE

If you want to try Glider right away, get a regular tube from your dealer. If you can wait a few days, however, we'll send a Guest-Size tube for a dime and any used metal tube. It is enough for three weeks and is very handy for traveling.

On this test we rest our case entirely—for we are positive that Glider will give you more shaving comfort than anything you've used.

Send your name and address with ten cents and a used tube to The J. B. Williams Co., Dept. EG-09, Glastonbury, Conn. Offer good in U. S. A. and Canada only.

about as long offers a generous mark at which to shoot when you're only 100 yards from the carpet.

Like Byron Nelson, I started driving with an iron. When the chips were down in our caddie vs. caddie battles, I'd use an iron in a pinch off the tee.

One day at Rumson, Tim O'Brien, who was having me test some shafts, asked, "Can't you fade one out there? Those hooks are horrible."

As a matter of fact, my hooks were bad. At the time I was controlling the ball but it was apparent that control would depart at any moment. On this type of hook, the club head comes in extremely late with a closed face. By dint of sheer labor, the player freezes his body and sort of pushes the ball out away from him. The shot starts on a direct line to the right of the intended mark and then curls in swiftly toward the left.

For a while I counteracted a tendency to get off quick, scooting hooks by using a brassie off the tee. The three degrees extra loft, which is really all the difference there is between driver and brassie, got the ball up in the air. I was using the brassie-and-push method as late as the championship of 1936 at Baltusrol, the year that fade player Tony Manero won the Open and set a new scoring mark of 282.

It really wasn't until 1938, when I was thirty-six, that I made up my mind to work out a dependable drive that, no matter how great the pressure, would stand by me. Here's how I worked it out:

I'm rather a big man, you know—weigh around 190 pounds. I've got fairly large, strong hands and I've always known how to make them work. So I decided to try out the idea of lining up my shot with the club face square with the hole.

The next thought was to take the club head back on a straight line—back away from the ball; not up and away, but back and away. When well back from the ball, the club head naturally rose and as it cleared the ground the face of the club opened.

How to Test Your Swing

Instead of taking the half swing that I had once used, I got to a position that was fully three quarters of the limit swing. Once the club head got that far back I concentrated on nothing but throwing that club head through on the path on which it had ascended.

There's no precisely similar motion in any other game. The nearest to it I can recall is the throw a shortstop uses in whipping the ball over to first for a put-out. It's an underhand movement. It's got no jerk in it. It's a whip motion.

And, by the way, if you try it, here's a way of testing the manner in which you are swinging. If, at the finish of your swing, your right hand seems to twist and lock over the left wrist you haven't got the idea. But if, at the finish, everything seems so smooth that the follow-through is made subconsciously—well, then you have it. A follow-through is a result. It's not a cause.

You've doubtless seen ballplayers hit and, seemingly, let go the bat the very second the ball is struck. The swing is finished, the object is hit, and there's nothing left to do but dash off for first base. Anything that encumbers you, like a bat for instance, is just so much excess baggage. Well, a forced follow-through in golf is also excess baggage. It gets you nowhere. It doesn't mean a thing.

I really labored on this idea of keeping the club face square with the objective as long as my hands could keep it that way without getting cramped. I

had to put that labor into the job for, remember, I'd been using my other method of swinging for practically twenty-five years. Muscles pick up habits in that time and cling very tenaciously. Try changing your natural walk and you'll get the idea at once. You can do it but it takes effort.

At no time did I stretch for the ball. I maintained my old idea of addressing the ball as near to the power center as possible, and that center is the very end of the shaft you're swinging. This reminds me of one of the little tricks of a great putter, Tommy McNamara, twice runner-up for the National Open championship.

Tommy Mac always struck his long putts toward the heel of the club, to get the maximum force with the least amount of effort. For short and downhill putts—the trickiest type, the kind that demand almost a tender stroke—he struck the ball off the toe of his putter. He did that because he could then apply the minimum force with the maximum effort.

I point this out because so many ordinary golfers think that by backing away from a drive and applying the utmost leverage they can get the greatest power into a shot.

By the way, here's a good time for a sidelight on driving that may at first seem extremely discouraging but really isn't. The amount of power used in hitting a golf ball with a 200-yard carry is equivalent to lifting a 180-pound weight a foot off the ground. Since in golf, the

point at which the driver delivered is about two player, the weight lifting distance.

So, if you come home tired from a round of golf, and you to mow the lawn—and of her see why you should all you've done is walk and a half of golf ball a ered landscape—just to did that weight-lifting That should stop her— onds anyway.

Power Means I

Oh, don't get the idea the ball with 200-yard the same as weight lifting said, "It takes the same power." In weight lifting pull. In golf the force is secure this blasting power shaft is the longest of a bag. For the same reason the club is actually the and this explains why the fullest.

All three reasons stem the desire to make that club head—that's what explosive force that means without adequate length go far as a tournament this high-compression rivals are pounding the THE END

ected ne chairman of the

dance committee—and it's just too loathsome because, look, Chubby wouldn't bring the soldiers if I let Jeep bring the marines. And Jeep said he wouldn't invite any marines if the soldiers came. That's what started the fight—and it's all so piteous. What am I going to do with a hundred and sixty girls on my hands?"

This question alarmed Fireman Dunnevan. He took several shuffling steps away and said, "I an' Benny gotta see a guy, so we'll be shovin' off ourself. So long, Miss."

"Hold it, Tim!"

"The Navy wouldn't leave a poor but honest girl in the lurch?"

"Naw. Supposin' we discusst the matter. I an' Tim might be able to help you out."

"But, Benny—"

"Listen, Mr. Sailors, this is deeply significant. I go to Miss Widdicomb's College for Women. We've had a spiritual renaissance—I mean but actually! About the terrible plight of all these poor boys in camps and barracks around San Diego. Grim is a weak, puny word for it! So we voted to give a dance. We practically had to wake the dead, persuading Dean Widdicomb and the chaplain. They thought we should have officers. I ask you—isn't that a revolting idea? Is this a democracy we're fighting for, or isn't it?"

"Yerse, but—"

"Quit interruptin', Tim!"

"Thank you. So I said, 'How would it look in print to have it appear that Miss Widdicomb's girls wanted enlisted men and the school authorities insisted on officers?' So Dean Widdicomb, the dear old dribble puss, said, 'Oh, but it won't appear in print,' and I said, 'It might, darling!' You see, my dad owns seventeen brazenly gossipy newspapers!"

Seaman Linn grinned. "You got a brain, Miss Polly," he said.

Polly Peters sighed. "But I'm practically in a suicidal position now. I'll have to go crawling back and admit that my boy friends in the Army and Marine Corps couldn't get together—"

"Yerse! You do that. Blame it on them—"

"Pipe down, Tim! Uh . . . lemme think—"

The maiden smiled charmingly. "I somehow have the feeling that you can perform miracles," she said. "How's about finding us two hundred nice sailors?"

"Ner, Miss! Y'see—"

Seaman Linn jerked his thumb groundward. "When do you want 'em?"

"Friday evening at eight o'clock."

"Okay. It's a deal."

"**SAVED!** I love the Navy, I love it, I love it! Come straightway to our halls of learning. I want to introduce you to Dean Widdicomb. She's a dear old relic—I mean honestly. Died in the nineties and just lingers on here below. Come along—my car's on the drive!"

"Benny! We gotta rent 'at motor-sickle—"

"Get goin', Tim!"

In Miss Peters' expensive sports roadster, the girl said, "By the way, I ought to have your names. It makes for easier conversation, you know?"

"I'm Tim Smith from the Saratoga—ouch—"

"His real name is Timothy Dunnevan, fireman secont, Destroyer Trimble—an' I'm Benny Linn, seaman first, off'n the same ship. Holy Joe McCabe, the base force chaplain, knows us. Our skipper is

PRODUCT OF **Delco-Remy**

It's Time to Give Your Car Extra Care!

YOUR CAR has to last. So give it every care that will cut down wear and protect the engine.

Automotive engineers agree that most wear is caused by "dry starts" and internal corrosion from water vapor.

So help protect the upper cylinders of your engine. Put Mobil Upperlube in the

gasoline. This reaches the cylinders as a vapor and its special ingredient produces an adsorbed film on the metal surfaces. This film guards against scuffing wear during periods when the regular oil supply may be inadequate. It guards against corrosion from combustion moisture.

Buy Where You Buy Mobiloil or Mobilgas.

Lieutenant Commander Herrick. Anything else, Miss Polly?"

Miss Polly thought a moment, while the roadster yanked itself around a corner, all four tires howling from pain. "Yes," she said. "You're my Cousin Benny and you went to Dartmouth—just in case Dean Widdicomb gets nosy. Right?"

"Yes'm."

THE appearance of Miss Peters at Miss Widdicomb's College for Women, accompanied by two sailors, created only a mild sensation. A girl dawdling along a walk near the entrance to Dean Widdicomb's quarters looked up from a bag of popcorn and said, "Hi-yah, Polly. My, my, how many little playmates!"

"It's sailors, Friday night," Miss Peters said. "Pass the word."

"Sailors? Oh, goody!"

Miss Peters hustled Tim and Benny into Dean Widdicomb's living room, but not before three other girls had giggled and made remarks which reduced Fireman Dunnevan to agonized speechlessness.

"Dean Widdicomb, this is my cousin, Benny Linn, a perfectly charming Dartmouth boy—and this is his friend, Timothy Dunnevan."

"Glad to know ya," said Seaman Linn, with perfect poise.

"Yersee, howdy," said Fireman Dunnevan, "but I sure don't think you folks wants us sailors—ouch."

"Mr. Dunnevan is very shy, Dean Widdicomb," put in Miss Peters, hastily. "He's been at sea a good deal. Our original plan was to have soldiers and marines, as you recall, darling?"

Dean Widdicomb, a maiden lady about eighty years old, peered dubiously at Seaman Linn and Fireman Dunnevan.

"Oh, dear—you've changed the plans?"

"Friction developed between the Army and the Marine Corps, darling. Cousin Benny says we mustn't think of mixing the branches of the Service. The dance committee agrees with him unanimously. Cousin Benny can supply two hundred sailors—boys from the very best families."

Nervously plucking at her lace fichu, Dean Widdicomb frowned.

"Friction—oh, dear. And now—sailors. And this labor trouble, too. I'm afraid—"

"Labor trouble, darling?"

Dean Widdicomb nodded vaguely.

"Between Mr. Sheehan and Mr. O'Melveny . . . some argument about Ireland . . . so they all stopped work and the lights and plumbing in the new gymnasium aren't in . . . so I fear we shall have to postpone the dance—"

"Oh, don't worry about that, Angel. We'll get it straightened out. I just wanted you to meet Cousin Benny and Mr. Dunnevan and approve our invitation to the Navy. Okay, darling?"

"But, Polly—I think we should settle this dreadful dispute between Mr. Sheehan and Mr. O'Melveny—"

Seaman Linn cleared his throat. "I could look into that matter, ma'am," he said. "Fact is, Tim here . . . Mr. Dunnevan is an Irishman himself and knows how to handle Irishers."

"Yersee!"

Miss Peters did some very fast talking. Before she was halfway through, Dean Widdicomb had begun occasionally to nod. Miss Peters got her to agree that Cousin Benny was a dear; that the dance could be held in the old assembly hall and that Mr. Sheehan and Mr. O'Melveny could be reconciled, whatever the cause of their silly dispute.

As a climax, Miss Peters gave Dean Widdicomb a kiss and a hug, exclaiming: "There! You decide everything. I don't know what we would do without you, darling."

Then, accompanied by Tim and Benny, she left the reception room.

An hour later, the motorcycle deal having been successfully closed at a garage in La Jolla's business district, Seaman Linn returned from several telephone conversations to discover Fireman Dunnevan glooming in the sidecar.

"Snap outa it, Tim! We got business!"

"Yersee?"

"A hundred an' sixty college gals to sell, with all expenses paid in advance. God loves U. S. sailors if their hearts is pure, Tim."

Fireman Dunnevan climbed out of the sidecar. "I ain't in on this, Benny."

"W-what?"

"Ner, I ain't. Them college people is outa our class. We shoond't have no truck with um. Besides, that Miss Polly is a screwball that you can't understand half she says."

Seaman Linn looked hurt.

"I'm s'prised at you, Tim, I certainly am. So you want Hitler to lick us, hunh?"

"Hitler? Whut's he got—"

"You're against national unity an' defense?"

"Now, whut they got to do with—"

"No brains, Tim, no brains. Do we get national unity jest talkin' about it?"

"Ner, but—"

"When Miss Polly an' them kids up at the college voted to give a danst for enlisted men, they acted a hundred per cent, didn't they?"

"Yersee, but—"

"They done their part. So it's up to I an' you to do ours, ain't it?"

"Yersee, but—"

"This is big, Tim! It's the biggest thing we ever tackled. A swell unity ball at the college! Get it? Tickets sold for benefit of the United Service Organization. With a hundred an' sixty classy college gals, we can sell at least six hundred tickets—"

"Sell tickets?"

"Yeah—dollar apiece—easy—"

"But Miss Polly dint say nothin' about—"

"Does she know sailors? We couldn't give fifty tickets away. But at one buck per, the guys will know it's legitimate. Right?"

"Y-yersee."

"Okay. Climb aboard. We gotta work fast!"

SHORTLY after ten o'clock the next morning, Private Chubby Chalmers of the Coast Artillery was summoned to the orderly room of his barracks at Camp Callan.

A grim sergeant pointed to two sailors.

"Major Holmes said these guys could talk to you," the sergeant said. "Hold onto your watch."

"Yersee?"

"Yeah!"

"Pipe down, Tim. We got a important an' confidential matter to take up with Mr. Chalmers—"

"Ha! I'll bet!"

"It concerns a certain young lady, so that no names had better be mentioned—"

"Oh . . . all right. Come on outside."

Withdrawn to a discreet distance, Seaman Linn unwrapped a small brown parcel.

"It so happens that Miss Polly Peters ast us would we help her with 'at little dance at the college, Mr. Chalmers. She don't like details."

Mr. Chalmers sniffed. "Sounds just like her," he observed. "Has she put you on the faculty too?"

Seaman Linn smiled tolerantly.

"Miss Peters decided she would only invite marines to the dance, on account she's off'n you. Here's the tickets I an' Tim is supposed to take to Mr. Jeep

Saunders at the Marine Base. He's a s'prise because he off'n him, too. Dean V. Miss Peters set a limit tickets. So these is all

HOW LONG WILL YOUR TIRES LAST?

"IT'S REALLY UP TO YOU"

SAYS: *Bob Bowes*

President and Founder of Bowes "Seal Fast"
Company. Pioneer in Safe Tire Repairs.

ADD 25 TO 50% TO YOUR TIRE MILEAGE—HERE'S HOW!

★ Don't neglect or misuse your tires! Watch out for under-inflation . . . check air pressure frequently. Don't bump or park too close to curbs. Slow down! High speeds burn up your rubber. Avoid "jack rabbit starts" and quick stops. Get your wheels aligned and your brakes adjusted to insure even tread-wear. Shift tires occasionally . . . front to rear . . . left to right. And be sure to have your tires taken off the rims for THOROUGH INSPECTION, *inside and out*, REGULARLY.

SLIP-SHOD TIRE REPAIRS ARE NO GOOD NOW!

★ Carelessly-done tire repairs never were worth buying . . . and NOW, it's worse than foolish to risk the life of your tires. Play safe . . . get BOWES TIRE REPAIRS . . . the world's best known, most respected tire repair materials. Now, more than ever before, BOWES TIRE SAVING SERVICE is the most necessary and dependable motoring asset you can buy. Long years of pioneering in SAFE Tire Repair Methods and Materials by BOWES assures you of extra life . . . extra miles from your tires.

LOOK FOR THIS SIGN

This familiar red, white, and black marker will guide you to the Bowes-Equipped Service Station Man who is a Tire Repair Expert. Bowes Distributors have trained thousands of Service Men in the skill and proper use of Bowes Methods and Equipment.

BOWES METHODS ADD EXTRA LIFE ... EXTRA MILES TO YOUR TIRES

Authorized Bowes Service Station Men are ready NOW to inspect your tires thoroughly . . . drive in today!

in his bright blue eyes, Benny pocketed eighty-five dollars collected from Chubby, Jeep and Yeoman Webster.

"The way to get unity amongst the armed forces in this war is to show 'em a bad example. Remember them Irishers Sheehan an' O'Melveny that Dean Widdicomb told us about? I done a little askin' around about them guys. You know why they been fighting?"

"Ner. Why?"

"Sheehan don't want Ireland to get in the war on our side an' O'Melveny says Ireland should get in the war."

Fireman Dunnevan gulped. "Why, Benny, you nuts? Erland is in the war. I'm in the war. Chief Mulcahy is in the war. I can name you—"

"But Ireland ain't in the war official yet, Tim. They got a guy named Deeverleery who won't even lend us bases in Ireland!"

Breathing stertorously, Fireman Dunnevan shook his head. "I dern't believe it, Benny," he said. "It's jest German propagander." . . .

Dean Widdicomb of the College for Women felt quite bewildered—so she told reporters later—when Mr. Sheehan and fifty rough-looking men arrived to picket the school assembly hall forty-five minutes or so before the big Unity Ball was to start.

Her first act was to send Mr. Drumwalt, the janitor, for an explanation. Mr. Drumwalt returned with a preposterous report. He said that Mr. Sheehan told him word had reached the Keep Ireland Neutral Committee that Mr. O'Melveny was about to hold a big rally in behalf of the Irish Bases for The Allies Committee in the assembly hall.

"I fear you have been drinking again, Mr. Drumwalt," Dean Widdicomb said.

Dismissing him peremptorily, Dean Widdicomb summoned Miss Teasdale, her secretary. She instructed Miss Teasdale to obtain a correct estimate of the situation. Miss Teasdale came back with an even more astonishing report.

"I took Polly Peters with me," Miss Teasdale asserted. "Mr. Sheehan was extremely rude to us both. He refused to believe me when I said we were merely giving a dance for the sailors. He said we were all schemers trying to get Ireland to fight in England's war. He said that if Mr. O'Melveny dared to show his face near the school they would fix him!"

DEAN WIDDICOMB, now thoroughly alarmed, was trying to reach Judge McKinley, the school's attorney, by telephone, when Polly Peters rushed in.

"There's going to be a riot!" Polly Peters said. "Those crazy Sinn Feiners are threatening to fight Mr. O'Melveny—and Mr. O'Melveny has sent out a call for his committee. I'm going to call Daddy!"

This, Dean Widdicomb refused to allow. It would be, she said, most unfortunate publicity. Failing to reach Judge McKinley, Dean Widdicomb telephoned Dr. Hurlburt of the Board of Regents. Dr. Hurlburt was very soothing and helpful in the crisis. He said that the Irish controversy was a historical one which needed cool heads and tolerance on both sides. He advised Dean Widdicomb not to call the police. He would come right over and mediate.

Taking her cane, and accompanied by Miss Peters, Miss Teasdale, Mr. Drumwalt and Dr. Rowell, Dean Widdicomb started for the assembly hall. Then, without warning, a weird and staccato sequence of events fell upon Dean Widdicomb:

1. Mr. O'Melveny's men charged Mr. Sheehan's men yelling: "Get the pro-German renegades!"

2. Mr. Sheehan's men charged Mr. O'Melveny's men yelling: "Erin go bragh! No quarter to British imperialists!"

3. Fists flew.

4. Polly Peters yelling, "We're saved! Navy!"

5. Two huge trucks rolled down the street the main gate of the college.

6. A big sailor and a small one out. The small one guys—lookit them Irish our national unity!"

7. Just as this show more large trucks rushed the gate. The first two marines. The second packed with soldiers.

8. A marine yelled: "Stop 'at scrapping, y start!"

9. A dreadful scene Dean Widdicomb, pale, was heard to remark: "I fear violence—"

She marched straight and closed the door.

IT WAS past midnight in a room brig of the Dean Fireman Dunnevan's of badly puffed knuck moodily fingered several tusions on his face.

"Benny?"

"Yeah?"

"Was it you that shot O'Melveny?"

"Yeah."

"That was smart, shoon't 've brung so didja see how quick together an' fought us 'Yeah."

Fireman Dunnevan slapped Benny sharply.

"It's okay, pal. You amongst them Irish unity on our side, too rines give us a hand. sods would ever help brawl. But it was u like you said, Benny."

Nodding, Seaman chewed a match.

"I guess the skipper for this. We're shovin but I an' you won't be one."

"Miss Polly—she's"

"No chanst. We me She's prob'ly askin' th us."

A key rattled in the swung open and Yeoman there.

"Chief Mulcahy told He's too disgusted to A big war on and you ashore. We had a the cops took you a gave me this letter certainly carry horses"

"Scram, Webster!"

Benny tore open the it over his shoulder:

"Dear Cousin Benny"

"It was excruciating the girls vote it the especially the riot swell-o. Poor Chubby jail, too. But I met th—a darling sailor fi talked with Daddy an get you all out of jail. Daddy says you have can opinion. I feel th ineffably symbolic. F me. I love you both Remember Pearl Har"

torrent that flows over Brereton's desk. They are Mrs. Doris Jepson, wife of a Firestone Company representative at Ceylon, and Mrs. Lee Spencer, whose husband, a General Motors engineer, was lost in an aviation accident in Iran in March. A score of other American and British girls have come out from New Delhi to serve in other depart- ments.

The American "invasion" of India was not without moments of interna- tional tension. The government of India requisitioned a large hotel building to serve as headquarters for Brereton and as quarters for most of the officers and newspapermen attached to his outfit. There was immediate and great indig- nation among the residents of the hotel who were ordered to move out of quar- ters that some of them had occupied for years. It was touch-and-go for a while, and it looked as though the Battle of India might start with an anti-Amer- ican uprising, but firmness and dip- lomacy found solutions.

The next move of the American in- vaders was to install in a few weeks more air-conditioning apparatus than New Delhi had ever seen before. These machines began replacing the primitive Khaskhas method of making interiors livable in the hot season, but not even the Americans could suddenly bring about such a transformation in the hotel dining room. It is still darkened throughout the daylight hours by thick straw mats over its few windows. A sprinkler system keeps water dripping constantly over the mats (in many places urchins with buckets of water replace the sprinklers) and the conse- quent evaporation reduces the tem- perature inside to a marked degree.

A Question and Some Answers

The Americans are well equipped against the heat with enormous pith helmets, shorts and short-sleeved shirts, open at the neck. This is now the day- time uniform for the outfit and old stuff, although some of them felt a bit queer in their newfangled garb at first. Major Ed Backus now likes the uniforms so well that he is going to introduce Indian styles in his home town of Vernon, Texas, when he gets back there. Backus, incidentally, has seen a great deal of action in this war and led our dive bombers in their first operations off Bali in February.

So they're getting along fine, these fighting men from America. They know where they're going, as do all of the American leaders in India. When I was finishing this dispatch I asked the four men quoted at the beginning of this article to put down in plain words for Collier's what they would answer to the question: Where do we go from here?

"I'm returning to Chungking," Am- bassador Gauss replied. "I work there, you know."

Brady said emphatically: "I'm going to stick right here until this job in India is finished."

Johnson's big fist crashed down on his desk to emphasize his reply: "We are going to victory sooner than at first seemed possible. It's time to quit re- treating."

I found Brereton just as he was finish- ing reading a report on a raid his boys had made on Mingaladon airdrome, out- side Rangoon. It was good reading for the general, and his reply was short and snappy and very à la Brereton:

"To Tokyo, dammit! Where did you suppose we are going?"

THE END

Time to be outdoors again.

But Briggs' choice golden tobaccos linger on inside their casks of fragrant oak . . . sleeping undisturbed, until ripe age has mellowed each leaf to bite-free perfection.

Briggs is cask-mellowed for years . . . (Longer than many luxury-priced blends). Result, a rare pipe treat . . . and all yours for only 15¢ a tin.

Water Witchery

By Bud Sawin

TOP honors in U. S. women's swimming belong to this eye-filling collection of kids who constitute the 1942 Official Women's All-America Swimming Team selected by the Women's Swimming Committee of the National A.A.U., whose job it is to follow closely the performances of every American woman swimmer. Selections were made strictly on the basis of competitive performance. This is a champion team, each member of which is a champion in her own class, and ten of the twelve are still in their teens.

They come from New England, the

Middle West, California, the Northwest. The outstanding quartet in the center are pool swimmers from Indianapolis, a city where water is available mostly for drinking purposes.

Their honors sit pretty lightly on these lissome kids. Their interests are still normal young-girl interests: boys, clothes, movies, dances, school activities. They're pretty well traveled, too; at one time or other each has visited practically every big city in the U. S. for competition or exhibitions, and each of them averages 4,000 miles of travel a year. ★★★

Dorothy Leonard of Worcester, Massachusetts, high point individual scorer at the 1941 Buffalo Indoor Championships, and present holder of the indoor 220-yd. free-style title

Anne Ross, Brooklyn, is a newcomer in national women's swimming. She won the indoor low-board diving event at the Buffalo indoor meet

Chieko Miyamoto, Maui, Hawaii, is 14, the youngest All-America, excels in individual medley and is already a superb breaststroke expert

Ann Hardin, Patty Aspinall, Betty Bemis and June Fogle, all from Indianapolis. Miss Hardin is a distance specialist, holding the national championship; Miss Aspinall holds indoor and outdoor breaststroke titles; Miss Bemis is a free-style specialist, Miss Fogle is a consistent marathon winner

Lorraine Fischer of New York is the fastest breaststroke sprint swimmer in the country, prominent in medley relay swimming for the past two years

Gloria Callen of Nyack, New York, a former free-style swimmer who turned to the backstroke. Holds outdoor title in the 100-yard backstroke. Miss Callen has broken many of the famed Eleanor Holm's records

Helen Crlenkovich of San Francisco is the present champion in outdoor springboard and high-platform diving. Many coaches consider her one of the best divers America has ever produced

ATHLETE'S FOOT

Act Quickly At First Sign
Of Itching Or Cracked
Skin Between Toes

Be careful! You can contract Athlete's Foot in showers, at pools—wherever public bathing is done. The spores of this dangerous, stubborn, tormenting skin infection usually first attack between the toes. Itching, tiny blisters, or raw, cracked skin between the toes are the symptoms of Athlete's Foot. Act quickly!

Apply Dr. Scholl's SOLVEX over the affected parts (Liquid or Ointment, as you prefer). It's a specific treatment for Athlete's Foot, formulated by this celebrated foot authority. The first application of Dr. Scholl's SOLVEX usually relieves intense itching immediately; quickly kills the fungi of Athlete's Foot on contact; helps heal the irritated skin, and aids in preventing spread of the disease to other parts of the body. Be sure you get Dr. Scholl's SOLVEX—not a substitute. Only 50c at Drug, Shoe and Department Stores.

Free Booklet on Foot Care—write to Dr. Scholl's, Inc., Chicago, Ill.

Dr. Scholl's

SOLVEX

FOR ATHLETE'S FOOT

PREVENT ATHLETE'S FOOT

To help prevent reinfection of Athlete's Foot from shoes, spray inside with Dr. Scholl's Shoe Deodorizer and Fungicide. Kills the fungi it reaches on insoles and shoe-linings; dispels odors caused by sweaty feet. Large bottle with sprayer 50c. At Drug, Shoe and Dept. Stores.

FALSE TEETH

KLUTCH holds them tighter

KLUTCH forms a comfort cushion; holds dental plates so much firmer and snugger that one can eat and talk with greater comfort and security; in many cases almost as well as with natural teeth. Klutch lessens the constant fear of a dropping, rocking, chafing plate. 25c and 50c at druggists. . . . If your druggist hasn't it, don't waste money on substitutes, but send us 10c and we will mail you a generous trial box.

KLUTCH CO., Box 2907-F, ELMIRA, N. Y.

You Can Get Quick Relief From Tired Eyes

MAKE THIS SIMPLE TEST TODAY

Eyes tired? Do they smart and burn from overwork, sun, dust, wind, lack of sleep? Then soothe and refresh them the quick, easy way—use Murine.

WHAT IS MURINE?

Murine is a scientific blend of seven ingredients—safe, gentle, and oh, so soothing! Just use two drops in each eye. Right away Murine goes to work to relieve the discomfort of tired, burning eyes. Start using Murine today.

the fixed logic of this. Cousin Gedog drank his coconut juice. The wife drank her coconut juice. Cousin Gedog put his coconut down with a click. The wife put her coconut down with a click.

"Eh to!" Cousin Gedog cleared his throat to warn Nia that he was about to speak.

"With war over and around us here," Cousin Gedog said, "a man is needed on each farm."

"Yes, a man is needed," Nia agreed.

"You have prayed for a son at Magic Bird Shrine?" he asked.

"Yes."

"You have prayed at Man's Hill Shrine?" he asked.

"Yes."

"You have spoken to the Merciful One?"

"Yes."

THE prayers sounded so much, portioned out in sentences this way. But Nia knew they weren't—not in asking for a son instead of that sweet, sweet luxury, a daughter, who, after all, is only a pretty visitor in her father's family until that day when she marries. But a son is a permanent possession—giving hand service and prayer service even after death, as do his sons and the sons of his sons through time.

"You made five-candle offerings at each shrine?" Cousin Gedog wanted to know.

"Yes," Nia said, wondering what he would say if he knew they had been ten-candle offerings.

"Quite enough for a dutiful wife!" Cousin Gedog pronounced.

"Quite enough!" his wife quacked.

"What of the crop you owe your son?" Cousin Gedog went on. "And if—the child should be a daughter, and I inherit the land and live here as I will, what of the crop you owe me?"

"Yes, what?" the wife demanded.

Ah no, not that! Nia's heart begged. Not them living here. Never this greedy cousin walling these high-stepped dykes, working this hillside paddy. Never this bird-faced woman pecking out the day's measure of rice, and roosting on the soft mattress-beds at night while she, Nia, and the girl child slept on the floor, carrying water, threshing rice, grinding sago flour, to earn their food as maidservants. All through the kindly, the benevolent, the paternal generosity of Cousin Gedog, naturally. . . . No, dear Buddha! No! No! Give me a son! Give me a son!

"Oh, I will weed well," Nia promised, smiling so earnestly, smiling so fixedly, to keep from crying. "I will not let the crop fail. No, never!"

COUSIN GEDOG'S feet were heavy with importance as he walked the veranda to leave. He stalked across the yard with no extra words, and then, suddenly, he waved his arm affably. "M'm-mh!" he said. "That is good ginger you have in the house patch, Nia. Good enough to eat, I expect."

"Only ordinary," Nia deprecated. "Only ordinary. But perhaps you would deign to carry some if I pulled it for you?" Nia asked it knowing full well Cousin Gedog would say yes the shortest way.

"Well! A little, a little," he deigned. Nia waded waist-deep between the bright rows of brittle leaves until she found the biggest. Three fat stalks she pulled, then four, and five, and still Cousin Gedog didn't say "Enough!" Longer than her hand, those pink roots were, and as big around as her wrist. Grated, or even sliced on rice, one would

do a family for a week. What, then, did Cousin Gedog want with six?

But Cousin Gedog's eyes were busy measuring the patch from end to end. "It sits well for ginger," he said out loud to himself. "Holds the rain. Holds the sun. The best ginger patch I know, by far. A man starting early—say, in First Spring—ought to take two crops easily, and still have sun enough for drying before the rains."

"M'mh! M'mh!" his wife agreed, but she was looking at the soft veranda cushions.

Six stalks were all Nia could carry in her arms. She tugged them through the soft ground and set them carefully by the well. They had to be washed. Cousin Gedog couldn't carry dirty ginger, could he?

Maybe two drawings would be enough, Nia consoled herself, as she lowered the rope. The buckets got heavier each day now—lifting them all that long way started the pain in her back until, some days, she had to sit for an hour before she could walk again. She closed her eyes and pulled the wet rope.

She didn't know how it happened, just her clumsiness, she guessed, but the first bucket splashed as she set it on the ledge. "Be good enough to forgive," she said quickly.

Cousin Gedog wasn't cross. He smiled a remote forgiveness, stepping away from the well to brush wet drops from his jacket.

Nia scrubbed, hauled water, fetched straw for the tying, and made the root string. "Forgive me that I give you this burden," Nia said, handing him the string. "May you eat it with good relish!"

Cousin Gedog was at the gate. Nia bowed heavily. "Be careful of your health," she urged. "Be careful of your health," she bowed and urged of the woman.

Cousin Gedog and his wife bowed a short little bow together. "Praying for a son!" they said with their lips. And then they were out the gate and walking the road to the village—Cousin Gedog taking his long man's strides, and the wife hopping along beside him.

Nia had never sobbed in daylight. She had never sobbed outdoors. So she didn't now. There was the blue sky for comfort, and the warm yellow sun. And there were the flowers she had planted around behind the godown. She walked to them now—her dancing bluecups, the hedge orchids, the crinkled silk poppies

—feeling their petals with feeling their color with wonder what a widow

She heard a step behind her, heard a man's voice saying, "A man needs flowers, doesn't she?"

It was Sagung, the stranger helper to the rajah's post there looking at the flower at Nia, and smiled that his. He wasn't a count wasn't strong and bustled like the men Nia knew. thin and long, with big eyes—and the city paler. He was a poor sort of mender if that was why she him, why she could speak out that aching breathless ways felt when she talked even to the husband, dear her parents had chosen for her.

SAGUNG was still a stranger, because he had lived in the village a year, a man from Batavia, who lived in the country because of sickness of his; a quiet, always fixing and mending where he took letters. I to farm.

No one knew the other him—whether he had a tooth, whether he flew in he dressed in the morning he ate himself sick over roast seacoast, or whether he tormented him at night for Sagung lived alone with folk to tell these things naturally want to know. I him often, only at the s and the three or four brought the tax papers.

He handed her one no "You have arrived," greeting, thanked him, a did not get enough to eat jacket needed mending.

The words came from deeper than his
lips.

NIA walked all that night to reach
the Nursing Tree. It was better that
way. It got her past Cousin Gedog's vil-
lage without being seen, and it got her
to the shrine before sunrise. She was
afraid of the night air, she was afraid
of snakes in the deep *alang-alang* grass,
but she was more afraid of not having
a son. The Nursing Tree was so sure.
A woman could depend on it, if she but
drank the dew dripping from it at sun-
rise, and said her prayers often enough,
devoutly enough, the rest of that day
and night. The Nursing Tree . . . why,
the Nursing Tree had been granting
women sons since time itself.

In the pale moonlight of dawn Nia
pulled her heavy body up the last stone
steps, and looked for a place to kneel.
The tree was so monstrous, knotted and
twisted and grossly pendulous the way
it was, and yet the ground under it was
alive with bending heads and upheld
cups. Nia walked this way and that to
find a place to kneel, a place close under
the low-hanging air roots, a place where
she would be sure to catch the magic
drip. She went almost around the tree,
stepping between and around and over
those other kneeling women, before she
found a bare spot.

Quickly Nia prepared. There wasn't
much time before sunrise. She opened
her piece of matting and spread it on
the ground. She tugged the knots on
her bundle open until she had un-
wrapped the wooden plaque. There on
the matting she set it, face up, the quick-
painted picture of a young woman
holding a man-child in her arms—just
so the Nursing Goddess would be sure
what she, the widow Nia, wanted. She
straightened her jacket, smoothed her
sarong, her hair, her sleeves, and then,
composing her face, she gravely and
solemnly and momentarily knelt.

SHE said the begging prayer distinctly.
She said it through twice before she
raised her cup and held it under the
branch. After a while she drank. Then
she said the prayer again. It was this
way—prayers and drinking, prayers and
drinking—until a window opened in the
gray sky and an immense gold blaze
shone forth. Nia closed her eyes in
weary supplication. She had said her
prayers before sunrise. She had drunk
of the Nursing Tree drip.

"Help me! Help me!" a city woman
kneeling next implored.

"Help me! Help me!" a woman ahead
and a woman behind Nia pled.

"Help me! Help me!" the chanting
murmur sifted and rose round the mon-
strous tree.

Would the goddess hear them all? Nia

THE BOOK OF THE HOUR IN A WORLD AFLAME

—THE SUPERB NATIONAL ENCYCLOPEDIA IN THE SERVICE OF EVERY AMERICAN TODAY!

WAR rages in Europe, in Asia, Africa, and on the Seven Seas. The United States has come to grips with the Axis powers. Five-sixths of the population of the earth is at war. The world faces the greatest crisis in its entire existence.

Americans—every family in every city, town, hamlet and farm in the broad reaches of our country—must be prepared, alert, ready to handle themselves in this new exacting disquieting world. To keep up with the swift pace of our day, the first call is for knowledge—not the old worn-out obsolete knowledge—but knowledge in tune with the time and keyed to our swiftly speeding era.

Thousands upon thousands of men and women are finding the answer to these pressing needs for knowledge in the superb NATIONAL ENCYCLOPEDIA. These thousands of keen-minded Americans have found new help in sifting truth from propaganda, picking out the cold clear facts, thinking soundly, for the NATIONAL

ENCYCLOPEDIA is gauged to today's world and keyed skillfully to serve every man, woman and child.

SUPPLIES A NEEDED BACKGROUND OF KNOWLEDGE

Written by a brilliant array of contemporary scholarship and by men and women at the operating throttles of our country's destiny, the NATIONAL ENCYCLOPEDIA supplies knowledge expressed in terms of today and viewed through contemporary eyes. The NATIONAL ENCYCLOPEDIA is the logical, authoritative tool for all Americans—a work of consummate value to all in this throbbing world aflame.

FAST, ALIVE—THE SYMBOL OF OUR NEW AGE

With world events power-diving as they are today, you need a *timely* encyclopedia. With the NATIONAL ENCYCLOPEDIA—no matter *what* happens tomorrow, in what country, on what subject—you will have a rich background of information always at your finger tips.

If you were to attempt to gather this information in individual volumes—histories, biographies, scientific treatises and other works—you would spend *four to five times the price of The National Encyclopedia*.

ONLY \$2.50 DOWN—60¢ A WEEK

Now no family in America need be without this Encyclopedia. This is one of the greatest offerings in publishing history! Not only is the price amazingly low, but the terms are excellent. FOR A PAYMENT AS LOW AS \$2.50 DOWN YOU CAN HAVE THE NATIONAL ENCYCLOPEDIA DELIVERED TO YOU—ALL SHIPPING CHARGES PAID BY US! And payments are at the rate of 60¢ a week! BUT YOU MUST NOT DELAY. PRICES MAY HOLD FOR ONLY A LITTLE WHILE.

SEND FOR FREE BOOKLET TODAY

So send at once for free copy of beautiful booklet containing complete information. It is a vivid Encyclopedia itself, with numerous illustrations in color, newsy, up-to-date halftone pictures.

Also included in this booklet is a "Catalog" of The National Encyclopedia, providing a key to its contents, but a fascinating guide to its contents. This beautiful piece of literature is yours to you postpaid and without obligation and mail the coupon below. Don't delay! Send for full details of this amazing Encyclopedia.

MAIL THIS COUPON TODAY FOR FREE LITERATURE

THE NATIONAL ENCYCLOPEDIA
250 Park Avenue, New York City

Send me without cost or obligation your beautiful booklet, describing the new National Encyclopedia, and including "Quiz". Also, please advise how I may secure the Encyclopedia by small monthly payments, at its present low price.

Ah, the sweet indul-
swt, sweet indulgence!
het and my hands I must
er that she has no fa-
and coddle her, that she
to keep the home for

her, this Beautiful One! With my heart
and my hands—"and then Nia looked
at her hands and into her heart, and
wondered what they could do.

Cousin Gedog would inherit the day
this daughter was a month old, when it
was politely, formally, obvious that a
woman and a baby alone could not farm
a paddy in these war years. Cousin
Gedog...

There he was now, striding in the
courtyard gate with sure, sure steps.
He didn't come to speak to her: he didn't
even bother to bow. After all, she
would be his serving woman in another
week. He flipped the lid of the bean
bin down. He stood the mattocks up
straighter, with a lingering possessive
touch. He walked on his heels across
the courtyard, humming, with the air
of an heir. . . . H'm, his eyes said plainly,
new and heavy thatch on the wide eaves.
Good! Yes, the ridge tiles were solid.
Good! And the size of the godown. . . .
Cousin Gedog stood stone-still.

"Beli!" he exclaimed as though his
eyes were playing tricks. "Beli!"
Nia knew what it was. He had seen
the flower patch beyond the godown.
She gathered her daughter closer in her
arms.

"Beli!" Cousin Gedog went on ex-
claiming. "Flowers in land that would
grow sweet potatoes! Or beans! Flow-
ers instead of a money crop!"

"Such a small space. Such a poor
space," Nia said in her smallest and
poorest voice. "Nor did I spend money
for the seeds! Oh, no! A New Year's
present, they were."

Cousin Gedog paced the ground. "Not
so small!" he contradicted. "Three rows
would go in here. And three rows is
three rows!"

"Yes, Cousin, if you say it," Nia
nodded.

"Eating things!" Cousin Gedog
shouted, his black jowls quivering. "I
want eating things on my land!"

Nia bowed her head.

"Take them out," he cried, snatching
a dozen flower heads in his hand and

throwing them under his stamping foot.
"Clear the patch! You, sitting there
idle in the shade as though you were a
man's wife!"

Suddenly, there was another man
there. It was Sagung, with long wands
of gray moss hanging out of his mail
bag. He was a little out of breath, as
though he had been running. He did
not look at Cousin Gedog.

"Congratulations!" he said bowing to
Nia. "Congratulations on this sweet in-
dulgence! A daughter is good, isn't she,
for she is there to teach sweetness to the
men children that come to the home!"
Did Sagung glance, ever so slightly, at
Cousin Gedog? Nia thought he did.

Cousin GEDOG made a face like a
barracuda snapping on bait.

"I present myself, if you will excuse
the liberty," Sagung said bowing and
speaking quickly, "as husband material
to the widow Nia, so that in these days
of war she will have a man on her land.
I will let her adopt me, to make it right
and proper. I will take her dead hus-
band's name. I will pray to his ancestors
and keep their tablets bright. This I can
do, for I have no land and no family of
my own. I am the younger son of a
younger son."

Cousin Gedog opened his mouth to
speak, to shout, to scream—Nia never
knew which, for Sagung went on quickly.

"Oh, I will ask my go-between," he
said, "to call upon your go-between, in
the formal manner. This is just our be-
hind-the-gate talk." He turned to-
ward Nia, saying to her, apologizing to
her: "The thought is not new to me.
Once before I almost spoke it to you,
and then I knew I must wait to see if
your child was a son—to see if you
wanted a husband."

Nia looked long at him. A poor man
he was, yes. A weak man. A man who
could never plow and plant and hoe and
weed and thrash like other men. But
looking at him there, standing next to
Cousin Gedog, Nia saw, suddenly, that
he was a bigger man, a more important
man—more important than any other
man in that whole valley.

"Yes," Nia said, not frightened, not
fearful now, and wanting to say this
thing that was in her heart now. "Yes,
I want a husband. I need a husband in
these war years. And in choosing, I
would choose you to—to keep this home
a home, to pamper and coddle this sweet
indulgence I hold, to . . ." but her tongue
tripped. She couldn't say out loud "to
father the sons I shall bear."

Sagung seemed to hear, though, for
he smiled and nodded. "Yes," he said.
"Yes, I can do that for you." He took
the moss from his mailbag, put it
around among the bluecups, patted it
with a serene dignity, and then with
both feet together, he bowed formally
to Cousin Gedog, bowed formally to
Nia. "My go-between, the rajah's
postman, will call upon your go-between
immediately," he said, and walked out
of the yard.

Cousin Gedog stood there staring,
grinding his heels hard into the court-
yard earth. He chewed his tongue. He
squeezed his hands and squeezed them.
He looked as though he were going to
cry.

NIA turned from him and sat herself,
dreamily, on the flower-viewing seat,
smiling at her daughter again, smiling at
the flowers again. A long minute after,
when Cousin Gedog said "Goodby"
as though he were tearing a piece of
cloth, Nia didn't even hear him. She
was wondering about the wedding feast.
Could she, could she possibly have for
the main dish those beautiful, beautiful
balls of cold rice wrapped so artistically
in raw fish, with the purple pickles in
the middle?

THE END

A POWERFUL 6-VOLT ELECTRIC LANTERN

The Delta Powerlite should be in every home, and
every auto, as an emergency lantern. Its 6-volt
power throws a piercing 800-foot spot beam for
distance. Its top lens gives wide floodlight for
close-up use. Either at the flip of a switch. Uses
standard 6-volt dry battery good for 80 to 100
hours. Unbreakable lens. Easily carried in auto
trunk compartment. Indispensable for night
fishing, camping, trailers, lake cottages and
101 other outdoor uses. \$3.35 less battery.
*Due to war demands, most orders
direct from factory cannot be filled.*

For Radiant MORNING FRESHNESS

Do This Tonight!

If you wake up tired and listless—if your
freshness and "sparkle" are slipping away
in the stress of these strenuous times—you
should know this!

Thousands are drinking a cup of new, im-
proved Ovaltine night and morning—for clear-
eyed morning freshness and vigorous days.

For Ovaltine is a scientific food-concentrate
designed to do two important things.

First, taken warm at bedtime, it fosters sound
sleep, without drugs. Second, it supplies cer-
tain food elements to replenish vitality while
you sleep—rebuild worn-out muscle, nerve and
body cells. High-quality proteins. Protecting
minerals, Vitamins A, B₁, D and G, pantothenic
acid, pyridoxine. Thus acts as an insurance
against strength-sapping food deficiencies that
effect more than one-third of our people today.

So turn to new, improved Ovaltine—begin to-
night. Get a tin today—or send for free samples.

THE PROTECTING FOOD-DRINK

IRVING ROIR

Bill had talked too much and too long about himself. He was so tremendously interested in his work he hadn't noticed that, but others had

There'll Never Be Another

By Richard English

ILLUSTRATED BY JOHN HOLMGREN

THREE months ago Bill Kirk would have laughed in the face of anyone who told him he would be standing there watching Carol coming down the aisle on her wedding day. It wouldn't have been a nice laugh because he was carrying the torch with both hands then and, up to a month ago, he had still been carrying it in one. When two people loved each other as much as they had they can't end it easily or even nicely, and there had been none of those fine false smiles and assurances that of course they would always be friends.

It was a high-noon ceremony and the church was crowded and Carol, clinging gently to her father's arm, was coming nearer and nearer. Beneath the bridal veil her face was pale and lovely and her eyes were the same soft blue as on the night when she had first told Bill she loved him, too. She had meant it so that it was still hard to believe that anything could have ever broken them up.

The muted tones of the processional music swelled into something that made Bill look away when she was almost beside him. Carol didn't glance at him and it was a good thing. For a man who had had to do so many things the hard way, this was the worst moment of all. Perhaps it was because his whole life had been far from easy that he hadn't known all the little things you're supposed to do and say when you've finally fallen in love with the right girl.

It had been so easy and so wonderful at first. He was a civil engineer, and a good one, and he had been back from South America less than a month when he met Carol. It was at a cocktail party where she was wearing a gay and foolish little Tyrolean outfit, and he had asked to take her home.

They had their first real date the next evening. They went dancing at a smart hotel and the piece they had liked best was *Piano Concerto*, which was certainly a strange name for a dance tune. But there had been so much to talk about in that tender and exciting discovering of each other that they hadn't danced much.

Later, when he had learned that different backgrounds and values can be far more deadly than any competition, he had wished he hadn't fallen in love so soon and that on their first date his head had been listening as well as his heart.

The reverend's full and solemn face was looking out over the audience and Bill became aware that the minister had something of the dignity that distinguished Carol's father. There was a quietness in his face, too, strangely like the one that had come over Carol the night she had told him it couldn't possibly work out. They had been sitting before the fire in the living room, and he had known that something was awfully wrong.

Their last few dates hadn't held that fine warmth and understanding and Bill had begun to wonder if every couple went through some sort of let-down on finding out they were really in love. Some of the fun was gone then, replaced by the knowledge that love meant marriage and when you thought of a lifetime together, you became sharply aware of what had once been only little differences between you. That lack of similarities in backgrounds and friends had made each other that much more exciting at first but now they were disturbing and to Carol, at least, they had become frightening.

"Carol," he had said, worried and a little bewildered, "let's not think about it too much. Let's just let it handle itself."

She tried to smile but it wasn't any good, and he did a very foolish thing then. Because he was Bill Kirk and liked things as straight and orderly as a project blueprint, he had to lay it on the line.

"I keep wondering if I've done anything to upset you. If I have, Carol, it would be better to tell me."

She tried to tell him, and at first the things that had been bothering her had seemed so minor that he wanted to laugh. Then he realized how serious and how frightened she was, and the laughter had gone out of him. She had mentioned the night of the Reynolds party when some of the men had wanted to know all about South America, not only about the Axis' chances there, but about his own work. Apparently he had talked too much and too

long about himself. Because he was so tremendously interested in his work he had but others had. He had been a and a little too sure of himself.

The slow color came into his face at her. "I wasn't trying to be the big," he said unhappily. It hurt him to let that much about others' opinions. I was on exhibition as a prospect thought that was between us, and

He had thought later that it was better if she had been angry. Instead, trying to pretend that what didn't really matter, but the more more it became apparent that she had up to regard herself as a part of a picture he didn't fit. To her, all the little as important as being honest and sincere. That didn't make sense to him; he

Carol stood up, her slender silhouette warm glow of the logs, her eyes bright tears. "I guess there isn't any more she said unevenly. "You're so content and your life that nothing could ever The things that have happened to me to me, too. Maybe we had just broken the whole thing."

He never even remembered walking out of the house. Nor could he recall anything that followed, except it had been work hadn't held him in the city he from her and the telephone that near, and all the places that reminded him of her. But he had lots to do before he could air bases now being built in northern

He hadn't begun to win his battle suddenly, and with some shock, realizing he had been entirely wrong. He had been painfully honest with Bill Kirk, and honesty came to his aid, relieving the tension within him. It took two to make well as a bargain, and, by the time he resolutely turning his mind from the terrible weeks, he began to feel better

HE HADN'T known he was practicing when he discovered that if he only remembered the last awkward dates, when their misadventures widened into a breach Carol didn't filling, he didn't care whether he ever Those last few dates hadn't been fun wasn't all his fault. Until the very last had been silently condemning him for without ever giving him the chance to break the patterns of his life that didn't

He had so mastered himself that coolly logical about everything that Carol was like a lot of people, he liked the bright and shiny medals times won through coming up the they didn't like the scars you might in winning those medals. They liked est and understanding and possessing sureness but, if at the same time robbed you of some polish, making you pined with some of your life and people like that at all. There was, he thought, the disadvantage in such a complete reliance could get over someone like Carol, ever be in love again, knowing that you could get over this new love, too

The reverend cleared his throat, and the church was suddenly painfully silent as he was smiling and he repeated the ring, Mr. Kirk."

Bill numbly took the ring his best He almost dropped it but then he held it between his thumbs for the last month anyway that way ever since the day he had watched Carol on the street and one of the did remember which—had said, "Carol wrong!" As he slid the ring on Carol alized he had been right about one He had always told himself in those when he was having to get over it, that be Carol, there would never be another

ters didn't ask for aid. Via D Morgan learned that r fit announcement peo- ted right in dosing them- breer's yeast, liver and n Foods. Many reported as longer turning gray.

Dr. Morgan is Conservative

Dr. Morgan refuses to be stam- d arousing false hopes, eth stay away from the ank instead about her mes. These have shown a th antigray factor, the om p x contains a vitamin gro h of animal hair. The ow vitamins are present food.

vitamin, pantothenic acid, help out the antigray fac- ere long the line. In her Dr. Morgan has shaved e bas of rats grown gray antigray factor deficiency. othe c acid in their diets new lack hair to grow in whil the rest of the hair gray. Eventually the new also m gray. This has led to be ve that pantothenic mideman that mobilizes plies of pigment, however urnishes them to new hair. ntly r. Benjamin F. Sieve City hospital has reported kenir of gray hair in fifty nts died with para-amino- and, ancer B vitamin found owever, in twenty cases the no we given endocrine- acts. What else they ob-

tained in their own diets at home Dr. Sieve did not say. Possibly they were eating the antigray vitamin.

Dr. Morgan believes firmly that gray hair is simply an outward sign of internal changes taking place as old age creeps up on us. Pigmentation of hair is supposedly controlled by the thyroid and adrenal glands. Lack of the anti-gray vitamin damages these glands. Both gray hair and gland damage are signs of old age. It all adds up neatly and has convinced Dr. Morgan that the vital adrenal, thyroid and other endocrine glands are made relatively inactive by dietary deficiency. This failure of the glands, she believes, brings on the gray hair, skin disorders, and other symptoms we group under the one collective term of old age.

Refined Foods Hasten Old Age

For additional proof of the value of vitamins in preventing old age she has produced a strain of super-rats. Since birth they have eaten a balanced ration plus a daily supply of yeast filtrate containing the antigray and hair-growth vitamins. At two years of age, the equivalent of 60 human years, when ordinary rats lose weight and show signs of senility, these rats are of near-giant size. They are physically and sexually active. Only a slight graying has appeared in their hair.

Old age certainly cannot be staved off forever but modern living seems to bring it on more rapidly than necessary. Dr. Morgan lays much of the blame on modern cooking methods, our desire for white sugar, white flour and other refined foods, and the leaching, scouring, and blanching our foods receive in being prepared for market. If she reads the evidence correctly, our purified foods, their vitamin contents largely removed or destroyed, are hastening the day when old age grays our hair, stiffens our muscles, and mists our eyes.

The remedy seems to lie in isolating and identifying all the vitamins and including suitable sources of them in our diet. By suitable sources is meant primarily *natural foods*. They are the best and *least expensive*.

Natural food sources of the antigray factor are liver, several brands of brewer's yeast, whole wheat, wheat bran, brown rice, rice bran, rice polishings and unrefined cane molasses. A cheap and effective source is black-strap cane molasses with wheat bran added.

Good sources of pantothenic acid in addition to the foods listed above are egg yolk, split peas, peanut butter, whole grains, legumes such as peas and beans, salmon and even the much-maligned potato.

Like all other vitamin deficiencies, however, deficiency in the antigray vitamin cannot be cured completely by use of natural foods. Some more concentrated source, such as brewer's yeast or rice polishings, can be purchased at most drugstores and should also be used at first. Don't expect quick action.

This is one diet in which you don't have to worry about the size of the portions. You can't eat enough of any B vitamin to do you harm and they're all a cinch to do you good. If you're like millions of other people you'll feel better for taking them. And if the anti-gray vitamin keeps those gray hairs away or banishes the ones you now have, that's profit. Either way you can't lose.

WHO'S GOT THAT EXTRA CASH?

AS MR. LEON HENDERSON never wears of telling us, the war is forcing a lot of extra money into American hands and at the same time is cutting down the volume of consumers' goods which that money can buy. Hence, the government hopes to drain off this excess buying power in various channels, so as to keep prices of available goods from being blown sky-high by surplus-money pressure.

Okay; but who has the bulk of this new buying power?

The white-collar workers in stores and offices haven't it. Many if not most of the concerns that employ these people are being squeezed by goods shortages and price ceilings, so that it takes a nervy white-collar worker to ask for a raise and a lucky one to

get it. Our horde of civil servants aren't getting raises except sporadically—a \$2 word signifying that as a group they are lumbering along on the old salaries while the cost of living climbs. The well-to-do and the wealthy are being hit by stiffer and stiffer taxes—no trouble for the politicians to cut down *their* excess buying power, if any, since they haven't the votes to prevent it.

Well, then, who has all this extra cash, or all of it that counts as a stimulus to inflation? Just two groups: labor and the farmers. Labor is getting it because the Administration hasn't the courage to freeze wages. The farmers are getting it because the farm bloc in Congress up to now has proved stronger than the Administration.

Are we doing anything to drain excess buy-

ing power from these two en-

The answer at this writing is n-

The most direct and one of the most effective ways would be a general sales tax of 4%, 5% or more on consumer goods. This would really hit the mark; would brake on unnecessary buying, would raise heavy revenues to help pay the war. Surveys indicate that most people favor this.

Yet the Administration has frowned on the general sales tax. It has yet to get to first base in hearing a good deal about how this is far, far ahead of the people's opinion about this war. In the matter of raising money as an obvious and equitable means to help up excess buying power, it looks as if the people are far, far ahead of the government.

FIGHTING MEN'S VOTES

WE'RE scheduled to elect a new House, one third of the Senate, numerous state officials, etc., next Nov. 3d. How about the votes of men in the armed services, now fighting all around the world?

In and after the last war, considerable discontent was kicked up by the fact that scrambled state laws on absentee ballots made it hard for many service men and impossible for others to vote in the elections back home. This discontent was capitalized afterward by politicians who found frequent chances to scream that if Our Boys had had anything to say about such-and-such it wouldn't (or would) have happened. The thesis was at least arguable that federal prohibition was put over because 4,000,000 young and youngish men were under

arms at the time and couldn't register their sentiments in ways that would count.

The prospects this time are considerably better, we'd say, but still not good enough.

All but three states (Louisiana, New Mexico, Kentucky) permit absentee voting by service men in some way; but there are many and various ways. Fighters from Connecticut, Iowa, Maine, North Carolina and Ohio, for example, have to apply for absentee ballots by affidavits attested before commissioned officers. New Hampshire permits absentee voting in Presidential elections only, and then only for Presidential electors. Fighters from Oklahoma have to vote by proxies in their home districts. And so on.

The National Association of Secretaries of

State has met and duly deliberated on the matter, but has decided not to try to make uniform state laws on it till the next state legislatures' sessions.

That looks dilatory to us. Have we taken vigorous steps to get this business out in all states now lacking satisfactory absentee ballot laws, before the next elections?

If any considerable number of men are prevented from voting in the elections, ammunition will be furnished to the enemy which keeps saying that we're going to ruin our own democracy while fighting it all over the world. That will be either for unity during the war or for building afterward.

THE BLACK MARKET

INEVITABLY, with rationing and price control coming in for the duration, black markets will develop in this country as they have done in other warring nations. Not pretty; but some people just aren't going to stay away from the black market.

We think, though, that it is in order to point out that the situation now is different from what it was under prohibition. The alcoholic black market was a sporting proposition, by

and large. An impossible law had been nailed into the lawbooks, and a law whose violation hurt nobody but the violator and sometimes his dependents. Such laws are destined to be broken.

These wartime restrictions are something else again. They are clamped on for two main purposes: to keep our fighting forces adequately supplied, and to deal the available goods for civilians around as fairly as may be.

Hence, when we patronize a peddler of essential goods, we are doing something smart or humorous, and we are doing something which has sense and justice.

If we'll all bear this difference in mind, the black market problem can most likely be a minor one. If we take to the streets and patronize the carnival spirit, the entire war effort grave if not in

FIGHTING"...Every Working Minute!

as if I'd blasted a Jap out of the sky, every time I see one of these cannon!" That's the way one Oldsmobile worker describes it, and that's the way all of them feel. *They're mad—fighting mad!* They want to do it, and they're doing it with *work*—but with a lot of "fight" in it. They're fast, and they're working well . . . Shift

after shift . . . 24 hours a day . . . 168 hours a week. Some of these men have been in arms production for well over a year. Long enough so that they frequently hear that the cannon and shell they've been building are already "dishing it out" to the Axis. And that makes them work faster still. No, America *can't* lose. Not when our great armed forces are backed up by men like these.

**KEEP 'EM
FIRING!**

OLDSMOBILE DIVISION OF GENERAL MOTORS

★ VOLUME PRODUCER OF "FIRE-POWER" FOR THE U. S. A. ★

Picture OF THE MONTH

PUBLIC APOLOGY: A few months ago we selected "Mrs. Miniver" as the Picture of the Month. We had seen it in a Hollywood Preview, but the producers, Metro-Goldwyn-Mayer, kind of left us holding a bag. They changed the release date after we'd gone to press. Well, no matter, the William Wyler production of "Mrs. Miniver" is good enough to be the Picture of Two Months. As a matter of fact it will be the Picture of the Year. Maybe—who knows—The Picture of All Time.

GREER GARSON • WALTER PIDGEON
in
"MRS. MINIVER"

CAPSULE COMMENT: It's rare entertainment. Its cast is headed by lovely magnetic Greer Garson and handsome Walter Pidgeon. Its direction is by the inimitable William Wyler. "Mrs. Miniver" was born to be great, has acquired greatness—and is destined to have greatness thrust upon it by the acclaim of audiences and critics alike.

"Mrs. Miniver" pictures the stirring days of the Dunkirk rescue that will be hallowed in history, the swift-moving pace of love under the "blitz". It mirrors the importance of simple, little things and the drama of action-filled hours.

Whether it is in the appealing revelation of such incidents as "Mrs. Miniver" shopping for a silly, extravagant little hat, or in those high moments of breathless excitement when she captures a Nazi aviator over a cup of tea—"Mrs. Miniver" has an inimitable way of telegraphing life and living; love and hate; and fear, straight to your heart!

Some pictures are "maybes" but "Mrs. Miniver" is a "must".

SUPPORTING PLAYERS: Teresa Wright, Dame May Whitty, Reginald Owen, Henry Travers, Richard Ney, Tom Conway, Henry Wilcoxon. Produced by Sidney Franklin. Screen Play by Arthur Wimperis, George Froeschel, James Hilton and Claudine West, based on the book by Jan Struther. Directed by William Wyler.

ITEM ABOUT MR. WYLER: The director of "Mrs. Miniver" has made more good films in the last five years than almost any other director in pictures. Maybe the "almost" should be omitted.

NOTE ABOUT MR. FRANKLIN: The producer of "Mrs. Miniver" has had a hand in some of the finest films that have ever been made. He is really tops.

NOTE ABOUT SOMETHING ELSE: "Till You Return", the theme of the William Powell-Hedy Lamarr film is due for the hit parade. Words by Howard Dietz. Music by Arthur Schwartz.

ANY WEEK

THE young man in the Flash Gordon helmet and horsehide suit on this week's cover is finding out how airplane controls behave at extreme altitudes. His headgear is of spun aluminum, welded to shoulder pieces of the same material, and he's in the "cold room" of the Douglas Aircraft Research Laboratory at Santa Monica, California, where conditions of cold and pressure at altitudes as high as 55,000 feet are reproduced, in order that scientists can learn how men as well as materials behave when they really get upstairs.

WE HAVE had a number of requests for reasons why no person with so common a name as Jones or Smith manages to get into this column. The latest, we regret to tell you, is from a fellow named Wandpflug. Christian Kidney Wandpflug. This one came just as we were riffling through our mail for a Jones or a Smith. You see what happened. So we shall go ahead with Mr. Wandpflug of Kokomo, Indiana. He is about to go to Philadelphia, Pennsylvania, where his grandfather lives and where, too, his grandfather is in more than a trifling quandary. The old gentleman is eighty years old. Ten years ago he struggled out of a sickbed convinced by his doctor and himself that he could not possibly live beyond the age of eighty and that it was extremely likely that he'd not make that. Thus convinced he cashed in all his insurance, divided the money into ten equal parts and was then equipped to live comfortably for exactly ten more years. If he died in the meantime—well, his relatives, including Mr. Wandpflug, would inherit. But now Grampaw has reached the age of eighty and is immoderately hale and hearty. Never felt so well in his life, he says. Feels as if he might go on another ten years. But he's broke—flat. He has applied unsuccessfully for

several jobs. Too old, they told him. So Mr. Wandpflug is going to call on his grandfather and see what there is to be done for the wastrel. Which is all we know about it except that Mr. Wandpflug's grandfather's name is Smith.

AND even if this hero's name was Jones or Smith we wouldn't be at liberty to tell. His first name is Dave and that's as far as he'll let us go. Nevertheless he's an Englishman, the writer of two novels which, in the early thirties, were in the best-seller lists in England. For several years he has been a waiter in one of the creamiest restaurants on Park Avenue, New York City. He was a waiter in England when he wrote his second novel. He was a dining-saloon steward on a Cunard liner when he wrote the first. He has had the pleasant experience of listening to people discuss his books while serving them food. He had offered himself to the British and American navies and armies in all sorts of capacities and had always been rejected, chiefly for physical reasons. We know all this to be true. Well, we've just heard from him as he was leaving a Canadian port with a convoy of munitions and food ships for England and Russia. He's very happy, he says—happier than he's been for years. His job? Oh, mess attendant. Waits on the officers' table.

IN THE meantime we've been galloping around the country trying to find out what this nation is doing to bring around the speedy and lasting defeat of our enemies. We're doing all right, but nothing compared with what we'll be doing a few months hence. We met and talked to a number of interesting people. One of these was a bombardier with a job on a Flying Fortress. Very absorbing work. We were discussing the duties of a Flying Fortress crew and asked him who, among them, was the real number one man. "The pilot?" we asked. "The pilot," he scoffed rather loudly and indignantly. "No, brother, the pilot's nothing but an ordinary chauffeur."

BUT a California journalist has just been telling us that the managing editor of the paper he works for is pretty difficult these days. The editor, (Continued on page 39)

New Life for Old Cars

CAREFUL maintenance, especially when conducted with an eye to preventing needlessly premature wear, is the best way to extend the life of cars and get maximum use from fairly recent models. • However, the serviceableness of General Motors dealers is not limited to this in keeping countless cars at work on necessary tasks. • As a dealer in used cars, he has acquired expertness in reconditioning that can give a new lease on life to many a long-driven car.

- His experienced mechanics are well prepared by factory-backed training.
- He is equipped for major service operations. His reconditioning, therefore, can create new life in old cars and thus goes far toward filling vital transportation needs.
- If you are concerned over a well-worn car that fills a necessary purpose, talk to your local GM dealer about the possibilities of restoring it to fresh usefulness.

The Automobile User's Guide answers your questions about taking care of your car in wartime. For a free copy see any General Motors dealer today or write Customer Research Staff, General Motors Building, Detroit.

"Dear Miss Lonely Hearts:
I have a problem..."

"My bristle used to make
the best brushes... then
along came machine-made
Pro-phy-lac-tic's
PROLON"

**Du Pont chemists
have outdone the hog—there is no
better bristle than Pro-phy-lac-tic's
synthetic "PROLON"**

When you hear competitive tooth
brush claims, think this over: du Pont
is "tops" when it comes to making syn-
thetic bristle! And "Prolon" is Pro-phy-
lac-tic's name for du Pont's finest grade.

So, how can the same du Pont bristle, in
another brush under another name, last
longer than under the name "Prolon" in
a Bonded Pro-phy-lac-tic Tooth Brush?
You know the answer—it can't!

"Prolon", on the other hand, has a
mighty important *plus* over any other
synthetic bristle sold under any other
name... only "Prolon" is rounded at the
ends! See for yourself, in the photomi-

crographs, the difference between the
rounded bristle-ends of "Prolon" and
the harsh, jagged points of ordinary bris-
tle. Think of the difference on your gums!

The only Tooth Brush in the World with

**2...SIX MONTHS MONEY-BACK
GUARANTEE**

We have no way of telling how long
a Bonded Pro-phy-lac-tic Tooth Brush
will last you... maybe a year, 18 months,
even longer. We can, and do, however,
give a clear-cut 6-months money-back
guarantee with each brush—the *only*
brush in the world with this definite
6-months *guarantee* of service. That's
how sure we are of its dependability
and durability!

... and don't miss this new line of
gem-like, transparent hair brushes!

Pro-phy-lac-tic's latest triumph! Dresser and toilet
brushes in crystal-clear plastic. Choice of four gleam-
ing, jewel colors. Transparent Jewelite backs. Moisture-
resistant bristles of duPont Prolon. \$1.50 to \$10.00
—at most brush-goods counters. Illustrated: Roll-Wave,
a unique "curved-to-the-head" brush... with comb, \$4.50

The capybara, largest of all liv-
ing rodents, has teeth powerful
enough to cut corrugated iron. The
Steganopodes, an order of birds in-
cluding pelicans, cormorants and
gannets, have no nostrils and
breathe through their mouths.

When a person can "hardly get
his breath" in a hot and badly ven-
tilated room, his pores, not his
lungs, are affected. The discom-
fort is caused by the stillness of the
air, which prevents his body from
losing its excess heat. Persons in
such rooms have felt no relief after
breathing fresh air through tubes,
while others on the outside have
felt no distress after breathing such
"foul" air through similar tubes.

New York is believed to be the
only city in the world in which a
certain personal name is not per-
mitted on a theater. In 1937, when
the Commissioner of Licenses ruled
that the word "burlesque" could no
longer be used, he also included the
name "Minsky" in the ruling be-
cause the Minsky brothers had op-
erated burlesque houses there for a
number of years.

Millions of people, particularly
the Mohammedans, still use true
solar time instead of mean solar
time and, consequently, their clocks
and watches are correct, or agree
with standard time, on only four
days of the year—April 15th, June
14th, September 1st and December
24th. The maximum difference be-
tween them occurs on November
2d, when it amounts to sixteen min-
utes and twenty-one seconds.

Many of the pipes of manual
organs, visible to the audience in
churches, auditoriums and other
places, are merely dummies, in-
stalled for display purposes. The
real pipes, made of wood or metal,
are in such a variety of sizes, shapes
and groups that they have to be
concealed.

Every spring, from three thou-
sand to seven thousand huge rafts
of logs are floated down the Yalu
River, which forms the boundary
between Manchuria and Korea. So
they will be well fed during the
journey that takes many weeks, the
Chinese who handle these rafts
usually carry along a patch of earth
and raise a variety of vegetables.

"What Can I Do To Schickelgruber?"

U CAN DO PLENTY! Nobody needs to hope today because he's too old for at service.

ducers are as indispensable as fighters in this struggle. Supreme effort will be required from all of us to supply the necessities of victory.

Every man, every woman, needs to be on a fighting pitch for this do-or-die national condition is of the essence—condition of mind and body.

Most important, your eyes, which control 50% of your actions.

Good eyes perceive quickly, guide

hands nimbly and surely, conserve nervous energy, keep you producing at tops.

Defective eyes tire fast, see double, cause fumbling and accidents, lose time, destroy material, soon exhaust nerves, brain and body.

If you really want to do things to Adolf Schickelgruber and Hirohito the Wasp, check up first on your eyes. Nearly one-third of all Americans have *uncorrected* faulty vision.

Don't experiment with slipshod eye care. There are truly capable men in your community to whom you can trust your

precious eyesight. Select one of them. He will make a scientific analysis of your individual defects of vision and provide professional correction and care.

Go to him. Tune up your eyes for the victory drive. Better Vision Institute, Inc., 630 Fifth Avenue, New York.

WING TALK

Piloting the Ferrying Command's big bombers requires a lot of experience—a job not to order for ex-airmen.

IF THE air-line pilots being taken into the Army Air Forces Ferrying Command were evaluated by their log books, most of them would have a starting rank of at least brigadier general. Particularly true is this of the boys who have been pushing air liners across the country day and night for the past ten or twelve years. They have really piled up the time, in terms of thousands of hours and closer to ten than one, too.

Broadly speaking, an airman's ability is measured by his time in the air. Specifically, you've got to find out on what types of ships he has spent that time and the nature of his flying. It is perfectly possible for a primary instructor in the Grasshopper class of aircraft to build up a big log book without knowing what the countryside looks like a hundred miles beyond his operating base. That would not qualify him to fly multimotored ships for the air lines, for the Army and Navy air-transport services or long-range heavy bombers. But an air-line pilot, with 10,000 hours of day and night and instrument and ice and multimotored equipment experience, does get the high rating. He is the master cross-country pilot. But as a combat pilot, he's out of practice.

Many of these pilots far exceed Army and Navy airmen in cross-country flying experience. And at this point we rush to the defense of the latter. In peacetime the service pilots were terribly neglected for want of aircraft and sufficient fuel appropriations to build up experience in the air. Furthermore, to train for executive and administrative posts, to groom themselves for positions of high command and responsibility, the service pilots had to hold down ground jobs of such a nature that they were lucky to acquire 300 hours in a year. Meanwhile, the air-line pilots, whose job it was to fly passengers, mail and express on fixed airways, and nothing else, were clicking off an average of 1,000 hours per year. But whenever an earthbound air officer of the Army or Navy could find time to fly, his cross-country trips were seldom twice over the same route.

We like to think that the boys in the Ferrying Command, the branches of the Air Force, by Capt. Jack Zimmermann, a 10-hour master pilot who has relinquished his post as Eastern Chief Pilot of TWA. Jack is flying air liners between Kansas City, Pittsburgh and New York, and like the conductor of a favorite railroad, has built up a clientele. Tall, handsome (natural) blond hair, no glasses in his dress, his uniform an Admiral Jellicoe angle, always with kid gloves, Jack is responsible for happy landings, fair weather and foul, and will for his company.

As an instrument or blind pilot, we hand him the honors, demonstrated his ability to regard on several occasions back in the cabin and vice versa that our fate was in his hands, versed happily with the host.

And you should be glad to see the task of moving men and our battlefronts is in the hands of capable men as these.

BY NOW, we are in the thick of the season again and this is the time to pay attention, whether pilot, passenger or landlubber, to the wisdom of cumulo-nimbus clouds. The Federal Aviation Authority for this warning is the Bureau of the Civil Aeronautics, which, for the third time in its history, is officially notifying all pilots on inside of what we some call thunderhead.

In turn, the Safety Bureau is the findings of Robert Stanley, a noted engineer, test pilot and records for soaring (careful gliding). Bob Stanley has penetrated the recesses of thunderstorms in his sailplane, brought back what the scientific data. For one thing that even in a mild cumulo-nimbus cloud, the rate of climb is (Continued on page 9)

In Action on every Front!

America's bombers and fighter planes roar across the sky. Our Navy's battleships seek out and meet their enemies. Our Army's tanks and trucks and artillery wheel forward. On every front, the handiwork of Bendix craftsmanship! These thousands of Bendix men and women and thousands of sub-contractor personnel behind them—are America's tools of victory: carburetion, ignition, landing gear units, instruments, signal equipment, radio, brakes and controls. Their level-best goes into each . . . for America. Men and women are meeting the tremendous production demands of our Army and Navy. They have multiplied their efforts, and are increasing it steadily, day by day.

This man is looking for Trouble

THIS MAN'S SEARCH for trouble on a rush construction job has carried him from the bottom of pits to the top of water towers.

Specifically, he has found that lumber piles were leaning and improperly braced; that cement was being loaded on both sides of a highway, thus exposing employees to traffic while crossing the road.

Being sharp-eyed, he has spotted dangerously low electrical supply wires at the pump station, and loose planks on a water tower erection job. He saw wall board piled too high and being worked stack by stack, rather than by the safer method of working down all piles uniformly.

He came across a good many exposed rails in boards; discovered that the dynamite house was built too close to a garage. He also noted that some of the dynamite

workers were leaving their sticks and caps unattended.

He detected scrap lumber and nail kegs being left around on slanting roofs, and found excavations that were not braced. He noted that employees in the cement plant had neither respirators nor goggles, and that the saw operators were without goggles.

All these things, which could be the cause of so much pain and disaster, are taken from the actual report of a man whose experience and training have fitted him for this particular kind of work.

He is a Travelers Safety Engineer.

He looks for trouble so that there won't be any. His job is to reduce accidents by seeking out their causes and eliminating them. His efforts increase production by decreasing the time lost from jobs. Frequently he is

able to cut production costs by helping
duce the cost of its casualty and fire i

It has always been important for A to pare accident losses to a minimum vital. Now, when there is not an hour's idle production, this man is of inestimable value to the industry.

There is a Travelers agent or insurance company in every state. An easy call of every manufacturer and contractor will put these Travelers Safety Engineers to work for you.

THE sun was just rising when the shallow river boat tied up at the wharf, and the mist from the river was rising with the sun. Already Winslow Greene could see the buildings by the water front and the elaborate but crumbling façades of Santa Rosa's buildings with their tiled roofs and their balconies and their arcades, designed to protect the pedestrians from the heat. He could see the royal palms and the plantains and the traveler palms that rose above the walks of Bolivar Park, and he could see the statue of the great general himself, South America's liberator and man of dreams, standing high on his pedestal, facing the Avenue of the Twenty-fourth of September. The dampness and the cool of the river were vanishing already, and in their place was coming insupportable, enervating heat. Winslow Greene shook hands with the captain and the pilot.

"Tomorrow morning," he said, "you will be taking back the American lady, and Señor Bird should be going back. They will tell you the time at the office."

"There should be whisky for Señor

Bird," the captain said. "A successful trip, señor."

Winslow climbed up on the wharf and told a boy to carry his bedding roll. He would walk to the hotel, but before he started he took off his glasses and wiped them carefully. The ship of the Pacific Mail Line was already in; he could see her anchored in the canal perhaps a mile downstream. Her high black hull and superstructure spelled the power and security of home. The idea that he would go aboard her in a little while and see the fresh linen in the dining saloon and ice in the water glasses gave him a sense of pleased anticipation.

"The Hotel Continental," he said to the boy who was carrying his bedding roll, and he began to walk slowly. It was important to walk slowly, even in the early morning, if you did not want to feel the heat.

The Hotel Continental was new and modernistic. It represented Santa Rosa's hope for the future, although it was hard to believe that the seaport could have much more of a future than it had a past. The chromium frames of the chairs in the hotel lobby reminded him vaguely of dentists' chairs.

She was not the kind of person who should have been sent, but it was up to Winslow to look after her, to see about her baggage—her clothes if necessary

The elevator took him slowly to a room on the fourth floor, and one of the room boys appeared dressed in a white flannel jumper that made him look singularly like a little boy in pajamas. He pushed back the shutters, and Winslow Greene took off his coat and ordered coffee. He was standing looking over the tiled roofs and listening to the gradual increase of sound in the streets outside when there was a knock on the door.

It was Milton Bird, the metallurgist of the Boca Grande mine, who had come down to Santa Rosa a week before on some complicated piece of business which Winslow had forgotten. Whatever Bird's errand had been it was clear that he had not been giving it his undivided attention. He was in his dressing gown and he was holding a whisky bottle and a glass.

"Hi," Milton said. "I thought you

might be in. How was the trip down? How about a drink?"

Winslow said that he did not drink in the morning. He tried to say it like a man of the world but he was afraid he sounded like a prig. Milton sat down on the edge of the bed, poured some whisky and gave a deep satisfied sigh when he had swallowed it.

"How's Jane?" he asked; he was referring to his wife back at Boca Grande. "Just as well she isn't here," he went on, and Winslow was sure it was just as well. "So you're going into the bush, are you? I'm glad I'm not going with you."

"I'm glad you're not, too," Winslow said. "You couldn't take it."

"All right," Milton said, "all right. Don't start giving me a calling down. Jane'll give me the devil at Boca Grande. She always knows when I've been drinking."

Winslow did not answer. There was no use giving anyone like Milton Bird a lecture.

"There's been a lot of celebrating around here lately," Milton went on. "There was a British destroyer in, and maybe those boys can't drink."

"Oh," Winslow said. He remembered he was not much interested. "What were they doing here?"

"After a raider," Milton told him. "There's a German raider named the Sieglinde hanging off the canal. She's sunk two Britishers and a Dutchman."

"Oh," Winslow said.

Without desiring to be rude, because he never liked to be rude, he wished that Milton would go away.

Milton poured himself another drink. "The trouble with you—" he said, "you don't get any fun. You want to be careful in this country. If you don't relax, you may go native."

Winslow considered for a moment. "I always thought you went native," he answered, "if you had too much fun."

He thought there was a flicker of embarrassment in Milton Bird's eyes as he watched him, and also a faint light of resentment.

"I don't mean raising Cain," Milton said. "Now take me: I make friends every time I come down here. For instance, did you ever hear of a man named Martinez?"

Winslow shook his head.

"Well, now, there's a fine boy. One of the first families here, and I just picked him up at a café. That's the way you learn about life."

Winslow did not answer. All he wanted was for Milton Bird to go away.

"And then there's a man named Gruber," Milton went on, "a great boy, Gruber—the best two-fisted drinker you ever saw."

"Gruber," Winslow said. "You ought not to play around with Germans, Milton. The company doesn't like it."

MILTON BIRD began to laugh, half vacantly, half boisterously. "I suppose you think he's a spy," he said. "But Hitler doesn't want to fight us, and the Japs don't want to fight us. Why, the Japs are in Washington now trying to make up."

Winslow rose and put on his coat and picked up his hat from the bureau.

"Where are you going?" Milton asked.

"Down to the customs dock," Winslow said; "out to the ship."

"What for?"

Winslow winced when he heard the question. "I have to go down to meet a girl," he said, and he winced again as Milton whistled elaborately. "Jim Walters told me to meet her. She's going up to Boca Grande to work in the office, you know."

Milton sat up alertly. He was always alert when women were mentioned, and it was clear he did not know.

"Who is she? Is she pretty?"

"Her name is Simpson," Winslow said.

"How should I know pretty? Frankly, I don't care."

Milton gave a disgusted look. "Haven't you got in you? I care if she's to go upriver with her, why didn't Jim ask through the customs?"

"Maybe he knows you," Winslow said.

Milton's eyes narrowed. "Could not rely on Milton was in Santa Rosa."

IT WAS half-past seven out to the ship, but it was there early than to talk. It pleased Winslow to tell other day he would be personalities. He would be the jealousies and gossip people in a little mining Grande. He would be vines dropped from the tall trees. He would be which very few white followed. He would stop and talk to the men guns and their poisonous parrots would be flying. The monkeys would be treetops. There wouldn't be birds or any bickering where he was going.

When he stepped out and walked past the chairs toward the front he noticed that a man in the chairs was staring at him. He always self-conscious stared at. It made him quickly and when he saw up he walked more quickly when he heard his name stopped. The stranger was an American in spotless white of the most beautiful Panama had ever seen. It was the arrested Winslow's attention his scientific curiosity, the fineness of those woven ways thought, made them wonderful objects that came from America. That Panamanian stranger was holding a feather and woven so could have been passed ring. Even in Santa Rosa hats were common, that have been worth well over dollars.

"Pardon," the stranger said, "am I speaking to the low Greene?"

Winslow's eyes moved. The stranger was slight, delicate, and very handsome. Winslow thought disappeared the grace of a professional—black hair, wide black teeth and a quick bright suspected that the man had something until he saw that hat put its own unknown category.

"How did you know?" He spoke stiltedly, using conventional phrases of politeness. "I don't think I have had the sometimes forget names."

The stranger drew an object from his inside pocket. He held it very gracefully and quickly, showing a visiting card which Winslow could not read. On the card was the name Ardo Lopez.

"I see," the stranger said. (Continued on page 67)

"It was rude of me to take your hat," Winslow said. "Take it from it," replied Señor Lopez. "It is yours. I beg you."

A matter of morale: free after their day's work in an airplane plant, these girls are as trim and fresh as soldiers on inspection day

tidiouness."
be fit to shame in this fash-
can pruce up and be a match
boys instead of a let-down.

Fashion, that fickle charmer, won't come to your rescue any more. Clothes are becoming shorter, straighter, simpler, to conserve material. This summer, buying clothes already in the market, you will have your last wartime fling with swishing skirts, brilliant colors and flattering frills. The next clothes from the factories will be muted in color, simple in line, giving you a chance to relax and look like everybody else or be distinguished as never before, with nothing to distract from the simple perfection of well-fitted clothes and immaculate grooming.

Perfection is your solution to a lot of problems. Talk about shortages can send you rushing out to buy so that you won't be caught without warm and decent coverage. Lectures on hoarding can make you curl up in your old clothes for the duration. But fashion, actually a sound stabilizer instead of a frivolous wench, will make you unhappy either way. Even in the limited range ahead,

there will be changes. Fabrics out of soy beans, handbags out of wood, lacy twists of cotton in stockings that will make your hoarded cobwebs look passé. You don't know what you'll be wearing next. But when the time comes, you'll prefer the clothes that come with it. Your cue is shopping as usual. Buy what you need and make the most of everything you own.

What you need most is a suit. Always the backbone of a sound wardrobe, it can now be practically that entire wardrobe. Suits are so popular that summer dresses are being cut in two pieces to look like them. A recent fur show for manufacturers starred as important only the fur coat roomy enough to go on over a suit; most of last season's remodeling was to that end. Furrers, looking ahead to a wool shortage, expect to put more of us than ever into fur coats with accent on natural furs to conserve dyes.

If you're buying a wool suit now for

wear the year round it may still be one hundred per cent virgin wool or it may be part reused wool. Don't fret about that. There are many grades of wool, and some of the reused wools are better quality than some of the virgin wools. Your suit may be part acetate. That's all right, too. Even when materials were no problem, acetate was frequently mixed with wool to give a pleasing drape and texture. Natural undyed colors are a good idea in your suit, also. They look right at any season.

To make a whole wardrobe of your suit you'll concentrate on variety with it—sweaters, shirts, frilly blouses, hats from sports to pretty. Dickey fronts, those conservers of laundry and materials, have blossomed anew.

But you won't be making the most of these feminine tricks unless you endow them with the immaculate perfection that is habit with the boys in uniform.

Take the fit of your suit—and be
(Continued on page 66)

War in the Woods

By Jim Marshall

Along a 2,000-mile battle-front patriotic women, children and old graybeards guard America's war-vital timber against forest fires

BEHIND the gray ships and planes ranging far to the westward, behind the khaki-clad legions guarding the Pacific Coast, the Far West has built a third defense line—manned largely by oldsters and kids and women—against forest fires. From southern California to northern British Columbia this line is more than 2,000 miles long, from fifty to a hundred miles wide. Today, as the dry season gets going, this strip of country becomes potential dynamite.

Because nature and a foreign foe have combined this year against us, thousands of men, women and children have been mobilized to fight the greatest timber battle in history. Weather conditions in 1941 make 1942 the most dangerous year of a decade in millions of acres of Western forests. Last fall it was too wet to burn the accumulation of trash left by logging operations on the forest floor. These carpets of trash now have become tinder, ready for a spark—and it takes only a spark to set a million-dollar fire going.

Today, our state and national forests are patrolled by the new army of citizen volunteers that has been created and

trained in the Coast states for just this emergency.

Almost every mile of timber, from the redwoods of the south, up through the Douglas fir and hemlock and tamarack to the northern spruce and pine is being watched today from planes and from mountaintop lookouts. Crews of trained men and boys are ready in strategic spots. Equipment owned by states, government agencies and private timber concerns has been pooled, standardized and assembled for quick transportation. In many lookout stations, wives of fire spotters are working twelve-hour shifts, spelling their husbands in the never-ending watch for that telltale wisp of smoke down in the green sea of trees stretching toward the horizon.

There's still a shortage of manpower. Army and Navy and industry have looted the country of its huskies; the CCC is almost out of existence; there are few transients this summer to be pressed into service on the fire lines. That is why old graybeards are ready to march into the battle; why women are working alongside their men; why boys of teen age are organized into crews and trained to stop the enemy.

People living in cities and unforested areas don't realize how devastating a timber fire can be. In August, 1933, one spark fell in some tinder-dry brush near Tillamook in northwestern Oregon. It started a fire that burned over 244,706 acres; destroyed \$275,000,000 worth of trees—enough to build a million homes; washed out jobs for 14,000 men

Smoke billowed up as high as 8,000 feet from this tremor which raged over the Toandos Peninsula, Washington. A thousand were called out to halt this fire, which destroyed 6,000

Young huskies learn the rudiments of fire-fighting in the Guard Training School, Tollgate, Oregon. Forestry schools are being raided for young men to man the fire line

A smoke jumper of the Chelan National Forest in Washington, wearing a full protective outfit used by aerial fire fighters in trial demonstration. His equipment includes a 3-pound, 13-ounce radiophone

Smoke jumpers getting into their suits in preparation for a practice jump. In an actual fire, a few minutes after the first smoke has been reported, the planes are away to drop their chutists before the fire gains momentum

Building a fire line with a bulldozer. Such firebreaks save time and can be used on grades up to 35 per cent. They work best in the open or in young stands of timber. The bulldozer will handle trees up to six inches in diameter

Smoke jumpers strain to hold the main fire line along a heavy road in Washington. Because forest fires move with the wind, firefighters can't always count on water being available

for six years. The amount of wood destroyed in that one blaze was three times the amount of timber cut on the West Coast that year. And that was just one fire!

New York had its record fire loss in 1930—but it totaled less than \$20,000,000.

Today the lumber country, North, South, East and Far Northwest, is knee-deep in sawdust, turning out lumber by the billion feet for the Army and Navy, shipbuilders and plane plants. Getting out the timber has become a panzer operation in which only the heaviest and toughest machinery can stand the gaff. Motor-driven saws bring down 200-foot firs in twenty minutes; it used to take a couple of experienced fallers two hours or more. Big brute caterpillars smash through "brush" forty and fifty feet high to yank out logs ten and twelve feet in diameter.

And up on Puget Sound is the Big Blue Ox—Babe to the loggers—the granddaddy of all trucks, rolling timber to the mills. Babe is 85 feet long, has 28 wheels, eight speeds forward and totes 150 tons of logs at a crack.

All this high-speed machinery is necessary in the woods because in the fire season it's unsafe to work in the timber except in the cool, comparatively

humid hours from early morning until noon. This is the Hoot Owl Shift—and during its eight safe hours all the logs needed by Army and Navy and war plants have to be cut and transported to the mills.

It's figured that three tons of wood will save a ton of steel—which is why the Navy is building wooden ships and the Army wooden bridges. One Navy order, for example, is for 200 slivers of fir, ten inches by eighteen, by 110 feet long. The Army Engineer Corps is getting bridge timbers capable of standing the impact of a fifty-ton tank going forty miles an hour, as another example. In one month this year the Army alone bought enough lumber to fill 300 freight trains, each a mile long. It figured that would last two or three months.

This demand for lumber and more lumber is one reason both Army and Navy are having headaches over the fire situation.

Soldiers can't be used for fire fighting for two reasons. One is that if saboteurs start fires to cover an attack, it would just be playing into enemy hands to use a lot of warriors in the timber instead of on the firing line. The other is that soldiers—through no fault of

(Continued on page 62)

COURTESY ABBOTT LABORATORIES

Thomas Hart Benton's indignation over the complacency of Americans toward their danger resulted in eight blistering paintings depicting the horrors of total war. This is one of them, entitled *Invasion*

Missouri Master

By John D. Weaver

WHEN Tom Benton went to war he went by himself and in his own way. The scrappy little Missouri artist didn't write to his editor, his congressman, his draft board. Fighting mad, he stalked into his studio, cleared it of the Missouri landscapes and still lifes he'd been working on before Pearl Harbor, and then set to work on eight paintings which he hoped would "scare hell out of people."

For months, Benton had been like a dormant volcano, smoking a bit, rumbling now and then, spurring an occasional snort at art critics and museum directors, but generally remaining fairly quiet. Missouri neighbors knew it wouldn't last. They wondered when the next outburst would come, and who would be buried beneath the seething lava flow of the Benton wrath. The explosion came on Easter Sunday, when eight new Benton paintings blistered the nation's front pages and rotogravure sections.

Easter art in American journalism traditionally features the lily, the silk topper, the goofy bonnet and the shy four-year-old twin girls skipping down the church steps with their egg baskets.

Benton, in eight canvases to which he gave the general title, *The Year of Peril*, roared out against the bloody consequences of indifference, bungling, hesitation, dissension, of not doing quite enough, of not believing it had to be done—and done now. Benton's Easter message spoke of death and brutality and waste, of skulls and broken

bodies, of vultures, burning ships, rape, starvation and a mad delight in killing.

"There are," Benton wrote in a foreword to the pamphlet presentation of the pictures, "no bathing beauties dressed up in soldier outfits in these pictures. There are no silk-stockinged legs. There are no pretty boys out of collar advertisements to suggest that this war is a gigolo party. There is no glossing over the kind of hard ferocity that men must have to beat down the evil that is now upon us. There is no hiding of the fact that war is killing and the grim will to kill. In these designs, there is none of the Pollyanna fat that the American people are in the habit of being fed."

The painting reproduced on the cover of the pamphlet is called *Starry Night*. It shows the bug-eyed face of a drowning sailor floating in oil-flamed water, his hands reaching up to clutch the night air as his ship sinks in the background. Benton's terse caption expresses the theme of his paintings: "The stars that look down on the seas of the world in this Year of Peril see men die grotesque

For more than six years Thomas Hart Benton has been putting on a great show for his home state, Missouri—a three-ring circus of painting, writing and talking—and talking is his hobby

and horrible deaths in order that their brothers may hope to live in freedom."

The paintings were first projected last winter. Benton had been rattling around the country on a lecture tour. Disgusted with what he calls "the Pullman optimism" of smoking-car strategists who were winning the war at every way station, Benton abruptly canceled his speaking engagements, put aside his current painting commitments and wrote his agent that he planned to devote all of his time, energy and talent to making the American people realize that they are "up against the greatest evil that has ever come to them."

Washington Pricks Up Its Ears

The eight paintings, begun around Christmas time, were made entirely on Benton's own initiative. His first impulse, he says, was to hang them in the Union Station of his home town, Kansas City, so that travelers shuttling back and forth across the country would see them and then go home and tell their families and neighbors. After his agent

flew out to take a look the word got around, and Washington showed keen interest. Photographs of the paintings were sent East, and stories announced that the paintings and give the government for any use. Want to make of them. Philets, post cards and letters made from the painting. ment officials say they widest possible distribu abroad."

The debut of the war Fifth Avenue gallery of American Artists brought a variety of people. Drafts mingled with Austrians, sailors, Chin publishers, actors, column artists. Tom Benton moved amiably through laughing and chatting questions. That morning British official had called ask if the opening were affair. Tom happened phone.

"Oh, no," Tom said; women too, you know." The first reaction to the one of terrific shock. The tality is painful to see, as to draw back from it. Bu impact, the effect of th much the same as the rea personal tragedy. The i followed by a realization

unch. Around the table are Mr. and Mrs. Benton, Jessie the
omas Piacenza Benton, and Collie Banks, maid of all work

is something to be faced and endured. The evil of this war, Benton says in his paintings, is also something that must be faced and endured.

National response to the paintings was overwhelmingly favorable. Many preachers based their Easter Sunday sermons on Benton's message, and almost every major newspaper and magazine featured reproductions of the pictures and editorials about them. Letters flooded in from factories, business offices and defense plants, asking for reproductions to hang on prominent walls for war workers to see.

In the last seven years, Missourians have become familiar with Artist Benton and his ways. So they weren't at all surprised at the spectacular ferocity of his war paintings. In the old days before Benton came home to paint his famous Jefferson City mural, most Missourians thought of art only in terms of barroom nudes and post-card hayfields. Old Missouri families would have a Bingham lithograph on the parlor wall and a feed-store calendar over the kitchen range. That, they figured, was enough art for anybody. But Benton has made art as important as politics, and when Missourians talk about it, they usually have their fists clenched.

The Artist at Work

In the summer of 1936, when Benton was plugging away at his Jefferson City mural ten and twelve hours a day in the stifling Missouri heat, the home folks packed a lunch, piled in the kids and headed for the State Capitol, curious to see an artist at work. The only one most of them had seen before was the man at the state fair who did colored crayon portraits for a dollar. The gaping Missourians filed into the Statehouse staring up at the small, wiry man in baggy trousers who stood on a high scaffolding, smoking a briar pipe and daubing at the walls bristling with the life of their state, its lynchings, politics, horse-trading, slave auctions, its steamboating, pioneering and barroom legends.

One leather-faced Missouri farmer shifted his quid, coughed and corrected the artist's treatment of a plow ("The hind part's too short, and the handles don't have enough turn to 'em"). A reporter pointed out that Kansas City's Boss Pendergast never smokes cigars, as shown in the painting, so the cigar came out and a cigarette was popped into the boss' pudgy hand. While the tourists rested their feet, and the up-state families ate sandwiches, the small, dark man on the scaffolding went right on mixing his paints on the porcelain top of a kitchen table. He didn't look arty at all; he looked like a courthouse loafer, perched cross-legged in front of the county recorder's office, talking crops and politics. And when he knocked off to eat lunch, he talked and laughed (he laughed loud) like anybody else. He was, one admirer said, "just down-right common."

Thomas Hart Benton, Missouri has discovered, is a small man with a big punch. His paintbrush packs more of a wallop than a whole green acre of Missouri mules. In the seven years since he settled down in his home state he has been in one row after another and he's usually come out on top.

First, the Capitol mural. Missouri legislators, Chamber of Commerce spokesmen, women's patriotic groups, civic leaders, plain opinionated letters-

Saturday night at the Bentons' often finds an impromptu concert, with musicians ranging from neighbors to members of the Kansas City Philharmonic

to-the-editor Missourians, all thundered their fury at paintings which, they charged, disgraced Missouri, made it appear to be nothing but "a houn' dawg state."

"Those walls seem to be shouting at you," one legislator said.

"Ought to be whitewashed," a Kansas City businessman said, and offered to head a band of masked riders to storm the Capitol.

Benton didn't duck. He met the storm, and weathered it. Today, most Missourians laugh sheepishly at the rumpus they kicked up. Guidebooks list the paintings alongside Mark Twain's boyhood home in Hannibal, Eugene Field's lover's lane in St. Joseph and the old farm home of Jesse James near Excelsior Springs. Missouri children study the mural in school, and make Saturday bus excursions to Jefferson City to see it. The artist himself has become a familiar sight, bumping along country roads on sketching trips.

After the mural storm began to die down, Benton cut loose again. He brought out an autobiographical book called *An Artist in America*, and shocked Missourians demanded that the Kansas City Art Institute, where Benton was the \$3,000-a-year head of the painting department, oust the artist-writer for using words nice people didn't even think, much less put in print.

Then came the Benton nudes, *Susanna* and the *Elders* and *The Rape of Persephone*. From the *Apocrypha*, Benton borrowed the story of *Susanna* and retold it in modern terms, portraying the girl as a quite attractive young woman with red-tinted fingernails and high-heeled slippers, dipping her toes in an Ozark stream while two leering Missouri farmers peeked out from a background which included a country church and an old jalopy. St. Louis gallery officials tried to block *Susanna's* debut, but were laughed out of it. A prominent Missouri clubwoman complained that *Susanna* was "just too naked," which struck Benton as "funny as hell."

Next was an interview, front-paged throughout the country, in which Benton turned his panzer phrases loose on art museums. Benton, whose work hangs in the Metropolitan Museum of Art and in other first-rate repositories of American art, said he would rather see his paintings brightening the walls of a saloon, a privy or a bawdy house than a museum. People go to saloons, he said, but never to museums, unless they happen to be tourists anxious to "do" the place and get it over with.

Mr. Benton Lets Off Steam

"The typical museum is a graveyard," he said, "run by a pretty boy with delicate curving wrists and a swing in his gait. You've got to have a sort of an undertaker's psychology to go into the museum business."

That was too much. Staid, Benton-hating trustees of the Art Institute forced his ouster over protesters who argued that Tom, as usual, hadn't done anything except say out loud what many other artists had said in their studios. "But," the trustees complained, "he says it so loud."

Benton was born fifty-three years ago in a small Missouri hill town, Neosho, of a family as distinguished in Missouri as the Cabots in Massachusetts and the Cabells in Virginia. His grand-uncle, also Thomas Hart Benton, is the biggest name in the state's political history, and the artist's father served six terms in the national House of Representatives, where he was noted for his roistering stories, his spectacular use of profanity and his red-bearded homeliness (he was reputed to be the ugliest man in

peach fuzz on his cheeks, starting off to
one of the scores of air-training cen-
ters thrown up in ■ miraculously short
time by the Army and the Navy to meet
the threat embodied in Hitler's march
into Poland and Tojo's attack on Pearl
Harbor. He is the Smith kid down the
street who yesterday was holding hands
with Mary Lou at a double feature
and tomorrow will be roaming the skies
in ■ 400-mile-an-hour pursuit, aching
to tangle with ■ Messerschmitt or ■
Zero fighter. The Army and the Navy
are talking about processing 80,000
Adamses and Joneses and Smiths a
year to give nerves and sinew to our air
power. Before our armed services fin-
ish cleaning up this world military mess,
they are more likely to be training 100-
000 each twelve months.

We are going to be concerned here
only with pilot training, with teaching
men to fly under ■ system which is as
tough, as rigorous, as exacting as any
employed by a major power. It's bet-
ter than most systems and it may be
the best. It's tough because it takes a
tough man to fight aloft. If Willie has
always had his mother around to re-
mind him to put on his rubbers he had
best report to his local draft board with
his nose drops and paper hankies. He
won't be able to stand the gaff at an air
school.

Pilots are only part of our air army.
It takes methodical meteorologists, re-
sourceful engineers, hard-boiled crew
chiefs and meticulous mechanics as
well. It takes bombardiers, gunners and
navigators. And here's ■ word of cau-
tion: Don't make any disparaging re-
marks to a graduate navigator about
the relative importance of his duties in
a bomber crew. He is touchy on the
subject and may plant one on your
bottom.

But most of all, an air army re-
quires good pilots, and training ■ man
to be a good pilot is akin to training
him for expert surgery or quick-witted

PHOTOGRAPHS FOR COLIER'S BY HARRY PENNINGTON JR.

argument before the bar. It isn't done
with mirrors. It means ■ lot of hard
work.

Much mystery has attached itself,
barnaclelike, to what Lieutenant Gen-
eral Henry H. Arnold, now commanding
general of the Army Air Forces, calls
this flying game. Part of this mystery
is legitimate. Part of it isn't. We know
a lot about flying and we are gradually
learning a lot more but we don't know
enough yet. What we don't know con-
stitutes the mystery. We didn't know
until ■ short time ago why some ac-
complished pilots working "under the
hood" to pile up instrument flying time
would roll out of a turn into a spiral in
the opposite direction and come dan-
gerously close to disaster before they
recovered.

Solving Air-Crash Mysteries

The Army searched for and found the
answers to fatal crashes on two succes-
sive nights at Craig Field, Alabama, as
students in advanced trainers were
coasting down to enter a traffic pattern
for landing. It is still investigating the
crash of four Airacobra pursuits in an
Ohio snowstorm. Mysteries are not
supernatural. The answers to them
merely elude for the moment the cun-
ning of man's mind and senses. So-
lutions to the mysteries of flying are
being found.

The important thing to a young man
flirting with the idea of learning to fly
is the safety of flying behind the battle
front. Accidents not associated with
combat flying are no more numerous
today in the midst of the intensive war
effort than they were in yesterday's
peacetime, in relation to the number of
hours flown. The Army and the Navy
have charts etched with eloquent curves
to show that.

At Cochran Field, Georgia, during a
period of five months a fatality occurred
only for the equivalent in flying time of

every seven-odd round trips to the
moon.

"That's too many fatalities," re-
marked ■ major on the staff of the com-
manding officer when he was told of it.
"One would be too many."

Practically any youngster with ■ good
body, clear eyesight, sharp reflexes and
horse sense can learn to fly an airplane.
That doesn't necessarily mean he can
fly a winged monster with ■ thousand
horses up front and eight guns blazing
from the leading edge of the wing. Even
so, from 55 to 60 of every hundred men
who think they can fly military planes
come out of the training wringer with
gold bars on their shoulders. Civilian
pilots with iron-gray hair, battered felt
hats cocked over one eye and a wad of
chewing gum lodged in their jowls are
ferrying Army pursuits from factories
to tactical fields these days. Until this
war began, many of them hadn't flown
faster than a sleek automobile travels
on ■ straightaway. It surprises the
Army some. Up to May, 1940, when
the Dutch burghers woke up to find the
panzer divisions at the door, the Army
promoted the fiction of the superman
in aviation. Congress was niggardly
with appropriations, and the Air Corps
had nothing else to sell.

True, ■ sizable proportion of aviation
cadets fail to win commissions. Why
they fail is no mystery. Some can't
co-ordinate. It takes a nice muscular
and nervous balance to fly. Some don't
have the stomach for it. Some are too
cocky. There was the student at a pri-
mary school in Avon Park, Florida, who
rolled his airplane into a ball in ■ land-
ing maneuver. The instructor wasn't
surprised. The boy had been courting
trouble for days. He knew too much.

"I suppose," he said ruefully as he
disengaged himself from the goulash of
fabric and framework, "this busts me
out."

"Not if it has taught you anything,"
(Continued on page 58)

Crazy Over Horses

By Dan Parker

ILLUSTRATED BY GEORGE DE ZAYAS

Horse racing suffers from the operations of a few unscrupulous men whose methods are as cruel as they are crooked and whose motto is "Never give the sucker an even break"

SEVERAL years ago, a great public benefactor, who adopted the trade name of Theodore Hayes, came to the conclusion that not enough people were getting rich by betting on the races, so he decided to do something about the situation. This benefactor, whom certain unappreciative individuals insisted upon calling a tout, bought a mailing list, referred to by cynics as a "sucker list," which contained the names of persons known to bet on the races. Thus equipped, he bombarded horse players with circular letters which informed them that he could fix claiming races at Saratoga for a stipulated fee.

One of the recipients of Mr. Hayes' proffered beneficence, being skeptical about the whole business, sent the circular to his favorite sports columnist who, in language that burned a hole right through his column, exposed Mr. Hayes as a typical mail-order tout, who couldn't fix a parking ticket, much less a claiming race at Saratoga.

"That will fricassee Hayes' gander to a tempting russet, egad!" said the sports columnist, vastly pleased with himself as he read over his tirade in print. Imagine the shock to the columnist's ego, not to mention his belief in the intelligence of his public, when the morrow's mail brought him a shower of letters, each containing money, with a request that it be forwarded to that nice gentleman, Mr. Hayes, so that he could fix a claiming race or two for them.

Although the sports writer's exposé of the spurious Mr. Hayes eventually led to that rogue's conviction, in absentia, by the New York State Attorney Gen-

eral's office in its drive against touts, the wholly unlooked-for reaction of the public cured the columnist of the urge to be a crusader against the evils of betting on the races. Like eating and drinking, too many people enjoy the habit to make it a popular one to knock.

Trying to cure race-track addicts of their vice is like making an unwilling horse drink after driving him to water. They don't want to be cured; they resent all efforts to save them from themselves. Furthermore, statistics on betting and attendance at race tracks not only show that they aren't being cured but even prove that more people are contracting the disease every year.

That suave scholar, gentleman and connoisseur of three-year-olds, Herbert

Bayard Swope, put a well-manicured digit on the nub of the situation in one of his annual reports as chairman of the New York State Racing Commission when he announced:

"The Racing Commission feels required to say that it is not in agreement with those critics who consider that wagering at race tracks is a custom to be deplored. The present pari-mutuel law has served to make legal and legally supervised an inclination for wagering, which has always been conspicuous in the American people. Since the people will bet, nothing could be more beneficial to themselves and sounder from a sociological and economic standpoint than that they pay a tax to themselves out of money spent for relaxation and

Unfortunately, the home isn't provided the nags which let

receive their own money by expenditures."

What Mr. Swope means in language is that the state money it gets from horse racing goes to building better roads, thereby providing a union ease for horse players to walk home after an after lightful relaxation with the ing which they had the money to lose the rent money. Unfortunately, (Continued on page 6)

A discreet shot of the right kind of stuff in the hip of a thoroughbred has accomplished more than generations of selective breeding

I feel like the Mother of the Regiment," giggled Elsie

"It's easy to see that your reputation is well deserved, Elsie," said the corporal with a sharp glance at Elmer.

"I am proud of my reputation," Elsie admitted. "But I'm even prouder of having so much of my Borden's Irradiated Evaporated Milk used in our

army and by our allies. Good cooks and good soldiers everywhere know it makes perfectly scrumptious cream soups and mashed potatoes. And it's so digestible and rich in Vitamin D!"

Elmer shook his head disgustedly. "Talk, talk, talk!" he snapped. "I don't see where you get the energy."

"Lots of people find energy they never dreamed they had," said Elsie serenely, "in HEMO — Borden's

new way to drink your vitamins and like 'em! And do stop glaring at this nice soldier."

Elmer started menacingly toward the corporal who stood his ground. "Stay where you are, bully," warned the soldier. "I know a big cheese when I see one."

"One of the very finest cheese treats I know," Elsie said quickly, "is Borden's Vera-Sharp. Folks just rave

about its keen, tangy cheddar flavor. I must say it's one of the most distinguished of the distinguished family of Borden's fine cheeses."

"Distinguished, eh?" bellowed Elmer. "Well, with all due modesty, my record in the last war . . ."

"Oh don't bore the corporal with your war record," said Elsie. "He knows you're part of Borden's."

it's made from such fine milk and cream."

Elmer sniffed. "You may not be aware," he said

proudly to the corporal, "that my great Uncle Hector was the original Sitting Bull!"

"Sitting Bull was an Indian," objected the corporal frowning suspiciously at Elmer.

"Speaking of Indians," Elsie interrupted hastily, "most boys at camp whoop like Indians when they open a box from home and find cake frostings, can-

dies, and cookies made with Borden's Eagle Brand Sweetened Condensed Milk. So wonderfully smooth and sweet, you know."

it's fine for EVERYONE!

the grand things that are made

Elmer, turning to the corporal. "I suppose you never heard of the Battle

rather hear about my smooth, Borden's Ice Cream," Elsie broke in. "Everyone comes on the run for that—

70 MILLION DOLLARS SAVID

on a grocery bill!

Seventy million dollars! This vast sum would go a long way toward filling the wants of countless American families! And it probably did—for last year, more than that amount was saved for customers of A&P Super Markets . . . because the food they bought would have cost that much more if these stores operated on A&P's cost rate of a few years ago. But A&P has steadily reduced its cost of selling food through new efficiencies—bringing amazing savings to its customers. Get the real significance of these savings. Millions of families not only saved by changing to A&P Super Markets from other food stores . . . but they made additional savings as A&P found new ways to do business at less expense. A&P carries on relentless war on needless expense in distributing foods. And each time it succeeds in saving money, you share in the savings.

THE GREAT ATLANTIC & PACIFIC TEA COMPANY

Shop any day
SAVE
every day on your
ENTIRE
FOOD BILL

SUPER MARKETS

WITH living costs rising, now is the time to challenge your food shopping habits . . . to examine into what you buy, how much you pay, what you get for your money.

Try shopping at your nearby A&P Super Market for just one week . . . for your usual 7-day supply of food and household needs. But first, jot down the prices you have been paying for various things. Then go to your A&P Super Market and compare prices. In the Grocery Department, shop from shelf to shelf, examine brands, read their labels . . . you'll find you save a penny or two per package on many things you need, of the quality you demand.

In addition to the famous brands all grocers stock, you'll find additional savings in many nationally known foods sold only by A&P. These are quality-renowned brands like the 33 Ann Page Foods; White House Evaporated Milk; Eight O'Clock, Red Circle and Bokar Coffees; Marvel Bread; Jane Parker Cakes, Rolls and Donuts. These and scores of other foods are brought by A&P direct from factories, roasting plants and bakeries with many usual in-between costs eliminated—and the savings are shared with you.

Visit the Dairy Center (the spick-and-span department complete with creamery

butter, selected eggs, fine cheeses and fresh milk). Here again you've a store in store . . . in quality and low prices. Spend time in the Meat Department . . . in the Fresh Fruit and Vegetable Department. Note the goodness of everything you see . . . and the reasonable prices asked. As you jot down your savings, remember these are savings you can make at your shop.

Go to your A&P Super Market. You'll find profit in your visit . . . more for your money . . . a saving in shopping.

Better, more nourishing meals for your family in times like these.

Save
UP TO 25%*

ON MANY FINE FOODS

* Many A&P brands (sold only at A&P) bring you savings up to 25% compared to prices usually asked for other nationally known products of comparable quality. You'll enjoy the goodness of our—

Flight to the Sun

James Aldridge

Illustrated by HARRY MORSE MEYERS

Very Far:

LIEUTENANT JOHN QUAYLE, of the 1st Air Force, is awaiting orders in a room where the Greek-Italian fighting Will Lawson, an American pilot, introduces him to a beautiful woman, Helen Stangou, who tells him she is a first aid post and expects soon to be moved to a hospital in the town of Ioannina. A girl are strongly attracted to him, but she discourages his advances at his "be sensible." When the squadron ("80") are ordered to Ioannina, he is elated at the prospect of being near Helen. He is a gallant and experienced pilot and the command of Squadron "80." Among Quayle's fellow fliers are Finn, Hersey, Vain, Stewart, Sou, Brewer and Richardson. In the air battle from this base, the squadron is shattered by the Italians, the squadron's plane is shot down, and the hospital matron at Ioannina enters the romance between Quayle and Helen. A week of bad flying weather, the squadron is grounded, and Quayle makes acquaintance of Nitralexis, a fearless,

laughing Greek flier and Papagos, his spunky little assistant.

Clear weather brings a heavy bombing raid to the town. Next morning the squadron is sent up with orders to bring down as many enemy bombers as possible. In the air battle that follows, Brewer is shot down while trying to help Tap out of a tight spot. That afternoon, the squadron again engages the enemy. Quayle observes Richardson bail out of his flaming plane, is horrified to see an Italian strafe the parachute so that Richardson plunges to his death. White with fury, Quayle shoots down the cowardly Italian and flies back with the others to their base.

Realization comes to Quayle that he loves Helen. He asks her to marry him. She loves him but is reluctant, speaks of "the difficulties," and finally says she will think it over and let him know that night. Quayle immediately calls on Commander Hickey and, in accordance with the regulations, asks if he has any objections if he, Quayle, gets married. Hickey, a true and warm-hearted friend, is delighted with the news. He asks Quayle when he intends to get married and the latter replies: "Tomorrow."

Hickey then answers slowly. "We've been ordered back to Athens tomorrow." But then he promises Quayle that Helen may ride back to Athens in a couple of days in the Bombay, the supply transport plane. "Thanks, Hickey," Quayle says.

IV

QUAYLE went out and up to his room. He slept until after eight o'clock, then dressed and went downstairs. Hickey had ordered the table set up again in the hotel hall, and the others were eating.

Again, Quayle was struck by the fact that there were only six of them. He ate the hard Greek bread and drank the thick Retzina wine that tasted like violin strings because it had resin in it. He walked out of the broken entrance to the hotel and up to the hospital.

There was no moon and the streets were hard from the two days' sunshine. He waited in the common room for Helen to come. She was dressed in a long yellow coat with a small yellow first-aid cap on her head.

They walked down the steps and through the village out toward the bombed bridge at the foot of the lake. They were silent through the village but on the white misted road he spoke to her.

"Do you know now?" he said. "Be-

fore you say anything, I'll tell you. I think I can get you back to Athens in the Bombay—that's the transport plane. We've been shifted back to Athens."

"You are going back? You're going back to Athens? When?" she said.

"Tomorrow or the next day, I don't know. But you can get back in the Bombay. What have you thought about?"

"I don't know," she said. "It's different, you going back. . . . It's different now. . . . What will happen at Athens? I don't think I can go. . . . I can't leave here."

"I'll fix that. . . . the matron will. . . ."

"But even then, what is there ahead?"

"Not very much. Nothing definite. If I leave Greece, you would come too. . . . it looks as if I'll be here until the Germans come in. Then we'll go back to Egypt. You can live there or go to England. . . . just so long as we're not split by a war. What do you expect?"

"It's going to be difficult leaving," Helen said.

(Continued on page 44)

My Lady Buxton thinks
of simply Everything.
See—I take it with
me wherever I go!

Here's an extra bit of Magic. No wonder it's called Magic Purse. I love it "solo" when I want to carry only small change, because it's so ingenious, practical. When I want to carry my change and notes together, I just lock it back into the billfold. It fits perfectly and stays put.

\$5. "Three-Way" with
Magic Purse in selected
Goatskin—others from
\$3.50 to \$7.50.

\$2.00 Magic Purse
model with open window.

\$3.50 Zip model with
removable Magic Purse.

Other Lady Buxtons from \$1.

IT'S THE ONE BILLFOLD that can boast of always looking young! Know why? Because it's made in a unique and patented way. No buckles, no bulges, as in ordinary billfolds. There's a grand "give and take" tailored into Lady Buxton. It expands smoothly when you cram it; eases into place again, when you lighten the load. That's why women insist on Lady Buxton by name!

Free! GRADUATION AND OTHER GIFT IDEAS, from small remembrances at 75¢ to lovely matched sets at \$25. Gift-wrapping directions; information on leather. Just write Buxton, Inc., 4276 Orleans Street, Springfield, Mass., or Dept. K, 47 W. 34 St., N. Y. City.

I'M ALL FOR THE
GREAT OPEN SPACES

There, I carry the Magic Purse "solo" for my small change. I just unsnap the purse, lift out the clever "flaplock." To replace, I reverse the motions, press down the cap. It's double locked into place.

I GET
THE WANDERLUST!

And then I need a special hideaway for important bills and papers. The inner partition, reversed, does the trick! It locks itself in. Keeps things safe; out of sight!

I'M IN AND OUT
OF THE SHOPS

And here my Lady Buxton "Three-Way" scores again! Always keeps my keys, cards, license, shopping lists, money in shipshape order and where I can reach them in a jiffy!

I'M A
GLAMOUR GIRL, TOO!

With a "formal"—I need a sleek, wafer-thin billfold. Lady Buxton's inner partition, removed, is just that! It's attractive, a complete fold, and adds a dash of color to my ensemble.

Crazy Over Horses

Continued from page 22

public-spirited senator has yet offered to amend the racing laws to provide free transportation home for losers on the backs of the nags which let them down.

The extent to which horse racing has gripped the country is partly indicated by the race-track betting and attendance statistics for 1941, when 15,000,000 went to the races in 16 states where racing is legal and bet a total of \$517,382,107. However, these figures don't begin to tell the story. An incalculable amount of money is bet illicitly with bookmakers away from the race tracks. Early figures for 1942 indicate that all records will be smashed to atoms this year. No statistics are available on the number of form players who will trudge over the hill to the poorhouse when their infallible systems for beating the races turn out to be slightly less than fool-proof. Such figures as these would hurt the game by seriously interfering with the improvement of the breed and, therefore, aren't compiled by racing commissions.

When Phineas T. Barnum coined the slogan, "Never give a sucker an even break," he unwittingly wrote the platform of the crooked element in the horse-racing industry. Horse players are tossed around like a pair of dice at a Harlem rent party, yet their gratitude for this treatment knows no bounds. They live in fear that reformers will step in and spoil the game.

You can drive a horse to water, some great mind has pointed out, but you cannot make him drink. Conversely, the races make many a horse player drink but at the average track you cannot drive him to water. There's none for drinking unless he visits the stables over behind the backstretch. Nor is this an oversight. All the New York tracks have been so burdened with excess profits that they had to spend hundreds of thousands on improvements. One of the improvements long sought by race-track patrons has been public drinking fountains. But, with the exception of Belmont Park and Aqueduct the track owners didn't get around to installing them along with the much less-needed renovations. To furnish free drinking water seems to be too much to ask.

The Great Outdoor Sport

Racing, as Mr. Swope has pointed out, is a healthful sport. It gets one out in the open and that goes for everything including the pockets. Race tracks are beautifully landscaped. Their majestic trees and well-kept shrubbery (clipping is really an art as practiced at the race track) make losing one's bankroll such sweet sorrow that the delighted victim returns again and again and again. Thus, his health is bound to benefit if his wealth doesn't.

Nor is fresh air the only healthful concomitant. No racing fan over-eats, for any length of time, at any rate. And at this very moment, hundreds of thousands of race-track addicts would be walking around the streets and lanes of America, stoop-shouldered, if it weren't for the kindly interest the state and track owners take in their comfort. To save their patrons from the necessity of carting around tons of copper coins in their pockets, most tracks graciously agree to shoulder this burden by retaining the odd pennies after paying off winners to the nickel or dime as the case may be. The technical name for this act of benevolence is "breakage," although there are several less euphemistic terms for it.

In New York State alone racing fans were relieved of the burden of carrying 443.43 in one-cent pieces. a total of 101,044,343 pennies placed end to end, would reach heaven whence pennies are showered every time it rains.

Race-track owners usually exasperating by-product with the state, which practice gave rise to the saying that falls on the just and the unjust. When it is revealed that for the entire country amounting to \$3,000,000, it doesn't take a figure out who got all the

The Ten Per Cent

The state and the track operate in lightening the burden of the players by extracting a pot bet as their fee. In most cases "take" is ten per cent whacked up evenly by the players in the pact. When a ten per cent is cut out of the same pie times in the course of an evening, it usually is, the player's share is over. He may not have a lot of money, but he knows his money is in good hands. Half of it goes to the track, some of it to be used for more trees and shrubbery, stands and more prizes for breeders to encourage the breed.

Neither is anything special about a few public telephones. When you enter a race track, you lose contact with the outside world, which is a good thing. There is nothing so relaxing as a horseman as subjecting himself to annoyances from the outside world concentrating on his vocation of breeding the ponies without the aid of a telephone.

Improving the breed, of course, is the sole reason for the existence of horse racing. The pillars of the industry stated so, time without end. Unesthetic folk prefer to medium for indulging their gambling, it isn't the fault of the industry. People behind the scenes should let racing die out, happen to the thoroughbred Army horses in time of war. Betting at race tracks was a New York State during the time of Governor Hughes. Two years ago, the tracks did close for two seasons and didn't open until the reform wave had passed. The betting system had been in place for a long time, this is probably the exception that proves the rule. Just the same, to know that a group of men are making sacrifices to improve the breed.

Improving the speed, of course, is the chief object of improving the breed. Sometimes the speed is improved by methods not entirely altruistic. Why the quaint custom of a saliva test was introduced is now in general use. This is the presence of narcotics in the system. A discreet shot of a horse in the hip of a thoroughbred known to accomplish a way of increasing his speed. Depressant drug will slow a sprinter to a jog. One of the most common methods of doping race horses that is known to the public doesn't know the name. It is running W.H. (meaning W.O.H., meaning with

es on him at the outset.

gentlemen who follow the noble
n of handicapping hasten to ex-
at you can beat a race but you
at the races. The trouble with
aments that nobody wants to
ace, whereas almost everyone

wants to play the races. And no one
ever stops on his way to a pari-mutuel
window to reflect on the great obvious
truth that if professional handicappers,
who bring into play whatever skill and
technical knowledge there is in connec-
tion with their calling, still cannot beat
the races, what chance has the average
man who trusts to luck, a hatpin or the
dream he had last night?

The Sport of Kings, which is really the
sport of deuces for the average player
since two-dollar bets are the most com-
mon, flourishes in times of great unrest
and social upheavals. When people be-
come discouraged after years of fruit-
less effort to keep that old curly wolf
away from their threshold they are ripe
for plucking by the benevolent gentle-
men who have put themselves in charge
of the improvement of the breed. A visit
to a race track, an afternoon of begin-
ner's luck, and the prospective victim
says to himself: "And to think I've been
foolish enough to work for a living all
these years with this going on right un-
der my nose!"

From that point on he starts talking
to himself regularly. Then he subscribes
to one of the racing sheets (25 cents per
copy because the firm that prints these
journals has a monopoly and can name
its own price). Inside of a week, if he
hasn't discovered an infallible system
for beating the ponies, he has at least
found a sure way to reduce his bank
balance while paying a tax to himself
out of money spent on relaxation, which
he will receive back in public expendi-
ture, as stated by the New York State
Racing Commission.

The thoroughbred race horse furnishes
employment for many but causes un-
employment for many more. Millions
are invested in him by those who can
afford to make horses their hobby. And
millions are lost on him by those who
can't afford to have even hobbyhorses.
A thing of beauty, nevertheless, the
race horse is about as useless a creature
as there is in the whole pattern of civil-
ization. As a medium for betting, he
serves no purpose that a nannygoat or
a fine, fat sow wouldn't fill if the emer-
gency required it. As a saddle horse, he
is too flighty and, besides, is a runner
and not a several-gaited steed such as
gentlemen prefer, along with blondes.
Behind a plow he would be a complete
flop since he is built for speed, not pull-
ing strength. As the motive power of a
vegetable wagon he would be a menace
to traffic, not to mention the vegetables,
because of his high-strung nature. In
times of famine, his flesh would be not
only inferior in quality but also in
quantity to that of the dray horse, as a
substitute for beef. Roast tenderloin of
a 6 to 5 favorite is reported to be too
stringy for the palate of a beef-eater.

As a sire for Army horses, the thor-
oughbred is desirable but again there is
a catch. The requirements of the Army
and those of the race track don't seem
to jibe. Not long ago, an examination of
the "score sheets" of Remount stallions,
kept over a period of years at the Army
Remount Station in Front Royal, Vir-
ginia, revealed the surprising, and to
race-track men, disappointing, informa-
tion that the best Army horses were
sired by the two least prepossessing stal-
lions of all the hundreds bought by the
Remount Service. These ungainly
beasts, Majority and Breast Plate, had
more things wrong with them, from the
point of view of the professional im-
prover of the breed, than a couple of
hucksters' spavined nags. Yet, they
produced the exact type of horses the
Army wants.

It's all very discouraging to those
who thought racing had a mission to per-
form besides its traditional one of guar-
anteeing that all horsemen, except
track owners, of course, will die broke.

THE END

How's your "Pep Appeal"?

—by Williamson

The Boss: Sorry. Can't use it. That song's got no whoosh! No bang! No pep appeal!
Joe: That lets us out, Art. You've got no words—I've got no tune!

Art: No pep appeal, huh? Say! I was reading the other day about how you can't have
pep without vitamins. And that's us, pal! I bet we haven't been eating right. You know,
not getting all our vitamins.

Joe: Maybe you're right, Art. And *that* gives me an idea. Come with me, boy!

Joe: This is the ticket, Art. Look what it says: "KELLOGG'S PEP is made from choice
parts of sun-ripened wheat and contains extra-rich sources of the two vitamins most
likely to be missing in ordinary meals—vitamins B₁ and D."

Art: And, mister, does it taste good? Boy! If getting the rest of our vitamins is as much
fun as eating this swell, crunchy cereal, we'll be in the big time before we know it!

Vitamins for pep! Kellogg's Pep for vitamins!

Pep contains per serving: 4/5 to 1/5 the minimum daily need of Vitamin B₁, according to
age; 1/2 the daily need of vitamin D. For sources of other vitamins, see the Pep package.

Twin Booms

By Douglas Ruth

ILLUSTRATED BY JOHN HOLMGREN

How a young lady of refinement came to see in a factory not noise and dirt, but the wings of aircraft

SOMETIMES at evening, when the sky was a pale yellow-green, Venetia would look up from picking the sweet peas. Frederick would know then that she had heard it and he would wait, his eyes reluctantly searching the empty sky.

In a moment it would come, a beating sound swelling to a roar. Far, far up, there would be a glint of silver wings.

The mighty interceptor-pursuit plane would straighten from the dive with a throbbing sound that pounded at their temples. They would see the sun glint again on the wings and the queer double body as it streaked across the valley. Then, with a quiet swishing sound it would be gone. Just like that, one long swish and it was gone.

Only its passing would have left a radiant look on Venetia's face and a tenseness to her body in its blue smock. And Frederick wanted to say profane words and tramp the sweet-pea vines back into the dirt.

"Sure moves fast, doesn't she?" he managed to comment this evening. "It's those twin booms, I guess."

Venetia didn't even hear him. Her head with its red-gold braids and dainty classic features was turned toward the west. In the west a pink cloud drifted against the yellow-green sky.

Picking up the rake and shears, Frederick took them to the garage. He was as long as possible putting them away and then he lifted the hood of their old sedan.

He knew Venetia did not like him to come to the supper table with his hands all greasy but it was better than seeing her there with that faraway look on her face as if she were that woman poet—what was her name, Amy something? Venetia went in quite a lot for poetry and was always having varied "emotional experiences."

She was probably having one now, Frederick thought as he turned the re-bored motor over and listened to its soft purr. To Frederick a plane was a plane and a mighty comforting sight now that there was this war. But to Venetia, a plane was a "shining messenger of delight." She also called the new moon a "smiling silver mouth." Well, at least Venetia was staying home, looking after the house and cooking his supper at night. She would not be reading all that poetry stuff now that she was no longer working at the Centaur Circulating Library.

Frederick's salary as bookkeeper at the Pacific Clothing Store was small but sometimes he thought if Venetia had let him be the only wage earner, he would have worked harder and got more money. He didn't know exactly how, because the clerical force of a clothing company is limited and Horace Harcourt had the only decent job as office manager.

Well, Venetia would have to let him do all the wage earning for a while at least. They were having a baby after

seven years of marriage netia's saying she would child into this world until it a comfortable home education. Frederick guessed body felt like that they stop fighting and tell Hitler over.

Before he went in to sup his hands with lava soap of comforting to monkey chinery but he guessed right. Probably it did look a bookkeeper to have d fingernails.

"I hear," Venetia said down to the table, "the court's getting Horace Tschaikowsky recordings niversary. Maybe they'll hear them."

Horace Harcourt was Fr down at the Pacific Cl Sometimes they were in Harcourt home.

Frederick went on ea and meat loaf but Venet (Continued on pa,

One afternoon, Frederick heard his name over the public-address system. He was wanted home at once. Bradford said, "Good luck, boy. Make mine an El Ropo

THE WORLD LOVES A "HAPPY BLENDING"!

1.
Frankie Frog, who painted cuties,
Certainly knew his bathing beauties.

2.
So when he picked the fair Francine
As "Miss Millpond"—he picked a queen.

3. Now Frank is hers and Fran is his—
A merger smooth as CALVERT is.

THE WHISKEY WITH THE "HAPPY BLENDING"

Unpleasant Breath gets its traveling papers when you pop a PEP-O-MINT into your mouth. Carry these breath-taking LIFE SAVERS at all times.

There's enjoyment for 60 minutes...one hour...one-twenty-fourth of a day in every pack of delicious FIVE FLAVOR LIFE SAVERS! Time it yourself.

Between Old Malls, Philip Luckfields—or whatever cigarette it is you smoke—you'll find PEP-O-MINTS a pleasant and tasty mouth-freshener.

Everybody's breath offends sometimes after eating, drinking, or smoking. Let LIFE SAVERS save yours. Choice of 11 delicious mint and fruit flavors. Sold everywhere. 5¢.

"I promised to write every day, but I couldn't mail them until I found out where he was stationed!"

Missouri Master

Continued from page 17

Congress). Benton's earliest memories are political—Election Day drinking and fighting around country polling places and jolting over hill roads with his father, electioneering. He remembers sitting across the family breakfast table staring with fascination at William Jennings Bryan and stuffing himself with poached eggs shimmying on halves of baked potatoes.

The boy rebelled against plans for a legal education. His talents ran to drawing and street-fighting. When he was seventeen, he went to Chicago to study at the Art Institute. He strutted through a period of thinking himself a genius, then packed off to Paris where, he says, "I wallowed in every cockeyed ism that came along, and it took me ten years to get all that modernist dirt out of my system."

After four years in France, Benton came back to New York, broke and disillusioned. He scraped along on odd jobs, painting, among other things display portraits of such early-day movie stars as Theda Bara and Clara Kimball Young. He loafed around New York gyms, wrestled, boxed, drank beer with fight promoters and anonymous heavyweights, but it never occurred to him then to use this vigorous material in his painting. His work was full of symbolism and subtleties.

When the United States entered the first World War, Benton pulled some wires and landed in Naval Intelligence. But his papers got mixed up some way, and he found himself at the Norfolk naval base shoveling coal. When his papers were straightened out, Benton was shifted to a drawing board. Immediately he lost interest in colored cubes and artistic posturing. Dredges, blimps, airplanes and barracks took the place of his old studio abstractions.

When the war was over, Benton was ready to get out and take a look at America. He bummed through the hills

of Tennessee and Arkansas harmonica in return for a bed for the night. He drifted rivers, listening to river talk rich bottomlands. He worked mines, the oil country, the filling sketchbooks.

In 1924 he was called home to Missouri. His father was dying and he dropped in every day to tell rowdy stories the old man took gusto. Tom's boyhood came to him. In the faces of old friends he began to think of a decision to make until the spring of 1935, when he left Greer with an outburst of epithets in Washington Square.

Art is Accepted

Missouri, in those happy days, was best known for its crooked politics. Art was a new experience for most Missourians as something decadent, effeminate, like kissing a lady instead of shaking it. "How-do." Today, art is politics, religion and football. Missouri is indebted to Tom Benton. As Benton rattled along in barns, courthouses, sleeping cows and lean, weaselly faces, he began to paint. He did more painting, less talking. He became interested in Missouri foliage, spent hours in delicate webbing of Missouri things, heard-of for this painter catering canvases.

In the spring of 1939, after a show in Missouri, Benton staged a show at the Fifth Avenue (

ye Benton takes his painting
own in the Ozarks, and turns
ose with creeks, pigs, rural fid-
al-ees and wild flowers (not
aff-els). He never lets his stu-
ide from realities. He boots
ht into the world of strikes,
es, political rallies and Baptist
eetings.

nsa City, Benton leads a sur-
qut life, working hard, relax-

ing only on week ends, when he likes to
drink ■ few highballs (Bourbon and tap
water, no seltzer) and listen to classical
music. A few years ago he bought a
sprawling old gray stone house, knocked
out four stalls of the huge stable and
put in a north window, providing him a
big, drafty, well-lighted studio, cluttered
with work and unanswered mail. He
drives himself twelve and fourteen
hours ■ day when working at some
major project, and a normal workday
is seldom less than ten hours. In a
single year he finished the Missouri
mural (45,000 square feet of wall space),
wrote ■ 100,000-word autobiography and
several articles on politics and phil-
osophy, gave ■ dozen lectures, cov-
ered the Mississippi flood country
(thirty-five drawings) and the Michigan
automobile strikes (twenty-five maga-
zine illustrations), finished seven litho-
graphs and made the designs for five
easel pictures.

Once he did ■ supergigantic blurb for
Indiana in six months, four of which
were spent in research. Commissioned
to paint a picture two hundred and fifty
feet long and fifteen feet high, celebrat-
ing the history of Indiana for the Chi-
cago Fair, Benton scurried over the
state, sketching, talking and studying,
then set to work. The actual painting
took only sixty-two days.

When Benton plays, he plays hard.
One day, years ago, he happened to pick
up his son's harmonica. He tooted a
couple notes, got interested in the thing,
sat down and played it for four months.
Never touched a brush. Now he is quite
a virtuoso on the chromatic harmonica.
He carries two or three, and his "sheet
music" is to professional musicians an
amusing conglomerate of lines, dots,
arrows up and down (denoting breath-
ing in and out) and numbers (indicating
which hole of the instrument to blow
into).

Benton's war work has cut deeply
into the Saturday nights, and his plans
for the future will leave little time for
the harmonica. As long as the war
lasts, he says, he will work with and for
the government. He has several proj-
ects in mind, the chief of which will be
a dramatization of American produc-
tion. The 1942 series of Benton war
paintings was called "The Year of
Peril." He hopes the next series will be
called "The Year of Victory."

THE END

"Henry! Such LANGUAGE!"

Fine way to end the day!

After long, hot hours at the office, you
aren't inclined to give Home Life much of
a break. But you can make evenings the
Best Part of the Day. Just before dinner,
get out of those hot clothes, grab a cake
of Ivory Soap, and get into the tub.

Pep up in an IVORY BATH

Give your muscles a good going
over with a little elbow grease and
a lot of that thick, quick Ivory
lather. Takes only a minute. That
big white floating cake lathers up
faster than any leading bath soap.
The brisker the rubbing, the better
your skin feels. New Ivory is so
mild lots of men use it for shav-
ing! You'll step out, feeling cool
and keen!

"... and what progressive school does
your little boy go to, Mrs. Marvin?"

MISSION

By Hans Ruesch

ILLUSTRATED BY HARDIE GRAMATKY

At the beginning of this desert battle, twelve tanks and an armored car; at the end one man, alone, but armed with the sure promise of his own invincibility

IT WAS smoother than traveling on an asphalt road. The dazzling sand was broad, soft and yielding, and the twelve baby tanks, a complete section escorted by an armored car, were rolling playfully over the dunes like lion cubs chasing one another under the watchful eyes of their doting mother.

The tanks, exhausts roaring and wireless masts swaying, seemed the only things alive in the desert. Even the three-men crews—the body of the commander emerging stiffly from the open turret, the driver at the levers, the gunner behind his weapons—were immobile as though drained of all life.

Yet this was a gross delusion: between heaven and earth, the tanks, insensible machines of iron and steel, were the only dead things, and everything else was alive—not only the men, nerves taut in watchfulness—also the sands were alive, moving imperceptibly in obedience to strange laws, continually shifting the face of the desert; the very air, a grayish haze shrouding the sun as in a veil, was alive with danger, the danger of attack from the sky,

or of a suddenly soaring khamsin, the south wind heavy with sand from the equatorial regions that made the atmosphere unbreathable.

The tank section was hand-picked. The men were hardened to desert warfare—trained to do with a small amount of water each day, to shoot straight in the dazzling whiteness, to endure long rides and marches in the grueling heat. The commanders knew the tricks of the sands and the dangers behind the dunes and how to move swiftly over torrid, faceless territory.

To be sure, it took all kinds to make a crew, and not all the men felt or thought alike. But in one quality they all resembled one another—in their determination to fulfill their assignment at whatever cost, to make the contact in the mountains, where no plane could land, and deliver the new plans for the attack from the interior.

It was only a small cog they would start turning, but each little cog might determine the entire outcome of the offensive that had to start simultaneously on all fronts. . . . Along the littoral belt, the first columns were already rolling. There was not an hour to lose. They would make that cog turn, even if it took the last machine, the last man.

GEOFFREY BLAKE, commanding the fifth tank, was destined to get farther than any other commander in this section. Perhaps it was just because one man must always get farther than

others; or because he was hardier and stronger; or because he was luckier, which is, in war, another form of strength, an asset of valor.

But rarely did his thoughts flash back to the past. A soldier's thoughts do not dwell on days gone by. True, Geoffrey Blake was never meant to be a soldier—but now he was a soldier, a full-fledged soldier rapidly forgetting the past, never thinking of the future, and living intensely in the present only. The past was too sweet, the future too grim. Both were disturbing.

Perhaps there really was a city in England clad in mists, where life used to be gay and carefree—where lived a girl with sun in her hair and sky in her eyes. But that city and the life and people in it now seemed so unlikely and remote, that at times he was inclined to believe that they existed only in the realm of his imagination. What was real to him now was the desert. And the sun, smothering in its own heat. And the camp, with its little cone-shaped tents, the park of armored cars and tanks and Bren-carriers and trucks, and the hum of youth. And flies and boredom were real. And Ayesha, back in town, her arms dark as shadows and warm as sand. And automatic weapons. And bombs.

And the mission was real. So real, that it eclipsed everything else, even Ayesha and the desert sun.

His fingers went to the canteen. For a little while they rested on it hesitantly, then returned to the rim of the turret's manhole where they remained.

They worked feverishly on the broken track, keeping close to the tank, holding on to the steady in the fury of

Sweat poured down his limbed back and stomach.

He thought of the two men all cooped up in between plates. Jack, the driver, was a mechanic—a lively little fellow, good-natured, and a freckled face. Andy, the fool for a trigger any time difficulty checking his finger order came to cease fire. If the right man for his post. The bellow was no place for a weak stomach.

NEVER before had they the coastal region, where day heat was tempered by the of the sea. Now it grew hot every mile they drove into it. The air about the armor plate with heat waves through which appeared as though distorted, flickering mirror. they knew, the flat rock on which lichen grew like an eruptive ease, had long given way to sea of dunes—sand waves of height of hills, with steep ridges, and pointed crests; (Continued on page

Play this bet on your friends—and win money

"It's simple as A-B-C. I bet my flying Lieutenant that I could pick Raleighs from any other popular-priced brands just by looking at the tobacco. Sounds hard, eh?"

2. "I let him take my Raleighs and some other popular brands, hide the labels, and show me just the open ends of the packs. It was a cinch to pick the Raleighs."

"Try it on your friends. The secret is that the tobacco in Raleighs is more *golden* in color than other popular-priced brands. You spot the difference at first glance."

Raleighs are more golden

4. "Golden color is proof of quality. At the great tobacco sales, golden leaves bring top prices. It's the expert way to get a milder, tastier smoke. Try Raleighs—and see."

"YOU BET THIS IS A MECHANIZED WAR

HERE in the United States, mechanization rests upon more than 41,000 locomotives — more than 2,000,000 freight cars — speeding on their own highways of 230,000 miles of rail lines.

As the U. S. Army says in an official manual,

"Rail transportation provides a service which insures that a body of troops and their impedimenta will be transported to destination with the least amount of inconvenience and fatigue. The railroads can supply equipment so combined... as to accommodate passengers, freight, livestock, vehicles, ammunition, baggage, and practically all else tendered for transportation."

And more and more freight, these days, is being

"tendered for transportation" by rail — and is being handled as tendered.

That is being done because of twenty years of planning and improvement since the last war, and because, since war started in Europe in 1939, the railroads have steadily increased their capacity to keep pace with the country's rising production.

How much more they can do depends upon the materials for repair and maintenance, and for additional cars and locomotives, which they are permitted to get. Whatever that may be, the railroads will continue to make the fullest use of all their resources in their vital part of this mechanized war.

ASSOCIATION OF
AMERICAN RAILROADS
WASHINGTON, D. C.

Continued from page 28

Continued from page 28

VENETIA never did fix his lunch. At noon he would grab a hamburger or maybe a bowl of chili at one of the ramshackle eating joints bordering the parking lots. One afternoon he was sick to his stomach and almost had to leave work. After that he got up earlier in the mornings and fixed his lunch, some

jelly sandwiches and an orange with maybe a container of milk.

There was another container in his lunch box and he noticed that sometimes the other men had applesauce or macaroni salad but he did not like to ask Venetia to cook anything special just for him.

At first in the strangeness of aircraft school he hardly noticed if he ate at all. It was absorbing like learning to play some fascinating game, this working with airplanes was. He even liked the feel of the bucking bar in his hands and the gruffness of the instructors, mostly old Army men.

At the end of the fifteen-day course he was slow but his riveting was straight and the tolerance was accurate to one sixty-fourth of an inch.

On the actual assembly line they put him in the wing and tail section. Later he learned that part of an airplane has the lightest "skin" and requires the most skillful riveting.

And the longer you did this sort of thing the more you learned there was something satisfactory about riveting, about working with your hands and the distant sound of those new interceptors being tested. When you got finished you could see what you had done. And when it was good, you got the credit and when you pulled a butch it was your own fault and you alone were responsible, not some guy in a corner office.

"So we're having another parent in our department," said Bradford, the little group leader. "Well, don't let it get you down." They were sitting around the bomber field during lunch period.

"Yeah, Freddy, keep 'em flying." This was the fresh punk who bucked rivets for Frederick. "It's a tough life but you're working for Whiskers now."

"Your troubles are only beginning, boy!"

"Don't scare him now. Wait'll he sees what the baby looks like!"

FREDERICK smiled. If Venetia could hear conversation like this she would call it "inane." That was a favorite word of hers, "inane." Frederick guessed it meant saying things like everybody else said them.

Well, these guys couldn't sling the phrases around and maybe none of them preferred Tschaikowsky. So what? So they still had the same feelings as the slipperiest intellectual.

Frederick had noticed that a lot in books and in the lectures Venetia made him go to. What the guy up there on the platform was saying sounded fine until you stopped to think what it all boiled down to. And nine times out of ten it was the same stuff everybody else said all the time only in words of one syllable.

Venetia wasn't feeling so well and he arranged to have a neighbor girl stay with her all day now. Venetia said nonsense but she let the girl stay there just the same.

One afternoon, just before the buzzer sounded, he heard his name announced over the public-address system. He was wanted home at once. Bradford laughed and said, "Good luck, boy," and "Make mine an El Ropo."

Frederick didn't hear very well until the guard yelled, "Hey! Your time card! Where's your time card?" Just then the buzzer sounded and by the time Frederick got his short time card he was caught in the change of shifts.

All his life, whenever he remembered that day, he could hear the click-click of lunch boxes opening and closing, opening and closing as the lines of men checked out before the watchful guards. All outgoing packages and boxes had to be inspected and it was no use to shove.

The lines shuffled on and then he was showing his own empty lunch box and

factory pass. Sprinting to the parking lot, he thought if the call had come half an hour earlier he would have missed the traffic jam at Great Western whenever a shift changed.

Again all he could do was wait and honk his horn at the thousands of cars and move forward inch by dusty inch.

When he got home the doctor was in the living room, getting something from his bag. "Well, you took a long time getting here," he told Frederick. "You took a longer time getting here than your son did."

"Oh, my gosh!" said Frederick. And he opened the door into the bedroom.

AFTERWARD Venetia always acted embarrassed about having had the baby so quickly and easily without going to the hospital. Maybe she thought it was being common or something.

Frederick had been nervous at first that he wouldn't act as a father should. Looking down at that little red blob in the bassinet, he hadn't felt much of anything except the horrified thought, "Maybe I am an unnatural parent! Then

ther is considered speediest of his section's riveters. . . ."

When Frederick showed the paper to Venetia she smiled and said, "How quaint!" But several weeks later he saw her cutting something from a paper. It was the item and she pasted it in a scrapbook.

It had been hot all day and Venetia had piled her red-gold braids high on her head. She looked so pretty bending over the scrapbook, as slender and graceful as any countess or English lady.

Looking up she saw his eyes and flushed the same as when they had been going together and she had seen by his eyes that he wanted to kiss her.

"I want to show the clipping to Dolly," she said hurriedly. "I wanted to ask you—they're having open house tomorrow night and we're invited."

Her voice was soft and breathless, the way it used to be before he left the store. He would do anything if only it would stay like that, yet he had to know something.

"Why do you want to go there, Venetia?" he asked gently. "Why do you

"It's no use, men, we've tried everything! Send for his mother!"

JAY IRVING

the blob kinda stirred and started to yell.

Gosh, it sure had a big mouth and he thought, That is my son, part of me. That is part of me and part of Venetia and we created it. Suddenly he felt like Tschaikowsky or Michelangelo, only better, so when the nurse came in to pick up the baby he went down to North Hollywood and bought Venetia a pair of earrings with real chip diamonds.

He gave them to her next morning when she was feeling better.

"Why, thank you for being so thoughtful," she said, examining the tiny earrings in her white hands. "Would you mind dreadfully if I exchanged them for jade? For inexpensive jewelry, jade always looks so much—richer."

"Those are real chip diamonds," said Frederick firmly. "I picked them out. I'd like you to wear them."

Venetia's mouth hung open and then she closed it. "Why, certainly," she said.

THE following week there was a write-up in the Aircraft Times. Well, not really a write-up but a mention right in the middle of the column by the Great Western correspondent. . . . "Among the many new proud papas at Great Western (and ye scribe can't begin to keep track of them all) is Fred Brown, Dept. 89, wing and tail. It's a junior but we hope the offspring resembles its mother. Tee hee! Incidentally, folks, the fa-

keep hanging around the Harcourts? That's finished."

"Even to please me?" she asked and he knew that it wasn't finished, that she still hoped he would go back to the Pacific Clothing Store. Perhaps even now she was scheming around and thought that once she had smoothed over the rift, things would work out her way.

He thought: Venetia, can't you see what you're doing? You're making me back down. I'll never be any good in an office. They don't build war planes in offices. I'm not making much but I like it and I'm supporting us.

"Now that we've found a formula that agrees with the baby," continued Venetia smoothly, "I'm getting a girl to come in days and look after him. They've offered my job back at the library."

The heat continued next day and Frederick worked on the assembly line in his undershirt. Lots of the fellows were stripped to the waist and looking at the guys working there like that, Frederick wondered how they would like it if they had to sit at a desk and wear a serge suit with a white shirt and tie.

Then something happened that made Frederick forget serge suits and everything else. Just before lunch he was called to the personnel office and informed that his work had been reviewed.

He was to be given a raise and pro-

moted to position of lead m on the swing shift.

The "swing" shift worked in the afternoon until midnight "graveyard" shift came on. man" he would have charge c ten riveters.

VENETIA was rustling around he got home, smelling of and violets. She had on some green wrapper over a lacy pet she was wearing the chip diamond rings.

"Now, Frederick, please hu ace wants us there by seven. I sleeping like a lamb and you are laid out on the bed."

He wished she would quiet a minute so he could take arms and tell her all about happened at Great Western.

"Venetia, starting tomorrow swing shift," he said, trying to pride out of his voice. "I'll man."

Venetia stopped doing thin eyebrows. "Swing shift," she "That's not the day shift, tha night. Why, Frederick, you'll tell them you don't want it. I here every evening by myself

Made by the makers of Johnson's Wax

something so sort of physical about you. I'm quite tight, Frederick, but I mean that." She had draped one arm about his neck and as he held cocktails in both hands there was not much he could do about it. He wondered if she knew her lipstick was smeared.

"Oh, of course, there's Venetia," she said languorously, "but she's a little icicle if ever—"

That was when Venetia and Harcourt walked into the kitchen. They were smiling and Harcourt stopped to inspect what was left of the hors d'oeuvres. Venetia kept coming across the room. Still smiling, she reached out and almost slapped Dolly's hand away.

For a moment there was silence, then Horace Harcourt's amused chuckle. "Ye gods, Venetia, you're reverting to type like a jealous shopgirl!"

Venetia ignored it. "May I have one of your cocktails, Frederick?" She smiled gaily. "Or are you practicing to be a right-and-left-hand drinker?"

Slowly Horace was mixing himself another bourbon and soda. Finally he turned to Frederick and his words were condescending:

"Now that you're back in the fold, let's hear all regarding our fascinating defense program." He lit a cigarette slowly and still more slowly blew out the match. "How many bombers are they turning out a week, my boy?"

"Oh, how thrilling!" chirped Dolly. "Is it true the antiaircraft guns are camouflaged with weeds and underbrush? Where are they located?"

"Come, come, Fred," said Horace. "You're among friends. We've killed the fatted calf in your honor. A few facts, please, as recompense for our largesse."

Venetia was watching Frederick now, her eyes steady and grave.

"So would the Japs like a few facts," said Frederick. "The Japs and a lot of other people. The government doesn't hand out information and defense workers don't ask questions."

Harcourt remarked swiftly, "Or perhaps you wouldn't understand the information if you did get it. Perhaps it might be in words of more than one syllable, is that it, Fred?"

Venetia was looking at Harcourt as if she had never seen him before. "My goodness, we'd better be going!" She put down her cocktail glass. "Frederick's absolutely right about not talking! What's come over you?"

Frederick could have told her what had come over Harcourt. It was the way Harcourt always acted when anybody stood up to him except this time it seemed like an hour before Harcourt said anything.

"Aren't you forgetting something, Venetia?" Harcourt slowly blew a

smoke ring into his bourbon. "Aren't you forgetting your husband is returning to the purpose of this event was certain financial details, I t

For just a moment Venetia Then she moved to Frederick her cheeks were flaming. "S wasn't it, trying to arrange Frederick when all the tin doing so much better? Hasn't he told you he's been man at Great Western?" her red-gold braids. "Oh, promotion, something like manager only, of course, wi sponsibility."

Suddenly everything slip place and the Harcourts wer walking with them to the da ing congratulations and wh they couldn't stay longer next time.

Frederick said, "Sure, time," and then he tho maybe I am getting poise!

AFTER they got in the ca did not start the motor He wanted to get his breath didn't seem in a hurry either down the windows and an in somebody's yard perfum "It makes you feel upl Venetia, "sort of in tune wi nite, sitting here under the none of my business, but Dol wear such tight dresses at he! You think the Harcourts are of—decadent?"

Frederick put his hand ove and said, "Sh-h-h."

Faintly from above came ing sound. It meant a interceptor plane was being t ably for night flight.

The sound started throbbr the interceptor were flying I sort of spooky, seeing only th the stars, yet knowing that their heads was streaking plane in the world.

For once in his life, Freder he would not mind if Vene chanting poetry. It really wa tional experience."

He rather hated to take his from her soft lips, but he war her voice. He waited a whil she started speaking, sure had that faraway ring like poet's.

"That reminds me," shu softly as the swishing sound into the sky. "You must be t sandwiches in your lunch. some nice hot dishes now swing shift."

re to more conscientious, de- mined believers in any ustry than the airship as after disaster has not

dampened their enthusiasm for the "rubber cows," as heavier-than-air pilots slyly refer to them. Be it nonrigid blimp or fully rigid world cruiser, even if you feel that these gas bags belong to a forgotten era you should not be too conclusive about it, because the caliber of men behind airship development is so high.

The airship people have taken terrific beatings in the past through the loss of such gigantic craft as the Shenandoah, Akron, Macon and Hindenburg, although now they are beginning to recover ground through the effectiveness of Navy blimps in submarine patrol work. On the heels of favorable consideration by Congress for more and better blimps to hunt out the U-boats off our coasts, an unintentional dig was given to the prestige of the airship by the Labor Department in the course of announcing a definition of the aircraft manufacturing industry for purposes of determining minimum wages. The aircraft manufacturing industry was defined as "that industry which manufactures airplanes and gliders, aircraft-type engines, aircraft propellers, parts and accessories for the above-mentioned products, and specialized aircraft servicing equipment."

Expressly excluded from the scope of the definition were several categories of commodities, including miscellaneous equipment. In this latter group, among other things, appeared: "... laboratory equipment; and lighter-than-air craft."

and says his queen bee dies. So I don't say anything but treat this queen bee that flies into my house nice and she is sort of a pet. I don't know anything about bees, so how am I to know that this pet queen bee gets lonely and goes out looking for the boys? Well, she finds them and brings them to my place where I have these secondhand, used beehives and because I treat her good she tells them all to hive up in my beehive with her." Which sounds like an honest way of starting a bee business.

A MR. NOONAN of Boise, Idaho, has just been telling us that a gentleman of his acquaintance has been cooped for not paying alimony to his former wife—contempt of court. Mr. Noonan said that, in court, the lady went exhaustively into her marital experiences with his friend. The judge commented that her erstwhile husband did not seem to be an entirely dependable person. Whereat the lady cried in a loud voice: "Judge, as a sturdy oak, that bum smelled bad."

MR. LUOGO DELMAS is a Mexican. He is urging us to accompany him into Mexico where, he assures us, he will lead us to information that "is to all former information as the simple cactus is to the royal palm." But we're not accepting with headlong speed. Mr. Delmas asks a somewhat stiffish reward. Furthermore, he declines to describe this information. And even worse he told us that two men have already investigated and were shot. "But," said he, "they handled the situation ineptly. They did not shoot first."

ANYWAY our trigger finger's sore. . . . W. D.

Strange case of the One-way Honeymoon

June is a great month for bubble weddings. In summer, air bubbles escape by the dozen from most melting ice and take your highball's bubbles on a one-way honeymoon—right out of your drink. Then ice water dilutes what's left . . . your drink goes flat!

Outsmart the ice. Insist on Sparkling Canada Dry Water—as thousands of smart hosts do, sip livelier, finer-flavored highballs, and broadly . . .

... Beam! Its pin-point carbonation—millions of tinier bubbles—stays Blissfully Bubbly to the last cool sip!

P. S. When you're "out," speak up for this finer club soda and get a better drink.

Ginger Ale Highballs taste best when made with "the Champagne of Ginger Ales"—Canada Dry! Also try Canada Dry Tom Collins Mixer, Lime Rickey, and Spur—the cola drink with Canada Dry quality.

Why We Won't Have Inflation

By Dr. Julius Hirsch

People who lived through the German inflation turn pale when you mention it. Dr. Hirsch not only lived through it, he was Secretary of Economics at the time. Here he explains the mechanics of inflation and shows you how we can—and are—controlling it

I ARRIVED in this country in 1935 on one of my periodic visits to find that the enemies of the New Deal were predicting that its financial policies would plunge the country into inflation. On my return to this country six years later, in 1941—to remain, I hope—I found, to my amazement, that high officials of the New Deal itself were warning the country about inflation.

I had not been in the country very long in 1935 before I was able to learn enough about affairs here to make the prediction that the dire forebodings of the New Deal's foes were groundless. In 1941, however, it was a little disconcerting to hear government officials telling the people that prices would run away and that the country stood upon the brink of that most devastating of all financial evils—inflation. However, once again, it did not take me long to learn enough of fiscal and industrial conditions here to satisfy myself that these alarmists were quite as wrong as their enemies had been. For I think I can say with assurance that there is no danger of runaway inflation in this country.

I was particularly sensitive to this subject because it was once my painful

duty to be in the German government as its Secretary of Economics during that fantastic orgy of inflation which descended on Germany after the last war. Naturally we learned a great many lessons out of that disaster. Hitler's government has certainly learned them. One of those lessons is not to frighten the people unduly about the stability of their currency. For at the bottom of a sharp inflation is the people's loss of confidence in their own money. Sometimes they lose confidence, as they did in Germany, because there is no longer any reason for confidence.

A Dangerous Weapon

But it is also possible to make them lose confidence before a good reason for that appears. One way to do it is to advertise the fact that the money is going to lose its value. If the enemies of the government in power do this it can cause great damage. But if the government itself does it, the result is apt to be very grave. It can set in motion the very thing it fears. Whatever sacrifices Hitler or Mussolini have demanded of their people, and there have been many, inflation is one subject

they would not touch with a ten-foot pole.

There is, of course, much confusion about the meaning of the word inflation. When economists speak of it they refer to a phenomenon which produces a general rise in prices. The rise may be a very mild one or at least moderate. But to the public the word inflation is generally taken to mean a runaway and devastating rise such as occurred in Germany in 1923, accompanied by a cataract of paper money. The administration is wisely determined to prevent any serious rise in prices by setting up an adequate system of controls, but does not invoke the devil of inflation to induce the people to accept these controls. For this devil is dangerous to play with. Much harm can be done with his shadow.

When I say that there will be no runaway inflation in this country, I base that opinion upon this fact—that there are not present in this country the conditions that produced the great inflation of Germany. I went through that inflation in a position of responsibility in the government. I saw it grow and develop and consume the energies and hopes of the people. Americans can hardly im-

agine the full force of the merely reading those far which describe what happened to many's currency. Only the fate of individual Germany be grasped. For instance my father paid life insurance for thirty-five years. He had to a payment of 50,000 (\$12,000) on his seventieth. That policy came due in 1923. His policy was after. The company wrote him that marks were enclosed in the postage stamps worth 25,000. The savings of thirty-five years were reduced in a few months to age stamps. But things were worse. One of those stamps, 25,000 marks then, was worth 000 paper marks some months later.

You have probably heard a story that a man's promise the paper it was written what happened to Germany which was, in fact, the price of German government. One day I was handed an advertisement for a moving-picture house. I found the advertisement on one side of a German note. The movie house had that was cheaper than the paper. The paper that note on would have been actual money had the 20,000-mark the government not been. The German government gotten to the point where printed on a piece of good based the paper. Return took that note to President the German Republic. I turned over solemnly and shocked. The full force of disaster was dramatized in exhibit.

People in this country come what they can do to protect themselves in the event of such here. I tell them there will be a cataclysm here and that in way to protect oneself from it. I tell them that under way almost everybody and no one is more helpless than the poorest man. To win against it, know how to speculate, what gamble in money. And as of the most expert games and known hardly at all to it is no escape at all. Those who lose their savings as my father who owe money can pay debts with depreciated marks for instance, who owed a hundred marks could pay it off with stamps just as the insurance did my father. On the other hand, might be ruined in other ways ruin accentuated by the whole financial and industrial around him.

Inflation Invites Gambling

Here is how a few men are gambling. I recall the case of a man who was a baker's apprentice who had a little flair for finance. He organized a grocery organization which he called the Rhenish Food Chain. For profits he organized another which he called the Rhenish Transportation Company. Its sole assets two old trucks. He formed another company Rhenish Flour Milling Company. Then he got hold of an old mill which he incorporated into Foodstuffs Warehouse Company. Then he had a string of small mills. The Food Chain would draw able in 90 days on the Transportation Company.

The Reichsbank, which policy of granting credit in rises contributing to the of the people, accepted the days later when it fell due, fallen to new lows. The could pay it off at a fractional value. The Transpenny drew bills in favor Mill Company and the company in favor of the mpany and so on. With ch the baker's apprentice the bank on these notes commodities.

can see, while the marks bound to repay fell to the commodities which t to fantastic highs. To er, look at it in a simple an inflation, I borrow lars from you which I ck in 90 days. With that I buy flour. In 90 days h a thousand dollars but worth only a hundred. pay you your hundred e 900 for my profit to go e operation as long as I 's apprentice I tell you million dollars thus in as. But, alas, there is a t this story. The young foresee when this wild el. He thought the orgy norever. In November, al was stabilized and he h winnings. Many people me in one way or another y art people—and in for- es people are smarter at ntig than in America be- ha: done so much of it. almost all—lost their sav- st them their winnings in

all, Genany had lost a great had laded for more than four in the termath she saw her istrial ystem exhausted and d. It's not thinkable that State:ould lose this war in way: this. Even defeat bring t the United States so haustic as defeat brought to and th defeat of America is e.

next ace, the Versailles d imposed upon Germany a reighn dot of 132 billion gold at was bout 32 billion dol- there a good deal of dis-

cussion of how much debt the rich United States can stand without being seriously affected. But no economist has any doubt about what an external debt relatively as large in terms of national wealth would do even to the United States, a country so much stronger than Germany in many other ways. If a country owes its national debt to its own people the effect is not so deadly. But if that debt is due to other nations the dead weight of it is destructive. If a nation borrows from another to build wealth-producing facilities within its own borders it is not so serious as when the debt is one which is created as a penalty against it without producing a dollar's worth of economic benefit within the country. To pay that debt—even if Germany could do it—would mean for generations taxation and exchange problems on so enervating a scale that no man could hope for any future in business.

German Debt Destroyed Hope

That debt produced in Germany a sense of complete and deadening economic frustration. It robbed the people utterly of hope. Of course, nothing like that is in sight here. This country is incurring a vast debt to win the war. But it is an internal debt which will be owed to Americans. It will not involve the seemingly perpetual and debilitating drain of reserves as in the case of Germany.

In the third place Germany had no adequate gold reserve. And this, together with the burden of the reparation payments, completely destroyed her credit everywhere in the world. America has a gold reserve of 23 billion dollars.

Fourth, Germany had lost control over certain forces which must be regulated if a nation is to protect itself against unruly economic evils. One of these was her frontier. The Allies had posted their troops on her borders and exercised over those frontiers the authority to say what should come in or go out and what should not. To a nation like the United States, where exports and imports are only a small percentage of its whole commercial life, this would be an unpleasant restriction only. But to a country like Germany which depends so much on what she buys from other peoples and what she sells to them, this was a fatal restriction of her powers. She could not decide what nor how much she needed. Her enemies did that for her.

Fifth, Germany lost an enormous amount of her natural resources—coal, ores, agricultural land in those territories which were taken from her. After the war her material resources were more out of proportion to her population and its needs than before.

Sixth, when the first threats to her currency appeared, she was unable to control certain prices that were vital to her. She could, by drastic controls, try to regulate prices on those things produced in Germany. But she could not affect the price of those things produced outside. Germany's credit was hopelessly injured in all foreign countries. Therefore the mark lost its value in foreign exchange. When this happened it meant that the price of everything Germany bought abroad increased. For instance, suppose the mark dropped 50 per cent in value in foreign markets. When Germany wishes to buy in America she cannot do it with marks. She must first buy dollars. But when the mark lost 50 per cent of its value in America the mark could not buy as many dollars as before. It took more marks to buy a dollar and hence more marks to buy the things bought with dollars in America. The effect was to create a heavy rise in price on all things

The Condition: Increased purchasing power, plus an ever-decreasing supply of consumers' goods, throws out of balance the supply-demand relationship that controls prices. Result: Increasing prices which may become inflationary

The Cause: Workers normally employed in the production of consumers' goods turn to war industries, where they receive high wages. At the same time, production of consumers' goods in the factories they have left continues to fall off

The Cure: Restoration of the normal supply-demand balance can be accomplished by draining off, by taxation, the surplus income, which, if available for consumers' goods, would cause prices to go up in an ever-increasing spiral

Right in Step for Home Defense

It's a "War of Survival"—on the Home Front, too. And right in step with his fighting Uncle you'll find the Dutch Boy. He's America's sturdy home guardsmen. Nothing helps homes survive the storm and the years like good paint—and good paint's other name is Dutch Boy White Lead.

Since Colonial days Pure White Lead has fortified the Nation's homes, farms and other buildings against the elements. And today Dutch Boy carries on the tradition. It's an outer defense that never cracks and scales—thus saving the cost of burning and scraping off old paint at repaint time. And its long, faithful service helps the cause by conserving paint materials.

Now Dutch Boy, formerly sold only in paste form, is also available as a ready-to-spread pure white lead paint. Especially designed for two-coat work it comes in Exterior Primer and Outside White. Together they give sparkling whiteness and complete coverage with

two coats—even on unpainted wood. Of course, all white lead paint can be colored.

Keep in mind—there's no combination like good paint and a good painter. And whichever form of Dutch Boy goes on your home—the famous paste or the new paint—"you're money ahead when you paint with White Lead."

Germans bought in America. The more prices of foreign goods rose to Germany, the more goods she had to export to pay for what she bought. And exports were artificially curtailed and partly even forbidden to her. As Germany depends upon the produce of other countries for so much that she needs, the effect was to cut enormously the purchasing power of the German people for the things that came from abroad. This price boost could not be controlled.

Under the influence of all these factors when the mark began to drop at home, it dropped more swiftly abroad. The German people lost confidence in the credit of their country and hence in its money. Money began to lose its value weekly and then daily. As soon as a man got hold of a mark, he wanted to get rid of it as if it were a hot coal—change it into "real" goods which would not lose their money value. But on the other hand the German government needed money and, as prices rose, it needed more and so began to print it—a little at first and then in ever-growing quantities.

Importance of Price Control

Now obviously none of these elements is present in America. No matter how long the war lasts America will still have her gold reserve, and her debt, no matter how big it is, will be internal. She will have complete control of all the elements of her economic life. And she is impervious to disaster from foreign trade since that plays a comparatively minor role in her life.

But more important than all, this subject of controlling prices and combating inflation is now understood as it was not when the last war began. Even in Germany where so much attention was given to war preparations, the subject of price control was little studied. I was a young man in the army. I was in a military hospital convalescing when I received a call to the price-control board of the government. The assistant administrator who, through a kind of poetic fitness, was an astronomer, told me he understood I had written some pieces on percentages. I was promptly shifted from the army to a desk and thereafter had a part in the whole job of keeping Germany's economic system under control. In the years which have elapsed, this subject has received great attention—as has indeed the whole subject of economics. And here in America now, as we have experts who understand the technique of combating inflation. And because we are so strong in an economic sense, we have all the means of employing those techniques with success.

The German government of Hitler has given great attention to this, and America certainly will not be less intelligent on this front than Hitler. The inflation tendency arises from two main forces. One is the flow of fresh streams of purchasing power into the stream of income. The other is the curtailment of the flow of consumption goods—that is of those goods which the population buys for its use as distinguished from capital plant and machinery. This may be illustrated by recalling that the National Industrial Conference Board has estimated that national income will be about 110 billions this fiscal year, of which 50 to 55 billions will represent war goods. This leaves 55 to 60 billions in the form of consumers' goods. Taxes are scheduled to take 27 billions away, and bonds and stamps perhaps another 10. However, of the 110 billion national income, all this swallows only 92 to 97 billions, and 13 to 18 billions are left for which no commodities are available. This would press prices up—until much higher living costs would fill that famous "inflationary gap." Next year we

perhaps may have 120 billions come, or even more, and consumption goods. The problem of controlling inflation is there. First, drawing off all the savings not needed to buy the goods that income to pay for the forcing the government borrowing from the banks keeping the price down by controls and (b) cost controls, materials and labor.

This is the pattern followed. First, he froze all prices on October 18, 1936, three years after the war started—using Mr. H. C. Hughes's plan. Since then there has been no profiteering law; moreover is subject to licensing as well as with the concentration background as the penalty rigidly rationed. Labor has been both held down in the matter of profits. Wages are controlled by unions dissolved and replaced by labor front including employers, strikes forbidden. Profits are restricted to six per cent. There have been found to evade these quarters. Interest on the existing mortgages is frozen at four per cent.

This policy of cheap money was ready begun by Chancellor Brüning before Hitler came in. All the issues for private property permitted since Hitler came. The whole capital market reserved for the government preparation purposes. They were used to draw off a government uses. For in any category of finance that is, the banks as a reserve in excess of 500 million marks. Dr. Schacht would send for and persuade them to invest in enterprises required by the government. When a Nazi official to persuade a private citizen to the dark background loom of the internment camp, never failed to persuade officials.

Nazis Commandeer

Thus as fast as savings from private industries and financial institutions they are piped into enterprises desired by the government. A great corps of accountants is busy continually reserves and drawing the hands of the government are kept out of the consumption markets or out of industry the consumption-goods market. Minus the ruthless enforcement, this government better position than Germany to accomplish all these contradictory ways.

First of all, as to the restraint of inflationary funds into the stream in this country: The government can drain the addition of power created by the war into its coffers. That is, billions of income in excess of the consumption goods to be purchased—13 to 18 billions the people do not need in what they produce can be the government into the by efficient methods of income and second, by convincing citizens refuse to lend, it may have to resort to forcing Citizens must be made to save not only to the government but their own savings by lending directly to the government by the government out of

are not as inflationary as by the government from banks. Added to this the can keep the nation's pur for consumption goods posing whatever credit re may be necessary, especially on installment and even dit. And the people them- arn how to submit to these, bravely and uncomplaining men submit to being

is the question of labor. problem arises out of transfer- in workers from peacetime time jobs. The present make trouble. Men are ar industries from peace- es by the bait of higher goes on it may result in disorderly competition for producers of war materials. rmously boost the labor action while at the same in discontent among many remain low.

Wages Lure Workers

are enticed away from industries by the higher industries, the peacetime with a ready market for their into competition with the for labor. And we may of wages that could even d. This will have to be

eezing of April 28th is at gining. The American gov- illot want to suppress labor ut labor unions can be made e necessity of co-operating government, wages can be an means can be found for esential labor services with- out competition.

pre front, America had to e two systems. One is the yem—I call it the Baby- e King Hammurabi used efore Christ. The other e- ing system first invented e Baruch in this country. e one o apply that was Adolf ut tler took things at the e years before war be- e controlled labor and profits e material prices. Mr. Baruch's e difficult of application here, e could not be applied un- e effort was well advanced, e ant prices were already seri- e of balance and to freeze e ld to freeze the unbalance, e d, because it could be made e ly labor and profit and in- e of all prices including e al pres would be part of the e At last, that was the reason- e e authority until very re- e e difficulty of controlling e e agricultural prices is e ider because of political con- e s and lack of administrative e. Hence Mr. Leon Henderson e who seemed to be the more e meth—fixing prices one at

r, the entails one more con- usly rice fixing on the piece- is wld involve a job so e that would be impractical if e attempted for the whole price e With one price is fixed, e fixed how a tendency to run e at brgs a dangerous contest e e agity of the price admin- e d the selling public. The price e ator, after one price has been e says w he had to fix three e s. E has made, up to the e me, more than 140 price sched- e the number of separate prices e ed in this country at one and e llin.

Consequently an "almost overall price ceiling" was enacted, freezing the nonagricultural prices at their highest sales levels of March, 1942. Agricultural commodities cannot be frozen before they reach specific levels—as a rule, 110 per cent of the purchasing power attained in the average 1909-14 period.

In most countries price laws add that for all prices of necessary goods not expressly fixed, the seller may charge a fair price. This price covers all costs reasonably incurred by the seller, including ■ compensation for the proprietor's own work, a risk premium and a net profit not exceeding the prewar level. This must not be confused with the old "cost-plus" of the last war. That was a plan under which the government made contracts for war goods without fixing the price and permitting the contractors to charge cost, plus a profit. What I have in mind is ■ plan to transfer the responsibility for avoiding profiteering by law to the mass of the sellers. This would make the price administrator the policing agent and not the dictator. It works satisfactorily in most countries and—for commodities not covered by direct freezing—it can certainly be applied successfully here.

Of course if the war lasts long enough and the costs mount high enough, there may be a threat of bootlegging in all sorts of goods. Ways of evasion turn up. In the first World War there was a cattle dealer in the Rhineland who sold his cattle exactly at the fixed price. But for every two head of cattle, the customer had to buy ■ dog for \$120. This dog was no ordinary animal, for after a short while he always returned to his first master. We could not prevent the dog from coming back, but we could prevent the master from selling him by licensing the whole cattle trade.

Democratic Methods for America

In America, when a merchant is licensed, the enforcement of the rules can be carried on with reasonable lenience and with some respect for democratic methods. On hearing of the first offense the American price administrator will write the offender a letter warning him. On succeeding offenses the price administrator can apply to the court for ■ revocation of the merchant's war license. Now all American wholesalers, retailers and service establishments are government-licensed.

Then of course the government has in its hands a powerful weapon over agricultural prices—namely the great accumulated surpluses. When prices tend to rise, the government can feed these surplus crops into the market with ■ steady effect.

Behind all that lies the vast gold reserve of the government. If at any time doubt should creep into the minds of the people respecting their currency, there is the huge mountain of gold which this government possesses, the very presence of which behind the currency should act as ■ barrier against inflation. Not only would the gold backing of the dollar act as a brake, but various sorts of controls through bank action can be effected by means of the gold. The government could decide to put gold coin back into circulation and, with gold circulating freely, the banks would have to increase their reserves and cut down their credits. Buyers of merchandise on credit would have to sell, thus increasing the supply and lowering the price. Never fear, this government has in its hands weapons of great power for controlling prices and reaching all the causes of inflation. And it will use them, as clearly forecast by the recent price freeze. There will be no runaway inflation in America.

THE END

LONGINES

*the most honored
watch for a
SOLDIER*

The Longines Convoy model shown here greatly enlarged is an ideal watch for the man in service. It is larger than most strap watches, but extremely thin. The case is stainless steel, the dial is gun metal; hands and figures are luminous. It is priced at \$63.50.

Longines

THE WORLD'S MOST HONORED WATCH

In war or peace a fine watch is a priceless possession. For more than three-quarters of a century Longines watchmakers have concentrated on the single problem of making fine watches better and better. The Longines Observatory Movement, the beating heart of every Longines Watch is the product of this experience. Ten world's fair grand prizes and 28 gold medals have been awarded Longines Watches for excellence and elegance. And they have won more honors for accuracy than any other timepiece. Longines Watches are sold by authorized Longines-Wittnauer jewelers. These jewelers also sell the Wittnauer Watch, a companion line of outstanding value, moderately priced from \$27.50—product of Longines-Wittnauer Watch Co., Inc., New York, Montreal, Geneva.

Longines Watches have won 10 world's fair grand prizes, 28 gold medals

Ladies' Longines: left Tally-Ho, \$77.50; right Salina, \$75.00; men's Longines: above Pres. Garfield, \$150.00, below Robert Burns, \$55.00.

"That's what is on your side. But this is about the most important thing you do or don't do. I'm trying to be cold about it."

"I suppose it will be all right," she said. "But I don't think the matron will let me go."

"We'll go back now and see her."

He pulled her around as he had not done for a long time. She was softer than she had been before. She did not resist him but just let him hold her close. He drew away suddenly and they walked in silence back to the hospital. . . . He was very sure of himself. The matron was surprised when Quayle and Helen Stangou walked in.

"Hullo, Matron," he said. "I'm sorry to disturb you, but I want to ask you for something."

"Hullo . . . you look serious. What is it?"

"We would like to get married. I want Helen to come back to Athens."

"You are wanting to marry?"

"Yes," Quayle said. "Can she go back to Athens tomorrow or the next day in our transport plane?"

The matron was quiet for a moment, then nodded and said, "It is easy to arrange to go back. She can go. I will make it all right."

Helen smiled quietly. Quayle nodded.

"That's swell of you, Matron. Thank you for that," he said seriously.

"She can take some broken parts for a heating machine down for me. We have no extra parts. She can take them down for me and it will be fine."

"Yes. Anything. Thanks a lot," Quayle said again.

"I am glad. I felicitate you. But you should look more happy."

"I don't know how we can get married around here," Quayle said.

"You worry about that tomorrow . . . or in Athens."

Quayle and Helen went out and Helen said she would have to finish some work. So Quayle went back to the hotel. Hickey was sitting on his bed and called Quayle in as he passed the door.

"I hope you fixed things up all right. The Germans are due in Greece tonight or tomorrow. Any minute. Your girl can go back on the Bombay tomorrow if she wants to. We've got a patrol to do before we leave."

"Where to?"

"Do you remember Nitralaxis?"

"That crazy Greek flier? I haven't seen him for a long while."

"He's been up at Koritz. We've got to take him out on a reconnaissance over toward Valona to see what the Italians are doing."

"That means low flying."

"Heaven only knows what it means. I just hope the jerries aren't in by then."

"What time are we up?"

"Six o'clock. You'd better get to bed."

"Yes. Well, I'll be glad to get out of this place."

"So will I," Hickey said.

"Good night, Hickey."

"Good night, John. I'll get the porter to wake you."

THERE was no mist the next morning. The Gladiators were standing coldly in the blue dawn. The Greeks had wheeled out the old Bréguet and were starting the engine.

Quayle and Hickey stood around waiting for Nitralaxis to appear. Hickey showed the others, on the map, where the reconnaissance would take place. It was over a high, rocky stretch of mountains away behind the Italian lines, where it was thought that large stores were hidden. Nitralaxis came up with

Papagos. He was already in his flying coat, and Papagos had two overcoats on. Nitralaxis put his arm around Hickey and greeted him with a wide smile.

"I am happy today," Nitralaxis said. He laughed with his head back. "I have accompany from you. This is going good."

He knelt on the ground and unfolded a crumpled Greek map of the area, much better than those the squadron had. In careful slow English he showed what he wanted to do. He knew his business very well, Hickey decided.

They would come around a high mountain peak; Nitralaxis would make the straight reconnaissance flight down the valley while his pictures were taken, would turn around for another run, then climb immediately and head for home whatever was happening. Instead of keeping height and waiting in case 42s attacked the Bréguet, the Gladiators would fly along with Nitralaxis at whatever height he was going to take his pictures.

"We will wish each other good fortune, yes?" he said to Hickey, as they walked to their planes.

"Yes, we'll need it," Hickey said.

THE Bréguet was rising and falling in great jumps as they came down and around the mountain. The flight kept in close, and Nitralaxis leveled the Bréguet out at five hundred feet, bumping straight down the valley. Then the short bursts of antiaircraft made black puffs around the sky and point 5s opened up with tracers. It was short, however. Nitralaxis made both runs quickly and started climbing. They turned back toward the mountains. All they had to do now was to get home.

They were almost at cloud level when the 42s came. Quayle saw them and was not surprised. There were sixteen or so in the first group. They were coming straight down in formation. There was another group coming beam-on lower down, about twenty. And Quayle knew this was the toughest spot he had ever been in.

The attack met them another two miles on. There was nothing much they could do about it except try to get height, hide in the clouds. But the Bréguet slowed them down, and the 42s came at them with full guns blazing. The air was streaked with white tracers in front, behind, underneath. For the first time since he had been fighting, Quayle got bullets in his plane.

He kicked the rudder, eased the stick and slipped into a glide coming in a slip right into the head of the 42s. He saw the white spread of ragged-edged flame from a 42 as he got the underwings where the Fascist emblem came into his ring sights. He pushed hard on the gun button, knew immediately that he had come in too close and that 42 shells were hitting his plane. He pulled hard on the stick to come up over the 42. There was slow action. The climb was too slow. He could feel the controls loose somewhere and the plane losing height again. He banked around and suddenly caught a glimpse of the Bréguet crashing beam-on into the middle of a 42 . . . and a strange tangle of machines going down.

His controls were bad, there was something wrong with the elevators and he kept falling. He pulled desperately on the stick, took a quick look out, knew he was too low to bail out.

The plane was hurtling fast, and the wind screamed high through the slits in the cockpit cover. The ragged side of a mountain came up quickly . . . the green

timber, red earth somewhat speed, blurred movement before him but solid, solid. He thought. This is everything is all the world . . . it's cold here. . . .

And Quayle crashed in a skidded deep below the came into the rocky earth. struts were torn to shreds everywhere. The weight of carried the shambles of the ward until it was crumpled ball. . . .

Quayle was conscious of the violent tearing of the flesh, the solidly, terrifically thrown his head crashed against the board. It was all quiet, very moment, then nothing. . . .

BLOOD had frozen on his the flesh had been broken metal, there was a hard cut that stuck to his skin and there was blood down the Irvin jacket; and where his through the mask, there were cuts. The mask had been his jaw and had crushed neck. His hands had bent and were loose and bleeding.

It was dark evening when ness started moving into When he could see, he could indefinite pain and the cold his head, which made it difficult to ordinate what he was doing grip on the side of the cockpit himself up. He felt the parachute and fumbled to release in his stomach straps fell away and he stood top of the smashed cockpit blacked out, fell hard to the he went to sleep again. . . .

There was plenty of day he woke up. He was normal immediately. He was quick again of all the pain and stomach, but mostly of the sweat cuts of his face. He sat up and looked at the timber and the wrecked plane.

"That thing will never was the absurd thought head. John Quayle stood uneasily and unfirmly to the pulled out the parachute the plane's compass was reached down and pulled emergency rations. It was the rations were all right.

He got the first-aid kit a He sat down on the rock and ointment from the kit over could feel it swollen and He pulled the release parachute. The pilot parachute and some of the big silk with his pocketknife and He bandaged his neck and head. He took a long military water bottle that waist opposite his .44 pistol stood up and, with the arm, walked unsafely up few yards until he came to timber and he could see v

When he could study t he was surprised to see how He was on a lofty mountain to the east he could see a river and, beyond it, a river the wide and green with the fertility. He walked back He pulled on his belt with the water bottle. He pi emergency rations, looked and moved across the slope He was bending down

the low timber as he left the plane when he heard the noise of walking. It was suddenly near and heavy and above the quiet wind in the leaves. He fell flat and waited. The movement was close. He peered through the foliage. He knew there were more than one. He didn't think of his .44 but just lay there looking with his eyes long-focused. The figures came through the timber and stood for a moment. Quayle looked quickly. He crouched into the earth. Then he saw the beard, the wide face . . . the tin helmet. It was Nitralaxis.

Quayle stood up and walked in the direction Nitralaxis and the other figure were taking. He came in across an open stretch. . . . Nitralaxis stopped quickly, looked surprised and in midair for a moment. Then Quayle said, "It's me . . . Quayle."

Nitralaxis frowned, then smiled in his beard and walked forward.

"Inglis . . . Inglis," he said, with a great laugh.

Quayle looked at the other figure. It was not Papagos, the air gunner. It was a peasant in a long black beaten-felt cape with a hood. He was very young, with hair over his forehead and red full cheeks. He smiled at Quayle.

"Where's Papagos . . . Papagos?" Quayle said. Nitralaxis was patting him on the back with his arm. He took it away and shook his head.

"We burn . . . we crash . . . we burn, fire . . . Papagos . . ." Nitralaxis shook his head again.

"How did you find me?" Quayle asked him.

Nitralaxis didn't understand at first, then said slowly, "He," pointing to the peasant, "said another *avion* . . . airplane . . . we going back . . . he said another airplane . . ."

Quayle took the maps out. He pointed to their position on the map.

"Tepelini," Quayle said. "We'll go toward Tepelini."

Nitralaxis picked up the map, then put it down again and pointed to Chimore on the coast. "Here . . . we go here . . . this is better."

"Tepelini . . . near Ioannina . . . it's quicker," Quayle said and pointed to Tepelini again.

Nitralaxis shook his head with confidence. "Too many Italians," he said. "Too bad country. That's impossible."

QUAYLE shook his head, folded the map. He knew that if he gave way to Nitralaxis he would not pass through Ioannina, but go down the coast to Chimore and back to Athens. He didn't want to miss Helen. He had to go through Tepelini to Ioannina.

"I'm going toward Tepelini. I want to get to Ioannina," Quayle explained slowly.

"Is dangerous. . . . Why?"

"Faster . . . it's faster," Quayle said.

"I think you want, you must go to Ioannina. Yes?"

"Yes," Quayle said.

"Why?"

"Plenty of reasons. I'm going to marry a Greek girl . . . a Greek girl . . . marry."

Nitralaxis pulled his black beard and pushed his tin hat back.

"You marry? Girl in Ioannina?"

"Yes. We were to marry today . . . today." John pointed his thumb into his chest.

"Ho . . . Inglis . . ." Nitralaxis laughed, and said something in rapid Greek to the peasant, who smiled and nodded and said something back to Nitralaxis.

"We go . . . we go to Tepelini. You will have the girl. . . . The Italians will have us. . . . Ho . . . Inglis and love!" Nitralaxis patted Quayle affectionately on the arm and chuckled into his beard.

"Fine," Quayle said. He picked up the maps.

Quayle looked at the map and started

to take directions again. Nitralaxis shook his head.

"It is no need, no compass. Nitralaxis pointed to the take us. He knows this. try."

"Well, let's go then," they said.

Nitralaxis told the peasant what to do. The young peasant turned around. Quayle's belongings.

"What's his name? His name is he?" Quayle asked Nitralaxis. The peasant boy was the reddest Quayle had ever seen.

"Deus. You know . . . god . . . Deus. He is a Greek. He is of the hills. He four lexis said, with his beard.

Quayle put the emergency first-aid kit, the maps, the shoulder bag, and they started.

DEUS led them through where the wind slapped the trees. The dirt was around the crest of the hills. There were deep around and other crests. John Quayle could see the far down in one or another lexis, and the river below walked silently, Quayle and Nitralaxis coming behind. Deus was getting thicker and his limbs were becoming muscularly stiff. Occasion at his map and saw they almost due east.

"Which way?" Nitralaxis asked once.

"We're heading due east," Deus told him.

Nitralaxis said something who replied without stopping.

"Says we cross road . . . Nitralaxis said.

"What about the Italians?" Deus asked him.

"It will be difficult," Deus said. "The Italians are frightened. They shoot quickly."

"That, I know," Nitralaxis said.

Deus.

"Perhaps I should have a pistol," Deus said.

Nitralaxis knew that Deus was eying the .44. Such a pistol was worth a fortune to Deus; but if he couldn't get it by himself, Nitralaxis knew that Deus would get him the pistol.

"The *Inglis* will give it to us. The *Inglis* will give it to us through the Italians. Greeks."

"He will?" Deus said.

"The *Inglis* is very trustworthy. That."

Nitralaxis was afraid to steal the pistol. He would give it to Quayle to keep it empty. He was more dangerous than sometimes, but he was a fighter.

They were climbing now. It was difficult. Quayle went on one of the cliffs. Nitralaxis was eating hard. The road below was getting directly beneath them.

The three of them started down the slope in the late afternoon. Quayle was getting stiffer to go slowly. By evening the way down the slope, and in full view. Deus stopped clump of plane trees.

"We will sleep here," Nitralaxis said.

"Aren't we near enough road tonight?" Nitralaxis asked.

"We must observe first off his felt cape. He looked at Deus who was sitting down with

knees. "He is with pain," Nitralaxis.
 "It's all right. That is the way rest themselves. He's all

Quayle offered Deus a piece of his bar chocolate. The boy looked at Nitralaxis.

"Go on," Nitralaxis said. "It is chocolate. It's all right."

Deus took the chocolate and smiled broadly at Quayle. He bit the chocolate carefully and opened his eyes wide, like a child. "It has much sweetness. It is very glorious."

Deus smiled at Quayle once more and sat down, chewing the chocolate. Quayle lay down and thought himself to sleep above the pain in his head.

Quayle woke up again with the movement around him. He did not want to move. He was still exhausted. The night was open with moonlight.

"We are going?" he asked Nitralaxis.
 "Yes. . . . You are all right? We have to walk upon stomachs."

Nitralaxis helped Quayle to his feet. Deus was smoothing the surface of the ground where they had been sleeping. They started down the slope with Deus leading and Nitralaxis coming up behind Quayle. Deus held the branches of the trees he ran into, carefully, so they wouldn't swish.

When the slope graded out, Deus almost stopped. He took every step carefully and very quietly and often he stood still. They came to a clearing and Quayle saw the road before him. Deus crawled toward the road. Quayle eased his way forward on his elbows. At the road, which was built up, Deus got into a crouching position. He touched Quayle on the shoulder, nodded his head and stood up slightly. Crouching, he moved quickly up the rise and crossed the road. Quayle followed him and felt the hard gravel crunching under his boots. He fell into the ditch on the other side, and Nitralaxis came. . . .

THEY started moving forward again. It seemed they were crawling for hours in the dark. They could hear voices all the time now. When they got to the river they were glad of its running sound. Deus stopped again and they sat crouching in a small circular dip in the earth. Deus whispered something to Nitralaxis.

"This is not deep," Nitralaxis whispered to Quayle. "There are some Italians the other side. We must be careful then. If something happens we will keep going upward. There is a dead river running upward."

"Okay," Quayle said quietly.
 "Horkai." Deus turned around and smiled.

They moved off again. The water was very cold and swift running. It was seldom above the knees. They crouched close to the surface. Sometimes the water seeped through Quayle's Irvin jacket and got into his stomach and almost made him gasp aloud. They got across it all right and lay down on the white pebbled bank. Deus moved slowly forward, then dropped quickly. The others followed. Quayle felt the pain in his head as he hit the earth. There was someone walking. He waited for something to happen.

Deus carefully moved forward again. Quayle lifted himself carefully and followed. He could hear Nitralaxis behind him. They went on into the night.

There was depth of sunlight above them. They were on the high mountain over the valley where the road and the river were running almost due south. Quayle was lying on his back. Deus looked at him from where he sat chewing at the hard bread he produced from somewhere on his person.

"You are certain," he said to Nitralaxis, "that the *Inglisi* will give me the fine pistol?"

"The *Inglisi* can be trusted. He trusts you . . . therefore, you can trust him." Deus nodded.

Then Quayle looked up because he

heard the sound of engines. He was doubtful at first but then he was sure. "Airoplanos," Nitralaxis said, pointing to the northeast. . . .

Quayle could see the large formation getting nearer. They were in three groups. There would be at least fifty planes in each group. They were at about ten thousand feet and in good formation.

"Hundreds of them," Quayle said.

Gradually they came near enough to distinguish the details of their construction. Quayle shaded his eyes and looked at them carefully. He realized suddenly what they were.

"Germans," he said to Nitralaxis. "They're Dornier 17s."

"So now we have the Germans, too," Nitralaxis said.

"I wonder when it started."

"Somebody will have many bombs from that lot," Nitralaxis said.

"We'd better get going," Quayle advised.

Deus led them along the side of the high mountain as the bombers disappeared to the south. Quayle looked at his map, saw their own course was due south now. He calculated they would cross the Italian lines somewhere between Tepelini and Klissoura, but near Tepelini. That would lead them to the Argyrokastro road. That road went back to Ioannina. That's probably where the Germans are going, Quayle was thinking. They'll go to Ioannina because it's the key town for this whole front. The Germans have sense that way. They would probably flatten it with bombers first—if they had not flattened it already. John Quayle put the maps away and concentrated on the rough path that slipped down the high mountain toward the valley between Klissoura and Tepelini.

ALL that day they heard bombers going over. Sometimes they could see the planes, and they were always German. Sometimes they could not see the planes but they heard bombing. It was difficult walking along the rock path from the high slope, winding around the steep sides. Quayle fell many times and twice he scratched more skin from his hands trying to keep on his feet. Deus did not seem to think there were any Italians at the height they traveled most of the time. But during the second day he began to take care because they were nearing the level area and they could see the two roads joining at Tepelini and the quiet village of Tepelini caught in the hook of a river and a mountain. It was white and sloped and it looked silent. They could see the Italian transport moving along the winding road all day. Quayle was thinking that if the Germans had started their advance into Greece, the Italians would be attacking too, so they would have to walk right through a battle.

During the second day from the high mountain, they moved in a great circle around the level area until at night they had reached a small plateau overlooking a wide Italian encampment and the road between Tepelini and Klissoura. They could hear the artillery from both sides somewhere to the south, and the Italian transport on the road never seemed to stop.

"We wait here," Deus said, when they sat down on the small plateau.

"How long?" Nitralaxis asked.

"Until darkness. We must cross the road again. It is difficult."

Nitralaxis told Quayle and they all lay on their stomachs and watched the activity in the Italian camp until complete darkness made only the sounds clear. Then Deus stood up and started carefully down the steep slope from the plateau.

"Do we go right through that camp?" Quayle said.

"No, we go around it."

They were moving very fast as Deus chose good footholds and kept the movement decisive. When they reached the end of the slope Deus motioned them to lie still. Quayle could hear the deep continuous boom of the artillery much nearer now. He could hear the Italians talking in the camp to the left. Then Deus moved on his stomach out into the open. John Quayle followed him.

SLOWLY they moved, and Quayle could see the clear outline of big Italian Diesel trucks ahead of them. Deus stopped when he saw them. He's miscalculated, Quayle was thinking. He didn't expect those trucks to be there. This is going to be fine.

Deus had not expected the trucks to be there. He looked at them and then wormed his way in a right-angle turn to a clump of bushes. Nitralaxis and Quayle followed him. From there they crawled parallel to the road and came to an open space.

"It is wrong," Deus whispered to Nitralaxis. "We have come too far."

"Well . . ."

"You are in a hurry?" Deus asked. "There are chances to be taken."

"We take chances?" Nitralaxis asked Quayle with mild humor.

"Sure. What's wrong? Let's get going," Quayle whispered.

"We take chances," Nitralaxis told Deus.

"Horkai," whispered Deus and patted Quayle on the back.

They crawled into the open space. Quayle noticed the bulky shapes with tree boughs on them. It suddenly struck him: Tanks! They were crawling through a tank-dispersal area, only they weren't too dispersed. He saw the tracks of one when they crawled close to it. Deus fell flat as a guard passed along the road which was less than twenty yards ahead of them. It was too early for the moon to be very clear, and Quayle couldn't see what was beyond the road. He kept close to the soft grass earth and followed Deus as he wormed inch by inch to the road. They stopped again when the guard paused up the road.

"Horkai," whispered Deus.

"Come on," Quayle said to Nitralaxis, and together they crouched across the road and dropped close to it in a shallow ditch on the other side. Quayle looked ahead and saw a wide clear space with shapes of big guns and timbers strewn around.

They crawled through a field of soft mud into a plowed stretch, and Quayle felt the dampness seep into his sheepskin boots. They crawled along to the timber clump that outlined itself against the clear sky.

"Wait," Deus said to Nitralaxis. "I will see."

Deus moved forward and Quayle was restrained by Nitralaxis.

"He observes," Nitralaxis said.

"What's wrong now?"

"Nothing. We came too far. Those Italians sleep well. Yes?"

"Shhh . . . you'll wake them up and we'll do some sleeping."

"How comes your face, *Inglisi*?"

Quayle was surprised because that was the first time Nitralaxis had asked him about it. It must be that we're both scared, Quayle thought.

"It's fine. Where's that young devil gone?"

"He will be back," Nitralaxis said. "I have the ammunition back. Here." Nitralaxis handed Quayle the ammunition. Quayle put it back in the pouch. Deus rejoined them without any sound following him.

"We have more such places to go through. It will be long," he said to

getting heavy but he could off now. Deus was down him, and Nitralaxis was both of them as suddenly water was too great and the ming. The water rushed bodies, and Quayle could grasping him tightly by the was almost sinking as he move forward with a breath. Nitralaxis was behind him was holding on . . . until he go.

Quayle saw him shoot down. He felt his kit bag tug at his legs. He pulled it off his went after Deus. Quayle could splash, then suddenly a white moonlit stretch. His arms wide and kicked power he got to Deus. He grasped by the heavy felt cape and under as Deus struggled him. Quayle went under feet on the bottom. When he found he still had hold stroked the water with his kicked; he heard the splash and repeated it until he thought not do it any more and would all the way downstream. feet found bottom.

He pulled Deus up into and lay there drawing deep could hear Deus breathing dered where Nitralaxis was not move, so Quayle leaned and rolled him on his stomach pulled off the sodden cape his hands into the small of He leaned forward and the the respiration worked, it came water so much as force Deus consciousness. He uttered a and turned over on his side.

QUAYLE heard a sound and lay flat. He could hear ment . . . then guessed it was "Hey . . ." he said in a whisper.

"*Inglisi*?"

"Yes," Quayle said quietly.

"You got him?"

"Yes. He is here."

Nitralaxis came out of water to the bank.

"Ho . . . he looks he is finished," Deus said in Greek.

"I am well," Deus said to

"We help you."

"No . . . Is the *Inglisi* all right?"

"Yes."

"You will say I am grateful."

"Yes . . ." Then: "He says"

you," Nitralaxis said to Quayle.

"I had visions of our transport through the Italian lines with Quayle said.

"He says he has grown tired," Nitralaxis told Quayle.

The Deus, "You are his friend . . . not let you see the bottom of for a deathbed."

Deus nodded and said he pulled on his wet cape and swayed, then bent over again.

"Shhh," Quayle said.

Deus dragged his wet cape as he crouched under the edge of the stream.

"Come on," Nitralaxis said.

"I lost all my stuff . . . I kit bag," Quayle stopped with

"Come on. It is no time of that."

Quayle followed Nitralaxis three of them crawled across until they got to the timber continued being sick as they over the rock of the mountain facing.

"He's going to give us away," said.

"He'll be all right," Nitralaxis chuckled in his beard.

"We climb here. We must

Nitralaxis. "Is the *Inglisi* all right?"

"He's fine."

"We go then . . . but be very careful. The Italians do not sleep well tonight."

"Go on then," Nitralaxis whispered.

They crawled into the timber that was beyond the small clearing. They seemed to make a terrific noise when there was timber to reflect the sound. They kept stopping and Quayle felt his vibration in the earth every time they flattened out.

SOON they were in another open space that was a camp for Diesel trucks and motorcycles. Quayle became more amazed at what they were doing as they crawled around the edge of the camp without being seen.

When they reached the river, Quayle could hear its shallow water slow on the pebbled edge, also the quiet deep water swirl in the center. He could see the moon now and the shallow light across the flat stretch of white water that was silver.

"It is deep," Deus said. "We will move together."

Nitralaxis repeated that to Quayle.

They walked into the shallow water, and the swiftness got dimensional as the water got deep until Quayle was up to his neck. He could feel the Irvin jacket

road but along the mountain," Deus said.

"How long will it take?" Nitralaxis asked.

"We should be through the Italians by tomorrow morning."

Quayle and Nitralaxis helped Deus as they started up the slope. As they climbed, they could hear the booming of artillery. It was to the south and east.

"There is some battle," Nitralaxis said.

"Yes. And we'll be in it," Quayle told him.

IT WAS dawn. The artillery was getting louder. It was hard to tell whether it was behind or before them now, it was so close. Then Quayle saw it bursting to the right, down near the road.

"That's yours, I should say," he said to Nitralaxis.

"It is Greek, it is good . . . look!"

A string of shells burst along the side of the road. It was good shooting, but Quayle could not see anything worth shooting at, not from this distance. Suddenly there was a quick whine, and a white puff came through the red earth above them. They all fell flat.

"We're right in the middle of it," Quayle said.

There was a deep sound from above them. "Italians . . . that is their cannon," Nitralaxis said. "Come on!"

The three of them crouched and loped along in the timber, falling flat when they heard the shells bursting above them. It was a terrific din, and there was a machine-gun sound. Then the quiet, quick, unpleasant rap of a light machine gun. It was somewhere below and ahead of them. Quayle looked in the direction of the sound but couldn't see anything. They fell flat when they heard another shell burst above them on the slope. This one was nearer.

"They must be shooting at us. They must see us."

"The stupid idiots! Come on!" Quayle was helping Deus along as they ran.

"There's the Greeks!" Nitralaxis pointed to the white puff of a shell bursting on the side of the mountain facing them. "That must be!"

They were running and loping, and there were more shells bursting above them, so that the loose rock on the slope rolled down behind them. The white bursts were still throwing up along the road. Then the machine guns opened up again.

"If we're near enough for machine-gun fire, the Greeks can't be far ahead of us. Come on, Deus! Tell him to come on," Quayle said.

They got up again and ran along the rough side of the slope until they came to a clearing. Without thinking, they ran into the open, and then the machine gun sounded again and Quayle knew they were being fired at. He could hear machine-gun fire from two directions across the valley they were coming to, as he fell on his face. The three of them crowded together flat on the earth, as they heard the machine gun firing at them. The soft bullet sounds came over them, and there was the softer sound of some of the bullets hitting the earth before them.

"We are near," Deus said. "We must get into the valley. The Greek is there. He must have retreated to there. He should be where we are now."

"We should go up into the timber," Nitralaxis said.

"No, straight on. They will see you running upward."

"It's nearer," Nitralaxis said.

"No . . . straight ahead." Deus pulled at Quayle and pointed ahead.

Quayle nodded. They got up, but the machine gun started again. Then Quayle saw Nitralaxis running up the slope in the clearing, up toward the timber.

"Get down!" he shouted.

Nitralaxis kept running. The machine gun came lo. Quayle didn't hear the saw Nitralaxis loosen the earth and fall as he ran. Quayle knew Nitralaxis hit more than once. Deus and Quayle crouched and ran ahead into the timber. The soft bullets over his head didn't drop; he kept on the timber.

Deus had crouched flat. Quayle looked behind him. He was lying on his side in an awkward-looking position without any support from loose against the earth. He knew he was dead.

They heard the Italian low them. Deus was pulling. He had the pistol. He was going to the empty chamber the ammunition. Quayle looked when Deus had taken from Nitralaxis and what to do with it if he gave him. He looked at Deus the square pouch on his chest pulled out the small box some of the squat leaves Deus' outstretched hand the box. Deus rammed the chambers and click shut. Quayle wondered known what to do with it.

As the Italians came Deus pointed ahead and crouching into the timber when the machine gun fired to the beginning of the valley. He heard the movement of feet behind and below them. He moved forward and slipped down. Deus waited for Quayle ahead and pushed Quayle him to run across the slope. The machine gun opened again.

"Horkai . . . Horkai." Deus vigorously and pointed ahead.

"Okay," Quayle said quickly-drawing breath.

DEUS pushed him forward. He heard movement behind him.

"Horkai, *Inglisi*," he said. He breathed again. He pointed.

He took Quayle's hand. He turned around and ran. Quayle drew breath across the wide slope in direction. He could hear guns firing at him . . . a quick sharp explosion of then again . . . and he ran across the rock until he fell . . . He lay there panting.

He heard the pistol again . . . The machine gun. Quayle looked behind. He was running up the slope and behind him. He heard the machine gun. He saw Deus stagger and drew a quick breath and kept running until he could hear the machine gun near him. He staggered and could feel his face. And then he saw the uniforms. He saw the hands wide, shouting, "In as loud as he could. He came up. *Inglisi! Inglisi* again. He knew he was his life that was crying.

"*Inglisi, Inglisi*," he said. His hands were in the air as forward and he saw the him. He felt the man's grip and felt the pain and st with the Greek.

"*Inglisi*," he said. "I was muttering from his bursting.

And he fell limp in the (To be continued ne

ed car blasted swiftly and every shot it staggered stricken giant, and its chain- lifted from the ground. interrupted its advance. hud increased in frequency and coming closer. The air rocked,

the earth shuddered. A north wind rose, lifting long waves of sand dust that hid the tanks time and again. Once Blake saw a tank emerging from a sand cloud only a few paces away, and averted a clash by a narrow margin. Yet he endeavored to remain in the sand clouds, following their course whenever possible.

Then the wind subsided for a while, and he saw a few widely scattered tanks rolling steadily ahead. Between them fountainlike splashes of sand belched high into the air. Through the peep-slot aft, he saw the Iron Belle—the armored car—still jumping crazily and firing unrelentingly. Even while he watched, she became enveloped in a black cloud that seemed to spring from the ground as if by magic. Then came the explosion. It made his tank stagger.

The lion cubs had been deprived of their fighting mother, of their provider.

For the bombers it was the signal to break formation and to come in low. The tanks had to open their turrets and fight for their lives. Using the Bren guns on the anti-aircraft mountings from the open turrets exposed the commanders to the planes' machine-gun fire, but it prevented the enemy from coming in too close.

Blake saw the two tanks closest to him destroyed. Each one, directly hit, crumpled into a blazing heap of scrap. But this did not concern him. He pushed ahead steadily, playing hide and seek with the bombers in the intermittent dust waves, firing whenever a craft appeared within range, watching eagerly as the big-game hunt became enveloped in the fast-sinking veil of the night.

Before it grew dark, one of the bombers came winging down toward him, not in a roaring power dive, but in a silent, insecure glide like a wounded falcon. It grazed his turret, and crashed ahead of him, overturning and dissolving into a bursting cloud of dust and fragments.

Then all calmed down. The thuds came to an end, the guns grew silent,

"I on't be interfering with any troop movements, will I?"

wind and dust subsided. The remaining planes, rid of their burdens, droned off.

Symbols of steadiness in a shifting world, two tanks were rumbling over the desert toward their goal.

THE two machines halted close to each other. Blake climbed slowly out of his turret. His muscles were stiff and sore. His face was encrusted and his eyes bloodshot from the tiny, invisible sand flints that filled the air.

He jumped to the ground with a thud and approached the other tank. "What's the matter, Curtis?" he called into the slit. "Can't you open up?"

"Can't open," a voice shouted from inside. The crew's frantic efforts to open up could be heard. "We were hit right at the beginning. It couldn't have gone worse, could it?"

"It could," Blake said.

Jack and Andy moaned as they stretched their limbs and stamped the sand.

"You can't get us out without a blowtorch," Curtis said. "Can you go on?"

"Yes. But we haven't fuel enough to get through, since the Iron Belle blew up. If I take your fuel we may make it. I'll signal your position as soon as I make contact."

"Go ahead," came Curtis' voice, after a short pause.

"We'll also take your radiator water."

When his men had drained Curtis' tank to the last drop, Blake said, "So long, Curtis."

"Look out for the Camel Corps, Blake," Curtis called. "This is their territory."

Blake and his men moistened their gums with a gulp of hot water. Then they started off.

They rode with open cowl and turret, smoothly and not too fast in order to conserve fuel. The night was now at its darkest, between sunset and moonrise. But just as the moon's luster began to appear, one of the caterpillar tracks rattled and stuttered, and the tank began to swerve. Jack at once shut off the engine.

There was sudden silence in the vastness; then the anxious breathing of the men climbing out.

Jack walked around the tank. "A link's broken." He pointed to one of the tracks.

"So we can't go on?" Blake asked.

"You don't need a blueprint to see she's busted!" Andy muttered irritably.

"We have some spare links," Jack said. "About two hours' work will repair it."

"Let's sit down first and feed our bellies," Blake said. "You work better on a full belly."

"I fall asleep on a full belly," Andy mumbled, producing the provisions.

THEY put on their heavy coats, for the night air was frosty and the sands had chilled swiftly. Squatting in the sand, they attacked their rations.

Jack chewed listlessly, then tossed away his half-empty tin.

"Don't feel hungry," he said. "The idea of Curtis and his crew makes me sick. Blast those rat traps!" From the tank came the continual crackling of the rapidly cooling metal.

"I'm not asking you to be hungry," Blake said coldly. "I'm telling you to eat. . . . You've got to drive me, you know." Then seeing Jack adjusting a bandage around his ankle, he asked, "What's the matter with your leg?"

"Nothing much. I bruised it, and it got swollen."

"Let me have a look."

Jack noticed Blake's worried look as he scrutinized the wound. "Is it bad?"

"Sure it is. Why didn't you do something about it?"

"It happened when we started. There was nothing I could do."

As they chewed on in silence, each man looking thoughtfully at the sand between his outspread legs, the sudden bark of a rifle a few hundred feet away made them jump up. Shots spattered about them. They dropped cans and tea mugs and flung themselves back into the tank, bullets whistling about their heads. Their straining eyes could detect nothing, although the sands were now flooded with moonlight.

"I wonder," Blake reflected aloud as soon as the fusillade subsided, "whether it is a regular Camel Corps squadron or just a marauding tribe waging a holy war of its own." Far in the distance he could hear the guttural grunting of the maharas.

For some time the men kept behind their armor plates, eyes and pieces at the ready. Then Blake came out circumspectly, and, as nothing happened, he ordered Jack and Andy to follow. But no sooner were the three men exposed, than the fusillade was resumed from nowhere, accompanied by the vicious chatter of machine guns.

"Blast it!" Blake cried, diving back into his turret. "They're Camel Corps troopers, all right. Did you hear those MGs?"

"I don't like that song and dance," Andy said, impatiently patting his gun. "Not if I can't see their noses."

"How many do you think there are?" Jack asked.

"They operate in *goums* of a hundred," Blake said. "I heard three MGs, so there can't be less than two squadrons; two hundred men at least."

"If we could only repair that blasted caterpillar!"

"Yes, and what a mess we could make of them!" Andy said hopefully.

"I'll try to fix the link while you two cover me with the guns," Jack suggested.

"No. We'll only hit the sand, and

they'll get you, all right," Blake said. Then he added: "Let's wait for dawn. They may attack then, and if we let them come close enough before opening fire, we may teach them a lesson yet. Try and get some sleep, even if it's only for a few hours. I'll keep watch."

"Good," Andy said. "Wake me at eight, on the dot."

A BEAMLESS disk of red emerged from beyond the horizon. The new day spread swiftly over the sands.

Blake heard the rasping sound of Andy's gun turning on its socket.

"Hold it, Andy!" he cried.

A maharist and his mount had appeared from behind a dune and were slowly approaching. The rider swayed up and down, to the right and left, in time with his mahara's awkward, disorderly stride. Ostentatiously he held up his rifle, to which a white rag was attached. When he came within hailing distance, Blake recognized him as a white subaltern officer, dressed in the large floating trousers of the native attire; only his plain khaki tunic and kepi were European. He stopped, and, holding up the white flag with one hand, called out:

"We won't harm you if you surrender now! But if there's any shooting, we can't answer for your safety! You know the native troops!"

"Must you have your answer now?" Blake called back.

"We'll give you half an hour. Then come out without arms and with hands raised. Be reasonable." The man saluted, and turning his camel about, disappeared behind the dunes.

"Next to a good fight, there's nothing I like better than to be reasonable and surrender," Andy observed.

From the dunes in the distance, maharists emerged all around, men of different tribes and races, who had always

AUTO-LITE SPARK PLUGS

In its 26 great manufacturing divisions, Auto-Lite is producing for America's Armed Forces on land, sea and in the air

and barracks and huts carried away; and when the sandstorm soars. . .

The khamsin soared and it was as though the earth, impatient to engulf its children so long delayed in returning to her bosom, rose up in an attempt to cover and swallow them with the fury of a jealous mother; the earth itself soared and beat down on the men and mounds and machine.

The Camel Corps troopers had drawn close together in heaps, heedless of the tank; they knew they would find it right where it was when everything was over. They drew their headcloths over their faces, made their camels kneel down, and buried their heads in the rich hides and fat backs of their mounts. The fine sand beat over their heads, swirling and rustling, relentlessly penetrating the inadequate filter, seeping into their lips, clogging their nostrils, drying out their throats, filling their lungs with impalpable dust.

They had no choice if they wanted to avoid immediate suffocation—doing nothing was the only way to survive, breathing as regularly as possible and as little as life permitted. Only their imagination, uncurbed by physical limitations, was allowed to work freely; and they thought of the men in the tank who lacked headcloths and camel pelt to bury their heads in.

BLAKE and his men had jumped to the ground, sinking ankle-deep into the sand. The temperature had shot up. The air was filled with a choking saffron smoke, and the sand, blowing hard and perfectly horizontally, painfully slashed their eyes. They took out the gas masks from the bag and adjusted them tightly to their faces. During the first few seconds, breathing remained hard. Then the air began to flow more freely through the filter, and their lungs began working safely, though with some effort.

They worked feverishly on the broken track, keeping close to the tank whenever they moved, holding onto its sides to get their bearings and remain steady in the fury of the storm.

In less than two hours the job was done. As Jack gave a last turn to the bolts of the new link, Blake unscrewed the compass from his instrument panel and put it into his pocket. Then the crew resumed their places.

The sudden roar of the engine and the rattling of the caterpillars scurrying around their sprockets and bogie wheels were music to their ears. Even if it baffled the troopers in the sand, there was nothing they could do about it.

The air seemed a thick yellow fog, and to guide Jack, Blake had to keep the compass close against the goggles of his gas mask. The tank picked up speed, pushing its way across the invisible desert, eluding its besiegers in the monstrous smoke screen. Although he could see nothing, Andy fired with both guns for a while, just for good measure and personal relief.

It was like traveling at night in a blacked-out train, or flying blind in a plane through overcast skies. There was electric light within the tank, but even there the air was thick with dust. At last the tracks hurtled over the brim of the basaltic expanse, and the ride became harder with every mile. It became a real tank ride, a rough ride with jouncing and pitching and strepitous clattering of iron.

But the yellow, opaque smoke hung over the plain for hours and, when it began to clear, the huge boulders of wind-eaten rock were beckoning like the turrets of a friendly fortress.

ANOTHER day passed, with heat sifting down from the sky, heat swelling from the hard ground, heat oozing from the armor plates; another day in the sickening smell of hot lubricating oil.

in the brain-shaking clanging iron.

The beamless red disc waded the horizon. The sun was cutting a dead path over the face of the wilderness. Tired of scurrying, stood sile.

Blake left his turret slowly followed, his gaze swollen and split.

"No use looking into it," said hoarsely, as Blake w. cowering. "We're through. We're out of fuel."

Blake leaned against the slowly passed a hand over the crust of sweat and were only two or three hours. Some ninety miles. . . saw that Andy did not appear. "Hey, Andy! You asleep?"

"Leave him alone," Jack said. "He's dead."

Blake looked up. "Yes," Jack said. "I discovered after the smoke had subsided was off. Perhaps that's why. Perhaps his heart gave out of the heat and strain. . . of trying to find out? What now?"

"We'll tramp the rest of the day. How's your leg?"

"It's been hurting badly just numb. The whole leg is numb. If I could only get know it would get better in time."

"Sure it will. You stay some sleep. I'll send some you up." Under Jack's Blake recognized the flush. "I'm coming with you suddenly. "You can't go all by yourself."

"You can rest here," Blake alarmed to the core. He to witness Jack's end.

"I'm not staying here," resolutely. "If something pen . . . it's better to be to."

"Let's go, then," Blake said. "And look out for snakes and stones."

THEY left everything behind their revolvers and weapons. They buried the Bren guns in the sand.

As darkness closed in, over the bleak, dreary plain Jack laboriously limping, with heavy, regular paces, clear in his dizzied brain like a foggy sea.

When they had set out signment, he had been doubtful they would ever be able to reach their destination. Now he knew He would.

He would not falter. He slip. He would not bungle had nothing left in the world mission. Nothing else to cling to fall back on. He had nothing—his family, his fort memories. The new friends were dead. The last and the one now dragging beside dead, too, a dead man wall.

But they would not take session from him. It was a den, but a burden that gave He knew that though his pushing fast, his forehead was h were icy, nothing could happen until he had carried out his matter how many hours matter how merciless the session.

Young Alu went back to his game
with the oars and the deep-sea nets.
Nengah watched his short waddling legs
and his stringy arms—this brother who
was more son to her now than brother,
with the menfolk dead, and the mother
so tired and so wasted, once the rice crop
was in, she stopped breathing.

There were voices on the beach path.
It was the seaweed gatherers coming up
with the bales of dried weed.

"As for today?" the Ulud wife asked,
the Ulud grandmother asked, and the
Ulud girl asked.

"As for today!" Nengah replied
cheerfully.

And there were others staggering and
straining up the path—the Irib wife and
the Irib aunt, the Redog wife and the
Redog son's wife, the Paujang grand-
father and the Paujang girl-child—
carrying the dried weed in wooden
saddles on their backs.

"Does the changing-monsoon storm
open tonight?" Nengah asked the Pau-
jang grandfather because he was the
only man among them.

"Not fully," he said.

"Praying no rain tonight!" the Irib
wife prayed.

"But the storm itself?" Nengah
strained to know.

The Paujang old one stared solemnly
at the sky, and then wagged his head
with foreboding. "It breaks on time!"
he said, saying the formula: "One day
to threaten, three days to storm, one
day to reform—for Candle Night!"

"And tomorrow?" Nengah made sure.

"Wind tomorrow," he told her.

"Only wind!" Nengah breathed her
relief.

She had one more day. What did she
care for this changing-monsoon wind?
It was not the raging blow of the Ninth
Month.

"Not to the reef!" the Paujang old
one cautioned, suddenly.

Nengah looked at him quickly. "One

"Who trained this horse to get on his mark?"

REAMER: KELLER

Best Loved Bottle In The World!

Everybody In The Family Goes For Rich,
Spicy Heinz Tomato Ketchup!

Men Call For It—Wherever men sit
down to enjoy the foods they like
best—in all their favorite restaurants,
clubs, diners, and at their own home
tables—you'll hear them call for pop-
ular Heinz Tomato Ketchup! This fa-
mous, mouth-watering ketchup adds
distinctive tang—makes a good steak
taste better than ever, makes plain
hash taste great.

Women Reach For It—They keep a
bottle of Heinz Tomato Ketchup handy
when they're cooking. You'll find it
gives a new, different zest to stews and
gravies, meat loaves, hamburgers, om-
elets. Even a dish of mashed potatoes or
"hashed-browns" takes on a tempting,
siddy color, an appetizing, spicy rich-
ness when you stir in a couple of table-
spoons of Heinz Tomato Ketchup.

Small Fry Go For It—Like
father, like son and like
grandad before them, chil-
dren want Heinz Tomato
Ketchup. Let them have
their fill. Heinz Tomato
Ketchup is pure, wholesome,
made according to an old-
fashioned recipe, from
fully ripened Heinz
tomatoes, cane sugar,
the finest of pickling
vinegar and freshly
ground spices.

BEST-SELLING ketchup
the world over is
Heinz! You can't buy
finer ketchup at any price.
And you can easily afford
this tempting, mouth-
watering condiment.
For it actually costs less
to use, because it's so rich, thick,
full-bodied—it goes much farther.
Just a penny's worth gives "that
million-dollar flavor" to your food.

trip I thought at low tide . . . she reasoned.

"Not to the reef!" the old one cried, and the moan of the wind, and the wash of surf over jagged rocks was in his voice. He pointed to the heavy sky and to the heavy sea. "Remember the ghosts of drowned fishermen who swarm the wave crests on the day of the changing-monsoon storm!"

"To pull oars from a rower's hands!" the Ulud wife shrieked.

"To fill a boat with sea water!" the other wives told.

"Never to the reef!" the grandmothers chorused, shouldering their saddles of seaweed again.

"Take care! Take care!" the young girls persuaded, strapping the lifting bands to their foreheads again.

"Your proa is below the storm line," the old one said as his fingers fumbled with lines and harness. "Tomorrow we help you roll it higher on the beach."

"Tomorrow!" the women called from the road to the village.

"Tomorrow!" Nengah called back.

TOMORROW! tomorrow! her thoughts went on clamoring, but as she turned to the house her hands plucked at bark and twigs for the fire.

Slowly she measured out the rice, heaping it a little so Alu would have a second bowl tonight. With fish pemmican grated over it, mightn't it taste as though they were really eating fish?

Just as slowly and methodically she stirred the rice in the washing-basket, in the milky first water, in the cloudy second water, and then in the clear third water, before she scooped it into the wooden steamer. She dipped water into the brass kettle and put it on for their tea. There was only the dried eggplant to soak in bean juice, and the evening meal would be ready.

"I have arrived!" a loud voice spoke from the doorstep.

Nengah nearly dropped the fire tongs. It was Nasiman, the stone-carver.

"You have arrived!" she replied, bowing quickly to hide her face.

Nengah placed a mat for him at the edge of the veranda. She brought cups and tea—the tea that was to be hers at the evening meal—and poured it for him.

"The changing-monsoon threatens," Nasiman said, smiling a smile that he could not keep from being evil.

"Yes, it threatens," Nengah agreed.

"The changing-monsoon rain holds off." He smiled again.

"Yes, it holds off," she said.

"The changing-monsoon wind comes tomorrow perhaps," he said, dangling his pipe.

"Yes, perhaps," she said, afraid of his geniality, afraid of his politeness, waiting, waiting for him to begin the talk.

"Your paddy is well placed, well protected from Little Wind and Big Wind storms," he observed so amiably.

"The ancestors were wise," she murmured, stiffening though. What was this about the land?

"Ah, yes, wise ancestors indeed," he said devoutly. "You are fortunate in them. Fortunate in ancestors, fortunate in land, fortunate that the Village Elder seeks a husband for you."

Nengah felt a cold wind on her heart. Should she deny, or be surprised? Instead she passed the talk back to him, saying, "You speak in kindness!"

"H'm-m," he said in his nose.

Nengah poured him the second cup of tea, waiting, waiting.

"H'm-m," he said again, and then: "I have thought, perhaps, Ni-ktut Nengah, you strained yourself overly these months about the namestones to prove you are wife material."

Nengah bowed her head, listening with her whole body.

"I have thought, perhaps," he went on, tasting each word as it passed his

tongue, "I could help you with them, if I were to say: 'Pay me only half now!'"

"You speak in kindness," Nengah made herself say before she asked: "And the other half?"

"Later! Later!" he said jovially, brushing time away with his hands. "A lucky crop, a lucky catch pays it! But that is not to press you. Oh, no! . . . So that it doesn't—and to be business-like"—his laugh made the word sound small—"we can fix a debt-paper to the land. Very ordinary they are. Very unimportant."

Nengah folded one hand over the other, gripping it tight before she objected: "A debt-paper? But none has ever yet been put on our land!"

"Oh, yes, but you can explain it to the ancestors in your prayers. Yes, surely! You do it all for the family, don't you?" he pressed. "And the debt-paper doesn't go to an ordinary money-lender, you see. But to a friend, a long-time friend, a true heart-knowing friend. . . . Did you know that, Ni-ktut Nengah? Did you know I was that friend to you? Heh! Heh!"

He laughed so modestly, and then in a minute his face was grave, and he was saying: "The debt-paper postpones your marrying, oh, yes! Maybe a half-year, maybe—for a husband could not take on your debt, naturally. Unless"—he coughed behind his hand, and whispered—"unless I were that husband."

Nengah's eyes flew open, but she only stared at the floor.

"Heh! Heh!" he chuckled. "Who knows? That poor woman of mine will not last always with the sickness that is upon her. No, I shall be a lonely widower before long. . . . And who knows what might happen?"

Even then Nengah did not look at him with horror. She must not show him she understood his dirty guilt. Else the memory of the look would always be shaming him, making him lose face, making him a double enemy.

"Last night the Village Elder asked if"—he spun the words slowly, "if your namestones were carved yet. Already the widow Nanga's are. Likewise the maiden Tehmah's. They whose men were lost in the same boat as yours."

There was only one thing to be said. Nengah said it:

"Let my father's and my brother's namestones be carved. On Candle Night, either I pay you in silver, or I sign the debt-paper."

Nasiman was slipping his feet into his sandals at the doorstep and straightening from his bow when he said: "You batten the house tight for the changing-monsoon storm, don't you? You open the paddy dyke so storm water won't flood it, don't you? You are careful of this good land, I hope!"

RUNNING her proa through the surf at dawn, Nengah thought it was like a chalk drawing on slate—white waves scratched on a hard gray sea, white spray scratched on a hard gray sky. And in the wind she could hear the voices of many ghosts, sobbing through the palms, whimpering over the dunes, gabbling with the crazy waves, but not angry yet, not raging.

She heard the roar of the surf as she went pounding through it, and wondered why it was so hollow. She heard the roar far out as she leaned over her fish-tail oar, stepping to push it, stepping to pull it. The heavy proa slapped over the curling crests, slapped into steep chasms, and the incessant sound of wood rubbing wood was harsh and loud as the oar turned on its rollers; and yet above all this was the hollow roar. It came from the sea ahead and behind; it even came from the sky. The storm was near.

There were no birds about the reef, no boats anchored there; only the jagged black rocks, and the long brown weed

Ah, o ut was—the ghosts of men who swarmed on idir pleading for a bucket O she would give them

the bucket. Yes, yes, she who had one whole piece of silver on her trident and weed enough to buy the namestones now.

She would give them a strong new bucket. But slyly, slyly, she must punch the hole first, so the bucket would leak. She knew better than to give drowned ghosts a whole bucket to bail water into her boat! She was not a fisherman's daughter for nothing. Well she knew drowned men could redeem themselves from the sea if they could but drown another in their place. "The bucket," she cried, as she tossed it far into the waves. "Take the bucket! Use it well!"

The screeching wind picked the boat up and hurled it headlong into the waves. Nengah's hand was torn from the oar, and she felt herself slipping, sliding on the slimy weed, not knowing whether she was still in the proa, until her feet caught against the bow thwarts, and she could brace herself there against the wild water.

When she had the breath to do it, she crawled back and tied herself to the oar. Lashed that way, with her body to steady it, the oar was a rudder. The wind would drive the proa onto the beach—if waves did not snatch it back, if drowned ghosts did not catch it in their arms and carry it down, down. Nengah hung there, saying the prayers she knew, blinded by the wind, suffocated by the water, while ghosts rode the waves, closer, closer. . . .

Nengah did not know the hands that grabbed her from the surf, nor the hands that carried her up on the beach to unlash her small child's body from the broken oar. But somewhere in the tumult of wind and wave and rain, she heard a strong man's voice say: "This one is wife material, even though boat and weed are lost."

"Aye! Aye!" other voices said.

"This proving of hers brings merit to us all," the strong voice said. "It is only just that our village should help her pay for her namestones now."

"Aye, wife material indeed!" the other voices said.

"Wife material! Wife material!" the ghosts in the wind screamed up into the valley, and beyond, and beyond.

THE END

Arslon ought to have to pay more than the usual towing charge"

DAVID B. HUFFINE

"IN HOLLYWOOD,

YOU GOTTA HAVE POLISH!"

JOEL McCREA starred in the Paramount Picture **"The Great Man's Lady"** says: "Even when an actor's role is that of a diamond in the rough, everyone expects his teeth to be well polished!" With screen standards so high, it's a mighty fine tribute to CALOX TOOTH POWDER that so many stars use it.

WHAT STARS KNOW is that glossy, fine looking teeth contribute to an appearance of glowing health and energy. Reason enough for everyone to select a dentifrice carefully. Read how Calox both cleanses and polishes...

A DENTIST BEGINS by cleansing teeth—then polishes, for lustre. The Calox formula is based on the same two ways to whiteness. Your dentifrice should be more than just a brightener. Try Calox—note the difference!

Two ways to WHITENESS

*your dentist follows both!
so can you—with Calox*

Notice your dentist's technique when he gives you a dental cleaning. First, he thoroughly cleans your teeth. Then, and only then, does he polish them. In your home care why be satisfied with less than BOTH cleaning and polishing, when you can get Calox?

Calox gives you not one or two, but five special ingredients for cleaning and brightening. With every stroke of the brush, Calox helps detach food particles, removes deposits, cleans off surface stains. Your mouth is stimulated, refreshed. And with every stroke Calox polishes, too, making your teeth shine with their own clear, natural lustre... In Hollywood, many a star trusts to Calox-care. Try Calox for your smile!

We Win Our Wings

Continued from page 21

replied the instructor noncommittally. It hadn't.

There were the three aviation cadets who, flying in formation, tried to roll their wheels on the top of a passenger train. They turned in their flying suits by request. There was the student at Orangeburg, South Carolina, who got sick in slow rolls; and there was the R.A.F. youngster in training on an American field who went to pieces when he came to the conclusion that his girl back home had jilted him. The boy who got sick was busted out. The Britisher recovered to become a crack flier.

The mysteries of elementary flying reduce to this: If you refuse to learn right you will bring up against a mountain or your airplane will spin in from a low altitude. In either event it will separate itself into small particles which are difficult to piece together. The same kind of foolishness leads a man to walk in front of a truck against a red light or to sass his wife on wash day.

What a Going-Over!

To become an aviation cadet you march into an Army or a Navy recruiting office and say to the man behind the desk, "I should like to become an aviation cadet." The man will be pleasant and will ask you to fill out a form. He will arrange for a physical examination, and don't let anybody tell you that the working-over the Treasury Department bestows each March 15th on an income-tax return is any more thorough than that given you by the medicos. Your heart must tick properly and your vision must be somewhere near what the doctors call 20-20. Your reflexes must measure up and your reaction time must be short.

Then you will be given what the psychologists call a "screening" test. A high-school graduate who did not cut classes consistently to see Lana Turner at the corner movie can pass that.

At this point you will begin wrestling with your soul. War or no war, the Army's wheels, like the Navy's, grind slowly but exceeding fine and the boy who hasn't patience is out of luck. A candidate for air training waits around home, waits around his replacement center, and waits, once he actually gets his hands on an airplane control stick, for months, to get his wings pinned on his uniform. The Air Corps is getting plenty of potential pilots. That accounts for part of the waiting around. Things got so bad at the Maxwell Field replacement center in Alabama recently that they had to telegraph recruiting officers to dam up the flow of young men at the source. They didn't have a place to bed them down.

Army and Navy training methods are so much alike that we won't distinguish between the two services in describing how you can win your wings. Both have a period of indoctrination. This eliminates the inept, the faint of heart and the foolhardy. Both have two additional training stages. Both drum incessantly on precision. Both flunk a man if his flying technique is a danger to himself and his fellows.

Suppose you are an Air Corps cadet. You will get another physical at the replacement center. The center is a sort of traffic-control office from which cadets are sent to primary-stage fields. You will be handed a paper-bound booklet which fits snugly into your breast pocket. It will tell you that in cadet jargon a bird dog is a fellow who cuts in on another's girl and that the squadron commander's plane is known

as the washing machine. You will be admonished that an aviator and a gentleman have some trouble in common: the big explosion. Cadets who neglect the value of a dollar living beyond the \$75 a month the government gives them for their ice-cream-soda habit, and an officer pay.

You will get "gigs," merits, for infractions you will get calisthenics, discipline, skull sessions in elementary aerodynamics. One fine day, you and you will be off to primary field of flying.

You won't get that Army knows it. It lets them around for twenty-four takes them aloft. The night be out of bed before eat a breakfast designed with a fourth of your 3 the day. The biscuit snacks to the flying line and midafternoon.

In jacket, helmet selected from the forty wearing apparel issued government, you will be the field, and there, will be dozens of train their propellers making the early morning light room you will don a parachute. You will be an instructor, a man than yourself. He knows Remember that. It mess of trouble in the

Your instructor will and-Hyde personality.

As you get indoctrinated, reports will
begin piling up on you in the office of
the director of flight training. They
may read:

"This student has been weak in all
phases of his work. His technique is
unsatisfactory. He restalls continually
on stall recoveries."

Or, the seal of approval: "Co-ordina-
tion perfect and airmanship thoroughly
satisfactory."

Or, lightly critical: "A good sense of
speed and distance but slow on sig-
nals."

Between sessions aloft you will study
tactics, gunnery, meteorology, naviga-
tion, and airplane and engine construc-
tion and maintenance in the classroom.

The Old "Thrown Stick" Gag

Between flying and classroom work
you will do a lot of hangar flying, which
is cadet lingo for talking shop. You will
be told the old one about the instructor
who couldn't for the life of him make
one of his students land the airplane.
So on the next trip aloft he carried a
spare control stick. A stick is as dis-
pensable to a plane as a steering wheel
is to an automobile. When the student
squared away for the approach to the
field, the instructor waved the spare
stick over his head and pitched it away.
Now the student would have to land
the ship. But the student, obeying sig-
naled instructions to the letter, tossed
his stick overboard too.

Cadets like that story because, you
see, the student had been tipped off
ahead of time. The stick he discarded
was also a spare.

You will have long arguments over
what makes a good flier. Americans
make superlative fliers. The United
States has a peculiar treasure in its
young men. Its genesis is Detroit, its
end-product a practiced accelerator
foot. The boy who pesters his father

The new Breezewood Pipe

\$1.00

America's hitherto untapped resources yield a pipe that is astoundingly light in weight!

Again the soil of America has proved its incredible richness! Deep in the heart of the Great Smoky Mountains of North Carolina a virgin forest of finest pipe burls has been discovered. Hitherto untapped, along Horse Pasture River and around Piney Knob, is a native forest possessing pipe-burls of astonishingly light weight. Pipes cut from this beautiful "Breezewood" weigh, on an average, less than an ounce and a quarter, complete with mouthpiece. Hold one of these marvelous new American Breezewood pipes in your own hand, today, at your tobacconist's. Buy one: discover America's great contribution to your pipe smoking comfort—Breezewood!

No wonder they were astonished! They all guessed too high! Actually the astounding new Breezewood pipe weighs, on an average, less than 1 1/4 ounces. In all traditional shapes, at your dealer's.

Free your hands for other tasks

The new Breezewood pipe is so light, it's pleasant to keep it in your mouth. Breezewood doesn't fatigue you when driving, fishing or whenever your hands are busy.

Copy, 1942. The Breezewood Pipe Co., 630 Fifth Ave., N. Y.

gram. The boy is getting acquainted with things mechanical.

What makes a good flier is still a moot question. Flying is more an art than a science, and a lack of co-ordination is the principal reason aviation cadets get busted out and retire to their quarters fighting back the tears. They cry, all right. They are young, and these dregs are more bitter than any they have ever experienced. Sometimes temperament is the chief cause of a flunk-out. A student becomes sulky under criticism. A sulky man can't learn. An excitable student doesn't last long.

The students themselves are not sure what makes a good flier even after they are through primary stage. Their hardest job is exercising good judgment on a limited amount of experience. In no other field of human achievement are the dividends from good judgment as quick and pronounced as they are in the air. Things happen swiftly upstairs. A pilot has to think fast. It was judgment which enabled Beverly Howard of Charleston to land a tortured plane with broken wing ribs knifing through the fabric at a Birmingham air show. He eased the strain on the tattered wing. It was judgment which saved Jimmy Doolittle's life when a plane he was testing in Cleveland began to shed its wings. He hauled back on the stick, got a few hundred more precious feet out of the disintegrating ship and hit the silk—took to his chute.

Basic stage, or what the Navy calls intermediate stage, is to military air training what high school is to our educational system. You will be graduated from a beginner's airplane, as gentle as the milkman's horse, into a faster, heavier, trickier machine.

You will find that the basic trainers run out of flying speed faster as you throttle back or nose up. They run out of airport faster when they are brought in for a landing. Additional gadgets stare back at you from the instrument panel. Just as the human body can stand the application of ice-cold water without flinching if the temperature is lowered gradually, so the aviation cadets are coaxed into increasing the tempo of their mental processes.

"We wondered," said a Navy pilot of the old school at the Opa Locka Naval Air Station in Florida, "whether these young men could handle the airplanes we asked them to handle. Why, I remember when some of the older men in the service actually objected to putting retractable wheels on airplanes. Said that was too much for a pilot to remember."

Speed Plus Precision

He blushed. He should have. Today's youngsters are simulating carrier landings at Opa Locka with planes at least five times as complicated as those of yesteryear.

Intermediate-stage students begin getting accustomed to the idea of speed. You will practice the same standard maneuvers you had in primary but now you are achieving more precision.

There was a time when the Army, groping about for perfection in its training program, separated the sheep from the goats in the course of the advanced training period. A man with quick reaction time joined the dive-and-zoom boys, the pursuers. The slower ones drew the coal burners, the lumbering bombers. Today it takes as fast an eye and hand to fly a four-engine Consolidated Liberator as it does to handle a Curtiss P-40.

The size of a man's bony framework does, however, have a lot to do with his assignment to certain types of aircraft. The width of the fuselage on a pursuit powered with a slender, cylinders-in-line engine is determined by the

width of an average man's shoulders. A mountain of a man won't fit.

When a student leaves basic stage in these times, he already is tagged for single-engine or heavier airplanes.

Lewin B. Barringer, the Army's glider expert, holds the national altitude record for sailplanes, with passenger—14,000 feet. He has a favorite axiom: When the wings feel like extensions of your own arms, you have learned to fly. By the time you reach the advanced and final stage of training, your reactions in flight ought to be as automatic as a congressman's smile in an election year.

You will have had two doses of the cockpit, of nine weeks each, flying an average of an hour a day. You will know how to get an airplane down onto a little patch of flood-lighted ground at night. You will know how to enter the limitless void of the sky and reach some point beyond the horizon without getting lost. You will understand how a man can keep an airplane right side up and on course, by reading the story in three primary instruments embedded in the panel before you. Then, as you enter on the final stage of your schooling, you will be conscious of the fact that only extremely bad luck will cheat you out of your wings. From thirty to forty of the hundred classmates you knew as fellow greenhorns were busted out in primary. Between five and six more out of that original batch were sent to the washout bay in basic. Only one will have his heart broken in the advanced stage.

In your eighty hours aloft during advanced training you will learn to tuck up your wheels on take-off and to let them down during a circuit of the field preparatory to landing. You will practice combat maneuvers. You will learn to describe a smaller arc in applying aileron and rudder to turn inside an adversary. Or you will be graduated into twin-engine transition ships against the day when you will be flying a Douglas A-20A light bomber or a Boeing Flying Fortress or a Martin patrol bomber. If you are being readied for a dive-bomber

assignment, you will ward in the pull-out momentary blindness force drains the blood.

You will stalk sleeve other planes, and ground objectives will orange streaks as you on the control stick. Army officers have a terminating the results ammunition is coated a distinguishing color the bullets penetrate.

The Proof of

You will learn the assault, support and when pursuits are sations. Those specks up thousands of feet way because a success carry the one-two putting boxer. And the planes up there is like in a football backfield.

When graduation d you will still be two h from actual combat. You will need that m as an officer at behind fields to make you a c.

Sounds tough, doesn't? But air training in the being taught to tou men.

For proof, follow Burma where outn fighters in the service Chiang Kai-shek ha enemy single-seater f boms. Follow the new where unescorted Fyir been chopping their wa of vaunted Zero purs news from the Navy's carrier-based fighters sent sixteen out of bombers into the sea seared scarfs of smoke.

Ask the Japs—in T THE E.

"This is fun—you'll have to take me knitting more often."

a Jap..
Heavy
Bomber!

HIGH school youngsters in New Jersey learn in their classroom to identify bombers by their silhouettes — because their modern-thinking, resourceful teacher is a Collier's reader.

In the highest law-making bodies in the land Collier's articles have been read into the record time and time again to further the formulation of forward-looking legislation—signal recognition by the people's representatives of the close relationship that exists between Collier's and the active American public.

Collier's early raised its editorial voice in a demand for Army direction of the civilian defense activities on the Home Front.

Alongside thousands of kitchen tables Collier's War-Time Food Chart dominates the headquarters for family meal preparation. (One food manufacturer bought 15,000 Food Charts for distribution to leading grocery stores.)

From every side the evidence piles in that the people of action on the Home Front find Collier's a never-failing source of information, inspiration and suggestion.

Editors and public speakers quote from it. College and school classes are taught from its text matter. Legislation springs from its alert editorial urge.

Collier's ace correspondents brought the war home to its readers vividly, accurately, when it was a thing far away. Collier's coverage of the Home Front is equally timely and instructive.

Leaders in the vast Home Front army of 130,000,000 look to Collier's for coverage of the war on all fronts—and particularly for help and guidance in the discharge of the duties that fall to the active men, women and children on the Home Front.

Have you read the Home Front articles in this issue? Germany's former Secretary of Economics writes "Why We Won't Have Inflation." U. S. Secretary of Agriculture Claude R. Wickard writes on food. Other articles tell what we're doing about forest fires, farmer-sailors, mining molybdenum.

CAN ADVERTISERS AFFORD SILENCE?

ADVERTISERS may well ask themselves: "Can we afford the luxury of silence — especially in wartime?"

130,000,000 Americans, schooled to a dependence on advertising as a part of living, look to the advertising pages today for morale-building news. Our victories right now are industrial rather than military.

Advertising needs to keep alive the great trade names of industry — symbols of American enterprise that will assure victory and energize the postwar world.

National magazines are made to measure for advertising's wartime job.

Collier's, we believe, gets a greater Reader Response from its millions of active, modern-thinking readers than any other multimillion weekly — and war has made that close liaison with its millions even closer.

do, hear Jap bomber, and the fighting planes of all the warring nations, flit across the ceiling of a high school in Newark, N. J. Pupils get about the same flash of them that they get of a real plane — and they can identify them. The unique supplement to modern education is Collier's. George F. Borone. He cut the plane silhouettes out of a recent Collier's "spread," and on lantern slides and projects them with a daylight lantern and an angled mirror.

ahan, Collier's staff photographer, made the unusual photograph of teacher and pupils.

War in the Woods

Continued from page 15

theirs—are worse than useless as fire fighters. There was a bad forest fire near Fort Dix, New Jersey, in 1941. Soldiers turned out to fight it and, according to Forest Service testimony before a Congressional committee, "were not only useless but a great many of them were worse than useless."

The fire menace, although it is most acute in the Pacific Northwest, really is a national problem because, despite all the moaning about "forest devastation," one third of the United States still is listed as "forested." In normal times timber grows faster than it is harvested, nationally, although of course in areas of heavy cutting the reverse is true.

The Department of Agriculture operates about 176,000,000 forest acres; the Interior Department runs 130,000,000 acres more. For years, the two departments have got along like a couple of strange Airedales, but this year they are co-operating to fight a common enemy.

A Law That Will Be Broken

This year's emergency, in fact, may result in some definite forest-fire-fighting campaign. Up to now, the National Park Service, the Forest Service, the Indian Service, various state agencies and private operators all ran their own individual fire departments in a highly individualistic manner. Occasionally one outfit would go to the aid of another, but not often. It still is against the law for the National Forest Service to fight a fire outside a national forest. But no one is going to pay much attention to that this year.

A forest fire has its own parachute corps. Old dry snags burn to the top, and flaming punk, borne ahead by the wind, starts new blazes, often behind the fighters. Fires in dry ground-cover—ferns, bracken, fireweed, moss—will travel as fast as a man can walk, and burning wisps are wind-lifted and carried far behind the line of grimy, weary men and kids along the fire lines.

But the Northwest has its parachute corps, too. In some sections, notably in Oregon and western Montana, chute fighters already are in action. The Forest Service developed this type of fighting—incidentally, later giving tips to the Army when the Army started organizing parachute battalions. Forest chutists equipped with a few tools and radiophones can be dropped near a fire a few minutes after it's reported, and they can land in trees if they have to. Service records show that a fire costing, say, \$1,500 to put out with a ground crew, can be put out for about \$400 by using parachute smoke chasers.

For these chutists, the State Forest Service of Oregon has developed the world's smallest and lightest two-way radiophone. It was built in the Salem laboratory by Bill Sanders and Grover Schaadt; it's about the size of a cigar box and weighs three pounds, thirteen ounces. A chutist, descending near a fire, can talk with a headquarters as far as fifty miles away.

Burlap chutes are used for dropping food and tools to ground crews in hard-to-get-into territory, even crates of eggs going down this way for fighters' breakfasts.

Forest blazes start from many causes: Tourists flip cigarette butts from cars. People who are sore at lumber companies or the government set grudge fires. Beekeepers burn over tracts so that fireweed will grow—fireweed honey being at a premium. Campers forget to put out their fires which smolder along for days. Sparks from woods shacks and locomotives get in their work. And there's lightning.

The general fire-fighting setup in the timber country is modeled after that of a city department. When a plane or a mountaintop lookout flashes an alarm, six-men crews go in to fight the blaze—by plane, by truck or afoot. The first crews to reach the scene radiophone back if they need help or supplies.

If the fire grows, other crews are moved in with their equipment. Farther

veteran fire fighter, thinks
—the native variety—
cause even a firebug has
ism somewhere and be-
be fire intensive watch-

ing. But no one is taking any chances;
every lookout is manned.

Timber states for years have been
educating their own people about the
forests. A typical example is Oregon
where Forester Nelson S. Rogers has a
mobile sound-movie truck—called the
Showboat—constantly in action, show-
ing films to schoolchildren, farmers and
service clubs.

If you're out in the timber this sum-
mer—whether in Connecticut or South
Carolina or Oregon—and find a fire, re-
member that fires tend to climb slopes.
If it's a small blaze, you dig a shallow
two-foot-wide trench down to mineral
soil in front of it, and then patrol this.
If it looks too big to tackle, beat it for
a phone and call the fire warden. In
timber country the phone girl will know
who he is.

One important thing: Don't try to
backfire a blaze unless you know how.
You can easily make things worse by
doing it the wrong way. Backfiring isn't
much good in the heat of the day but if
done properly it works well at night or
in early morning. The theory is that if
you set small fires ahead of the main
blaze, the heat generated by the main
fire will draw in cool air and so pull
your backfire toward it, creating a strip
of scorched earth and so stopping the
fire. Although water may be available
for fighting a timber fire, fighters can't
count on it. In many cases portable
pumps and long hose lines can be used,
but not always. So the classic method
is to starve out the fire by destroying
its fuel. That's a good thing to know
if you're going into the woods this sum-
mer. When touring in timber areas take
along an ax, a spade and a bucket. For-
est Service men won't let you into most
areas unless you have this equipment
and they may bar you from other areas
altogether this season. Most camping
grounds will be fireproofed and it's a
good idea to stick to these if possible.
You had better obey the fire laws about
smoking and tossing away matches too.

Army and Navy are off to the wars
overseas but the timber country has a
grim battle on its hands—a battle which
if lost could have more disastrous pos-
sibilities than it is pleasant to imagine.
But the timber country has the gray-
beards and the women and the kids—
and it is going to fight the battle the
best way it knows how—figures it's go-
ing to win, too.

THE END

"the rubber shortage beginning to tell,
hic! Just look at this feller's tube!"

SEN 8078

Half your horse-power at 40 M.P.H.

DID YOU ever know that at 40 miles per hour on a level road, half of
the horse-power developed by your automobile engine is used in over-
coming friction inside your motor?

Competent automobile engineers will verify that fact.

That's why it's so vital for you to keep a slick wall of oil on all moving
parts of your engine—to reduce friction, to protect your motor's life, to
lengthen its service. All this is more important than ever, now that you
don't know when you can get another car.

Fleet operators know that friction and carbon are death on motors. So
when the Arrow Line operating five buses out of Hartford, Conn., says that
Macmillan RING-FREE gave them cleaner and smoother performance,
minimized inspection, cleaning and replacement; and gave them a gain in
gas mileage, you know RING-FREE proved itself on a basis of sheer merit.

When the Shanmac Company, excavating con-
tractors of San Francisco, by using RING-FREE,
were able to operate their shovels for 4,000 hours
without an overhaul, this experience led them to
standardize on RING-FREE for all their equip-
ment—trucks, cranes, draglines, and pull shovels.

From one end of the country to the other, in automobiles and trucks and
taxis and stationary engines, in tractors and buses and Diesels, Macmillan
RING-FREE is reducing repairs, saving on operation and maintenance
and prolonging the life of motors.

Its use is based on sound business judgment with these industrial users.

Isn't there a vital significance to you in maintaining the life of *your*
own car in this better lubrication provided by RING-FREE?

Our Fighting Me

Newest aid in Kelly Field's difficult celestial navigation course is the Hagner Planetarium, used to give cadets a complete picture of the celestial sphere. All fields will soon have this equipment

HONOLULU, T. H. The boys in this biggest U. S. Army garrison and Naval base have whipped up plenty of envy over the luck of the lads who, leaving the West Coast in transport convoys for undisclosed ports, have wound up on the Australian and New Caledonian fronts instead of on the Rock of Oahu in Hawaii. The greatly strengthened garrisons at Schofield Barracks and elsewhere in the Islands are hoping for one of two things (or maybe both): either that the Jap invasion fleet comes over the horizon so that they can get a crack at it, or that the American Fleet shoves off from Pearl Harbor for Old Honshu. If the Nips come the boys figure they're ready; if not, they want to light out for Tokyo at least before the gents from Darwin do.

HARD-BITTEN muleteers of the Hawaiian Pack Train, Mountain Detachment, report back from the high hills of the Koolaus and Waianae that in the outposts and lookouts the main topics for sessions over the mahogany have to do with ways of defending a tropic beach with some strands of barbed wire and a few machine guns, grenades and mortars. Having studied the terrain for months, the men know how. One of their classics is the new epic tale of the last defense of New Britain's Rabaul by 1,300 Australian troops against an invasion fleet of 20,000 Japs. The enemy came ashore at night in landing barges and the Aussies let them get into the shallows and barbed wire before letting go with concentrated machine-gun cross fire. The Japs piled up in six-foot windrows of dead on the wire and the slaughter continued for days until the Aussies, so exhausted they couldn't fire another round, faded into the swamps and trekked overland through the jungle. Of the 1,300 defenders 700 finally reached New Guinea. That sort of fight won't be repeated here, the boys in Hawaii say; but they cite it as an example of tropical warfare.

ARM Y Engineers have been transforming Hawaii's face so that old-timers hardly recognize the place. Military roads now go where only goats ventured before, and the Engineers have bridged gorges and constructed gun emplacements, barricades and other defensive strong points. In their spare time they practice grenade tossing and bayonet technique, and they work with guns on hips, all set to fight at the drop of a pick.

IT WOULDN'T be a fighting force if there wasn't the customary amount of beefing, but nobody is really morose. For a while, there were lengthy disruptions in the mails and delays in getting supplies from the coast, although there were no serious shortages. When the cigarette stocks ran low the boys smoked cheap fags originally destined for the Philippines and side-tracked here. Liquor is back in rationed lots but the men have to do their drinking at public bars; regulations prohibit them from buying at retail stores for home consumption.

So that pilots may know wind velocity and direction at each 1,000-foot level up to 14,000 feet, a balloon filled with hydrogen is released each day at Randolph Field and its behavior checked with a theodolite

sumption. Out in the at the outposts have a substitute made from pineapples (sugar isn't incidentally), and all they've discovered the trick of what to do with coconut left in the ho it and drink the milk

Pull Yourself Together

Continued from page 13

finicky as an Army officer about it. Shoulders flush with your own. Sleeves exactly the right length. Jacket never so tight it draws when you button it. Skirt snug at the waist, hanging straight all around—no ugly cupping in the rear. Ready-made clothes are sized miraculously well but there are bound to be differences between you and a regulation size. Pay for a fitting at the store or go to a good tailor if you haven't the necessary skill with tape and needle.

To keep tabs on each garment, military precision in your closet is a help. "All clothes hanging on the racks behind each bed," writes a soldier reporting on garrison inspection, "must be entirely buttoned, facing the same way and in the same order. Overcoat on the right, then raincoat, fatigue uniform, dress jacket, shirts and trousers." A sure giveaway to the inspecting officer, of missing buttons, bedraggled shirts, unpressed uniforms.

Now that your own wardrobe is fined down to essentials in the same fashion, marshal it for your own inspection and let nothing get by that isn't in perfect wearing order.

New Techniques for Glamor

Yes, you do have extra problems. Hair, for one. The time it takes a man to shave, you could spend wielding a brush to polish your hair. You could have it cut and set only in the way it is most likely to stay put. Keep it really short and trim, if it's the all-over short haircut beginning to crown those newest, most photographed glamor girls of the day, the girls who work in war industries.

If you stick to your longish bob, try a hairnet to hold the ends in shining, beautifully brushed order. Wear heav-

ier, snoodlike meshes, when your job is too wind-blown for a hat.

Put your make-up on to stay and you won't have to be dabbing all day long. A powder base first, as light as you like. Then powder patted on with a fresh fluff of cotton, the excess is then brushed off. Lipstick smoothed on, powdered over and blotted with a piece of tissue.

There are tricks to putting on nail polish to make it look smoother and last longer. Buff your nails first, and the polish will stick better. Two thin coats last longer than one heavy one. Drain your brush on the neck of the bottle to cut down on the amount you use. Then over the color, put a third thin coat of clear polish, bringing it just under the edge of your nail to seal the works and prevent chipping. Your nails will be moderately short—no talons today.

Don't think stocking shortages will make bare white legs any prettier on the streets. Cotton, rayon or a smooth, even tan (on a smooth, young leg) will give the right finish to your good looks. A quick way to the latter is a make-up that goes on flatter than any nylon. Of course you've done the necessary hair-disposal act first.

It's a steady job of homework ahead, to keep yourself and your wardrobe on the ready. But as your wardrobe becomes smaller and simpler and better organized you're in for a happy surprise. No more going to the closet and finding not a decent stitch to wear. You can hop into anything you find there and know you'll be looking your best. Gives you assurance. You'll discover you actually spend less total time on yourself and get a bigger lift for your efforts. You'll match the boys in looks and in the swing of your self-assured step, too. You'll tell it right back to the Marines.

THE END

"How soon do we learn to operate?"

It's Loaded, Mr. Bauer

Continued from page 12

His eyes met Winslow's, and his sallow cheeks flushed. Winslow said, "that was rude of me at it."

"It is yours. I beg you to take it," Señor Lopez said, "it is yours. I beg you to take it."

A pretty custom of South American convention of offering gifts, their houses and their things, though it was a gesture not to be lightly accepted. Winslow found himself a señor was too kind but could not accept.

"Very bad with names and excuses," he said. "If I have met you before, excuse me."

Lopez took a step forward, his hand on Winslow's.

"You are not, Mr. Greene. I am not."

Lopez's hands were swift and he pushed his alligator-skin pocket into his pocket. "I'm secret about a political party. My floor is your floor."

OW still could think of nothing but in the pause that followed that Señor Lopez wished something.

nothing you have done, my only something that may in these days this is such an age, and what a time it is to be here. "I'm glad that I'm here."

Apparently waiting again to say something.

"You know in these days," Lopez went on, "the harder it is to be here."

Winslow said slowly, "I am a natural geologist at the Boca Grande. It won't be hard for me because I don't know any-

one's teeth flashed in another man's going to ask you a question to worry about."

"I can't help you," Winslow said. "I'm leaving here to-

Señor Lopez nodded. "For the world there are snakes and lizards and little fish with their jaws asking you to do something in case something hap-

pened to Winslow rather unfairly. "Maybe you'd better first," he said, "just what is the matter?"

Lopez tilted his head slightly to the side. "It is not difficult," he said.

"Think before you leave," he said. "Two gentlemen may be waiting for you, either of whom I think you should look startled. They are waiting."

agging. One of them was Mr. Gruber, and the other one was Mr. Martinez, a most polite man and finally a Señor Marti-

must have been very early before Winslow could see Lopez had noticed the expression. So he added, "I'm already?"

his head.

Lopez's voice grew silkily, be-

soft. "Then you have heard me do not think me im-

low said. "Mr. Bird—a minute ago."

Lopez owned. "Of course," he said. "It was dull of me to have

they will talk to you

because perhaps Mr. Bird cannot answer their questions. If they see you it would be a kindness if you should tell me. I ask it as a favor of you, please. It will be nothing that can do you any possible harm. I am in room four-ten. Knock on my door at eleven o'clock tonight."

"What's the matter with them?" Winslow asked.

Señor Lopez did not answer directly, but his forehead wrinkled thoughtfully.

"Have you a minute?" he asked. "Then let us sit down, Mr. Greene." He waved his hand toward a shady corner. "The clerk is one of our men, and it is still early, so we shall not be disturbed. I have been thinking—your work and mine are very much alike."

Señor Lopez was being most agreeable. His slender hands moved as though he were modeling a figure out of the space between them.

"We both look for things we do not see," he went on. "You search for a vein of gold-bearing ore. It pinches off; it shatters; it appears again. I search for another sort of vein, also in the dark. I have been once in the Boca Grande mine."

"Oh," said Winslow. "When was that?"

Señor Lopez's hands were moving again in little curves and arcs. "There was a man we wanted there some years ago. You may laugh at me, but the dark, the foul air, the stillness down there made me very much afraid—those miles of passages leading nowhere, those ladders leading up and down from different levels. I learned how you follow the vein wherever it might wander through the rock. I learned how men die following it when the galleries cave in. I saw where the vein would lose itself. That's why I say we're alike."

"I see," Winslow answered. "What are you digging for now?"

Señor Lopez's hands ceased moving. "I don't tell you," he said, lowering his shoulders in an elaborate defeated gesture, "because I do not know. I see a little mineral here and there but I am working in the dark. There is something happening among people here and I have been sent to watch. I cannot understand what it is they wish, but may I ask a question? When you came down the river, did you bring gold with you—gold from Boca Grande?"

There was a moment of silence, and Winslow smiled faintly. "I'm sorry," he said. "I don't know you well enough to tell you that."

Señor Lopez laughed, and his laugh was completely good-natured. "You are quite right," he said, "but I should be very grateful indeed if you were to tell me tonight if anyone else should ask you that same question—say Mr. Martinez or Mr. Gruber. There is something here which is hiding, my friend—hiding like the gold beneath the earth."

His voice was casual but it made Winslow sit up straighter.

Señor Lopez rose and held out his hand. "And now I must not keep you. You are going out to the ship."

"Just how," Winslow asked him, "do you know where I'm going?"

Señor Lopez laughed. "Where else would a citizen of the United States be going so early in the morning? It has been a pleasure, Mr. Greene."

IT WAS eight o'clock by then and the streets of Santa Rosa lay shimmering in the brilliant morning sun. The newsboys and the vendors of lottery tickets and the sellers of cakes and oranges and

poisonous-looking colored drinks were crouching in the shade of the buildings. An autobus rushed down the street with its horn blowing continuous blasts. Down by the customs dock the glare from the muddy water of the river made Winslow blink his eyes. The ship lay in midstream with her ladder down, and the lighters were already clustered about her to take off her cargo. Winslow was glad to get beneath the awning of the little motor launch that was waiting.

THE promenade deck of the big ship gave him an immediate sense of luxury and comfort which no travel folder had ever adequately described. He could see the profusion of food in the dining saloon. The deck chairs were out, ready for reclining passengers. The vendors of souvenirs were already aboard, squatting beside their sales displays on the deck. There were the usual Panama hats and bits of antique brass and the hide of a huge boa constrictor for sale, and pathetic imitations of Indian bows and arrows. Those tawdry goods were all that most passengers would ever know of that country where the ship was anchored. A few travelers who were examining the Panama hats looked up at him. They knew he was not one of them. They knew that he lived there and they must have wondered what he was doing.

"I am looking for Miss Simpson," he told the deck steward. "Miss Henrietta Simpson. Could you send for her?"

The way the steward looked at him made him more self-conscious. "Yes, sir," he said. "She told me she was expecting someone from the Boca Grande mine."

Winslow Greene said that he would be waiting at the purser's desk and he walked down to B deck.

"Hello, Mr. Greene," the purser said. "Nothing to go in the strong room this time?"

Winslow had not expected the question. It must have been his talk at the hotel that made him apprehensive. It seemed to him that two of the customs guards were watching him curiously.

"I don't know," Winslow said. "I'm on a prospecting trip, not running errands this time."

"Miss Simpson's been waiting for someone," the purser said. "There she is now."

Winslow turned and saw a girl walking down the stairs. He never liked meeting women, even when he was at his best, because he could never think of much to say to them. He had hoped that Miss Simpson would not be pretty because a pretty girl always made him feel particularly inadequate. She was not the type he had expected at all to come from New York to work in the office at Boca Grande. She looked more like a magazine advertisement—graceful, cool and artificial. Her hair was a delicate blond, her eyes were wide and gray, and she wore a diamond bracelet—at least it looked like a diamond bracelet. She had on high-heeled slippers that were open at the toes, the last thing you could walk on, particularly on the cobble streets of Santa Rosa. She must have read about the tropics in Somerset Maugham, he thought. She had on a white dress and a little cape. He crumpled his hat in his left hand and walked toward her.

"Miss Simpson," he said, "Jim Walters—he's manager, you know—he sent me to take you off the boat."

"Oh," she said, and he thought she looked disappointed when she saw him. "Well, I'm all ready. Where's the mine?"

"We go to the head of the river," Winslow told her, "and then overland. About two hundred miles from here, the way we have to travel."

She looked as though she did not believe him.

"Oh," she said. "I thought it was right here. Well, my bags are locked and my trunk is up from the baggage room."

"A trunk?" Winslow repeated.

"Why," she said, "a wardrobe trunk, of course."

Winslow scratched the back of his head. It was a habit which he tried to stop but he always did it when he was embarrassed.

"That's going to be bad," he said. "You'll have to leave the trunk at the hotel and we'll buy some bags. You see, everything for the mine goes in on mules."

"But isn't there a motor road or a railroad?" she asked. "The travel folder says you can motor through the Andes."

"No," Winslow said, "there isn't any road. The mine's right in the middle of nowhere. That's where gold generally is—right in the middle of nowhere."

"Well," she said, "let's go."

Winslow hesitated for a moment and cleared his throat. "All right," he said, "the hotel porter here can take care of your baggage. But would you mind, before we leave, I'd just like to go up to the smoking room—"

"Now, that's too bad," she said and she smiled at him, "but the bar is closed in port."

Winslow stammered and before he could prevent himself he scratched the back of his head again. "I know, but all I want is just a little ice water."

"Ice water?" She gazed at him blankly.

Then they were sitting at a table in the smoking room, and Winslow sipped his tall glass of ice water slowly.

"That's awfully good," he said. "Sometimes I dream of ice water."

"I don't see that it's much to dream about," she said.

That remark of hers made him feel a little old and weary. "Of course at Boca Grande the ice is all right," he told her. "We have electric refrigerators and we use boiled water but you can't trust the ice anywhere else. Dysentery, you know. You see, this isn't a very healthy country." He looked at her uncovered blond head.

"Where's your hat?" he asked.

"Why," she said, "I haven't got a hat. They don't wear them much now in New York."

"Well," Winslow said, "you'll have to buy one of those Panamas on deck, then. There's the sun."

Then she looked at him the way other women had. "It seems to me you're awfully careful about your health," she said.

"Believe me," Winslow answered, "you need to be here. You can't get off this boat without a hat."

HE DID not care any longer what she thought of him. The truth was that she was not the kind of person who should have been sent down there at all, but it was up to him to look after her until next morning, to see about her baggage, to see about her clothes if necessary.

They did not speak for a while as the launch took them toward the customs dock. She sat gazing at the wharves and blinking at the glare from the water. The way her eyebrows were puckered reminded him that he must get her a pair of colored glasses. Her baggage was in the center of the cockpit. The wardrobe trunk and all the suitcases, down to the smallest one which looked like a jewel case, were new and carefully matched. Certainly no girl who traveled with baggage like that would have to work for her living. No woman in her right mind would have brought such baggage to Santa Rosa.

"I'm afraid no one told you what this would be like," he said.

must go up the river, of course. It's nice up in the Andes. It's like a different world. You get to like this country if you live here long enough."

"Tell me about Boca Grande," she said.

"Well," he said, "it's this way," and he closed his notebook. "Boca Grande is a pretty big mining operation. The mill there handles four hundred tons of ore a day. The mill and the main shaft are right on the side of a stream. If you want to, you can travel about ten miles underground but I wouldn't want to." He smiled at her. "The miners and their families live in most of the town. They have their recreation center and their houses, and then there's a company of soldiers stationed there. The Americans, the engineers and their families, live in bungalows on the side of the hill. There's a club and a swimming pool and we have dances on Saturday nights. Jim Walters is the boss—it's quite a job running that whole community, the store and the hospital and the machine shop. We all get on one another's nerves sometimes but everybody's all right on the whole. You'll be in the office typing reports and handling the files." He paused and frowned. "Do you know anything about doing things like that?"

She nodded and she looked happier. "The family were funny that way," she said. "They have an idea that girls ought to be able to earn their own living. Yes, I went to a business school one year. You mustn't get a wrong idea about me. I'm not as bad as I look."

"You don't look bad," Winslow said, and then he blushed. "I mean I've been sort of out of the way most of my life, so I don't know how anyone ought to look, really." He cleared his throat and went on hastily, "It isn't bad up there. It's sort of one big family. You get to know everyone pretty well after the rainy season."

"Do you think I'll like it?" she asked. Winslow cleared his throat again. "Well, I don't know," he said. "Maybe you'll find it sort of different."

"Do you like it there?" she asked.

"Well," Winslow said slowly, "well, no, but then that doesn't mean anything. I never was good mixing with people. You don't want to take me as a measure for anything. I'm more at home in the bush. I seem to get on better there."

"Well, I'm going to like it," she said, and in some way Winslow felt that they had become friends. "You'll be surprised. But you're right. I'll have to get some other clothes." She stood up. "Let's go out and get them now."

"All right," Winslow said.

"You don't mind looking after me?"

"No," Winslow said. "Why, not at all."

AS a matter of fact, he often thought how much he had enjoyed that morning. He felt useful taking her to the shops and arguing with the tradespeople. She had to depend on him so completely and he liked it. He liked it when she asked his advice. He liked it when she asked if something were becoming.

"Why don't you call me Henrietta?" she asked, by the middle of the morning. "It's easier."

"Why," Winslow said, "why, thank you very much."

"I'm glad you're taking me up there. It won't seem so strange."

Then he told her he wasn't taking her up there. "You see, I'm taking the plane at four o'clock tomorrow morning. I'm going to the east slope."

"Oh," she said. "When are you coming back?"

And he told her not for quite a while, not for a couple of months, perhaps.

"Oh," she said, "I'm sorry."

"You know," he said, "I'm a little sorry, too."

Then she did something which surprised him very much. They were walking along beneath one of those arcades, and he never forgot the place. It was just by a newsstand and a greasy little food shop. A row of donkeys were plodding slowly up the street. A boy was shouting a number for the lottery. When he told her he was sorry too, she turned and rested her hand on his arm for a minute.

"I'm glad I came," she told him.

"That's fine," he said. "I'm glad you're here too." He found himself blushing but what he had said did not seem out of place.

There were a number of things which he had planned to do that day but as time went on they did not seem important. He began to feel that there was something rare about that day, something which he could not afford to miss, and he began thinking how soon it would be over. He had always found Santa Rosa insupportably dull but for once it seemed to be a lively place. He had never realized that there were so many things he could tell anyone. He showed her the cocoa beans drying in the street. He showed her the warehouses on the waterfront. He showed her the river boat which would start with her the next morning, and he explained to her about sugar cane and balsa wood. They had lunch in the hotel dining room, and after lunch he told her she should rest for an hour or two because it was customary in the tropics. He was afraid that they had done too much that morning. He did not want her to be overtired.

"I'll knock on your door at five o'clock," he said, "and we'll go out to dinner. There's one quite nice restaurant in Santa Rosa where everybody goes."

HE LEFT her at the hotel elevator but as far as he was concerned he had no desire to rest. He crossed the lobby and opened the ground glass door to the bar-room, the latest addition to the Hotel Continental—a modern American bar with small round tables and soft lights. Four citizens of Santa Rosa sat about one table, dignified, almost austere, drinking French vermouth. At another table the local head of the air lines and the manager of an agricultural-machinery agency were shaking dice.

"We've got your place on the plane tomorrow," the air-line man said, and then he added, "Have you heard the news?"

Winslow shook his head and they asked him to sit down.

"It's this way," the manager said, "I was down at the British consulate this morning, and Bill, the vice consul—you know old Bill—"

With the exception of the Germans, every foreigner knew every other foreigner in Santa Rosa.

"Well, right when I was there, a code message came in. It was from their destroyer, you know, the Artemis. She was in here only the day before yesterday. When she left she ran down the coast to Lima. About dawn she sighted one of those coast steamers, about three thousand tons, heading right due west. It looked a little queer—a coast boat on that course. When they went after her she tried to run for it. She was full of oil. They got aboard her before the crew could scuttle her. Half of them were Germans."

He paused, glanced across the room and lowered his voice, as one did lately when one spoke of Germans.

"There wasn't any doubt about it. She was running out to that raider. You know—the one that's been off the Canal. The Germans are off there somewhere. Bill said they could spot that raider now if they only had some planes. She can't be far offshore and she's running short of oil."

deep and vast silence—the deepest and vastest silence ever experienced by a company anywhere assembled—settled over the street. Jim began to blow. . . . To this day no two men in that outfit have been able to agree as to what came out of that horn. But Jim himself knew it was the messiest Mess Call of all time, and right in the middle of it he took drastic steps to set things right. Abruptly dropping the bugle to the platform, he wiped the sweat from his collar and reached for his mess kit. Grabbing the canteen cup in one hand and the meat can in the other he raised his arms above his head and began to bang the utensils together with all the strength at his command, at the same time bellowing: "Last—call—for—chow!" It was Jim's first and last call and represented probably the briefest and most spectacular bugling career in the U. S. Army.

FORT CUSTER, Mich. Barbers at the Reception Center whetted their razors in glee the other day when the first two members of the House of David to be inducted showed up with full beards and braided hair, but Maj. Eldon M. Stenjem said George Anderson and Francis Buck, both from Benton Harbor, could cheat the tonsorial artists if they wanted to. The boys said they'd druther. Army brass hats have frowned upon beards in this mechanized war, on the grounds that hair in the gears is a

monkey wrench in the works. They're undoubtedly right, but a full beard and braided hair offer camouflage possibilities that should not be lightly considered.

FORT LEONARD WOOD, Mo. The boys here have to dig hard for an excuse when the people back home want to know why they haven't written lately. Besides free postage (compliments of Uncle Sam) they get free stationery and free typing service at the USO Center in Rolla. If somebody could contribute some self-sealing envelopes, even the most dilatory correspondent at the Engineer Replacement Training Center wouldn't have a leg to stand on. . . . Speaking of excuses, a soldier on furlough from Wood sent a telegram to his C. O. "My grandmother," read the message, "had a stroke and I would to get a few more days."

FORT DEVENS, Ayer, Mass. A new division from the Southwest had a hot time getting here. Orders were to leave all pets behind, but Sgt. Bill Ryan wrapped Missy, his outfit's pet water spaniel, in an overcoat and stowed her in a compartment with the company packs. When trainmen investigated, Missy went to work on them and it cost Bill eight bucks for damages—mostly for pants. . . . Other trainmen profited from the trip without suffering physical indignities. At one stop Corp. Walter

MP EDWARDS, Falmouth, as "King K" is the title of the 104th Infantry. K by the Yankee Division. During the past year of K's personnel have rung and sandy wastes of the woodlands of central Massachusetts. They sing all kinds of songs, marching, religious and they make up their own late pop tunes. "Before the day," says Sgt. Amen, "we used to sing on the street corner in North Adams of old-timers hail from, tried singing right into the h us. Makes us a closely

knit outfit. A year ago we got 105 new selectees from all parts of the state. Most of them hadn't ever heard of North Adams before, but ten days after they joined us we were all confined by a two-weeks measles quarantine; so when the new fellows weren't joining us in song for self-protection they were hearing about North Adams. I'll bet a foxhole that if an Australian blonde gets a chance to ask any of them the names of important U. S. cities the boys will tell her New York, Chicago, Boston and North Adams." Maybe an Australian blonde will get a chance to hear Co. K's song about coffee, too:

*The coffee that they give you
They say is mighty fine;
It's good for cuts and bruises
The same as iodine.*

ADD Yankee Division phrases: "Oh, my back!" means the soldier is surprised, astonished, or has received unpleasant or unbelievable news. When he "sweats it out" he's impatient and on pins and needles. "Like waiting for the wife to have a baby," one of the men explained.

GENERAL

BIG morale booster of troops at the front are the new refrigerator trucks being put into operation by the Quartermaster Corps. They'll go right up to the battle line with U. S. No. 1 frozen meats and vegetables as a welcome substitute for the canned foods some of the combat troops have been getting.

"I WONDER," writes a soldier from Fort Benning, "if you could give a guy a break and insert a few lines on my behalf as a sort of build-up to my old girl friends. You see, I was a pretty popular fellow with the opposite sex back home and I do all right here, too—but since I've been in the Army my girl friends keep riding me about how it feels to be without the company of the lovely ladies. I've been trying to impress upon them that I get along OK and am sort of a Glamor Boy in my outfit, but they won't believe me; so I thought you could print something to that effect without mentioning I asked you to."

FORT BENNING, Ga. There's a soldier here who's such a killer-diller with the ladies that the gals back home don't mean beans to him. "Our Glamor Boy," is the way his buddies describe him. Don't say we told you, but his initials are O. M.

OKAY, Bud?

G. W.

"WHO—ME?"

Not right now, sonny. But you just wait! This whole great country is going to be needing you. Say about 15 years from now, when you've acquired a little algebra, and a best girl, and 100-odd more pounds of bone and muscle.

"What'll it need ME for then?"

For lots of things. For jobs a great deal different and better than today's. You like airplanes, don't you?

"Airplanes? You bet!"

Well, we'll need you to fly them. Better planes than any we have now, flying higher and faster. They'll be safer, and the whole world will be safer, too, when you take to the air. We're determined on that, and we're doing everything in our power to make sure of it. What else do you like to do?

"Well, we're buildin' a clubhouse..."

Building! Just the thing! We're going to want your help with a lot of building. Houses, and the things that go into houses. Things like air conditioning, and better heating and lighting, and refrigerators. I tell you, you're going to be busy!

"Bu—but I like to PLAY!"

And you'll have some wonderful things to play with! Radio such as nobody knows today, and television, and the results of new research in electricity and plastics and electronics—things that aren't even imagined yet. Things that you'll have a hand in imagining, and then making real. And you'll find there's no play in all the world that's as much fun as helping to build the world of the future.

Yes, sonny, we're all going to need you. And we're all of us—fathers and mothers, soldiers, men and women of American industry—working and fighting right now to make sure that this world of the future will be a better world. A world in which a young man like you can find the fullest opportunities to work and build and play. *General Electric Company, Schenectady, N. Y.*

★ ★ ★

The volume of General Electric war production is so high and the degree of secrecy required is so great that we cannot tell you about it now. When it can be told we believe that the story of industry's developments during the war years will make one of the most fascinating chapters in the history of industrial progress.

Where Do They Go from Here?

STEEL man, 27 years' commercial experience U. S. A., Far East, Cuba, Europe; fine educational background, linguist, 42; owing priorities available on short notice as purchasing agent or similar job requiring initiative and ability. . . .

Management executive—Successful record in general management, both production and sales. 36 years old, college education. Now assistant to president large national manufacturer but available soon due to war dislocation. Broad experience in sales, marketing, accounting, merchandising, costs, credits, collections, advertising, office and production management. Competent administrator, balanced judgment, resourceful, capacity for vast volume of detail. . . .

Businessman, forced by priorities to liquidate; unusual abilities developed by valuable experience in manufacturing, executive, administrative fields; any location, moderate salary. . . .

These three "Executive Positions Wanted—Male" ads, picked almost at random from a metropolitan newspaper's classified section, are pebbles ground up out of an earthquake which has hit our economic system because of the war. They are also danger signals.

The earthquake has hit what is called, for lack of a better name, our middle class, or bourgeoisie—small businessmen, their managers and executives, jobbers, middlemen, contact men, salesmen. Their trouble is that the war is taking more and more of the raw materials and finished goods which these men used to process or sell in a peacetime consumers' market, and that not all these men can be fitted into our war machine. The WPB the other day at one clip forbade use of iron or steel in a batch of 400 types of articles manufactured in profusion before Pearl Harbor.

Especially hard hit are the salesmen, male and female—a group comprising more than 3,000,000 men and women. The specimen probably best known to you is your filling station man, if he is still in business.

Where do these people go from here?

The radical theory is that these people are useless parasites, who should be allowed to die or be absorbed in great, streamlined distribution cartels operated by the politicians without thought of profit—though with plenty of thought, we take it, of graft and favoritism. A lot of people who think that way are in powerful positions in Washington, working to bring about this change as a by-product of war.

Yet these middle-class people, by and large, have been our most valuable citizens. They had the courage and initiative to strike out for themselves, to refuse to become cogs in some industrial machine. Thus they sharpened their brains and developed their talents. To let them sink would be a huge waste of human resources, looked at from the coldest, most materialistic point of view.

It is, further, a little too much to expect these people simply to lie down and die quietly. The middle class was going to do that in Italy and in Germany between the two wars, according to the radicals' "inexorable economic law," or the middle class was going to be killed off. It didn't turn out that way.

"This is a wicked beast," said Voltaire, ironically. "When it is attacked, it defends itself" . . . and the Italian and German bourgeoisie rallied behind Mussolini and Hitler, and the two countries got Fascism. Very wicked, perhaps, but it happened. The cure latterly looks worse than the disease; nevertheless, the cure was tried.

The same thing can happen here, if our mid-

dle class is forced to the wall, threatened with destruction. They can rise up, promising these things, and they can find themselves ready a lot of would-be Hitlers. They are doing business in dark political and economic map.

Can't we short-circuit this process and possible violence?

How about some scheme to give workmen's compensation or insurance—some sort of protection every proper case a middle-class war pinch can draw, to keep them alive and paying the grocer, the tax collector?

It seems a cheap price to pay for this problem, in contrast to the wealth if not in blood of just let the class to sink or swim. We suggest a chance for some statesmanship order.

\$32,000,000 for the USO

THE United Service Organization in with its second yearly ap \$32,000,000 this time, as again 000 collected last year.

We think the USO deserves. Americans feel like giving it. For it is now functioning about as well as one could hope, and is doing good works which no other type do as well.

The latest USO activity that for example, is the setting up of an enterprising young lady for the USO, of a clearing-house for requests for letters from girls in magazines and newspapers have to handle effectively for lack of

Give the USO what you can, advice, and we feel safe in promising we won't regret it.

Wholesome Neglect

WE WAITED for years for a designated Typical American say something really Grade A was finally rewarded by the 19 lady is Mrs. William N. Berry, N. C. Mrs. Berry has had 13 children is what she says she did about

"I just raised my children. I gave them a lot of love and wholesome

What Mrs. Berry means, of course, she let her children be themselves, naturally, build up their own careers, with a minimum of supervision and advice. Her grown children are eminently good in various lines and show much promise.

Had Mrs. Berry smothered her children with solicitude and tried to do their lives for them, she would likely have drug up a flock of neurotics, semipsychopaths, hypochondriacs, a succinct explanation of how she as a mother is as shrewd and ill-used of sentences as we've seen in a days.

This is an American child.
This is an American home.

Lucky young American.
No child in the World has so bright a future.

We see her the Woman—loyal, helpful and smiling—with a Smile that owes much to her Lifelong use of Ipana and Massage.

ULD BELONG to no other country. In her
umnd up all the efforts and strivings of
—all our hopes for the future. If you have
ter be this, how proud you must be of
er destiny—proud that she can face
re in body and mind, confident and

milin! For this little girl knows well a
denal health that many grown-ups have
earn. Today, in thousands of American
ms,* youngsters are being taught the im-

, at request of over 85,000 teachers, Ipana
char, teaching helps and other material for
ntal hygiene classes in American schools.

portance of firm, healthy gums to bright teeth and sparkling smiles.

These young Americans know that today's soft foods rob our gums of work and stimulation. They know why gums tend to become soft, tender... often signal their sensitiveness with a warning tinge of "pink" on your tooth brush!

Never Ignore "Pink Tooth Brush"

If you see "pink" on your tooth brush... see your dentist. He may simply say your gums have become tender because of today's soft foods. And, like many modern dentists, he may suggest "the healthful stimulation of Ipana and massage."

Ipana is designed not only to clean teeth but,

with massage, to aid gums. Massage a little Ipana onto your gums when you brush your teeth. Circulation quickens in the gums—helps them to healthier firmness. Let Ipana and massage help you to brighter teeth, firmer gums, a more sparkling smile!

EVERY WEEK

YOUR RADIO-PHONOGRAPH
BECOMES MORE IMPORTANT
TO YOU!

...Here's how to make it last longer!

IN TIMES like these it will pay you to take extra care of your radio or phonograph-radio—so that you may get the greatest amount of service and enjoyment from it.

HERE are a few hints:

KEEP IT CLEAN!

CLEAN the dust out of your set occasionally—after disconnecting it, of course!—with your vacuum cleaner's hand attachment. Better yet, have a qualified Radio Serviceman go over it carefully at least once every year—cleaning it, readjusting it, testing tubes.

KEEP IT COOL!

ALL radios generate a certain amount of heat inside—heat that may shorten the life of some of the elements in the set, if it is not permitted to escape. Therefore: Keep the back of the set away from the wall by a few inches at least—to assist free circulation of the air. A radio placed against a wall may overheat!

TREAT IT KINDLY!

CHECK the set's electric cord and plug—be sure that the cord is not frayed, and that the plug fits firmly into the wall socket. Check connections on electrical appliances nearby: loose connections may cause noise and static. Check the aerial and ground wires for breaks. If you have an outside aerial, make sure it is equipped with a lightning arrester in good condition. Even small static discharges—not lightning—can ruin your set if it is unprotected.

REPLACE WORN TUBES!

ANY radio set will last considerably longer with reasonably good care and periodic check-ups. Tubes, of course, should be replaced without delay when they begin to weaken—for a thoroughly worn-out tube can occasionally damage other parts of the radio. Be sure to replace them with genuine RCA Radiotron, RCA Victor, or Cunningham Tubes... made for longer life by RCA!

ANY WEEK

BETWEEN aircraft plants we ran into Damon Runyon whose Mindy stories are among the numerous reasons why millions of intelligent people read this indispensable magazine. Mr. Runyon asked us to lay for all time the ancient story that he buys shoes by the dozen pairs and sends them to Mr. Hype Igoe, the New York sports writer, to break in for him. Mr. Runyon told us that he buys but very few shoes indeed; that those he does buy (one pair at a time) come already broken in and that anyway he wears shoes only because modern paving hurts his

bare feet. As for Mr. Igoe, Mr. Runyon said: "He broke in only one pair of shoes for me and that was many years ago when I had but two pair to my name. I did not ask Mr. Igoe to break them in. He volunteered—in my absence. Whether he broke them in properly I do not know. I never saw them again."

AFTER you've walked the concrete floors of your tenth aircraft plant, seeing warplanes being turned out like motorcars you begin to lose interest in names. Therefore it doesn't matter which assembly line it was whereon this happened. But we got to asking silly questions of the men and women who are making the planes which, as certainly as our name isn't MacArthur, will fetch this war to an entirely satisfactory end sooner than you think. Being somewhat shy we talked first to the men. We noticed that in almost every assembly line leader's crew there was a woman! We asked the first squad leader how he liked working all day beside a girl. "Well," said he slowly, "I don't believe in all these women working in aircraft factories. It won't work. They're not mechanically minded. You can't tell them nothing. But this little woman here with me, she's different. Smart. Best woman in the place." So we asked the second squad leader: "Nope," said he, "it won't work. Women weren't made to work on assembly lines. This here little girl who's working with me though, she ain't like the rest of 'em. Clever. Quick to catch on. Best gal in the place."

Still doubtful we asked the third squad leader. "I dunno," he sighed. "Don't hold with women working machinery, myself. Means trouble. But

now this young woman here with me, she's different. She's the smartest—" So we quit speaking to squad leaders on airplane assembly lines and were about to leave the place when a foreman accosted us. "I heard what you were asking," he said. "About women working on assembly lines. Personally I think a woman's place is in the home and you got all you can do to manage them there. But this gal I got working with me—well, I'd say she's one in a thousand. Quick as a flash, she is smart. But I wouldn't give you a nickel for the rest of them. Now this gal I got. Listen, mister—" But we waved him off and got out, hotly pursued by a four-engine bomber just leaving the finish end of the assembly line.

IN ARIZONA we met a gentleman named Robinson who had dropped everything to organize Less Gas for Congressmen clubs. Mr. Robinson told us that already thousands of our fellow citizens, porch-bound for the want of tires and threatened with further cuts in their gasoline rations, are longing for the day when their representatives in Congress drive back on new tires and with X cards entitling them to unlimited supplies of gas. He can assure us, he said, that the very sight of such a legislator will cause thousands of his constituents to cast their votes for the other guy. "If I were running for Congress this fall," said Mr. Robinson, "I would campaign from the back of a mule or, at best, in a buggy. All the congressmen I know have all the gas they need without X-card help."

SO WE joined Mr. Robinson's movement and rode into the desert to inspect a desert stove whereon our troops in the sand and cactus country heat their beans and boil their coffee. We're glad that Mr. Robinson wasn't with us because he might now be at some pains to preserve his patriotism. In the desert no firewood is to be had. Therefore the lads take a large can, lower it into a hole in the sand, half fill the can with sand and saturate the sand with gasoline. Touch it off with a match and there you are. It's a brain child of Major General George Smith Patton, Jr. It's called Hell in the Desert and is Pattoned Applied For. The desert does things like this to some people. W. D.

KEEP UP WITH THE WORLD

By Freling Foster

A unique orchestra of the Tonga Islands in the South Pacific is composed of twenty native women who perform without musical instruments, producing their symphonic effects by skillfully clapping and pressing their hands. With their large repertoire of melodies, they have played before white audiences in Australia and New Zealand.

Evidently, the oak seedling has a greater phototropic reaction than any other plant. It will definitely bend toward the light of a match held within three feet of it for only eight seconds.—By Vivienne Eisner, Dayton, Ohio.

Recently, a short-wave radio station, using the call letters DE-BUNK, started to broadcast a daily, half-hour program of anti-British and anti-Semitic propaganda. It purports to be hidden in the Middle West, but direction finders have located the transmitter in Germany. The announcers give themselves away by signing off at "(Censored) Central War Time" when it is Eastern War Time.—By Julian P. Cole, Arlington, Virginia.

A poll made among American poetry lovers in thirty-nine states revealed that the five best-liked poems, in order of their popularity, are: A Psalm of Life by Longfellow, The House by the Side of the Road by Foss, Thanatopsis by Bryant, Crossing the Bar by Tennyson and Trees by Kilmer.—By Frederic J. Haskin, Washington, D. C.

The only accident in American railroad history caused by a "passenger" turning over in his sleep, occurred a few years ago during the night run of a circus train. While in the throes of a nightmare, a sea elephant suddenly shifted his great weight and derailed the car.—By Gertrude A. Mohler, Toledo, Ohio.

One of the most famous encyclopedias in the English language pays its celebrated authors at the incredibly low rate of two cents a word. As an example, George Bernard Shaw, for a difficult article of 3,420 words, received \$68.40.

Through pipe lines today are able to ship thousands of gallons of gasoline to a city. The oil is pumped to a second and then to a third, simply by pumping the line in succession. The main line occurs and the operation remove their share of its prospective of its position in the "liquid train," by opening the valves at the first stop.—By William M. Baker, New York.

In reality, a haughty one forty-eighth of an ounce of bitters is one quarter spoon and the lion's share of a thing is one hundred percent.

Daniel Pratt was probably the most colorful and best known actor in New England before his death in 1850. He was long demented, this "can Traveler" could grandiloquent speeches, addressed numerous students annually, his arrival was a boisterous welcome a ration of a holiday.—By Powers, Sunside, New York.

The only live animal in Hollywood that have been African elephants with African scenes only six such animals in the United States. They cannot be rented, elephants have to be made to look like their cousins by wearing false ears.

A geographical curiosity of twin lakes atop a Flores Island in the While quite similar shape and separated by a wall of rock, their general appearance a paint, with one colored blue and the other red.—By Ruth Goodale, Massachusetts.

Five dollars will be paid for or unusual fact accepted. Contributions must be accompanied by a factory proof. Address: K. World, Collier's, 250 Park City. This column is copyrighted by Collier's. The National Weekly. Not to be reproduced without express permission of the publisher.

Wear on airplane tires is saved by the pivot mechanism of this cup-shaped turntable in use at Washington Airport

WING TALK

FLYING is still so young, romantic and adventurous that among pilots there has not yet developed a counterpart of the old sailor and his tall stories of the sea. However, that the day will come when ancient and retired airmen will spin yarns of the airways for wide-eyed grandchildren is forecast by a tall tale of the skies credited to Capt. B. C. Dickerson of Delta Air Lines, who flies out of Atlanta up Knoxville way. Here it is:

We got out of Atlanta on schedule one morning before daylight and headed for Knoxville. The weather (which was a military secret) had been bad for several days. We broke out on top at seven thousand, leveled off, and proceeded north. About twenty minutes out, the sun came pushing up out of the mist. We had a cross wind and drifted several miles east of our course which put us over around Clingman's Dome and Newfound Gap. This section of the mountains is quite popular for skiing.

We were busting along just on top of the overcast, when right in front of our nose a V-formation of ski jumpers broke through the overcast! We, too, were surprised, and since we were pulling more manifold pressure than they were, we did an Immelmann and got out of the way. Fortunately, no one was sucked up in the intake.

Several days later we heard that one was fished out of the Hiwassee reservoir, another ran the rapids of the Little Tennessee River, a third spun in, and the other two are still missing.

RECOGNIZING that tires for private and commercial aircraft will also be hard to replace, the engineering depart-

ment of Aero Insurance Un-
writers, one of a all ar
of aviation insur ice tra
which do much to kee vir
at a high level, app to
men to exercise the me

★ ★ ★

STAGGERING figures they were, on that fateful day when we heard them over our radios . . . 60,000 planes, 45,000 tanks, 8 million tons of shipping. Matching, in twelve short months, the strength that the forces of aggression took years to build. A fantastic goal—for anyone else but America!

Today, the men and women of American industry are proving that the task is not too great for their ingenuity, skill and energy. With grim determination, the weapons of Victory are pouring from the assembly lines. The war production pace is *ahead of schedule*. That's America!

In this united effort, the creed of Philco's soldiers of production is "More! Better! Sooner!" In the production of communications equipment, radios for tanks and airplanes, industrial storage batteries, fuzes and shells, we see Victory in the making. And more than that, we see the forming of *a new and more abundant life*. The arts of war that whip men's minds to desperate deeds of destruction leave a legacy to peace. The scientific achievements that men conceive in fury will be converted to a fuller, richer life for all humanity.

We see our part in that legacy now in the Philco laboratories, in the faces of our engineers . . . as we carry on with hope, inspiration and faith in America's future.

Free Limited Offer . . . While available, a full size reproduction of the original drawing by Carl Rose will be furnished gladly upon request. Simply address Philco Corporation, Philadelphia, Penna., and ask for Cartoon Number 5C.

PHILCO CORPORATION

America is conserving its resources for Victory. As you save on sugar, rubber, gasoline, and all products of peace-time consumption, remember too to preserve the use of the things you own. Through its national service organizations, Philco offers, at reasonable and uniform charges, the means of prolonging the life of Philco products.

U. S. Navy vs. the U. S.
The complete history
every hort war which was
hans down by Seaman
and Fireman Dunnevan

U. S. Destroyer Trimble, hav-
sunk one Japanese submarine
possibly a second in the waters
Hawaii and the West Coast,
oped to San Diego bay to take
some more depth charges.
Seaman Lin and Fireman Dunne-
van, their dingarees dirty and their
bowls salty, were sharing one of
t newspapers to reach the ship.

"Don't talk whilst you read, Tim!"
said Seaman Linn, sharply. "An' quit
snorting in my ear!"

"Yerse . . . but, Benny?"

"Yeah?"
"Why ain't you a hero? Why ain't
your name in the paper? Dint the
Skipper say you done good to hit that
Jap pig-boat?"

This brought a resigned shrug from
Seaman Linn, the brain of Force and
Brains, Inc.

"A unidentified U. S. destroyer is all
it ever says, Tim. This man's Navy is
too busy fighting a war to brag on itself.
A U. S. sailor would hafta swim over
an' capture a Jap sub single-handed to
get in the papers." Then, remembering
to be modest, "Besides, I wasn't the
whole gun crew. I was only a pointer."

"Lookit, Benny!"

"Now, what?"

"Right there . . . in the paper . . .
see? 'ARMY MEN CITED FOR BRAVERY IN
FAR EAST BATTLE' . . . Lookit . . . three
of 'em. Gener'l Haizlip . . . ain't that
old Fuzzy-Wuzzy?"

Seaman Linn stared at the newspaper
story.

"Haizlip, sure. Hully gee, Tim . . .
we know all of 'em! Sergeant Reginald
Downes . . . an' Corporal G. T. Mat-
thews—"

"Downes? Dint he marry Cookie?"

"Sure—an' that Matthews was the
guy they called Prof. The guy who
wanted to go A.W.O.L.—only we
wouldn't let him!"

A flood of reminiscence swept over
Fireman Dunnevan and he snorted.

"It ain't fair, Benny!" he growled. "I
an' you an' Polly Peters—we made
them guys. Right before the war busted
loose, we did!"

But Seaman Linn remembered de-
tails more accurately.

"We dint exactly do so much for Haiz-
lip, Tim. But we sure put morale into
Rex Downes an' Prof. Now, lookit,
they're heroes. Fuzzy-Wuzzy is gonna
be a lieut. general an' Downes gets a
commission an' Prof. gets promoted to
top sergeant."

Bitterness clouded Fireman Dunne-
van's St. Bernard brown eyes.

"I an' you an' Miss Polly taught 'em
all a lesson, Benny," he said. "Even
old Fuzzy-Wuzzy. It ain't fair. Them
Army guys get medals. I an' you dern't

Yanks Down Under

By W. B. Courtney

RADIOED FROM AUSTRALIA

In Australia, strange and wondrous land, winter comes in summertime, cars burn wood and run on the wrong side of the street, and yes may turn out to mean no if you're not careful. Our guys are learning fast, Mr. Courtney reports

AUSTRALIA is the farthest point on the earth's surface to which American soldiers ever have been officially sent to fight. Even in these years of swift transportation, it's awfully far, far away from home as the average young man reckons. As you walk about in the States, the soles of your feet are—except for a matter of some eight thousand miles of soil, rock and inner fires—against those of your soldier boys here on the diametrically opposite side of the globe. Hence “antipodes”—with the feet opposite—the fanciful old name for these parts.

Stick a long pin through your parlor table globe at, say Eastport, Maine, on a southerly axis, and it will come out close to Perth in western Australia. Roughly, from the center of our west coast at San Francisco to the center of Australia's east coast at Brisbane, it's about 8,000 miles. From New York to

Sydney, it's more than 11,000 miles via Panama and more than 15,000 the other way around. In standard time the Yanks got fifteen hours ahead of the folks at home by coming down here. Today with us is yesterday for you.

Within Australia, there's two hours difference between east and west coast times. In another way, we are six months apart. Below the Equator—Sydney's about as far south of it as San Diego is north—the seasons are reversed. Yanks who left home in winter found themselves cheated of spring; instead, they got autumn, and in June, July and August they face another winter.

The Yanks find many familiar things topsy-turvied. They walk and drive on the “wrong” side of streets. They are cooled by winds from the south, warmed by northerly breezes. Whereas, Americans go south in

winter to Florida, Arizona and southern California, Australians go north—to Cairns, Townsville and Great Barrier Reef resort.

Look at a flat map of Australia. This island continent, astray from ancient main lines of man's international travel and commerce across the northern temperate zone is about as large as the whole United States.

Yet its population isn't as large as that of New York City. Turn the map over and up side down, look at it through the back against the light, and you will notice a curious thing. It now even resembles the shape of the United States, with Cape York Peninsula being our Florida, and the great Australian Bight our Great Lake region.

Distances, we suspect, are the feature you least realize about Australia. From the big southeastern cities here, for example, it's as far to the northeast towns as from New York and Boston to (Continued on page 44)

by his cognomen through the simple ex-
pedient of never having been seen ex-
cept under an ancient derby in a couple
of decades of leaning against the same
building, and he was known in his own
sphere as a very fast man to a dollar.
So fast, indeed, that there was some talk
at one time of putting up a monument
to Mouser Bergen—Mouser having
shrewdly succumbed to pneumonia
while owing Hard Hat a small sum and
thus becoming the only man on record
who ever beat Hard Hat out of that
which was owed him.

And it was to Hard Hat that Willie
Wurtzel came, Willie having found that
Ed Delaney was out of town and that
other friends were severely in the
shorts. Willie wanted to borrow three
thousand dollars.

"Ah, Willie," Hard Hat said. "You're
extravagant. You drink and gamble and
take show girls around, and though your
colored boy makes you lots of money,
you come to me."

"That's right," Willie said.

"How much do you want?"

"Three gees for thirty days."

"And what makes me think you'll pay
me back the thirty-three hundred in
thirty days?" Hard Hat asked.

"My boy, Refugee Smith, has got a
fight in Philly thirty days from yester-
day. We're gettin' eight grand. I'll have
my four the next mornin'."

"What security have you got?"

"Security?" Willie said. "At them in-
terest prices?"

"You might die," Hard Hat pointed
out from the green and bitter memory
of Mouser Bergen's betrayal.

"Aw," Willie said, "I'm healthy as a
horse."

"Okay," Hard Hat said. "You got life
insurance?"

"Naw."

Hard Hat McGee tilted his derby
back a shade and scratched his brow.
"Well," he said finally, "I think I have
thought of a way I can help you. I think
I have thought of some security you can
put up."

"Yeeh?"

"You make me out an assignment of

your fighter's services, contract, et cetera
et al," said Hard Hat, who figured a
few etsy might dull the edge of his propo-
sition, "in event you die—or don't pay
me back in thirty days."

Willie Wurtzel backed up a step. "Aw
naw," he said. "Not that."

"It's just formality," Hard Hat said
casually. "It will be in plain print you
can redeem the assignment do you pay
me back inside of thirty days, and you'll
have four grand thirty days from now."

Willie pictured Annabelle unwrap-
ping the coat. "Well . . ." he began
doubtfully.

A WEEK later Willie Wurtzel was
standing in the apartment of Anna-
belle Divine, unwrapping a box. On
Willie's face was a look of rectitude and
sacrifice. Annabelle's face was blank,
poised for elation or disappointment.

Willie fumbled willfully with the
strings. Finally in one grand gesture,
he broke the string, threw open the box.
He stood back and watched Annabelle.

(Continued on page 50)

Magic Mountain

By Roscoe Fleming

This is the success story of Element 42. Its name is molybdenum, better known as moly. A whole mountain of it in Colorado is contributing handsomely to our war machine

HOWEVER you come upon it, Climax is a thrilling surprise. You drive up toward Colorado's Fremont Pass over the top of the continent, through a high vast land, empty of humanity and lorded over by glittering mountains. You swing around a curve, and there, right beside the road on the pass among fir trees, is a young city of neat modern homes, huge buildings that rumble incessantly—a mountain is being ground up inside them—tooting ore trains, and below and to one side, a Saharalike expanse of flour-white, flour-fine tailings. You have come thus unexpectedly upon one of the great mining enterprises of the world.

Behind the buildings, towers a ruddy mountain with a vast sunken livid scar in its near side. The altitude is 11,400 feet, and the air is thin and keen; there is winter seven months a year. All the activity is behind a high steel fence, and believe me, you must prove both your identity and your business these days before vigilant guards will roll up the big steel gate.

Here is a vital bastion of democracy and of our war offensive. It is in itself a revolution and what it's producing at an unbelievable rate is less dispensable right now than all the gold that is being dug out of the ground in all the gold fields of America. Here is the world's hugest storehouse of molybdenum,

Element 42 in the periodic table, belonging to the tungsten-chromium-uranium family; and, up to thirty years ago, little known or used. In metallic form, molybdenum is silvery in appearance but its uses in that form are minor though valuable. The main molybdenum mineral is molybdenite, a soft blue-black substance resembling graphite. A piece of molybdenum ore from Climax looks like gray rock on which someone has drawn heavy lines with a soft black pencil. The mineral rubs off on your fingers.

One magic of molybdenum is this: Add exactly five pounds of it to a ton of molten steel, and the steel cools into a strong, tough alloy. Add a larger amount to an otherwise properly prepared steel, and the product becomes superhard and tough; cutting tools made of it retain their keenness at cherry-red heat, performing perfectly at high speeds to shave into shape the cannon barrels and other heavy steel weapons, and all the auxiliary steel shapes that America now needs. But there are other magics. By endless and—during the early years—profitless research, the specialists of Climax have found many places where moly (pronounced molly) is well nigh indispensable to America's mighty industrial machine.

A further magic is this: Colorado's Bartlett Mountain, at Climax, is the world's greatest storehouse of molybdenum. A few years ago molybdenum was merely a competitor of nickel and chrome and tungsten, but the chief sources of these are far away and, in the case of the two latter, are now cut off by seas menaced for the time being by hostile powers. Research men in work that is now proceeding at redoubled speed have found ways to supplant these scarcer materials or to supplement them with moly, for many purposes.

The demands of war for steel are so great and so unpredictable that no one can say there will be enough of any product, but moly in combination with

Bulking against the sky line at Bartlett, storehouse of molybdenum in foreground carries off the

other alloying materials serves greatly capacity of steel makers to meet these

Climax Molybdenum Co. has exploded mountain endlessly. Its diamond-drill end to end would measure more than 20 drills have bored down 3,000 feet—an moly; nor, drilling horizontally, have the limit of the ore body on one side.

The present estimate is that there are tons of ore in reserve, containing at pounds of moly. Climax's huge crush-away endlessly, can now grind up 18,0 daily, and the machinery in the working 24 hours a day, can extract 15,500 tons daily. When a new mill pleted this spring, this mill capacity 18,000 tons; so that every two days the enough ore to equal in mass one of United battleships.

Climax is now producing moly at 1,000,000 pounds a year and with the will go to 36,000,000. The first figure is entire world production in the biggest 1941; and Climax produced most of 1,000,000 pounds in 1939.

Other American mines now produce of 13,000,000 pounds yearly, so that capacity—of which Climax has 71 per on the order of 45,000,000 pounds. higher before 1942 is over.

Moly is widely distributed through crust, but mostly in such infinitesimal it does not pay to mine (Continued

He Woke Up Famous

By Corey Ford

ILLUSTRATED BY EARL OLIVER HURST

With luck, Bill Webster should go all right. For such a hapless guy, he does.

LATER, Mrs. Huntington Beebe insisted she had heard the explosion when it occurred. Those who knew Mrs. Beebe—and Beebe was requisite for admission to exclusive circles—were inclined to believe her determination to be first in any event went on. As a matter of fact, Mrs. Beebe's secretary had been engaged in a game of gin-rummy at the time, with all the windows closed and going full blast; and the first intimation of the program halted abruptly to make a special announcement:

"The Navy requests residents along the coast to be on the lookout for survivors of the tanker, reported torpedoed off Eshey's Point." "Eshey's Point!" Mrs. Beebe laid down and gasped. "But that's right here!"

"Yes, Mrs. Beebe," Lynn Horner said. "But I heard it," said Mrs. Beebe. "Now that was what I heard. It sounded like a boom! It was right off there," pointing through the living-room window in the direction of the Atlantic Ocean.

"Yes, Mrs. Beebe," said Lynn. "I don't think."

"But they'll be drifting in almost a moment," Mrs. Beebe pushed back her chair and called Lynn Horner, bring some blankets and a flashlight. She swept toward the door, her gold bracelet clanking. "And a bottle of brandy," she added. "It's a long swim, and they'll be soaking wet."

Lynn followed her resignedly. The possibility that a party of survivors would select Mrs. Beebe's particular beach seemed remote two months as Mrs. Beebe's social secretary taught Lynn a certain respect for her ability to make the impossible happen not only dominated people; she assumed of events. The war had been taken easy.

The beach was deserted, as they hurriedly walked to the water's edge. Lynn noticed while Mrs. Beebe played her flashlight down the shore. Suddenly Mrs. Beebe pointed toward the water.

"Here's one now," she said, as delightfully she had just located an Easter egg.

Lynn caught her breath with a gasp. The figure, clad only in a pair of shorts, waded out of the surf. He tottered three or four paces, fell onto his knees, and then collapsed on the sand. Mrs. Beebe started triumphantly.

"Miss Horner," she called over her shoulder. "Bring brandy. . . ."

BILL WEBSTER moved his head rest against the pillow and opened his eyes. He stared in horror for a moment, and shut them quickly. He opened them again but peeked between the lids at the large bedroom, banked with flowers. He let out a sigh.

"I guess I drowned," he concluded reluctantly. "Lie still," said a soft feminine voice. "You're all right."

Bill rose on one elbow, and turned in surprise. But instantly a sharp pain stung behind the eyeballs, and he collapsed once again with a low moan. (Continued)

"Poor boy," Mrs. Beebe sympathized, "there isn't any mistake." She patted his head, sending a shooting pain clear through his scalp.

That Awful Girl

es played by Mary Anderson, who
over have any boy friends if she

W. EUGENE SMITH

In the current Broadway hit, *Guest in the House*, Mary Anderson makes Evelyn Heath one of the most repellent adolescents on record. That's what the role calls for—and it's the secret of her success

keeps on perfecting her technique. For she gives a brilliant performance of malevolence. She will need bodyguards if she expects to survive the winter."
The winter is well on into summer and Mary survives, adequately equipped with boy friends. For, angel or devil, honeyed or acidic, little Mary is Sex from the South, and the Broadway wolves are baying. Five feet two, a petite hundred pounds, brown eyes—big brown eyes, with curling lashes for lowering seductively—a voice sifted through a honeycomb. If she needs bodyguards it's to fight off the males.
Not that the gay life occupies much of her thoughts or time. Mary is capital "A" Actress, deeply enamored of capital "T" Theater, flying toward fame as the stratoliner flies—straight, high, and without stops. When she reads, she reads

plays. When there's a mirror she poses before it. While others of the cast eat their pre-performance dinners, Mary strides around the deserted stage and emotes to the empty auditorium.
"You have no idea what this part does for me," she says, shining. "All that screaming and anger—I haven't an inhibition left, I reckon."
And it doesn't stop there. She is her own best adviser, and her advice is to keep pushing, kicking, snapping, crying, pleading for success. First, she tells herself firmly, become the greatest actress there is. But at the same time remember that acting is only one part of this theater business.
"She's a lovely girl," the show's press agent says, "and I wish she'd take a dry dive from a high building. Up here all the time, clutching my lapels, ogling me

with those eyes, begging for interviews and pictures and articles and more interviews, more articles. What a job!"
As a result of these tactics and great ability, Mary's job now nets her over three hundred dollars a week. Sweet and tough is Mary. Sweet with people, tough about her career.
That career has been Mary's dominant interest ever since she ran pigtailed and barefooted over her family's farm in Trussville, just outside Birmingham, Alabama. Her brother, Buddy, slightly her elder, was her first audience in an improvised amphitheater under a china-berry tree.
Mimicking a revivalist who had taken the pulpit at the local church one week, Mary whooped it up. She led her one-man choir from the piano-stool pulpit
(Continued on page 40)

The Navy Needs Your Skill

The United States Navy is the greatest body of specialists, its ships the most complex mechanisms, in existence—and has been since the days of wooden ships. Every job in it is specialized, requiring the ultimate in precision teamwork and—above all—training.

To push its men constantly toward the peak in handling their intricate equipment, the Navy offers training and increased pay in many fields. Civilians whose experience fits well will find advancement that much more rapid. They will bring what the Navy urgently needs, and they will receive the prestige of a rating in their skills by the top authority—like a college degree in a practical trade. Some will be given the chance to work for commissions; those particularly well qualified may receive them immediately.

Today there is practically no such thing as an ordinary "gob." The Navy or Coast Guard man, from two-striper to apprentice seaman, is specializing and advancing himself in rank and pay. He serves himself and his family the better for his more intensive service to the Navy.

Our Fighting Men

 **SEATTLE PORT OF EMBARKATION.** For years the Seattle Chamber of Commerce has been plugging its bairn as the closest major American city to Alaska and the Orient. Since December 7th the C. of C. has been off somewhere, trying to think about something else, and the press relations office for the Seattle Port of Embarkation has spent its time trying to keep stories out of the papers. The enforced modesty has been tough on the promotion boys, who have been developing split personalities about Seattle's role; but this is to report that they're feeling better now, thanks to Frank Knox. The Secretary of the Navy dropped in recently, took a gander and announced that "The Seattle waterfront is one of the principal shipping points to the principal theater of war . . . I have seen nowhere on this coast such evidence of wartime shipping activity." Just like that. The boys are glad the secret's out, so they can get back to work.

FORT LAWTON, Seattle. The edict requiring everybody to turn in old phonograph records to get new ones will spoil a lot of laughs at this post. For months the juke boxes in the day rooms have blared the contributions of Seattle citizens; but apparently the records-for-soldiers drive has been confused with salvage effort, because when the boys dive into the latest batch of platters from civilians they find such items as (1) Cohen On the Telephone, (2) wavery soprano struggling with Indian Love Call or Poor Butterfly, (3) Paul Whiteman's Whispering, and (4) assorted bird calls. Edison and Gennett records are lasting much longer than Mr. Edison or Mr. Gennett would ever have dared guarantee; but the boys play them all anyhow, if only to get belly laughs out of the corn contained in the old platters.

FORT WORDEN, Wash. In the days of Sugar Unlimited an M.P. at this Harbor Defense Command post won popularity by the quality of the cakes and stuff he got from home. The adulation was not particularly welcome; he'd rather have had the eatables. "The boys," he wrote his relatives, "said the cake was delicious. The candy must have been good, too. Five of the fellows

got in a fight over it." The following week his home-baked assortment arrived under some socks in a box labeled Laundry. The M.P. carried the deception to a satisfactory conclusion by hustling the package from the post office to his bunk in a gas mask sack.

Incidentally, the lads at the post have found out their tricks aren't so new. An officer who had served in the last war, and who knew what to expect, ordered a gas mask inspection. Four of the guys didn't like the idea. Inside their masks the officer found, collectively, a vacuum container full of coffee, some cookies, two apples, three oranges, candy bars, two magazines, a supply of beef and some ham sandwiches. "Nice picnic here, eh, boys?" said the brass hat. "Yes—er—no, sir," said the boys.

 **CAMP WOLTERS, Texas.** Gimlet Grogan, whose G.I. Gazette is featured bi-weekly in the camp paper, is pondering offers from three publishing houses who want him to do a book. The Gimlet (Corp. David McLean to the guy who calls the roll) has built himself a reputation with his column, written with considerable butchering of the President's English and dealing with the doings of his friend Pvt. Stinky Smith and Invisible Yardbird Pvt. Phineas McFiddle. Says the Gimlet:

"I been hearing a lot of guys making dirty cracks about G.I. soap. I was thinking of this yesterday when I looked at a magazine ad and then it struck me that we got to do a little advertising to put glamor in G.I. soap.

"Just like in the magazine ads, the G.I. Gazette is now starting a contest. All you got to do is complete the sentence, 'I like G.I. soap because . . . ' in 25 words or less. The less the better.

"Just scribble your entry on the back of a dollar bill and mail to old Gimlet Grogan at the guard house. The judge will be my friend Pvt. Stinky Smith, who will be real impartial because he don't use soap of any kind.

"First prize is the telephone number of a geisha girl in Tokyo who speaks pidgin English. Second prize is the phone number of a geisha girl who just says 'Ugh!'

The Axis will have a tough time beating down guys like that.

(Continued on page 72)

**AUTO REPAIRMAN
ENGINE MECHANIC
POWER PLANT
ENGINEER
MARINE ENGINEER
MACHINIST**

Machinist's Mate ratings require knowledge of machine-tool operation and the care, adjustment and repair of all engines on board ship. Includes machine shop practice and marine engineering (turbine, reciprocating and Diesel engines). Immediate ratings as Machinist's Mate and Motor Machinist's Mate, Second Class (First Class in some cases), are open. Present outlook indicates prospects for rapid advancement to First Class and Chief Petty Officer in this rising branch for men who are experts in some of the particular qualifications required and who by shipboard experience after enlistment acquire proficiency.

**BOILER OPERATOR
BOILER-ROOM MAN
RAILROAD OR
POWER PLANT
FIREMAN**

They assume charge of a fire room when under way and make adjustments necessary to efficient boiler operation, including all repair and overhaul work on the system. No immediate ratings are open.

**METALSMITH
SHEET-METAL
WORKER
TINSMITH
BLACKSMITH
COPPERSMITH
WELDER**

They plan and perform general copperwork, blacksmith and sheet-metal work, estimating time and cost, and are familiar with various uses of metals, their composition and alloys. Rating immediate as Metalsmith, Second Class, is open. Expert welders will be considered for Metalsmith, First Class.

**PLUMBER
PIPEFITTER
SHIPWRIGHT
METAL WORKER
WELDER**

They are employed in maintenance and upkeep of ships' hulls and metal fitting including piping and drainage systems. Immediate rating as Shipfitter, Third Class, is open to those qualified. Expert welders will be considered for higher ratings.

**GUNSMITH
MECHANIC**

Their work is in connection with the operation, care and upkeep of guns of large and small caliber. They handle Navy mines, depth charges, torpedoes; adjust mechanisms, take charge of a gun and gun's crew. Immediate rating as Gunner's Mate, Third Class, is open to those with ordnance experience. In general, however, Gunner's Mate, Torpedoman and Turret Captain ratings require experience that can be acquired only in the service. Opportunities for advancement to these ratings from seaman are good.

**CONSTRUCTION
MAN
RIGGER FOREMAN
SAILOR
HOIST OPERATOR**

They know canvas work and all kind of hoisting with block and tackle; understand anchor chain and the method of mooring; handle boats, fashion knots and splices with rope or wire, and read a compass. If you have appropriate nautical experience, the Navy will give you an immediate rating as Coxswain, will pay of a Petty Officer, Third Class.

**PHARMACIST
HOSPITAL
ATTENDANT
FIRST-AID
INSTRUCTOR
MALE NURSE**

Pharmacist's Mates under the Medical Officer's supervision have charge of the sick on board ship, do first-aid work, prepare and administer simple standard medicines, administer anesthesia, and supervise hygiene. Immediate rating as Pharmacist's Mate, Second or Third Class, and as Hospital Apprentice, First or Second Class, are open.

PAINTER

They supervise and perform all painting on board ship. They are qualified to prepare and mix surface coatings of various kinds, and understand the proper choice of materials for specific tasks. Immediate ratings as Painter, Third Class, are open.

**CARPENTER
PATTERNMAKER
CABINET MAKER
SHIPWRIGHT**

Using hand and power tools, they repair ships' boats and repair and replace all woodwork on board ship. They know joining and finishing, read blueprints and understand principles of wood preservation. They know a ship's piping and drainage system and the maintenance of watertight integrity. Ratings are open as Carpenter's Mate, Third Class, and Patternmaker, Second Class.

New Rates of Navy Pay

Men with dependents	Pay Grade	Base Pay	If serving at sea or abroad	If serving abroad on flying duty	Rental and Subsistence Allowances
LIEUTENANT		\$200.	\$220.	\$330.	\$132.

* All food and lodging supplied.

These or higher pay rates are just about to go into effect. In addition, a bill now going through Congress provides payments to dependents of enlisted men in this way: the sailor allots \$20 monthly out of his salary; the government adds another \$20 if he has a wife but no children; \$30 to a wife and one child; \$40 to a wife and two children; \$10 a month extra for each additional child.

The Odds On Your Navy Career

Of each 1,000 enlisted men in the peacetime Navy there are 250 Apprentice Seamen and Seamen, Second Class; 220 Seamen, First Class; 157 Petty Officers, Third Class, 153 Second Class and 140 First Class; 10 Acting and 70 Permanent Chief Petty Officers—or grades with equivalent pay.

Submit qualifications, get reference from the nearest Navy Recruiting Station. They are within reach of every community.

The Marines Want—

Graduates in electrical, communication or radio engineering, for assignment to special aircraft warning duties. Men with dependents or minor physical defects are accepted. Men are commissioned as officers, with same pay as that of the top three grades in the above table.

Experienced radio operators, technicians and repairmen for aircraft warning duties. High-school graduates between 17 and 35 may enlist as staff sergeants with pay equal to Petty Officers, 2d Class, in the table.

American citizens who know the Japanese language. Commissions are offered.

Automobile or truck repair and maintenance specialists, with experience as shop foremen or maintenance superiors. Men between 25 and 40 (preferably with some military experience) may apply as Marine gunners (with pay in Petty Officer range) or first and second lieutenants (equal to Lieut. J. G. and Ensign).

Civil, chemical, electrical and mechanical engineers—to train in water distillation and purification, camouflage, refrigeration, photography, demolition, surveying, road and landing field construction, basic drafting, well drilling and bridge building. Accepted as commissioned and noncommissioned officers.

They use, adjust and care for instruments that direct the firing of the ship's guns. They have a thorough knowledge of electricity, can interpret mechanical drawings and wiring diagrams. Those experienced in the manufacture, assembly and testing of fire control instruments should submit data which will be passed on by the Bureau of Naval Personnel.

FIRE CONTROLMAN

PHOTOGRAPHER (AN AVIATION RATING)

They are responsible for the care, operation, adjustment and installation of photographic equipment. They understand the principles of aerial photography and map making. The Bureau of Naval Personnel will consider a few applications from particularly well-qualified applicants for photographer ratings.

They use electrical tools and perform soldering and brazing necessary to electrical repairs, repair open circuits, locate grounds, and run wiring for electrical systems. They are charged with the care, upkeep and operation of all electrical equipment aboard ship. This consists of motors, generators, motor-generators, switchboards, searchlights, batteries, telephones, etc. Immediate ratings as Electrician's Mate, First, Second and Third Class, are open.

ELECTRICIAN'S MATE

They operate, adjust and repair Navy transmitting and receiving equipment, as well as radio direction finders. Radiomen are capable of standing watch as operators and maintaining the equipment in operation. Radiomen, First, Second and Third Class, are wanted immediately. Men with certain basic educational requirements are accepted for training as Radio Technicians, Second and Third Class.

RADIOMAN RADIO TECHNICIAN

They send and receive international code by blinker, searchlight or semaphore; take and receive all flag hoist signals required; identify storm warnings, flags and other signals. Rating as Signaller, Third Class, is open.

SIGNALMAN

They are responsible for Navy food, its attractive and hygienic preparation and (under direction of the Commissary Stewards) use of kitchen supplies and equipment. Ratings are open for Baker, Third Class, and Ship's Cook, Third Class.

SHIP'S COOK BAKER

They are able to direct the installation of a complete Naval Meteorological Observatory afloat or ashore, to make upper air soundings both with surface and aircraft instruments, to compute pilot balloon soundings mathematically, to make weather observations and read meteorological instruments, to draw accurate synoptic weather charts, and to read weather codes. Ratings are open for Aerographer, Third Class (or higher).

AEROGRAPHER

They work all types of metal used in aircraft; they forge, braze, weld, electroplate, and bend pipe; and use oxyacetylene welding and cutting outfits. Know how to dress and repair tools and to apply heat treatment and methods of testing aircraft metals. Aviation Metalsmith, Second and Third Class, are the ratings open.

AVIATION METALSMITH

They align and assemble aircraft and aircraft engines, make adjustments and repairs to engines, engine parts, rigging and fabric. Overhaul and adjust airplane engine accessories, and operate, adjust, and overhaul internal combustion engines of the various types used in aircraft. Immediate ratings are available as Aviation Machinist's Mate, Second and Third Class, with higher grades possible.

AVIATION MACHINIST'S MATE

* HIGHER ADVANCED RATINGS ARE OFFERED THOSE WHO QUALIFY

QUIZ KIDS' CELEBRITY

By Henry L. Jackson

THE photogenic moppets you see above, behind the plate-glass window, are those knowledgeable infallibles known as the Quiz Kids.

We submit that the photograph is news. It is news that the erudite juveniles, who haven't been amazed, awed or even mildly surprised by anything since they began talking, managed to simulate these emotions for the photographer whose chore it was to dig up a new way to ring in the Father's Day idea.

The most expressive of the group, in short the scene-stealer, is Mademoiselle

Ruth Sandra Duskin, aged seven, who was reading King Lear to her mamma at an age when your moppet and mine were learning to say glug for milk and glug-glug for more milk.

This blond little beauty is expressing her delight over the new blue silk bathrobe and the socks and stuff she's going to buy her daddy for Father's Day. She, like the other quizzers, is one of the few children in the world able to indulge in such dutiful largess. As one of radio's—and Paramount Pictures'—better paid workers, she is in a unique position for a seven-year-old.

The idea we are struggling to put across is, however, that other children—with the political and economic collaboration of Mother—can do for Pop what La Ruth will do for hers.

Before we leave Ruth we would like to indulge in a small maliciousness. Here is a poem she composed for Father's Day:

*May Father's Day be a happy day,
And may you enjoy yourself at work
and play,
And may the birds sing
And the wedding bells ring!*

Ruth, who embarrassed our editor no

end with her questions of location of the Irrawaddy F Caspian Sea, just dashed poem off in a few minutes. it here to prove that she's lectual giant. We submit very poor poem indeed.

The handsome lad with smile, who contemplates lighter he might give his father Llewellyn Williams, who's a wiz at mathematic ing Father to the movies as too, as part of his Father's bration. There are scores

ve I d—cigars, a pipe, a pen-
il s or a shaving kit. He
together made up his mind, as
see om his speculative smile.
y, though, about dinner and the
hich e can share.
thud little guy next to him
ne-year-old zoologist-botanist-
gist, Master Gerard Brendon
He told us that if anybody's
of ving him anything this
Day it must be a soft-shell
a re: variety obtainable in a
ive-d-ten-cent store in his
ago. We explained, of course

that that wasn't the Father's Day idea at all. He should give Pop something—the brat! So then he decided he's going to give the elder Mr. Darrow a bathing suit—a tight, light blue satin one, because the one now owned by Mr. Darrow looks, we were told emphatically, simply terrible.

Harvé Bennett Fischman, whose age is eleven, volunteered that he was giving Father a "leisure jacket"—one of those comfortable, sporty lounge jackets, good to wear around the house evenings and Sundays, for bowling, or after swim-
ming. Harvé is a historian, but prac-

tical enough to understand that his father's leisure jacket should have enormous pockets to put all sorts of things in.

Joel Juden Fleck is the big boy at the right. He's thirteen and the pride of Dallas, Texas, where he was born. He is an all-round expert but specializes in astronomy. He was going to drive a truck and then he toyed with the idea of being a garbage man, but recently he's decided to become a scientist. He's considering socks, suspenders, handkerchiefs, maybe a pair of sunglasses for Pop. But if we know Joel, he'll give

Father a sextant, which Father can't use but which Joel will probably want very much—if Uncle Sam will let him have one. Sextants are used in the navigation of planes and ships to determine position.

These Quiz Kids certainly came in handy as a way of suggesting to mothers and children that it would be a nice thing to do to give Father a tie, a piece of jewelry, some shaving lotion, a jar or bowl of shaving cream, new razor blades, pipes, cigars, cigarettes, bowling shoes, a pair of skates, or a new tire for his car . . . Whoops, sorry! ★★★

DIXON WAGNER

Flight to the Sun

By James Aldridge

ILLUSTRATED BY HARRY MORSE MEYERS

The Story Thus Far:

IN ATHENS, not far from where the Greek-Italian war is raging, Flight Lieutenant John Quayle, of the Royal Air Force, meets and falls in love with a beautiful Greek girl, Helen Stangou. Both are ordered to the town of Ioannina, she to work in the hospital and he to join his squadron.

Quayle's outfit is a gallant and experienced fighter unit under the command of Squadron Leader Hickey. Every day their valiant little group goes up to do battle with the enemy, and they bring down many enemy planes. But they are hopelessly outnumbered by the Italians who pick the British fliers off one by one until the squadron is down to only six.

Quayle asks Helen to marry him and when she says "yes," he arranges for her to go back to Athens in a few days in the Bombay, the supply transport plane. Hickey informs Quayle that the squadron is to go to Athens the next

day, but that at six in the morning there will be one more patrol to do. They are to accompany Nitralaxis, a laughing Greek flier, on a reconnaissance flight toward Valona.

The squadron runs into a cloud of Italian planes and in the ensuing battle, Quayle's plane is damaged and he plunges earthward and crashes. When he returns to consciousness, Quayle, sore and bleeding, climbs out of the wreck.

He encounters Nitralaxis, whose plane has been shot down, and Deus, a young Greek boy, who agrees to guide them through the Italian lines to where the Greeks are fighting.

Finally they start on their perilous trek. For two days they make their slow, painful way past the Italians. They are shot at by both Italians and Greeks as they crouch and run toward their own lines. Quayle sees Nitralaxis shot down. He sees Deus stagger and fall. Then Quayle, putting his hands wide, runs toward the Greeks crying: "*Inglisi! Inglisi! I'm Inglisi!*"

THERE was silence. . . had never heard such silence. . . was no sound . . . silence always had some sound. . . was wrong. There was sound. . . thoroughly and utterly

LUCKY STRIKE MEANS FINE TOBACCO!

One of a series of paintings of the tobacco country by America's foremost artists

Off to the auctions. Painted from life in the tobacco country by Doris Lee

o you could enjoy fine, mild tobacco like this,
we paid 33%* more in Fairmont, N. C.

YOU COULD LOOK for a month of Sundays and not find a more typical tobacco town than Fairmont, N. C.

Fairmont is one of the many Southern towns where Luckies buy tobacco. Here as elsewhere, year in and year out, we consistently choose the milder, better-tasting leaf—and pay the price to get it.

For example: In Fairmont, at auctions of the 1939 crop, the makers of Luckies paid 33% more—yes, 33% above the average market price—to get this finer, milder tobacco. This was in no way unusual. We paid well

above the average market price in 108 tobacco markets that season. And that 1939 crop, properly aged, mellowed and blended with other fine crops, is in Luckies today.

To independent tobacco experts, Lucky Strike means fine tobacco. With these experts—auctioneers, buyers and warehousemen—with men who know tobacco best, it's Luckies 2 to 1.

In a cigarette, it's the tobacco that counts—and because we pay the price to get it, the finer, milder leaf is in Luckies. Remember that, next time you buy cigarettes.

*33% more than the average market price reported by U. S. Department of Agriculture.

With men who know tobacco best—it's Luckies 2 to 1

Flight to the Sun

Continued from page 22

"I don't know. We don't know anything up here. Everything is gone wrong. They've bombed Ioannina a lot. We lost contact with the general there for yesterday. He says it is bad there. We are retreating everywhere."

"What about the Australians, the British?" Quayle asked. He was looking at the bread and he felt hungry. "Can I have some of that?" He pointed to the bread.

"Sure," the Greek said. "The *Inglisi* are on the other side of the Pindus. We do not know about them. There are Germans coming down from Koritza."

"Can I get back to Ioannina before them?"

"Yes . . . you will be all right. Don't worry."

"I'm not worrying. But I've got to get back to Ioannina. Will you show me how to get to the road?"

"That's all right."

Quayle was breaking the bread and putting it in his tunic pocket. The Greek watched him. The little Greek gave him another mug of cognac. Quayle drank it in a gulp, filling his mouth, then swallowing it.

"Will you show me?" he said, and walked to the door.

"Can you travel?" the taller Greek asked.

"Yes . . . if I can get to the road." Quayle opened the door, and the white sunlight astonished him. He shaded his eyes. He could hear the artillery very distinctly now.

"If you wait for a minute he will go with you." The Greek in the peaked cap nodded toward the small Greek. He said something to the small Greek, who went away.

"He's gone to get his things."

"I don't want to put you to any bother. Can you spare him?" Quayle asked.

"What difference does it make? One man won't make any difference now."

"Thank you," Quayle said.

THE little Greek came back with a rolled blanket over his shoulder. He had another one. He smiled and showed yellow teeth. He gave the extra rolled blanket to Quayle. The Greek in the peaked cap told him what to do.

"Get him to Ioannina," he told the small one. "Put him on the trucks going back and get him to Ioannina. Then come back here. It's all clear."

"I understand," the small one said. He took the order the Greek had written out for him. He nodded to Quayle.

Quayle stepped out of the stone hut. He walked a few steps in the mud. As if by an afterthought, he turned and said, "Goodbye. And thank you. Thank you for everything."

"That's all right," the Greek with the peaked cap said. "I wish I were going with you."

Quayle looked at his quiet face and saw that he meant it.

"S'long," the Greek said, along with the artillery.

"S'long," Quayle answered and followed the small Greek through the mud.

He walked with the little man along the mud-deep path. It was fine to walk not expecting Italians to spring from nowhere. He could see the road and the trucks passing by, beneath them. Just as long as the Germans were not in Ioannina, he would find Helen there and he could get back to Athens.

"*Airopianos*," the little Greek said.

Quayle listened. He could hear the multiple engines. The little Greek was crouching in the timber at the side of the track.

"Come out of it," Quayle said. "they're miles away."

He walked on down the path. The little Greek followed him, looking up all the time. They saw the flock of bombers pass over and they were heading west. Quayle couldn't figure out where they were going unless it was to the coast ports.

When they got to the road, the trucks that had just pulled out of a parking space were stopped, jammed up close together. The drivers were standing around up the slope away from the road. They were all peering at the disappearing bombers.

"What is wrong? Do you think they can hit you from there?" the little Greek said to them, as he caught up with Quayle. The other Greeks looked at the two of them.

was the sound of airplanes. John Quayle slept with his head on his arms across the broad engine cover in the cabin of the Diesel. . . .

AT ARGYROKASTRO, where it was night, the little Greek shook him and woke him up. Quayle could see the white buildings and smell the acrid bomb odor as he got down. He followed the little Greek, still half asleep. He could feel the wetness on his face as a light rain came down. There were Greeks everywhere around as they walked through the bombed ruins of the town clutching the side of the large white mountain.

"Where are we going?" Quayle said to the little Greek.

The little Greek shook his head and pointed in front of him.

"Jiggly old rattletraps, aren't they?"

GEORGE SMITH

"Who is that? Who is it, you with the stomach in his mouth?"

"*Inglisi* . . . It's an *Inglisi* . . . An aviator who was shot down. He walked from Valona. He was up bombing there."

"You talk too much," a big Greek said.

"Maybe . . . but he's got to get to Ioannina. We will ride in your truck."

"I only go to Argyrokastro."

"Well, we go that far."

The little Greek picked out the big Greek's truck because it was an eight-wheel Diesel captured from the Italians and did not go off the high mountain roads very easily.

"The *Inglisi* will ride with you," the little Greek said.

QUAYLE didn't know what was going on but he realized that the little Greek was being aggressive because he was there and was an *Inglisi*, which was an excuse to be aggressive. He led Quayle to the cabin of the big Diesel and helped him up. He sat down next to Quayle and then the big Greek got in. There was the whine of the starter. The big Greek pulled at the large gear shift and they moved off.

There was only memory of sleep and wakening as the others ran into the ditch at the side of the road because there

Quayle looked at the Greek soldiers who passed them. They were walking without effort and direction and were tired in their movements. He could see they were retreating in slow disorder. He looked at them disinterestedly because he felt nothing about them or for them. He followed the little Greek through the smoking destruction and was glad when they were out of its odor. The little Greek seemed to have set his mind on walking some distance. There was no transport on the road.

"Hey . . . where are we going? What about truck . . . auto?" Quayle asked.

"Oihi . . . Oihi." The little Greek shook his head and pointed forward.

Quayle reasoned there would be some sort of car ahead.

They had been walking for more than an hour, and Quayle was beginning to feel his head filling with blood again. He sat down on the wet earth of the road and didn't feel its dampness. He wanted to sleep. The little Greek pulled him up and kept his wide hard hand under Quayle's right arm. Finally they came to the bridge where there were trucks coming back onto the road.

"Detour," the little Greek said and Quayle couldn't see him smiling in the dark.

As a truck loaded with soldiers came up the steep bank from the bridge the

little Greek shouted to have an *Inglisi* . . . I have you and get him to Ioannina.

"We're not going to Ioannina."

"Who is in this convoy?"

"Ask some of the other road," the driver said.

Quayle could barely hear, he was so tired. He heard the Greek shouting again. The pressure under his armpits and stumbled into the back and felt the hard jerk on his head dropped to the floor. He immediately.

The truck stopped where crossroads near Doliana. large groups of Greek soldiers around, and a mile of confusion. There were no sight and nobody seemed anything about straightening mess. The little Greek what was causing the block gone for a long time. W back, Quayle was awake.

"*Inglisi* . . . *Inglisi* . . . A Ioannina . . . *Allemands* . . . the little Greek screamed.

Quayle tried to remember. He wondered how the Greeks have got into Ioannina. They went away and Quayle looked the confusion, wondering. Then the little Greek came him was a tall bearded Greek yellow corporal stripes on said something in German.

"Yes . . . you speak German asked in German.

"Yes. . . This one here is to go to Ioannina."

"That's right," Quayle said this about the Germans being there.

"It is true, they say here. move because they say the in Ioannina."

"How could the Germans I do not know. I only they say."

"How far is it?" Quayle asked.

"Some hours."

"Thank you. I'll walk. A get here if he's coming."

The corporal asked the if he would walk to Ioannina. *Inglisi*. The little Greek the Germans. The corporal didn't believe it. He would v nina with the *Inglisi*.

"All right," the little Greek go."

THEY walked past the column of trucks, guns, mule carts, limbers, soldier not alive though they went ahead on the empty Ioannina.

Quayle expected some tra on the road even if the German Ioannina; but as they walked between the valleys they did truck. They saw no soldiers mules. Quayle was beginning the Germans must have taken "How far away is this place asking the corporal.

"Not far . . . it's kilometers They passed kilometer 22, a rough post. The little Greek ging behind and he kept talking.

"We will walk into the German he said. His small unshaven a mockery to Quayle even looked at him.

"Too bad," the other C "What difference anyway?"

"Why go on?" the little Greek

"I want to get as near home

INTRODUCING
*the Finer Seagram's 5 Crown...
in the Beautiful New Host Bottle*

Overnight this FINER "5" has

Won the nation's favor.

Millions like its RICHNESS, BODY,

SMOOTHNESS, LIGHTNESS, FLAVOR.

"Pleasure In—and Toughness Out—"

Yes, that's Seagram's boast:

Note the graceful bottle, too.

It's proudly called the "HOST."

Seagram's Finer 5 Crown in the new Host bottle is now available in almost every state in the Union where liquor is sold, and is recommended by the better places.

THE FINER
Seagram's 5 Crown

What kind of Fathers do modern daughters like?

An independent survey reveals they prefer fathers who are: Liberal-viewed and sympathetic • Well-versed in current problems • Athletically inclined • Gracious hosts • Dressed in quiet good taste.

THE KIND OF MEN WHO WEAR

ESSLEY Woman-Wise SHIRTS

Count on a woman's keen eye to take in a man's appearance! To win her approval your shirt must be smart in style, beautiful in fit, distinguished in workmanship. Essley Woman-Wise Shirts are (a) styled by America's foremost men's fashion authority and (b) tailored by famous Troy craftsmen. In character, colors and styles they make perfect Father's Day gifts! \$1.75, \$2 and \$2.50.

Originators of the TRUBENIZED* Collar

ESSLEY PAJAMAS are designed for sleeping—comfortably cut, and smartly styled in many patterns and colors.

sible. What about your *Inglisi* here?"

"He's crazy. He walked from Valona. Fancy that! It would be simpler to be killed."

"Why don't you get killed, then?"

"I go with the *Inglisi*," the little Greek said.

Quayle did not understand what they were saying, but he liked the little Greek for his arguing. They walked on, along the silent road that climbed slowly up the mountain slopes and wandered easily into the valley. When the road climbed higher and got into the cold wind that came around the mountain edge, Quayle, who was walking ahead, saw the lake of Ioannina.

"That's the lake," he said in German to the corporal.

"Yes . . . we are near."

"What about the Germans? Can you see any signs of them?" the little Greek asked the other.

"Not from here. There's the lake, though. Yes. There's the lake!"

It was slower walking now because they were so near. The afternoon was almost at its end, and Quayle was going as fast as he could because he wanted to get there before dark. The little Greek was still anxious about the Germans. When they came down off the last slope and crossed the wide bridge, which had no guard on it, and everything seemed deserted, he was certain the Germans were there. He asked the corporal why they couldn't wait until the morning, but he could see Quayle walking steadily across the bridge, so he resigned himself to certain capture.

Quayle was not thinking so much about the Germans as about Helen Stangou now. It was so near that he was not able to think too much about the possibilities of what Helen had done. When the thought threatened that she might have gone back in the Bombay transport plane on the day he was shot down, he blocked it out and looked at the red road ahead of him.

And then he saw the first Greeks.

"Well . . . the Germans haven't got it. There's some Greeks." The little Greek beamed and pointed to a mule cart coming toward them from the town.

Quayle did not look closely at the Greeks in the mule cart when he passed. They could have been Germans in disguise, but he would not notice that now. He was walking with steady ploddingness as if he were tramping in snow. He passed the road junction, then the

trees at the outskirts, then houses, then the big tree that the road where the vehicles checked going out, but there were no there now.

When he came around the village outskirts he saw the bage. There was no real shape the indefinite crude houses made the village.

He got into the ruins of street and then he saw the walking around, and the comforted feeling of the place was satisfactory. He wondered quickly the hospital. This town was destroyed. He walked across square that was nothing but craters filled with water and a smashed hotel where they had the Greek soldier sitting on the cement step just looking at earth. Quayle looked at him steadily as he walked by. He had to be conscious of the little corporal who were far be

"What are you doing here?" Quayle
asked.

"I got plugged in the shoulder. I got
back, though."

Quayle looked up and saw Helen
smiling widely at Tap. He was sud-
denly conscious of something within
himself that didn't like this.

"How are you feeling now?" Quayle
asked slowly without thinking. He was
looking at Helen.

"Fine," Tap said. "Just fine. I'm
waiting for them to send a Blenheim or
something up to get me."

"You'll wait forever, then," Quayle
said.

"They said they would. You can come
down with me."

"They can't waste a Blenheim for us."
"Have you told Headquarters you're
here?" Tap asked.

"No . . . not yet. I'm just going up
there."

"What do you say about this?" Tap
said to Helen. He smiled broadly at
her.

Helen put her arm through Quayle's.

"She thought you'd got it, John," Tap
said.

"What have you two been up to while
I was away?" Quayle asked with half hu-
mor that he knew was a serious demand.

"You'd be surprised," Tap said and
laughed. Helen said nothing. Quayle
looked at both of them and again he
was conscious of something that he
didn't like.

"She was hit pretty hard," Tap said.

"Just as well you were here, then,"
Quayle told Tap, but he smiled when he
said it.

"Yes. Don't you think so, Helen?"

"Yes," she said without any implica-
tions. "Tap was very bad when he came
in too."

Quayle did not like to hear her use
Tap's first name. "Were all the others

How's your "Pep Appeal"?

—by Williamson

Director: No, no, no, Miss Joyce! Get some life in it! Some zip and zing! You know—
some of the old pep appeal!

Girl: Oh, dear! It sure looks like I've lost our chance for a spot in the show. I guess
I just haven't got it!

Boy: It's not *that* bad, honey! You know you can step with the best of them. It's just
like he says—what you need is a little more pep. I'll bet you haven't been eating right
lately—not getting all your vitamins. And right now's when you start getting them.
Put on your hat and let's go.

Boy: No getting around it, sugar. You can't expect to have pep without vitamins. And
right in KELLOGG'S PEP are extra-rich sources of the two vitamins least abundant in
ordinary meals—vitamins B₁ and D. Yes, sir! Right in this swell, crunchy cereal, made
from choice parts of sun-ripened wheat.

Girl: Mister, mister! Why didn't you tell me how marvelous it tastes? If getting the
rest of my vitamins is as much fun as eating PEP, we may be seeing our names in
lights before we know it!

Vitamins for pep! Kellogg's Pep for vitamins!

Pep contains per serving: 4/5 to 1/5 the minimum daily need of Vitamin B₁, according to
age; 1/2 the daily need of vitamin D. For sources of other vitamins, see the Pep package.

SOLD BY GROCERS EVERYWHERE

me he was just pouring the stuff down."

"They didn't leave a Gladiator behind by any chance, did they?"

"No. I would have flown it out ages ago if they had," Tap said.

"Well, I might as well go and see about getting out of here."

"Where are you going?" Helen asked.

"I'm going up to headquarters. But I'll be back, don't worry."

He turned away. Helen stayed with Tap. Quayle walked down the steps and went outside. There was the confusion outside the hospital.

He walked through it. There was the mud and the wreckage all the way through the town and the uneven bomb craters that made the whole place a deserted garden.

He walked through it.

WHERE the road swung around the cliff to the headquarters cave, there were high wooden coffins stacked against the wall and some of them had been smashed in by a bomb that had left its shallow crater in the rock road.

The trees along the road outside the cave were stripped and broken by the bombs that had staggered along the road. The fuel dump that had rested just beyond had exploded and spread a great black stain up the side of the solid rock. Quayle walked up the steps into the headquarters, showed his papers to the guard who saluted. It was the same as usual but with more confusion. He walked to the small ante-cave where the English speaker was. He looked around but couldn't find him. Then another Greek came up and said, "You wish what?"

"I wish to see somebody about calling Athens," Quayle said, looking around at the tired Greeks working in the confusion.

"You are what?"

"I'm a flier. I was shot down behind the Italian lines a couple of weeks ago and I want to call my C.O. in Athens. Where can I do that?"

"Excuse. I will get the captain."

He went away and came back with a tall man with a clipped mustache showing through unshaven features. He had a wide-collared coat that was almost down to his ankles and a rakish cap.

"Alex Mellass," Quayle said. He was remembering the first time Mellass had met the squadron when it arrived at Ioannina.

"Ha . . . *Inglisi* . . . the one with the straight nose. . . You are in a fine mess. Where have you been? What are you doing here?"

Quayle explained to Mellass about the crash and getting to Ioannina.

"I want to get in touch with my C.O. at Athens. Can you help me out?" Quayle said.

"You come too late. We have no touch with Athens."

"What's wrong now?"

"Perhaps the Germans have reached Trikkala. Perhaps parachute men have cut the wires. We do not know. We know nothing here."

"I'll have to get back to Athens. Can you get me a car?"

"Ha! Listen to the *Inglisi*! Can I get an airplane? It is the same."

"Is it that bad?"

"You are gloriously ignorant. It is that bad!"

"Well, I've got to get back to Athens," Quayle said after a silence. "Isn't there any way of getting a car?"

"No. There is the broken one that nobody can fix. But you could not take it."

"Where is it? I can fix it."

"They would not let you take it."

"Look," Quayle said. "You show it to me. Let me worry about taking it."

"They will shoot you if they catch you. There are strict orders—"

"Just let me try it," Quayle broke in. "Where is it?"

"It is foolish. But if it is that way, I show you."

Mellass took him out of the headquarters cave. They walked into a narrow opening in the cliff. It led up some steps to a porch that opened onto a courtyard. Quayle could see the outline of cars parked there. Mellass walked to one corner. In the darkness Quayle could see the car.

"Are they all smashed?" Quayle said, looking at the others.

"They have been used to supply spare parts for others. Only this one is whole."

"What's wrong with it?"

"I do not know. It is the gear. The clutch does not work, I think," Mellass said.

Quayle got into the car and started the engine. He pushed the clutch and pulled the gear into first. When he let the clutch out nothing happened.

"Transmission," he said. "This is going to be tough."

"I don't know how Halverson does it, but he certainly made a lot of money for the bank last year!"

DICK SHAW

Somebody called out in Greek. Mellass paused a moment, then answered.

"It is the guard," he whispered to Quayle. "Be quiet and stay under the car."

Quayle got under the car. He heard Mellass talking quickly with the guard. Then the guard went away.

"I told him you fix it for the general," Mellass explained. "He has gone to get a light."

WHEN the guard came back he had a storm lantern that had been painted blue. Quayle took it with a grunt. He could see better when he scraped some of the blue paint off the globe. He could see the dent in the gear box. When he worked the clutch he could tell that it did not go in and completely engage the gears. It had obviously hit something, and the clutch arm was bent. If he straightened the clutch arm it would go right in. He crawled out and told Mellass about the clutch.

"Can you do it?" Mellass said.

"It'll take me a while. What about some petrol?"

"I do not know. There would be some where you landed your planes."

"That's a long way off."

"You will only get away if you finish before morning. They would see you here in the day. You must finish before morning."

"Can you keep the guard away?" Quayle asked.

"I must go," Mellass said. "But I will tell the guard not to interrupt you. You will be all right, you think?"

"Sure."

"I will come back," Mellass said as he walked away.

QUAYLE got the few tools from under the front seat and a giant tire lever. He got under the car just as the planes came over. . . . The first he knew about it was the bombing. He could hear the string dropping down the lake road. He lay flat because the noise was big. Then another string dropped across the town and he could see the parachute flare

cursing into the red flat when the bomber he could see the bomber near the hospital. Helen. She was pro what had happened to wondering about Tap have time to think that so long as she stayed this thing fixed.

He got up and belted and felt his smashed he finally straightened crawled on his belly, bombs, and got back u could not get the lever slipped because his sn not strong enough to h the lever back with or aged to slip it into posi pushed in the pin and He blew out the lantern quiet again because t gone away. He started pulled it in gear. Slow clutch and it took. Th ward easily.

"Good!" he said. He and went back to the h to find Mellass. He fo into a telephone.

"Okay," Quayle told it. I'm going up to the Helen."

"What?"

"I'm taking her with to marry her."

"The girl with the ha the other *Inglisi*?"

"Yes. . . . Will it be a the car straight out?"

be ready for you. Won't we, Helen?"

Quayle turned angrily and went out. The little Greek and the corporal were waiting for him at the hospital steps. When Quayle came out they followed him through the confusion of the ambulances and the blood-strewn stretchers that were stacked against the long column.

"Listen," he said to the corporal when they were away from it, "do you want to get to Athens?"

The corporal was silent for a moment. Quayle could see he was working it out. He wondered about this definite-looking Greek who was younger than he appeared.

"Yes," the corporal finally said. "It will be all right."

"You might get caught. Wouldn't you be shot for deserting?" Quayle asked, to try him.

"I'm not deserting. We were disbanded by our officers. We wanted to go on fighting. I've still got my rifle. I would not give that in. I'm not deserting." Quayle could feel that the corporal was definite about it.

"What about the midget here?"

"He wants to go anywhere you go. He just wants to get to Athens," the corporal said.

"Okay," Quayle said. "I've got to get some petrol. It's at an airfield about five miles out of town."

"What do you want us for?"

"To carry it."

"All right. But how can you get to Athens?"

"Do either of you know the route over the Metsavo Pass?"

Quayle's two companions talked in Greek again.

"Yes. We know it," the corporal told Quayle. "But the Germans are in Trikala."

"The Germans were in Ioannina. Do you want to come?" Quayle asked.

"Yes. But how will you get there?"

"Never mind that now. We've got to get some fuel from the airfield. Come on. We've got to hurry."

There was another bombing raid as they passed through the town.

IT WAS an hour before they got to the turn off into the airdrome. Quayle could see the large bomb craters in the quiet darkness. He walked straight to the small timber clump where the Greeks kept the fuel. There was a square mounting of four-gallon tins. He said, "Good!" aloud. He knew they could not carry the tins by hand. He pulled at the limb of one of the small plane trees. It bent, but it would be strong enough to hold four tins. He bent it backward and forward until it broke at the roots. He pulled out four tins. The bearded corporal saw what he was doing and pushed the limb through the handle at the top of the tins, bending them until the limb could fit through. Quayle lifted one end, and the corporal the other. The limb bent, but held.

"I'll take another one in case this breaks," Quayle said, and pulled at the tree again. He gave the limb to the little Greek and told him to carry it. The little Greek didn't understand what he said but could see for himself. They slung the weight on their shoulders and got back onto the road.

It took them an hour and a half to get to the edge of the town, which was being bombed again. Quayle did not want to take the petrol into the courtyard. He would have to chance leaving it near the hospital with the two Greeks. The car had enough petrol in it to get him to the hospital and perhaps out of town. So he skirted across the fields behind the village, and they fell and stumbled carrying the weight over the uneven ground. When he got behind the hospital he told the corporal to wait there for him.

"I've got to get the car. Don't move from here," he said.

"Where is the car?"

"At headquarters. There'll be a nurse, too, and another *Inglisi*."

Quayle ran back to the headquarters cave. By now his shoulders were completely numb from carrying the petrol. He walked quickly past the guard at the steps and found Mellass. He was talking to somebody who looked like a general. Quayle waited for him to finish. Mellass saluted the general and walked past Quayle.

"Come with me," he said as he passed Quayle.

When they were outside, Quayle said to Mellass, "It's okay. I got the petrol. I'm going now."

"I'll go with you to the car. Where's the girl and the other *Inglisi*?"

"They're waiting for me at the hospital."

"Once you start, don't stop. I'll get you to the hospital."

They got to the car without the guard seeing them. Quayle started the engine,

room where she slept with two of the other first-aid girls. She put on a heavy coat with the letters over the pocket and filled the pockets with handkerchiefs and a woolen jumper and gloves and some letters from her parents. She turned out the dim blue light and went out.

THROUGH the tangle of bodies and movement and noise and pain along the floor, nobody took any notice of her. She pulled open the large doors and, in the air, she suddenly realized that it was nearly morning.

"Is that you?" she heard Tap say.

"Yes. Are you all right?"

"I fell over a couple of dead men, but I got here."

She could see him sitting at the foot of the steps.

"We can't wait here," she said. "Come to the road farther."

She helped him along as he walked uncertainly. They stopped at the split-off trunk of a tree that had a large bomb crater beside it. She helped him sit

and Mellass got in on the other side.

"How do you get out?" Quayle asked.

"Down there," Mellass said, pointing straight ahead.

Quayle could see the dim outline against the burning red of a great arched gateway. There was a guard there, too.

"Drive fast through it," Mellass said.

"Don't stop if the guard says anything. Don't stop at all."

Quayle let out the clutch and revved the engine. It was some time since he had driven a car. It lurched and then he put his foot down solidly. He felt the closeness of the gate as they swiftly went through it.

AT THE hospital the confusion was increasing. Helen Stangou walked through the wounded, the nurses and the doctors. She went to Tap's room . . . entered.

"All set?" Tap asked.

"Yes," Helen said. "I will wait for you outside. You must go down yourself."

"How do I get there?"

"Walk straight down the passage. Be careful of the men on the floor."

"All right. Don't be long," he said.

She stepped out and went to the small

down on the broken tree. She expected Quayle any minute.

They had been waiting for nearly an hour. They did not see John Quayle and the two Greeks leave the gasoline just below them. They only saw the car later when it came bumping toward them without lights. She could see the two figures coming up from below them.

"Look," she said to Tap.

"I hope they're not guards or something," he said.

They saw the car stop and the figure get out of the driver's seat and one from the other side. They went to the car.

"John," she said quietly.

"Yes," he said. "Get Tap in the back seat. We've got to get some gas."

"Where is it?" Tap said.

"Just sit there," Quayle told him. "It's down here. I got a couple of Greeks."

Quayle went with the two figures, and the third man, who was Mellass, followed them, though neither Tap nor Helen knew who it was yet. They saw the four of them coming back carrying the cans of petrol.

"We've got no time to put it in now," she heard Quayle say. "Get in."

The two Greeks understood, though he spoke in English. They opened the

To land bigger planes on smaller fields

we built this better wheel and brake —
to absorb 10 million foot pounds energy

TO win the victory, American genius is building fleets of the largest military aircraft the world has ever known.

From this experience is coming the "know-how" to design still bigger airplanes that will make our nation the most powerful in aerial transportation for the war.

At Goodyear we are already building wheels and brakes capable of safely landing big airplanes two to three times heavier than any now in regular service — stopping them handily on runways shorter than most transports need today.

This is accomplished by a new improvement in the famous Goodyear Hydraulic Disc Airplane Brake that enables a single brake to absorb five million foot-pounds of energy. By mounting two of these units on a specially designed Goodyear airplane wheel we get a braking action that exerts ten million foot-pounds stopping power.

Just to show you what this means, a 110,000-pound plane equipped with a dual-wheel landing gear of this type can be set down at 100 miles per hour and brought to a dead stop in approximately one-quarter minute — after a run of only eleven hundred feet!

BUILDING MAGNESIUM-ALLOY AIRPLANE WHEELS
These wheels combine great strength with extreme lightness. Pioneered and developed by Goodyear for use with Hydraulic Disc Brakes.

Naturally, smaller planes with this new wheel and brake equipment can land in still shorter runs. Thus when peace comes hundreds of American cities will be able to accommodate the great new airliners of the future with airports no larger than they have today.

While serving the nation, Goodyear is building for a better world — tomorrow.

No guesswork here! Your automobile mechanic *knows* what goes on beneath the hood. As a Doctor of Motors, he prescribes proper parts and service.

With eyes, ears, and hands trained by years of study and practical experience, he checks the motor. With a prized collection of precision instruments and tools, he diagnoses and corrects the trouble.

Your Doctor of Motors merits your confidence! Con-

sult him regularly. When necessary, he will prescribe minor repairs and adjustments that will save you money . . . and save your car!

He Woke Up Famous

Continued from page 16

Then he felt a cool hand on his forehead.

"Is it your head?" she asked solicitously.

"I don't think so," he groaned. "I think it's somebody else's. I never had a head like this in my life." He ran a fuzzy tongue around inside his mouth, and made a wry face. "It feels like the world's worst hangover."

"It is."

He blinked. "Where did I pick it up?"

"You swallowed practically a quart of brandy last night. Mrs. Beebe thought you needed it." She moved around in front of him, carrying a tray. "How about a little black coffee?"

He took the cup gratefully and tried to focus his eyes. He was sure the girl standing before him would be very beautiful if he could see her. She was quite beautiful now, despite the fact that she was eight feet wide and had two heads. He looked away; it was easier to imagine how beautiful she was just by listening to her voice. "If I'm not too curious," he asked, sipping his coffee, "who are you?"

"Lynn Horner. I work for Mrs. Beebe."

He tried again: "Who is Mrs. Beebe?"

"Mrs. Huntington Beebe. You're wearing her late husband's pajamas."

He felt himself slipping, but he made a final attempt: "Who am I?"

"Maybe you'd prefer to read it for yourself." She handed him some newspapers. "I promised to let Mrs. Beebe know as soon as you were awake."

THE door closed. He stared after her, puzzled for a moment, and wriggled uncomfortably to a sitting position. Evidently the late Mr. Beebe had been somewhat on the small side: the silk pajama coat barely met across his muscular brown chest, and his big forearms protruded from the sleeves. He frowned at the headlines: TANKER TORPEDOED OFF COAST . . . but they were meaningless. The type swam before his eyes, and he tossed the papers aside. Nothing made sense: Mr. Beebe's pajamas, the floral wreaths, the brandy.

His head was splitting, but he made an effort to recall the events of the night before. He had been heading back in his little sloop; he remembered that much. He had just wound up a week's fishing down around the Keys—his last vacation before he joined the Army—and he had been chugging back all alone toward Eshey's Point, doing maybe eight or ten knots an hour. There hadn't been enough wind for sails, and he was using the auxiliary motor. Probably he'd been half dozing; anyway, he never saw the reef or buoy or whatever it was he hit. There was a splintering crash and he landed in the water, and the little sloop began to go down.

He'd hated to see her go; he'd had a lot of good times on her. . . . It was a long haul to shore; he'd been a pretty good swimmer in college, but a couple of times he thought he'd never make it. Those last hundred yards were just nip and tuck. He remembered feeling his feet touch bottom, and then everything had gone black. . . .

He winced as the door banged open enthusiastically.

"You're all right! Oh, I'm so happy!"

A vague blob of lavender was advancing toward him, and he heard the clank of bracelets. "So unutterably happy. I'm Mrs. Beebe. Mrs. Huntington Beebe."

"Well, Mrs. Beebe," he floundered, "I want to thank you—"

"Thank me?" she protested in a soprano shriek that made his whole head

echo. "But I'm the one thanking you. After all, it isn't every chance to entertain a hero."

"But I don't see any reason about—"

"Now, then, you must be chiding. 'We've been and hours to hear the wail of your own lips.' He be pleasantly aware of other things behind her, like she dream. 'First these girls like to ask you a few questions.' 'What's your name?' inquired.

"Bill Webster." He he scratched. "Really, though, it wasn't anything."

"Did you have any war voices inquired. she sink? Was it a direct?"

"I guess it must have been the first thing I knew—"

"How about the other crew?"

"My crew?" he echoed, trying to figure how anyone could be aboard his sloop.

"Did anybody else get before she went down?"

"Tanker? . . ." He stared at her, sudden comprehension. "minute!" he exclaimed, right. "Wa-a-ait a minute be some mistake—"

"Hold it!" a matter-of-fact voice interrupted. A blinding flash of light, and his face, and his aching head, and his contracted again, he clapped his hand to his eyes and groaned.

"Oh, I know how you feel. Mrs. Beebe sympathizes. I'm afraid there isn't any pain clear through his skin, the only one of the whole saved."

He stared at the room. "I'm not . . . that is, I'm not you . . ."

His voice trailed. His head began to function at last. The first time it focused on a thing in the doorway. Slowly he seemed to swim together, eyes stopped flicking, he slowed to a halt. He gazed at her. She was beautiful—even more beautiful than he had imagined. He imagined her eyes would be gray, or her hair would be a shade of chestnut brown. Instead, they were a deep, deep blue. "I'm trying to say," he said, "I'm trying to say."

"You mustn't try to say more right now," Mrs. Beebe said gently. "You're too up plently of time later."

HE OPENED his mouth again. After all, it occurred suddenly, Mrs. Beebe was plenty of time later. I thing now, he would have away; and he was in no place to leave.

"I'm sure these gentlemen will be glad to give them any further can. Miss Horner," she might stay here in case wants anything. . . ."

The door closed. The room He peered at Lynn for a moment, uttered a tentative moan.

"Head," he sighed, pointing. She placed her hand on his again. He settled back contented looking down at his

"Is it as bad as that?" he groaned.
"What's the matter with me?"

"There's nothing the matter with
you," she said. "If anything's the mat-
ter, it's with me, I guess." She flicked
the ash from her cigarette, and looked at
him directly. "I'm pretty narrow-
minded about some things. If I ever find
out, for instance, that a person is a
fake—"

"Are you busy, Mr. Webster?" Mrs.
Beebe's golden soprano preceded her
through the door. "Because the news-
reelmen are here, and I promised to let
them have just a few minutes of your
time . . ."

He nodded resignedly. The bed of
a hero, he was beginning to discover,
was not all roses. Hour after hour to-
day he had faced a dizzying succession
of cameramen with floodlights, radio-
men with microphones, lady interview-
ers with purple nail polish. It was not
until the end of the day that he had an-
other chance to talk to Lynn alone.

She entered his room quickly and
shut the door behind her. He saw at a
glance that something had happened;
her smile was gone, and there was a look
of dull disappointment in her eyes.

"Bill . . ."

He waited.

"The tanker just landed at Miami,"
she said quietly. "They announced it
on the radio."

He stared at her, stunned. "But I
thought—I mean, it was torpedoed . . ."
"They managed to patch up the hole,
and they limped into port an hour ago.
The whole crew is safe. Nobody miss-
ing, the radio said." Her eyes were level.
"So I was right, wasn't I? The hunch
I had?"

"You were right," he said slowly. "I
never saw that tanker in my life. I was
sailing all alone in my little sloop, and it
upset, and I had to swim ashore. The
whole story was a fake."

She nodded. "I hate a fake, Bill. I
hate a fake worse than anything else in
the world—"

The door was flung open. "Oh, I've got
the most wonderful surprise for you,"
Mrs. Beebe shrieked, sweeping into the
room like a lavender tornado. "You'll
never guess."

Bill braced himself.

"I've just been talking to the cap-
tain—"

"What captain?"

"The captain of your tanker, silly,"

"SHHH! Mom's on The Warpath!"

Why ruin the evening, Mother?

Housework on hot days is bound to
leave you tired and cross. To make
evenings with your family the Best
Part of the Day, try this pleasant
treatment for "nerves." Every after-

Mrs. Beebe laughed. "He called me on the telephone just now, he read about you in the papers, and he was so excited he could hardly talk. He couldn't believe it," she beamed, "so I invited him to come out and see for himself."

"When is he coming?" he asked hollowly.

"He's on his way right now. He just had to stop and pick up some Navy authorities he said would like to meet you, too. Isn't it exciting?" She paused, her hand on the knob. "He says he can't wait to see you."

Lynn waited until Mrs. Beebe had left the room. She slammed the door and braced herself against it. Her face was white. "You've got to get out of here."

He was looking at her curiously.

"They'll be here any minute," she urged breathlessly. "You've got to hurry."

He did not move. "Why do you want me to go?"

"Don't you understand? They'll make all sorts of trouble for you if they catch you."

He grinned. "I thought you said you hated a fake."

"I do . . . that is . . . of course I do . . ."

"Then why are you so afraid something will happen to me?"

"There isn't any time to talk now," she said, grabbing a dressing gown from the closet and flinging it at him. "Put this on. It's Mr. Beebe's, too."

"It's because you love me, isn't it?"

"There's a trellis outside the window; you can climb down." She shoved him across the room. "You can get through the garden without anybody seeing you—"

He paused, one leg over the sill.
"Isn't it because you love me?"

"Oh, please. Please hurry!" There was a distant crunch of tires on gravel. "They're here now!"

"Not till you tell me," he insisted, standing on the trellis.

"Please, Bill," she pleaded, "there isn't time—"

He started to put his arms around her; and as he did so there was a slow splintering sound beneath him. His expression froze. His arms began to slide away from her again, his face retreated, and with majestic slowness he moved backward and outward into space. Lynn had a momentary glimpse of the late Mr. Beebe's pajamas, upended before her. There was a moment of horrid silence, then a distant thud and the faint tinkle of glass. She pressed her hand to her mouth to stifle a scream. People were shouting, and she heard running footsteps below. With a choked cry, she whirled and bolted down the stairway and out into the garden.

They were gathered about him in an excited group when she arrived. At

teeth. "Holt on, Miss Polly," he said.
"I an' Tim had better form an estimate
of this situation, so on an' so forth, be-
fore we can tell will we be able to help.
Who's this guy Fuzzy-Wuzzy?"

Miss Peters waved a hand, vaguely.
"That's our nickname for General
Haizlip. All his men call him that. A
positively loathsome slug, I assure you.
Why, he had the gall to tell Cookie that
she couldn't send a message to Rex un-
til the war game is over! Cookie has to
sail at midnight for Hawaii. If she
doesn't see Rex before then she will
never survive the voyage. You see, they
had an utterly mad lovers' quarrel!"

"Benny!"

"Yeah?"

"I dern't get mixed up with no gen-
er'ls. Them guys ain't in our league,
Benny. I sure am sorry, Miss Polly,
but—ouch—quit—"

"Pipe down, I said!"

"Oh, you mustn't kick Tim, Benny!
Shame on you!" Miss Peters took a
firm grip on the sleeve of Fireman Dun-
nevan's blouse. "The moment you lay
eyes on Cookie, your doubts will fade
away. She is in the process of dying
from a broken heart—literally before
your eyes!"

"Get going, Tim!"

MISS MARGARET (COOKIE)
COOKE was sitting on a bench near
the hotel tennis courts and staring at
a sad and solemn sea. It may not be true
that a young woman can die of a broken
heart, but Miss Cooke showed alarming
symptoms. Normally a cookie that most
any man might reach for, Miss Cooke
had been seized with a snuffing pallor,
a hollow-eyed lethargy that was impres-
sive. Has any deep-thinking novelist
pointed out the startling resemblance
between love's melancholy in the female
and the ravages of a bad head cold,
coupled with pernicious anemia and
hookworm disease?

"Cookie, darling—you're saved! Here
they are! The miracle men: Tim Dun-
nevan and Benny Linn!"

"Pleased to meetcha, Miss Cooke."

"Yerse. B-but you look sick, Miss."

Cookie turned her face to the back of
the bench and began to sob.

A MIST of sympathy fogged Fireman
Dunnevan's St. Bernard brown eyes.

"Agh—dern't take on thataway,
Miss," he said. "You jest tell I an' Tim
who done you dirty. We'll fix um—
please, Miss, you shoon't cry—"

"Leave her be, Tim."

Polly Peters looked triumphantly at
Tim and Benny.

"Now, I ask you?" she demanded.
"Aren't you filled with unutterable
loathing of Fuzzy-Wuzzy? Isn't it sym-
bolic when a general in our own Army
can separate Rex from Cookie and sim-
ply rack her with grief and prob'ly drive
Rex to desertion?"

"Yerse!"

"Don't, Polly . . . oh, don't say that!
Rex hasn't deserted—" sobbed Cookie.

"He threatened to!"

"Don't say—that—it'd ruin both our
—hhhh—lives. I can marry him—if he's
just a corporal. But Uncle Dan would
never let me m-marry a deserter—"

Seaman Linn cleared his throat. "All
this ain't neither here or there, Miss
Polly," he said. "Less get down to brass
tackts. The idea is you want I an' Tim
to find this Rex guy. Right?"

Miss Peters beamed. "We emphati-
cally do!" she said.

"What's his outfit an' where's he sup-
posed to be at?"

Complications rapidly developed, as

ON LAND... AT SEA... AND IN THE AIR

In every branch of the service you'll find cool, green Willsonite Sun Glasses on active duty. It's the choice of civilians, too, who demand and need scientific protection from sun and glare.

Willsonite gives 3 times the protection of ordinary sun glasses, eliminating 97% of the dangerous infra-red rays, cutting out entirely the harmful ultra-violet rays, yet transmitting sufficient visible light for safe, comfortable vision. It more than meets U. S. Government requirements for proper eye protection and has been tested and approved by flight surgeons for Pilots of Leading Airlines.

Insist on scientific Willsonite Sun Glasses for your eyes. Smart styles at popular prices at better stores everywhere. Manufactured by Willson Products, Inc., Reading, Pa., makers of eye protective and respiratory devices since 1870.

they had a habit of doing with Polly Peters. It appeared that Corporal Rex Downes belonged to C Company, Second Tank Battalion, Fifth Armored Division. Corporal Downes had vanished in the heat and dust of Fuzzy-Wuzzy's war game somewhere between San Diego and the Mexican border. Army headquarters had brutally and stubbornly refused to forward any love messages for Corporal Downes. When Miss Peters, whose father owned a chain of seventeen newspapers, demanded to know Rex's exact whereabouts on pain of publicity for refusal, an atrociously rude aide on Fuzzy-Wuzzy's staff had told her to go back to Miss Widdicomb's College for Women and attend to her knitting.

"For that, my dear Benny," said Polly Peters, "we're not only going to find poor Rex—we're going to wreak vengeance on Fuzzy-Wuzzy. It isn't the insult to me and Dad, at all. It's plainly and simply that Mr. General Haizlip is not a fit person to command an army. His men hate and despise him, and so do I. He's destroying morale. Dad's papers are full of complaints. His head must roll in the sand!"

Chewing a match, Seaman Linn rendered his opinion:

"If this was a U. S. Navy matter, I an' Tim would have a good chanst. But we couldn't even get to first base lookin' for the guy, with MPs guardin' every road—"

Polly Peters giggled.

"Oh, how stinkily stupid of me!" she exclaimed. "I forgot to tell you about Mr. McCullan! He's the war expert for Daddy's papers. He's got a pass to go with the Armored Striking Force. He can take you right straight to Rex's part of the Army!"

"Yeah? But will he?"

Miss Peters giggled again. "Come and see!"

This remark aroused Miss Cooke from a soggy reverie. She stood up and confronted Miss Peters almost sturdily.

"No, Polly—I won't stand for getting that awful man mixed up in this—why, the very sight of him would so disgust Rex—not that creature, Polly—"

Fireman Dunnevan snorted protectively. "If he's immural, it's out!" he said.

But Seaman Linn said, "What's the angle, Miss Polly?"

"Devastatingly simple," said Miss Polly, her angelic eyes demure. "Daddy sent Mr. McCullan to cover the war games. He's spent the last four days in the Coronado Hotel bar. I caught him at it. He's in my power. I'd have sent him by himself to find Rex, but he's too drunk. But Benny, you and Tim can load him into your motorcycle and use his press flag and pass, can't you?"

Seaman Linn grinned. "You got a brain, Miss Polly," he said. "C'mon Tim, we shove off!"

"Wait . . . the message to Garcia!"

Fireman Dunnevan blinked. "Oh, is they a Mexican lost too?" he asked.

Polly Peters laughed, but Miss Margaret (Cookie) Cooke drew a sealed letter from her sweater pocket. She handed it to Seaman Linn.

"I feel that you're my only chance, Mr. Linn," she said, simply. "If Rex gets this letter in time, he'll come here . . . and marry me. If he doesn't, I'll just have to—hfff—start for Hawaii—"

"We'll find him, Miss!"

"Yerse!"

CORPORAL REX DOWNES of the "Armored Striking Force" had an extremely bad case of low morale. He and his two-man crew—a first-class private nicknamed Prof. and a plain private nicknamed Sarge—with their blitz buggy machine-gun carrier, nicknamed Liver Complaint, had been officially "destroyed." Three heavy bombers of

the "Blue Army" had caught them on the edge of a tiny grove of pine trees, about eight miles down the beach from the Coronado peninsula.

A parachuted message from one of the bombers had informed Corporal Downes: "Tank destroyed and all occupants casualties. You can have no further communication with your commanding officers. Signed: Lieut. H. J. Phillips. Verified by Colonel C. M. Donohue, referee."

In official words, Corporal Downes was "dead."

HE FELT much worse than dead. For nine days he had been bumping over rocks and slogging through sand in obedience to orders. His back ached and his head ached, but his heart ached worst of all. *Where was Cookie?* Had she actually gone back to Honolulu? Why, oh, why had he ever quarreled with Cookie? Why hadn't he promised to go to officers' school? He should

"Nope. I don't defend no brass hat, never."

"You admit Fuzzy-Wuzzy shouldn't have started maneuvers until we had all our equipment?"

"Sure, sure."

"Then why shouldn't we rebel against the whole silly farce, Sarge?"

"You rebel, kid. Not me." Sarge closed his eyes. "I'm catchin' me a nap."

Prof. jumped to his feet. He had a wide crack of a mouth and indignant gray eyes and a crew haircut.

"Hey, Rex!"

Corporal Downes stirred slightly. "I agree one hundred per cent, Prof.," he mumbled. "We'll give Fuzzy-Wuzzy the old *ling chi*, then fricassee the pieces in crankcase oil—the blankety-blank, so-and-so—"

Prof. walked over and kicked Corporal Downes gently. "How's about going over the hill right now, pal?" he demanded.

Rex sat up. He looked somberly at

have been willing to see her side of it. Cookie's Uncle Dan was a general, and it was natural that the poor kid would want him to have a commission. A silly and rather snobbish attitude, true enough, but he could at least have compromised with Cookie.

Corporal Downes moaned, lighted a cigarette and slumped deeper into his bed of pine mast in the shade of the blitz buggy. He was short and fair, but, while he could not be called handsome, he was not ugly. With his "maneuvers whiskers" removed, some sand and crankcase oil wiped off, and an abnormally bitter scowl taken away, Corporal Downes would do all right.

But not now—not this afternoon. Corporal Downes lay wallowing in gloom, too dispirited to join his companions in their argument.

"OHIO . . . That's me!" Prof. was saying. "And I won't even wait till October. I'll go over the hill any minute now."

"Blaaaahhh," Sarge said. "You guys talk just like we talked at Funston in '17. The hill we went over was Number 243 at Exermont—in France."

"I suppose you defend this childish make-believe that Fuzzy-Wuzzy calls a war game?"

Prof. Then, he glanced toward a thick brown dust cloud four or five miles inland. A swarm of reconnaissance planes and fighters buzzed over the cloud. Corporal Downes thought of the thousands of sweating, toiling soldiery in that dust and heat. Then, he looked at the blitz buggy.

CORPORAL DOWNES slowly and deliberately stood up. "I'll settle for going A.W.O.L., Prof.," he said.

"No! Right over the hill!"

"Aw, Prof., you don't want to do that."

"Oh, have some intellectual honesty!"

"A.W.O.L.—that's all. And just for a couple of hours. How about it, Sarge? You with us?"

Sarge, a wizened little man so brown that he looked as if he had been covered with gingerbread dough and baked hard, opened one eye.

"Naw, Rex," he said. "I been A.W.O.L."

"C'mon, then, Prof.!"

But Prof., who had been an instructor in philosophy at a California college, was not satisfied with merely going A.W.O.L.

"War games with imitation tanks and guns are, per se, destructive of morale,"

he stated. "But when they are tortured for days because old poop like Fuzzy-Wuzzy show Washington he's fit a field army, we have reduced to *ad absurdum*. Our duty as intelligent men—"

"Prof.! Look!"

"What is it?"

"You see what I see, Sarge?"

"Yeah. Two sailors an' motorcycle. Headin' this way."

SEAMAN LINN gunned the cycle along a sandy beach. A series of masterly turns a on Corporal Downes, Prof. Fireman Dunnevan sat in holding a small, plump bald on his lap. The s.p.b.m.v. pennant attached to a stick an unintelligible monologue. "I guess I seen every Sarge said.

Halting the motorcycle, yelled, "You guys know where find Corporal Rex Downes?"

MORALE IS A LOT OF LITTLE THINGS

IF YOU'RE A MAN, it's a shine on your shoes... the sweet feel of a fly rod in your hand.

It's your favorite pipe... your roses... that old hat your wife tried to throw away last fall.

If you're a woman, it's a tricky new hair-do maybe... or a change of lipstick.

Morale is a lot of little things like that. People can take the big bad things... the bitter news, the bombings even... if only a few of the little, familiar, comforting *good* things are left.

☆ ☆ ☆

It happens that millions of Americans attach a special value to their right to enjoy a refreshing glass of beer

... with friends on a warm summer evening... with wholesome American food... as a beverage of moderation after a good day's work.

A small thing, surely—not of crucial importance to any of us. And yet—morale *is* a lot of little things like this. Little things that help to lift the spirits, keep up the courage.

And, after all, aren't they among the things we fight for?

A cool, refreshing glass of beer—a moment of relaxation... in trying times like these they too help to keep morale up

beer an' give the poor guy a swig—but not too much!"

Fireman Dunnevan groaned. "But Benny—whut if'n he bites my fingers again?"

"Give him 'at beer, Tim!"

Benny turned back to Corporal Downes, Prof. and Sarge.

"Tim'll stay here with your buddies, Mr. Downes. I an' you an' Mr. McCullan will ride the motorsickle back to Coronado." Then, with heavy sarcasm, "Maybe you guys' morale will hold up until we bring Mr. Downes back here. I'll have Tim tell you how we handle low morale in the U. S. Navy."

Sarge spat tobacco juice dangerously near Mr. Linn's left foot. "Yeah, sailor? How—f'rinstance?"

"Well, soldier—just as a sample—wunst a couple of boots complained to Chief Mulcahy that the coffee had flies in it. The chief hung 'em by their thumbs outside two fo'c'sle ports in a rough sea!"

Sarge grunted. Corporal Downes and Prof., who had been in whispered conference, faced Seaman Linn.

"Look, sailor," said Corporal Downes, "Prof. wants to go A.W.O.L. with me. How's about you renting us the machine for a couple of hours?"

Seaman Linn chewed a match reflectively. "'At would come pretty high."

Prof. grinned, and with bitterness. "He knows you're stinking rich, pal!" he said.

"Name your price, sailor. I'm in a hurry."

Without a blush of shame, Seaman Linn said calmly, "It'll be fifty bucks rent an' another fifty deposit on the motorsickle. Then, I'd hafta charge you a hunnert bucks deposit on Mr. McCullan."

"A—a deposit on him?"

"Right! If you don't bring him back, how'm I an' Tim gonna get outa this war game an' home to our ship? As an extry concession, you can take your other buddy along. He don't weigh much. But that motorsickle an' Mr. McCullan has gotta be back here inside of two hours or the whole two hunnert is forfeit."

"For that much Rex ought to get title to Mr. McCullan, at least—"

"Shut up, Prof.! It's a deal!"

THERE was a climactic outcry of pain from Fireman Dunnevan: "Benny! The littel sod bit my thumb an' guzzled the hull botter!"

Mr. McCullan lurched forward, empty bottle in hand. "A wild-goosh shase!" he announced. "An' itsh all Fuzzshy-Wuzzshy's fault! Am I correct?"

Sarge grinned, nodding. "You can't go wrong blamin' it on a brass-hat, brother," he said.

Mr. McCullan embraced him. "We know, don't we, old boy, old boy? They never take war gamesh sherious till the bullets start to fly. Am I correct?"

"Yeah. Won't even keep their heads down. But when them things start comin' over, they remember everything they griped at on maneuvers."

"A genius!"

This meeting of the minds caused a temporary hitch in proceedings. Sarge did not particularly want to go A.W.O.L., but Mr. McCullan refused to board the motorcycle without him. However, when Seaman Linn pointed out that Corporal Downes' romantic future hung in the balance, Sarge agreed to make the trip to Coronado.

"Charge!" yelled Mr. McCullan, waving his press flag. "'Charge for the gunsh,' he said, 'not though the sodshers knew Fuzzshy-Wuzzshy had blundered! Take him alive, men, take him alive!'"

Tim and Benny watched the brave expedition chug off through the sand. The sun was low in the western sky.

"Benny?"

"Yeah?"

"We fixed Mr. Downes Cookie up orl right, but helped the mural of the none. Them soldiers sho A.W.O.L. In the U. S. Na desert our ship, even was nuts like Fuzzy-Wuzzy N"

"Major Johnson—when these men have had their lunch, you will take them to Navy Landing. I have . . . er . . . explained matters to their commanding officer. That is all. Carry on!"

"Ju-das, I mean, thank you, sir!" "Y'yerse!"

Nodding almost genially, Fuzzy-Wuzzy turned on his heel and walked out. Major Johnson set the lunch basket on a bench and handed Seaman Linn a telegram.

"Don't ever fall overboard, sailors," he said. "Your pockets are too full of horseshoes. I don't know what made the general change his mind. I had the firing squad all ready!"

Tim and Benny read the telegram together:

MESSRS. LINN AND DUNNEVAN
GUARDHOUSE, CAMP HAAN
DEAR BENNY AND TIM WE GOT MR. MCCULLAN INTO HIS RIGHT MIND AND HE WROTE A LONG STORY ABOUT FUZZY-WUZZY SAYING HE HAD A HEART OF GOLD AND A SENSE OF HUMOR AND WOULD TURN YOU LOOSE STOP REX SAYS HE THINKS FUZZY-WUZZY IS ON A SPOT AND WILL GRAB THIS CHANCE TO MAKE HIMSELF POPULAR WITH THE ARMY STOP IF HE DOESN'T AND PUTS YOU IN PRISON I SHALL DEDICATE THE REST OF MY LIFE TO GETTING YOU OUT STOP FEEL THIS WHOLE THING ■ FOULLY SYMBOLIC AND AS SOON AS COOKIE HAS HER WEDDING WE MUST WORK OUT PLAN TO AROUSE THE PUBLIC TO THEIR OWN LOW MORALE STOP YOUR SOUL-THRILLING ACTION HAS NOT BEEN IN VAIN STOP I LOVE YOU BOTH MADLY
POLLY PETERS

Tears of anguish flooded Fireman Dunnevan's eyes. "Ner, Benny," he said, "we dern't want no more Polly Peters—never. Takin' on the hull U. S. nation is too much—even fer me an' you, Benny. / Is that a thought, or ain't it?"

For once, Seaman Linn agreed. "Right, Tim!" he said. "I an' you is gonna leave the U. S. public strickly to God!"

SOMEWHERE on the darkened Trimble, a bosun's whistle piped. Seaman Linn jumped to his feet.

"Let 'em keep their medals, Tim," he said. "Here we go to get us some more Japs!"

But Fireman Dunnevan, still bemused, had a question to ask:

"Look, Benny—"

"Yeah?"

"What did happen to the U. S. public's murrall?"

There was a grim jerk of Seaman Linn's thumb upward.

"Pearl Harbor happened, Tim," he said.

in that rousing halloo: "Give Me That Old-time Religion."

Buddy shortly allowed as how he was saved, he reckoned.

The church brought out her dramatic potentialities and then kindly gave her opportunity to exploit them. While her proud young parents, James and Mary Anderson, nodded approvingly, Mary starred in Sunday-school plays, in grammar-school plays and eventually in high-school plays.

Her mother grew accustomed to seeing her precious run a high fever before each performance, and finally stopped putting her to bed and phoning the doctor. It was futile. Deep in the heart of Alabama, the show-must-go-on tradition flourished surprisingly in one little girl.

The family moved to Homewood, Alabama, where Mary's grandfather lived. Grandfather Anderson—hereinafter referred to as Pampa—was a character. To Mary he seemed a cross between a white knight and divine justice.

"I never left his side," she says.

Pampa, the Gunman

Mary is convinced that, when she was ten or thereabouts, she saw Pampa shoot a man. It was at her mother's sister's wedding reception, and the victim was a saxophonist. Pampa arrived on the rowdy scene in his nightshirt and nightcap, raised his trusty musket to his trusty shoulder, and filled the musician with buckshot. "Durned noise!" he said.

When Mary wasn't striding around in Pampa's wake, frowning like a militant Jove, she was mincing coquettishly in the fashion of her aunt. For her mother, Mary Polis Anderson, was of French ancestry, and Mary's aunt had the graces of a French lady.

"Men were attracted to her like moths to a candle," says Mary poetically. "So, of course, I tried to be like her." This statement is accompanied with a swift lowering of eyelashes, and a tilting of the head.

Into the dramatic boiling pot already abubbling with Pampa and Auntie, Mary's family threw a performance of Peter Pan.

This was the first professional theater Mary had seen, and she was deeply impressed. Came the first big rainstorm thereafter, and Mary, accompanied by a dubious Buddy carrying a tremendous umbrella, went flying. The wind picked up the two children and carried them for a few feet in the air before depositing them on the ground again. "Mother dear," Mary shouted, as she ran back inside, "Buddy and I flew over the house—just like Peter Pan!"

Like Peter Pan in another respect, Mary took her time about growing up. She was the baby of the family—a role she rather enjoyed and didn't bother to wear shoes until she was sixteen.

Even with shoes, she looked young for Howard College in Birmingham. This institution was run by preachers—a group of men, Mary points out, who were, in a way, potential actors. Dramatics were, therefore, an integral part of the curriculum. Mary played Portia in The Merchant of Venice, she was Juliet to a cleric's Romeo. The dramatic club featured her in Somerset Maugham's Jack Straw and in Hell Bent for Heaven. The club and Mary then toured the South in a repertory of one-act plays.

"I don't know what the faculty could have been thinking of," Mary says. "The

plays were mostly Chekhov—just reeking with sin!"

While attending Howard, Mary was active in the Birmingham Little Theater. During her sophomore year, she was playing the role of the prostitute in a play called Excursion when the whispered word passed from member to member of the Little Theater's cast: "There's a Hollywood talent scout out front!"

Talent scouts are rare birds in the Southern woods, and Mary gave her all. George Cukor, the bird in question, came back to her dressing room after the performance. "Ever hear of Scarlett O'Hara?" he asked. "How would you like to play her sister?"

That should have been all there was to it—but it wasn't. Mary and her mother were shipped to New York where she was screen-tested. Cukor offered to get her a job in summer stock while the studio continued its search for Scarlett but Mary's mother wouldn't allow her baby to stay up North alone. They merely waited in New York until David Selznick came east and invited her to sign a contract.

Mary was so flustered she signed on the dotted line reserved for the producer's signature. In her own mind she became, as of that moment, a great movie star.

But she was several light years away from that goal. She returned to school, feeling infinitely superior to her classmates, told them of her great success—and then nothing happened. Nothing whatever. Since she was the first person signed for Gone With the Wind, she had a heap of waiting to do. After several of the most irritating months a girl ever spent—"Movie star, are you? That's a hot one!"—Vivien Leigh was finally discovered in England, and a production date was set.

So Mary went to Hollywood. Her mother installed her in the Studio Club, a ladylike institution with a code of rules, and then returned to Alabama. Mary was in Hollywood alone.

If that sounds glamorous, forget it. Mary was signed to a contract written on the head of a pin—fifty dollars a week; not enough money for the first down payment on the first tile for her first swimming pool, and no possibility of help from home, as Father's business had gone the way of all real estate in the Great Crash.

The Studio Club was as respectable as a convent, though the girls resembled nuns not at all. Her first morning there, Mary rose at seven and dressed carefully. She combed her long black hair, put on her patent-leather shoes with the almost-high heels, donned the little blue dress with the prim white collar which her mother had made her, and went down to breakfast.

A Memorable Breakfast

It was a memorable meal. The dining room was full of young actresses, stenographers and carhops all wearing lounging pajamas or robes. Mary and her back-country ensemble were a sensation.

"And who are you?" the girl opposite her wanted to know. "Shirley Temple's understudy?"

If the Studio Club was surprised by Mary, Mary was bewildered by it. But only for a short while. Once she'd learned that homespun dresses, however dainty, were not *comme il faut*, she blossomed out in wild slacks and wilder blouses. Although she couldn't keep from blushing from time to time, she

more unemployment, until
Patrick saw her in a studio
essay and engaged her to play
when in his travelogues.
me unemployment. Mary had
he got the idea that actors'
we foxy fellows who mulcted
gia of part of their salaries in
fo doing nothing. A period of
bis drove this delusion from
ad, he accepted an agent's con-
nd, as promptly signed by War-
oths.

Se-Hawk with Errol Flynn and
Robson was followed by All This
dean Too, and then Warner's
er Max Reinhardt's dramatic
er further polishing. Reinhardt
equer talent and starred her
schol's productions and, when
r's red of paying her tuition,
ve by a scholarship. And when
told him that her brother Buddy
a biding genius, the maestro
to teach him the rudiments of
ama oo.

Buddy came west, and Mary and he
took an apartment together. It didn't
take Buddy long to learn, and soon he
was on Warner's pay roll in his sister's
stead.

This might have caused friction if
Mary hadn't been signed, soon after, to
play the second lead in Cheers For Miss
Bishop, starring Martha Scott. Mary
was the meanie, of course, stealing Mar-
tha Scott's fiancé and marrying him just
in the nick of time.

The cheers were mainly for Miss An-
derson. The producers told the agents,
the agents told the producers, the pub-
licity department told the press that
Mary Anderson was a comer—another
Ida Lupino.

So Paramount gave her another un-
pleasant female to portray in Bahama
Passage, with Madeleine Carroll and
Flora Robson. Another Bette Davis,
everyone told everyone.

Then, illogically enough, she was
cast as Henry Aldrich's sweetheart.

And who could better play the terror
of Guest in the House than Henry's
girl? Producer Stephen Ames heard the
prophecy on the Coast that Mary was
the next great star. He flashed the good
word to brother Paul Ames in New
York. Brother Paul so informed Direc-
tor Reginald Denham. Denham dubi-
ously phoned his friend Flora Robson,
and Flora, who knew, said, "She's
great!"

Now Mary Anderson's a Broadway
star with a shining movie future. A
penthouse? Fast cars? Well, not ex-
actly. Mary is a very close hand with
a dollar bill.

Not tight, precisely, but close; you
never know when you'll need a dollar!
So she tends to undertip bellboys, and
her friends follow her around making
things right. And although she's for-
ever presenting gifts to the members of
the cast, she's a due-bill collector. Ho-
tels give due bills to pay for advertis-
ing, and a smart girl can buy them cheap
from a broker. This means moving
around a lot and living in some pretty
peculiar places.

But Mary says: "I don't much care
where I live as long as I'm acting. As
long as I'm acting good!"

The Old College Try

By Franklin Lewis

Lou Boudreau, Cleveland's Boy Wonder, a guy with new slants on managing a baseball team. He may have something at that

WHEN Alva Bradley, president of the Cleveland Indians, opened a door to an office in League Park the night of November 25, 1941, nodded toward a slender, somewhat nervous young man and said to the assembled reporters, "Gentlemen, meet the new manager," he loosened a torrent of gasps and shudders that filled the nation's sports pages for several days.

The new manager, of course, was Lou Boudreau, twenty-four years old, and he had just signed a nice, fresh two-year ticket to handle baseball's most explosive squad. They had been nationally hooted as the Cleveland Crybabies two years before; they had been a flop last season even with Bobby Feller compiling the best record in baseball. Boudreau was now to lead this harassed group out of the wilderness.

"It's a great deal," wrote a sarcastic gentleman on the West Coast. "They get Baby Sandy for manager and ruin the best shortstop in baseball."

But it had never been a matter of impounding Boudreau and forcing the job on him. He had not come running at the crook of Bradley's finger and the salary debate had been no wishy-washy affair. He haggled with Bradley for several weeks, finally signed when several adjustments in club relations were promised. In short, he wanted the job and wasn't afraid of it.

Bradley started getting warm on Boudreau two years ago at Fort Myers, Florida, when Lou, crippled by a broken ankle bone, played catch with a teammate while hobbling around on crutches. Boudreau noticed Bradley and called to him:

"Gee, Mr. Bradley, I sure hope this

ankle doesn't keep me out of the opening game. I'd like to play every game this year."

"If you do," answered Bradley, "it'll mean a bonus of \$2,500 for you."

This would have been Little Rollo stuff for anybody but Boudreau, who from his grammar school days has been running the teams he was on and giving forth with the old college try. Opening day found him limping around at shortstop and he went along steadily enough till mid-September, when, with the team in a death struggle for the pennant against Detroit and New York, Boudreau went to Max (Lefty) Weisman, the club's trainer, to complain of a pain. Weisman took him to the club

physician, who insisted that Lou submit to an immediate appendectomy. Boudreau balked.

"Fix me up till the season's over, Doc," he pleaded. "Put on those ice packs and get me out there."

Boudreau won. He struggled along till the last game, even though his weight dropped ten pounds, his face was drawn and he became slower and slower. The Indians lost the pennant to the Tigers on the third from the last day of the season but Boudreau played in 155 games and collected his bonus.

That spirit undoubtedly inspired thoughts in Bradley's mind but Boudreau's actions in the field had done even more to influence the team gen-

erally. From the time he became a regular shortstop, he had been giving to the rest of the team. He gave oral orders but each turn of play began to mean certain things: a fielder, an infielder, the catcher, the veterans got to looking for Boudreau's lead and it was open game. The team for several years had been the leader of the pack. Traveling correspondents at the Cleveland training camp at Fort Myers, Florida, this spring were impressed by the team's spirit even in routine practice sessions, a reflection of the manager's insistence that the game be played intelligently and

Lou Boudreau, manager of the Cleveland Indians. Lou also doubled as a top-notch

The sun is the source of all energy... the energy of sunshine is crystallized in Dextrose sugar.

Dextrose improves flavor—adds to the food value of Ice Cream

ANNUALLY, AMERICA ENJOYS almost 300 million gallons of ice cream; the appeal of its cooling refreshment is universal. While everyone thinks of ice cream as a "treat", actually it is a valuable food, providing carbohydrates, protein, protective fats and vitamins A, B₁ and G.

THE USE OF DEXTROSE in ice cream formulas indicates the value of this important food-energy sugar. Dextrose develops rich, creamy texture and superior "body" in ice creams, emphasizes delicate natural flavors and adds measurable food-energy value. As the primary "fuel" sugar of the body, Dextrose is promptly absorbed, utilized for bodily energy and activity.

MANY OF AMERICA'S finest ice creams, sherbets and ices today are "Enriched with Dextrose". These delicious, refreshing products provide genuine food energy, extra enjoyment—at no extra cost.

CORN PRODUCTS REFINING COMPANY

You will enjoy the finer flavor, smoother texture and genuine food value of ice creams "Enriched with Dextrose".

newspapers each day run "American" recipes to guide Australian housewives. The Boston cookbook is reported a best seller in the bookshops of Australia's five largest cities. All over Australia, on highways outside American camps, hot-dog and hamburger stands are springing up. Judged by the crowds, these vendors are the beginning of a new millionaire class in Australia.

This is giving a real American touch to the Australian background of huge old gum trees and palms. After the war you will feel right at home when you go touring in Australia and come upon signs like this: "Five Hundred Yards Ahead—Digger Danny's Toasted Dachshunds."

BACK home, the consciousness of war is present, although the pressure of war physically near at hand is not. But the actual continent of Australia has been touched by war at Port Darwin; relatively, that is, as if San Diego had been attacked.

Ideas our young soldier had of what life is like for the civilian population of an endangered country were necessarily gained only from pictures, stories and air-raid practice. That's why, apart from his own camp duties and training, the Yank gives wide-eyed attention to his day-by-day surroundings in Australia. Thus, a feature that captures his interest as soon as he is off the boat is covered by the one new word, at least, that Australians have contributed to this war's lexicon—"brownout."

A brownout is Australia's twilight version of what in Europe and the States we call a blackout.

For most Yanks, the brownout is their first intimate experience with that stage of man's progress which, by enabling each to seek his enemy's country through the sky at night, has turned down the lamps of most of the world and set the comfort and security of life outdoors after dark back at the level of the Middle Ages. For your correspondent, who lived through two winters of Germany's blackout and described it for you in Collier's, the brownout is of particular interest.

The swift pace of modern community life is predicated upon light—abundant, beneficent and full—by night as well as by day. When light fails, old evils flourish. Australia's brownout is the most rational attempt I have seen to compromise with atavism; to hold the best of modern life by night without endangering public safety either from local effects or from enemy action. It's perhaps the most valuable experiment that any belligerent has made with the social and moral aspects of war. If it succeeds, perhaps it will influence Europe to emerge from total darkness into uneasy dusk.

The theory of the brownout is to shut off completely all shining out of light from indoors, to discipline private lighting outdoors, and to reduce public lighting to a point where the flip of a button can put an entire area into complete darkness. If you ride a bicycle or use a flash in walking, you must screen the lens to a fraction and you must be ready to switch off entirely if the siren whines. Night speed limit is twenty miles an hour. Tram blinds are drawn. Essential street and hazard lights are left on, but under constantly alerted master control.

In practice—well, it's been a lot of fun. The bachelor girls of one city in a newspaper poll gave their choice of weapons for brownout flirts. Many favored walking sticks or umbrellas, others preferred jackknives. A few secretaries told how they carried home each night the file spike from their boss' desk, but hatpins—the immemorial feminine stand-by—topped the list. Another brownout note that amused Yanks was

the complaint of a bicycle-
pion that he could no long
in his thirty miles of road
night. He went too fast for
headlamp, so he rigged up
indoors at home and does
there.

Unlike Europe's blackout, brownout does not tend to home nights. If reasonable you can walk without bumping people. Across the infrequent pools the crowds by some twirl of fear to swim rather than out of the shadows beyond the number of Yank face monkey or overseas cap is feature of Australian (th days) this might be Main S are nasty enough by natur flashlight on any park ben not, you will see a Yank and ing hands. states—a sort of World Series. New South Wales are the Yankees of Australia, having most teams and the biggest population to draw upon. Nevertheless, Victoria took them in last spring's play-off.

The Yanks are doing better now with practice and teamwork—although the Aussies still win a surprising number of games. Aussies play solemnly. Their game manners are in the cricket rather than the rounders tradition. Their pitching is slower than ours. While their hitting is sharp and well-placed, but short, and their batters are inclined to close their eyes when they swing, their fielding is superb. Their rules are the same as ours, except that if a foul ball goes into the crowd it's politely returned with "There you are, chum," and "Thanks, mate." (Pronounced mite.) Whereas only handfuls used to watch big games, crowds of eight to ten thousand Australians, not counting Yank spectators, are common now at games in which United States teams play. It's because natives find our habit of talking up a game quaint.

In one recent game, a Yank batter, called out on strikes, threw down his bat, kicked up dirt, screamed murder, shook his fist at the umpire—all clowning for the benefit of the crowd; but the umpire went home. Aussies have begun to imitate Yank pep talks. You now hear from the shortstop, "Bully pitch, old thing," or, when the umpire calls a close one, "Slay the bloke!" Sports editors say baseball seems really to have caught on with spectators at last and may remain an important Australian game after the war, with the possibility of intercontinental matches or authentic World Series.

Yanks here think at least two Aussies are big-league caliber: Charley Puckett, a pitcher formerly with Victoria, now with Western Australia, and Ken Gulliver, a New South Wales pitcher.

"Kin you imagine," a Yank player said to me, "what the big leagues are missing by not sending an ivory hunter down here? Just think how one of these Aussie players would get over in Brooklyn, especially if he wore his turned-up

digger hat and threw boomerangs at fresh guys in the bleachers."

The Yank's chief source of home front news—besides of course his personal mail—is the columns of general items and sports results that most of the large city dailies in Australia have undertaken to print for his benefit. Local radio stations give as a rule only Canberra and London newscasts. Facilities for picking up and rebroadcasting short wave from the United States are not numerous. A few Yanks brought portable receivers capable of short-wave reception; others have purchased sets here. You can get quite a good one for about \$65.

In all Yank camps it's commonplace to see large groups of quiet men around a set at night trying to raise home. The majority of Yanks have no access to short wave, and those who do have express with razberries their chagrin because Tokyo is the easiest distant station to pick up, while general short-wave reception in Australia from the United States is difficult and uncertain, a fact that has annoyed commercial radio engineers for years. However, much of the local broadcasting is home-like, consisting in large part of canned dramas and musical recordings from the States.

THE American sports news in the papers mainly concerns baseball, although boxing and racing—true to Australian taste—are reported. The daily scores and, at intervals, the major-league standings are given. Thus Yank soldiers 12,000 miles from the peanuts and the rain checks are happily able to learn how the Red Sox or Cubs are making out, who is the latest big leaguer to be drafted and how many homers Ted Williams has. There are partisans, of course, among men whose loyalties suggest their scattered origins, but little passion; it's all too remote. However, during one long ride in a truck filled with soldiers, I heard a testy debate of the Dodgers' chances to repeat, while sights of a strange land flashed by ignored.

Often in the baseball roundups, there

will be a slip that mystifies the Yanks. For example, it was gravely recorded here that "Lynwood, a schoolboy, and Rowe, a right hander," had been sold by Detroit to the Dodgers. But such oddities, if not transmission faults, are mistakes of an unfamiliar pencil, not of the heart. For the newspapers here have given both intelligently and generously of their space, and the Yanks are grateful.

Next to sports results, the home news that Yanks read and discuss most eagerly relates to the effect of the war upon the folks they left behind. Wage ceilings, politics, Hollywood divorces, cuts in train schedules—such matters give little kick. Homelier things touch deeper. "Ma ain't ever going to be able to get all her baking done with only one pound of sugar a week." "How can the girls manage without bobby pins?" "And if they take the rubber out of girdles, boy, Maggie will sure have to suck it in."

CONSEQUENTLY, a feature of Australian life that the Yank soldier watches keenly is the rationing of everyday things. As a rule his own wants are not much involved, for the Commissary or Post Exchange can sell him what small luxuries Army fare and routine don't provide. It does affect his shopping for gifts, particularly jewelry, to send or to take home when the great day comes. Moreover, Yankee inborn curiosity and friendliness make him take an interest in the problems of his Australian mates; also these incline him to thoughtfulness about the daily pattern of life now at home.

He is becoming accustomed to the sight of housewives struggling with unwrapped commodities. Paper is at a premium, so you stuff your pockets and arms with purchases and everybody knows what you have got. The sheepishness of men who have accompanied their wives on department store sprees or perhaps have done a little sweetie's buying on their own is a commonplace of tram rides. So is the helpful pursuit of oranges or potatoes that someone has fumbled. You see many Yanks carrying things for girl friends. Rationing is intended to conserve manpower or labor as well as materials; that is why you can buy no sliced or wrapped bread and get no deliveries from department or grocery stores of parcels less than four pounds in weight or three feet in length. And even those only once a week.

Among things that cannot be manufactured from iron or copper or their alloys or derivatives are coat hangers,

lampshades, novelties ash trays, sporting g holders. No glycerin baking or confectioner nic in your closets for not be used for moth l to pursue fashion, love larity without perfun rations, harmonicas c Girls must get by on r cally the entire cosme —less of a hardship, i vored lassies of this than it would be to most other lands. burning charcoal in the airtight
er ves off carbon gas. By air
ted from outside and from steam
n by boiling water, oxygen is
birl with the carbon gas, reducing
on monoxide gas. Some hydro-
carbon dioxide and nitrogen also
ult. The gas is drawn through an
g intake pipe into the cylinders
s compressed and then ignited
the spark plug, exactly like gasoline
or. The gas is very dirty when given
and asses through a cooler and a
es of cleansing filters. It will not foul
er plus but you must clean the filters
quently. You must also clean out
es, rather similarity to the kitchen
ve. Our instrument panel has one
b for petrol, another for the change-
r to charcoal gas, a third for burning
ombination of petrol and charcoal
if the car begins to buck and lag,
on long hills.

OTCISTS here run out of fire in-
stead of out of gas. When you open
top of the burner to put in more char-
coal, you must not hold your face close
you will lose your eyebrows. There's
a collection of gas under the lid
it will flare off when it mixes with
air. It doesn't do so by itself, you
st throw in a match to make it pop.
The carbon monoxide is, of course,
lly poison. You have to be in open
when starting or stopping. Users
ve been so thoroughly warned of
ills, however, that there's only one
ord of fatality; some truck drivers
umped at night put a tarpaulin
er themselves and the producer in or-
to keep warm.

Motorists who have gas-producers buy
petrol not only for supplementary
refuels in a pinch but for starting.
The producer does not begin to
tick the cylinders until suction draft
rough intake is created by running of
the motor. Petrol can be dispensed
th entirely if an electric blower is at-
tached to the producer to push the gas
rough as soon as you step on the
arter. Some blowers whine and howl
like a siren. In many neighborhoods,
people used to rush to the shelters,
thinking they were air-raid alarms.
Most private owners have their gas-

producer fastened to the rear of the car,
but farmers are more apt to carry it on
a small trailer so that the producer can
be switched from car to truck and even
to the farm light plant and other en-
gines.

Yanks invariably report this experi-
ence after their first rides in a gas-pro-
ducer-equipped car or taxi: Whenever
you turn your head a little, you catch
sight through the back window out of
the corner of your eye of the big con-
trivance riding there—and you nearly
jump over into the driver's lap because
you think it's another car about to crash
into you.

Certainly there's no local manifesta-
tion of war in which the Yank soldiers
have taken more interest than in the
gas-producer. That interest seems
founded on a certain apprehensiveness,
because often a soldier will say to you,
"I hope we don't find them things in the
States when we go home."

For running around camp or outside
it on official business, the Yank has his
jeep, now as familiar here as in the
States. The Australian papers have
probably written more about our jeeps
than about our generals. Aussie girls
would rather ride in jeeps than in any-
thing else, so they say. Oh, well, too bad
it's against regulations!

IT'S when he's in town on leave that
the impact of war-restricted personal
transportation really bangs the Yank.
For he is more accustomed to plentiful
and luxurious transportation than any
other national in the world. In the
United States, trolleys—except in cer-
tain localities of stubborn franchises—
have become museum pieces; Horace
Horsecollar of the Mickey Mouse car-
toons is the only *equus caballus* many
citified Americans ever see.

Suddenly the Yank found himself in
a country, war-beset for three years,
where the trolley or tram is the chief
means of city transportation, and the
horse is a familiar sight and becoming
more so. The American's offhand man-
ner of hailing a taxi for every little gada-
bout whim had to be sharply disciplined.
Petrol rationing and the calling up of
manpower has reduced Australia's taxis to
a small fraction of prewar numbers.
Late at night or in a rain, you will spend
futile hours trying to get a cab. After
midnight, trams run only once an hour.
So Yanks soon learn to be careful about
accepting invitations in the suburbs. On
the trams, men in uniform pay only half
fare.

The tram conductresses—"lady con-
ductors," the Yank soldiers call them,
and they are plenty capable of throwing
off smart alecks or deadbeats—afforded
some confusion and embarrassment at
first. Our boys were always getting up
to give her their seats when all the poor
girl wanted was the fare.

But much as he finds life strange and
novel and fascinating here, much as he
likes the land and the people, the one
thing the Yank soldier in Australia is
most interested in is mail from home.
His eyes and ears may be here but his
constant thoughts are with the folks
back home. Even though he may be too
crusty to admit it, there are little clues
by which you know. There was the
quiet autumnal Sunday, for instance,
when every single Yank soldier you saw
on the street wore a flower, either red or
white, in remembrance of Mother's
Day. Or take that boy you saw writing
something in the guest register of a re-
ception center in a certain town. He
carefully shielded what he was writing
with a blotter and when he had finished
he went out quietly. Afterward you
went over and had a look at what he
had written. It was "Australia is hunky
dory, but, oh, boy, give me Ottumwa in
good old Iowa!"

THE END

means that Boeing Flying Fortresses
any missions on schedule is that Boeing

designers and engineers build for performance of
personnel, as well as for the performance of the
airplane itself.

Boeing engineers study the effect of noise upon
the nervous system of fighting men, and they sound-
proof their airplanes accordingly. (Today the giant
four-engined Boeing Flying Fortress is as quiet as
any luxurious transport.)

Boeing heating engineers have made it possible to
maintain a cabin temperature of 60 degrees above
zero when it is 60 below zero in the stratosphere
outside. Boeing designers work constantly with

problems of seat construction, window construction,
lighting, ventilation, and vibration control.

This is the engineering that has created giant
Clippers capable of taking whole oceans in easy
stride, and great Stratoliners* which carry their pas-
sengers in new comfort through the smooth upper
air. This is the engineering that permits the nine
men in a Boeing Flying Fortress to carry out their
orders swiftly and exactly and thoroughly.

The increase of human efficiency . . . both in war
and peace . . . is only one of many projects that are a
constant part of the Boeing engineering schedule.

signed ■ confess dat you is ■ uzzerer. De law in dis town don' like your kind. Iffen you ever puts the muscle on any-one anytime, we gives de recipe to de law." Refugee took off his coat, laid it on the bed. "Goodby, Mr. Hat," he said ominously.

Willie Wurtzel looked up at his fighter, rubbed the tears from his eyes. "Boy," he said brokenly, "how did you know?"

"Miss Deevine," Refugee said, "tol' Slippery."

"Where," Willie asked, "did you get the money?"

Refugee Smith looked down at the pudgy little man who was his manager, his one-time life saver. "I got a dollah six bits from Freezy Johnson," Refugee began, "I got five hundred and fifty from Hank Robinson, I got five hundred from Slippery, I got three hundred and twenty-five from Sam White. . . ."

"What did you tell 'em?" Willie Wurtzel asked.

"I could've got hit all from most any one of 'em," Refugee said, "only de banks was done closed down for de day. I got four hundred and sixty-two fifty from Infinite Sanders. . . ."

"The gambler that tried to frame you once?"

"Yessuh, Mr. Willie."

"What'd you tell 'em?" Willie Wurtzel asked helplessly.

"I tol' 'em I needed hit an' dat I wouldst pay hit back."

WILLIE WURTZEL looked up at Ed Delaney, and then he looked at Annabelle Divine. "I got two friends," he said, "in thirty years around here."

"That's two more than most have," Ed Delaney said.

"But that boy," Willie Wurtzel said, "he's got hundreds; that trust him."

Refugee Smith said, "They trust me 'cause I trust de Lord."

"It'd cost you a hundred thousand bucks if that boy hadn't showed up," Ed Delaney said.

"They wouldn't've handled him right," Willie said in a low voice, "he'd have been unhappy."

Annabelle Divine looked at Willie Wurtzel and she knew then that Willie Wurtzel had been thinking of his fighter and not of the money and she walked over and took one of Refugee's big black hands in hers. "I'd like to shake hands with you," she said.

"You'll never shake a better hand," Willie Wurtzel said in a tight voice, "in a glove or out."

THE END

"Does it matter if they're still full of beer?"

Wing Talk

Continued from page 8

Maine and Central Vermont Railroads operated an air line now known as Northeast Air Lines, and they still are associated with that concern. By and large the railroads let the airplane slip through, just as they did trucks and busses.

Not to be caught a second time in any postwar major air developments, Gulf, Mobile & Ohio Railroad, which went into the truck and bus business when "fly-by-night operators with one or two trucks began to cut in on the business which we had spent almost a century in building up," has filed application with the Civil Aeronautics Board to operate air freight, air mail and air passenger service throughout its territory. It believes it is the first railroad to file for air freight.

Feeling that when we have won the war there will be a surplus of bombers, cargo and troop transport planes, and that independent plane operators will rush into the air hauling business,

GM&O is endeavoring to get in on the ground floor now to offer co-ordinated rail, truck, bus and plane service throughout its system. The air mail and freight activity is organized under the name of Rebel Air Freight, Inc., to operate from Chicago to New Orleans. Three additional air lines to provide passenger, mail and freight service over the entire GM&O routes are also being sought.

THE wide margins of safety that surrounded peacetime operations of Army and Navy aircraft must be cut down in war. One of the greatest such reductions is in the loading of aircraft, specifically landplane bombers and Navy flying boats. Loads as much as 7,000 pounds beyond what used to be regarded as a good safe limit are now being carried by pilots who know how to do it, and the safety record in this respect is still high. Surest and safest take-off for land or sea craft is out over

open water where no ob-

Important to all buyers or users
of office or portable typewriters:

War Time Message to:

- ★ Susan Wood of Mansfield, Ohio
- ★ James V. Hammond, Purchasing Agent, Chicago, Ill.
- ★ Corporal John Watts, Governors Island, New York

Susan:

You know it
we can't sell
t start new
o wanted.
m is ordered
ke fewer Co-
sel those we do make only to
d Navy, and to turn the rest of
ry, men, and machines over to
things our fighting men need.
orry Susan...and likewise we're
d glad.

Susan...don't give up your good
error or rent a typewriter, and
type now. Today, and for years
his country needs lots of good
You plan was smart. It still is
stick to it. We still say, "Many
start on a Corona!"

★ Dear Mr. Hammond:

Nobody dreamed of a rubber shortage three years ago, when you "standardized" your office on L C Smith typewriters. But when we tell you today that you can regrind your L C Smith rubber platens, and make them last six, eight, maybe ten years, you can certainly credit yourself with smart buying. It's a feature most typewriters do not have.

You probably know that we're keeping our service and repair departments going full blast at every branch office. We know how much you need typewriters, and although we can't sell you new ones, we can certainly keep your present machines going. Proof? Well—L C Smith Model 1, Serial 1, made in 1905, is in good operating shape right now! Why not have us work out a service program for you at minimum cost?

★ Dear Corporal:

You're one typewriter user we can talk "turkey" to, because (within certain limits) we can still make and sell new L C Smiths and new Coronas to the Army and the Navy.

You already know something about the speed of both machines, and you know their record for standing up under hard use. Both were re-designed before war hit us—so you can be sure they're equipped with all worthwhile operating features.

Here's the point: you might be asked to express your preference (and again you might not!). If you get a chance, ask for an L C Smith or a Corona, as the case may be. You can take our word for it—for sound design, honest workmanship, and long-lived usefulness, they are both outstanding. Descriptive booklets free on request.

BRITISH COMBINE

The GREEKS had a War for It

By Frank Gervasi

...of Greece having a mug
...the anteen he presented to
...C.A. in London, the first can-
...be filled entirely by Greeks

King George II of Greece, a monarch temporarily out of a country but not out of a job, comes to the United States to carry on the fight for freedom. Something of the debt the United Nations owe his tough, liberty-loving people is told here by Collier's reporter, who covered Greece before the Axis tide engulfed it

ALL the little nations of be-
...Europe that lay in the
...ath of Axis domination of the
...content, only Greece, after
...loved democracy so well as to
...it vorously enough to call
...a war. It wasn't war in
...it was murder. It wasn't war
...it was a skirmish. In Po-
...though the resistance of
...had been, the German cam-
...roved an enormous exercise in
...actics. Only the Greeks had a
...it.
...ok the toll of the enemy. Hol-
...Belgium Poland—even Norway
...the Germans, and therefore the
...any m and much equipment.
...til Rujia entered the war, no
...acted each punishment on the
...the Greeks did upon the Italians,
...er, with the help of the British,
...e Germans.
...can't it a calipers on what
...did for the cause of democracy
...asure accurately. The war
...er yet. But it *might* have been
...it no been for the Greeks—
...Greek politicians nor big busi-

nessmen. Many Greek politicians were Fascists, as the government of Premier Metaxas had been Fascist, patterned, even down to police methods of handling traffic, after the Fascist design. The big businessmen for the most part thought they could do business with Hitler. Some of the members of the Greek general staff had sold out to the Italians, and at least one important member of the Department of the Interior was a Nazi stooge.
But the Greek people—the goat herders and the tobacco farmers, the wine growers and the tenders of olive groves, the factory workers and the keepers of wineshops—the common people of Greece had no mind to do business with Benito Mussolini or Adolf Hitler. The night the Italians treacherously descended upon Greece from their long-established base in Albania—October 28, 1940—those people filled the village squares and the streets with their clamor: "Down with Fascism!"
They meant as much the Fascism that had been imposed upon them since the day Metaxas invented a Communist rebellion in the provinces. In August,

1936, to seize power, suppress the constitution, close up the parliament and become dictator, as they meant the Fascism of the invader. It was to have been a victorious march to Athens for the Italians. Mussolini's choice of the date October 28th—anniversary of his Pullman-car "march" on Rome—indicated that, as did the bald fact that Italophile members of the Greek general staff had received enormous bribes in gold to induce their regiments to lay down their arms.
He Chose to Fight
Metaxas heard the cries of the people. He was as shrewd a politician as he was an able general, perhaps one of the ablest officers of our times. He saw and seized the opportunity of going down in history as a paladin of democracy rather than a despised dictator. He chose to fight.
And what was to have been another easy victory for Mussolini's "invincibles," those veterans of one-sided battles against unarmed natives in Ethiopia and barchanded Republicans

in Spain, turned into a catastrophic defeat. The adjective is understatement. Italian Fascism, nourished for years on hypodermics of propaganda, on a sort of national Couéism of phony victories and false economics and catch phrases that included the one concerning Mussolini's infallibility—"Mussolini ha sempre ragione" (Mussolini is always right)—died in the mountain passes of Albania.
Fascism fed on glory. There was none for Fascist arms in Greece. Fascism gorged on victory and met costly defeat in Greece. It dawned on even the staunchest Black Shirts with the Greek debacle that Mussolini was very definitely not always right. The decline of the Second Roman Empire that may meet its end one day soon on the sands of Libya began in Greece because Greeks loved freedom well enough to fight for it.
Something more the Greeks accomplished. Italy's mission in the Axis strategy in the Mediterranean region was to have been twofold: The Fascists were to have marched to Athens and

Or for Worse
A SHORT STORY
COMPLETE ON THIS PAGE
By Stanley Frank

H E HAD given her five more minutes for positively the last time when he saw her coming down the street, to the accompaniment of an invisible string ensemble playing in three-quarter time. She wore the skins of six dead sables, a vacuous expression and a corsage of flowers pinned to the furs. He knew the origin of the furs and the beautiful blankness, but the corsage stopped him cold.

His own talent was the source of the handsome animals which clutched gently at her soft throat. Nature had chosen to assemble her features in a pattern not at all unpleasing to the eye, and the corsage probably had come from that leering stewbum who had a buck for every tea bag in China. He scowled and pondered the extensive pleasure to be derived from punching eight million dollars' worth of low character in the nose.

She approached, she saw him, she smiled and the stone lions slumbering morosely in front of the City Hall sat up and took notice, a reaction not at all uncommon to the male animal in the presence of a Dish. He consulted the wafer-thin platinum watch she had given him the time they were held over at the Moonlight Roof and glowered at her, but it was an effort.

"You're forty minutes late, Dog-face," he grouched. "What detained you? A sailor or something?"

"So sorry, darling," she trilled, and a reverent hush enveloped the street, silencing the profane noises competing against her voice. "I didn't realize I was at the beauty parlor so long."

"**Y**OU should've hung around until they waited on you," he said with elaborate sarcasm.

"Ah, darling, please be nice to me, just today," she pleaded. "This really is a difficult situation for me."

"G'wan," he scoffed, "you can do it blindfolded with one hand tied behind your back. You've been planning it long enough—for three years—and driving me crazy every minute. Maybe I would've been better off if I'd cut my throat the day I met you. It would've been quicker and cleaner."

"If you want to back out," she said, and her lower lip trembled piteously, "it's your privilege. After all, nobody is forcing you to go through with it."

"Don't give me that!" he yelled. "You're through playing me for a chump. I was a sucker not to have done this long ago. You making with the eyes at every guy in town on my time. And where did you get the flowers?"

"If you must know," she said, "I bought them myself. I wanted to look radiant for you. I wanted to give you something to remember always, and all I get is abuse and vile suspicion."

"What is that you're wearing, a skirt

or a kilt?" he demanded. "I don't mean to be personal, you understand, but I've seen your legs before. It wasn't necessary to refresh my memory quite so obviously."

"You always said I had nice legs," she pouted. She drew her absurd little skirt taut against her knees, examining them critically.

"You got a swell pair of gams," he assured her, "but I'm old-fashioned enough to believe there are certain sacred things a husband doesn't share with the public."

"You're trying awfully hard to be nasty."

"No trouble at all. Look—we're almost an hour late. The man is waiting to mumble those little words you've been dying to hear."

"Oh, Poopsie will be there all afternoon."

"Poopsie!" he howled. "Who's Poopsie?"

"Judge Poole, you silly goose. You know, that distinguished-looking gentleman who comes to the club so often. He's a lamb."

"If you ask me, he's a sheep in wolf's clothing. No doubt he's told you he can make you very happy after this passing incident in your life is finished."

"An older, worldly man always is more understanding."

"Oh, yeah!" he said. "Well, my winsome witch, if you don't come along and get this silly business over and done with, I'll kick your teeth down your delicious throat."

"I forgot to tell you," she said, "the photographer won't be here for a while."

"Won't you feel uncomfortable posing with all those clothes? If it's not asking too much, would you mind telling me who's taking the picture and for what?"

"For the papers, of course. I can see the caption now: 'Dancer Leaps for Keeps.' That nice boy who does the night-club column in the Star said he would do it specially for me."

"He's probably reciprocating past favors," he retorted. "Do you meet all trains?"

Her eyes suddenly sparkled with tears. "You poor boy," she murmured. "You're jealous and I never knew. Tell me, darling, how long have I been torturing you? When did you decide we couldn't go on this way?"

"When I found out I couldn't support you any more," he said.

"And when did you ever support me?" she blazed.

"For three years I've been lugging you over every dance floor in America three times a night. When I took you out of that coatroom and put you in the act, you were a cute little trick. Now I'm in training to be the bottom man in the pyramid. Don't look now, Butch, but you're bulging in the strangest places."

"If you were a man," she thought, "I'd gouge your eyes out for an instant I'm your phony woman's-pla-home line! You want to go so you can get another girl to front for you while you charm for those frowzy batt think you're wonderful, you rat. I'll spoil your dandy li I'm not going through with "If you don't mind, lady," with a big box slung over t said patiently, "would you with the legs over here?"

S HE perched on the ledge the alert lions, crossed her at the appreciative audienc sprung out of holes in the pulled her absurd, inadequa her knees.

"Lady," the little man lously, "a nice, big smile more leg, please!"

"I will not lend myself to hibition," she said stiffly. "I give people with low, vile wrong impression." The c restlessly.

"Nice legs always make pression on Page 1," the litt wearily.

"Go on, sugar," her par from the crowd. "You own public."

"Darling, you do unders cried. "Wait for me. I've mind."

She crossed her legs impulsively. The crowd whistled madly, and man, a veteran of many epics with ladies, momenta tured his lost, forgotten you mitted himself the luxury c smile.

The new Breezewood Pipe

\$1.00

From the Great Smoky Mountains comes a newly discovered pipe incredibly light in weight!

Unheeded—sleeping unused for centuries, a virgin forest of pipe burls has just been discovered in America, in the Great Smoky Mountains of North Carolina! Again the American continent proves its native wealth of natural resources—and from this virgin forest comes a beautiful pipe burl, lighter in weight than any before known—"Breezewood." The Breezewood pipe weighs, on an average, less than an ounce and a quarter, complete with mouthpiece! See, hold in your hands this astonishing new American Breezewood pipe, at your tobacconist's today. Buy one—and discover how wonderfully sweet a smoke America's Breezewood pipe can bring you!

No wonder they were astonished! They all guessed too high! Actually the astounding new Breezewood pipe weighs, on an average, less than 1 1/4 ounces. In all traditional shapes, at your dealer's.

Free your hands for other tasks

The new Breezewood pipe is so light, it's pleasant to keep it in your mouth. Breezewood doesn't fatigue you when driving, fishing or whenever your hands are busy.

Copy, 1942. The Breezewood Pipe Co., 630 Fifth Ave., N. Y.

thereby intimidated Yugoslavia, where the treacherous Stoyadinovitch had prepared the terrain for an Axis coup, into the New Order line-up. Turkey, which at the time leaned far toward Berlin, was to have been won over by this Fascist triumph, and the Fascists were also to have conquered Egypt. Marshal Rodolfo Graziani had an enormous Fascist army in Libya, which outnumbered Egypt's defenders by at least four to one.

But in the seven months the Greeks held the Italians and in the six or seven weeks that the Anglo-Greek forces held the Italo-German armies later, the Italian pincers on strategic Suez broke—both jaws crumbled. The Nazi general staff was obliged to replace these broken jaws, to deploy divisions in the Balkans and in Italy and in Libya. Germany's ally had failed, and Germany was obliged to delay the attack against Russia, already prepared in Rumania and Bulgaria.

Thrown Off Schedule

Hitler attacked the Soviet Union on June 22, 1941. But Greek resistance in the Balkans, which inspired rebellion in Yugoslavia and further complicated matters for the Nazis, had given Russia an extra seven months' preparation. Moreover, Hitler was caught on the Russian plains by winter because his timetable was thrown off schedule by the Balkan campaign and the fighting in Libya, where he was obliged to move at least four valuable armored divisions in addition to several motorized infantry divisions and hundreds of planes to stiffen the disintegrating Fascists. He might not have been frozen-in in Russia had he been able to launch his invasion of Russia sooner than June 22d.

Hitlerism, some believe, may die in Russia, but if so, it received the mortal wound in the Balkans at the hands of the Greeks.

The task of holding Greece together,

particularly after the untimely death of Metaxas, was that of King George II. A rugged man with an iron jaw, taller and broader than the Greeks he ruled, he was tireless in conferences with generals, members of his cabinet, diplomats and British staff officers. He was among the last of the officials to be evacuated from Athens to Crete, where the government was transferred.

Good fifth-column work tipped off the Germans to George's presence on Crete. The Nazis bombed him the length and breadth of the island, almost as though they were searching him out personally. As it was, George and a small party barely escaped alive from the battered island where thousands of British and Greek troops died in a defense rendered hopeless by lack of Allied air power.

The Greeks are fighting still. Guerrilla resistance continues. Every day Greeks are shot as saboteurs. Thousands are dying in Greece from starvation and typhus every month. They could have spared themselves the tragedy that has befallen them, by accepting the New Order placidly, as Austria did, and later Rumania and Hungary and Bulgaria. But they chose to have a war instead, with all that war means, for by the time the Greeks started fighting they had a fair idea of the hardships and bloodshed and sacrifices they would have to endure.

In Greece, democracy was born and in Greece, democracy has fought a struggle for survival through the centuries since the Romans conquered the Hellenes in 146 B.C. To evacuated Greek soldiers I met in Cairo and Alexandria, what happened in the spring of 1941 was part of the same old struggle. I've seen many evacuees of many nationalities. Defeat and despair were plain in the faces of most of them. I saw neither in the level glances of the Greeks I met in Egypt. They'd come out only to fight again.

ayed baseball and basketball reshmen teams. Next year he vary in those sports and star a Western Conference on. Aough he weighed only ds, spad thin over five feet fram he was as wiry, agile

and durable as he had been as a youngster.

At the close of the basketball season, Boudreau, the sophomore, was elected captain of the team for the following winter. There was no doubt of his leadership of the basketball team. He was the unanimous choice for captain, regardless of scholastic years.

Such trust and command came easy to Boudreau even then. So it was only natural that big leaguers in baseball should respect the young man from the outset. Just after Boudreau was named manager of the Indians, representatives of organized baseball were in Jacksonville, Florida, for the annual winter meetings.

General Manager Warren Giles and Manager Bill McKechnie of the Cincinnati Reds told Roger Peckinpaugh, vice-president of the Indians, and Boudreau, they were interested in Rollie Hemsley, the veteran catcher. The four sat down to discuss the possible transfer. Giles hadn't met Boudreau before. So he addressed most of his talk to Peckinpaugh, an older, more experienced baseball official.

Boudreau interrupted the conversation frequently to ask questions and to inject comment that was sound enough to startle his older conferees. Giles and McKechnie soon found themselves talking to Boudreau, directing their remarks to him as Peckinpaugh sat back and smiled at the little drama being unfolded. But it was getting late and it was suggested that the conference be continued in the morning.

"That's okay," said Giles. "Let's meet in the coffee shop of the hotel here between 9 and 9:30."

"If you don't mind, let's set a definite time," replied Boudreau. "I might get down in the lobby around 9 and get mixed up in some kind of a deal and I'm pretty green at all this. So let's meet here at 9:15, sharp. Then I'll come right in and we'll talk."

Giles was startled, but agreeable. The group met at 9:15 and soon the transfer of Hemsley to the Reds was a matter of record. But not until Boudreau had asked more questions and had stuck in some notable remarks.

"I was one of those who questioned Boudreau's appointment when it was made last year," Giles says now. "But no more. I know why Mr. Bradley named him manager."

But Boudreau, though he might star in baseball, basketball and at a conference table, couldn't cut through football. He tried it just once at the university.

In the autumn of his junior year, Boudreau was taking a course in physical education that included a class in football instruction. His teacher was Douglas R. Mills, Lou's basketball coach who has since been promoted to athletic director. "They need a place-kicker on the varsity," Mills told Boudreau. "You know, kick those extra

YOU'LL find the Quaker State sign along every highway in the United States. It's a part of the landscape. It's always there. You can't miss it, no matter where you drive.

And remember, when you see it, that every mile of Quaker State's march from coast to coast was a fighting mile. It won its own battles. It proved its own quality. It came into leadership the hard way...by sheer merit.

Today, four great refineries supply millions of motorists with millions of gallons of Stabilized Quaker State Motor Oil. And every year the demand increases. Motorists know how stubbornly Quaker State resists oxidation, with its resulting sludge, varnish and corrosion. They know how really economical Quaker State Motor Oil proves to be...know that its extra protection is a money-saving device used by wise drivers everywhere...Quaker State Oil Refining Corporation, Oil City, Pennsylvania.

points and field goals. Can you kick a football?"

Lou said he had booted a few in high school and he might as well try to help the dear old Illini.

"I kicked all afternoon," Lou recalls painfully. "The next morning, when I tried to get up, I couldn't make it, couldn't even get out of bed. I had to miss classes that day. Well, that cured me of football. My right leg was sore for weeks. I waited for basketball to start then."

The captain of the varsity basketball team was to have been the key man in a championship drive. But suddenly, Boudreau found himself notorious.

Major John L. Griffith, commissioner of athletics for the Western Conference, reported to the University of Illinois that Boudreau's mother had been receiving monthly payments from the Cleveland baseball club.

The university's board of athletic control had to decide whether Lou's family was receiving assistance through legitimate channels or whether the great basketball and baseball hero was a professional. The six members of the board were deadlocked. Three voted to bar Boudreau from further collegiate competition. Three voted to allow him to continue. The president of the university expressed, in writing, his belief in Lou's innocence of professionalism.

The board tossed the hot potato to the other Western Conference schools, who voted Boudreau out of competition. They told him he might be reinstated the following autumn if he severed relations with the Cleveland club. C. C. Slapnicka, then vice-president of the Indians, wired a release to the collegian.

Baseball vs. Love

Soon it was spring and Lou wanted to play baseball. He also wanted to marry Della De Ruiter. Lou and Della talked over their problems. They agreed to have Lou finish his junior year first. Lou could play baseball and postpone his final year of study. By taking a winter course, Boudreau gained his degree in physical education in February of 1940.

Boudreau signed with the Indians in the spring of 1938, was farmed out to Cedar Rapids in the Three-Eye League, where he played third base and batted .290 in 60 games, which was just 100 points lower than his batting mark at the university. He even caught a few games at Cedar Rapids.

The Indians had another young collegian on the string that spring. He was Ray Mack, a home-town product, a second baseman who weighed 210 pounds and who had been graduated from Cleveland's Case School of Applied Science. Off to Fargo-Moorehead in the Northern League went the young engineer, who had been a football and basketball hero, too. There he batted .378, high enough to earn him an order to report to the parent Indians in September of that year, 1938. Boudreau reported, also. They met, exchanged a few words, went their way.

Boudreau and Mack reported to the Tribe's training quarters in New Orleans the following spring and were assigned to the same room. From that circumstance developed what Tris Speaker, immortal Gray Eagle of the outfield, insists is the greatest second-base combination in the history of baseball.

Although they were not yet a combination on the field, the former collegians were close friends. Boudreau was still classed a third baseman, but the Indians had just bought Ken Keltner, a great young third baseman. So Lou was switched to shortstop. Now he was next to Mack on the field as well as in the privacy of their room, where they

dreamed of the big-league stardom that was to be theirs sooner than they expected.

But they were young ballplayers and they needed experience, so there was a conference in New Orleans between Vice-President Slapnicka, Manager Oscar Vitt, Peckinpaugh, then managing New Orleans of the Southern Association, and Steve O'Neill, managing Buffalo of the International League.

Cleveland baseball creates strange bedfellows. Peckinpaugh and O'Neill were former managers of the Indians even then. Vitt had succeeded O'Neill. Peck was to return to the Cleveland organization in 1941 as manager, then was to be promoted to vice-president to succeed Slapnicka, who resigned, so that Boudreau could be made manager.

These men met in that spring of '39 to place Cleveland talent for the coming season. Both O'Neill and Peckinpaugh wanted second-base combinations. Peckinpaugh had first choice of two spare pairs because of a close relationship between the Indians and the New Orleans club. He was offered Boudreau and Mack. Peckinpaugh turned them down, insisted upon Scalzi and Shilling, players who had had more minor league experience.

Under O'Neill, Boudreau and Mack gained additional confidence. The youngsters made plays around second base that set records in the International League. Boudreau hit .331, Mack .293. They were the talk of the circuit.

Meanwhile, the Indians had dropped out of the pennant race. Cleveland fans had dropped into their chairs at home, too. A night game with the Browns was scheduled in Cleveland's huge Municipal Stadium, August 1, 1939. The Indian's front office wanted a crowd. Tony Galento was hired as an added attraction. Finally, Boudreau and Mack, the dream boys of the minor leagues about whom much had been written in Cleveland, were to report for their big-league introduction.

Buffalo fans revolted. They threatened to boycott the Bisons' park if Boudreau and Mack left. The press in Cleveland trained its bows and arrows on the Tribe front office, accused the club of hippodroming just to get a crowd, which it didn't. Only 16,000 turned out.

But those 16,000 never will forget that

game. They'll always recall dashing inaugural at short amazing speed and agility big. They noted, too, how stayed the balance of the y stop, although batting .258, turning plays his way out dirt and keen baseball obognized the spark of leade rookie.

Boudreau was not one of Cleveland players who paid a serious visit to the office of Bradley the following June Manager Vitt's removal. other younger players—except Boudreau was told to stay on the ground of the revolution, to allow older players to take the pu

BRAKE LINING

Your car has a job to do—for you, and for all of us. Keeping it running depends on Preventive Service—the kind sponsored by Collier's "Ever since Poland."

America needs her cars—needs them kept in running condition . . . and needs them running.

Nearly thirty million of them add up to the greatest privately owned mass transportation system the world has ever known . . .

Jack them up, and overnight you would throw an unbearable load on the public carriers—a load they couldn't absorb.

We must drive our cars *less*—leave them home when we can—but we must drive them enough to keep them in shape. An idle car (especially the rubber) unless professionally prepared for storage, deteriorates rapidly—costs real money to restore to active service.

WAR

AND YOUR AUTOMOBILE

We must drive *better*—with a new sense of the things we do that shorten the life of any part of the car. Habits are hard to change, but parts may be even *harder* to get!

And we must keep an eye—a relentless, American Eagle's eye—on the *condition* of our cars. From bumper to bumper and fender to fender. Every nut, bolt, widget and gadget. . . Every bushing and bearing and screw and plug and gasket. Just let some neglected part fail—some ten-or-fifteen-cent doo-flicker you never even heard of—and your car might be laid-up for the duration!

Preventive Service will reveal most possible sources of trouble *before* the trouble happens—and keep it from happening. Your part consists of giving your automotive specialist the chance to do *his* part . . . the chance to render full Preventive Service to your car.

★ To help you and the service man, COLLIER'S has prepared a new, up-to-the-minute book of questions and answers on "WAR and Your Car." It elaborates the points merely outlined in this article. Enclose 6 cents to cover cost of handling and mailing. Address Preventive Service, COLLIER'S, 250 Park Avenue, New York City.

WAR and your tires

Saving rubber is the most vital need—and this requires attention to tires, wheels, shock absorbers and springs. Poor wheel alignment is Tire Saboteur Number One! Wheels out of line scuff and scrub your tires against the road. Save rubber by keeping alignment under strict control! Shock absorbers and springs should be properly serviced and

lubricated—they affect tire wear, as well as steering. Undetected, uneven springs can play hob with tires! Proper inflation, and tires to equalize wear, at tire-insurance everybody about by now—but the for themselves—give them

WAR and lubrication

Eternal vigilance is the price of engine safety! More care should be exercised than ever before to assure that all moving parts are properly lubricated. Make sure that the correct grade of good oil, and the recommended kind of lubricant, are kept to "FULL" in the crankcase, transmission and differential. See that the element in your oil filter is replaced

often enough to assure clean changes.

Lubrication points out "mile class"—front wheel bearings—ample—are often neglected; they seldom need attention, even on "20,000

Reduce friction through lubrication, and you'll prevent

WAR and your electrical system

Within your car is a self-sustaining power plant complete with generator, storage battery, transformer (coil), distributor, power lines running to spark plugs and lights. Like a municipal plant, it requires inspection and maintenance service. The fan belt drives the generator—see that it doesn't slip on the job. Have the battery kept supplied with distilled water (once a week isn't too

often) and see that its cable straps are O.K. The voltage and coil should both be inspected, and the distributor all wiring and connections. Spark plugs that are broken out of adjustment can mileage 10 to 20 percent. removed every few thousand cleaning and inspection.

WAR

and your engine's efficiency

le symptoms reveal some-
inside the engine. Unre-
lerator... lack of pick-up
power... excessive con-
as and oil... any of these
a skilled mechanic should

Fortunately, the wear is usually local-
ized in piston rings, valves, or bearings.
... It may be nothing more than a stick-
ing valve, but prompt attention is better
than regret. ... Protect your engine by
preventing the unnecessary wear that
would result from neglect!

WAR

and your car's appearance

An occasional wash-and-polish isn't
enough! Start with one thorough treat-
ment with a good cleaner. ... Then the
car is ready for a protective coat of wax
or polish, which should be periodically
renewed. Prevent deterioration, and the
good finish of a modern car will last as
long as the car itself.

This is a good time to check the wind-
shield wipers—we can't take a chance
these days on an accident of any kind!
See that each wiper is operating prop-
erly, and that the blade is in good
condition. Be sure that the windshield is
kept clean at all times with an efficient,
non-smearing cleaner.

WAR

and engine tune-up

ame e refiners for the "ping"

ere a three things you can do:
ombustion chambers free of
accelerate more gradually, and
ition being adjusted for "peak"

performance. DON'T depend upon re-
tarding the spark to get rid of "ping"—
waste of gasoline, and loss of power
would result!

A worn or dirt-clogged carburetor—
or one that's out of adjustment—wastes
gasoline, too. Prevent waste by having
your carburetor periodically checked
and adjusted.

WAR

and your stopping

Dependable brakes are more important
today than ever, so brake care deserves
unremitting attention. Hydraulic brak-
ing systems should be flushed twice a
year—kept filled to capacity... the brakes

themselves should be adjusted, to pre-
vent tire wear and insure safe stopping.

Worn brake linings should be re-
placed before brake drums are damaged.
Prevent this expensive repair job.

WAR

and your cooling system

ough the anti-freeze drained from

EMERGENCY NOTE

If a car must, or should, be laid up for the duration of the war, definite
steps are necessary to prepare it for long storage. This requires professional
knowledge and handling because, in addition to taking care of tires, battery,
finish, upholstery, running gear and bright work, special treatment of internal
parts is vital to prevent serious damage.

It's Loaded, Mr. Bauer

By John P. Marquand

ILLUSTRATED BY RONALD McLEOD

The Story Thus Far:

WINSLOW GREENE, a shy and likable geologist in the employ of the Boca Grande foothills of the Andes Mountains, comes down town of Santa Rosa on the first leg of a dangerous trip into the interior.

At the hotel he runs into Milton Bird, m Boca Grande, who had come down to Santa Rosa on some complicated business which he had forgotten. Bird, a handsome, self-assured man, heavily. He mentions that a British destroyer a German raider lurking off the canal has been says he has made the acquaintance of two men, Martinez and Gruber.

In Santa Rosa, Winslow Greene has one of he dreads. Jim Walters, the mine manager, to meet a Miss Henrietta Simpson on the boat from New York that day. She is going up to work in the office and will take the upriver boat.

On his way to the customs docks, Winslow stopped by a soft-spoken, handsome stranger, a pensive Panama, who introduces himself as of the secret police. Lopez intimates that two Martinez and a Señor Gruber, may try to get tion out of Greene about his mining operation only that Winslow let him know, in room 41 when and if he is approached by the two. This remains noncommittal.

At the ship, Winslow meets Miss Simpson, a blond girl wearing expensive clothes. Glumly to the hotel. In her room she suddenly breaks down while Winslow helplessly looks on. She tells him she came here to get away from someone she had married. Winslow, embarrassed at such an intimate revelation, becomes shy and tongue-tied. Finally she says she is fully nice. Winslow likes that. He enjoys shopping with her for suitable clothes and when he gets back to the hotel he asks her to have dinner.

Then he goes down to the barroom where he meets an air-line manager, who tells him that the British have a coast boat full of oil. They have no doubt sent it out to a raider. "The British consul says they are raiding now if they only had some planes," the manager continues. "She can't be far offshore and she's got a lot of oil."

II

WINSLOW GREENE recalled that he had spoken about the raider, but he was not interested at the time.

He was thinking of Henrietta Simpson told her a good deal about himself, but he had seemed quite natural to tell her. He had about the Colorado School of Mines. He had about his first job in British Columbia and how he had spent a winter in Alaska, and how he had come to Boca Grande five years before.

"Aren't you ever lonely?" she had asked him. "No," he said. "I'm used to it. I've got a sort of restless. I rather like to be alone. You don't look like the sort of person who goes to places like that."

He knew very well what he looked like. He was lean and stringy with stooped shoulders. He did not look like anybody who might amount to anything. He wished that he looked more like Milton Bird.

Just as he was wishing it, Milton Bird pushed through the door to the bar. "Say," he said, "have you heard the news? She was a all right." And then he slapped Winslow on the back. "Where's the office girl? Is she pretty?"

"She's taking a rest," Winslow said, and his reason his answer made Milton laugh.

"Well, I'll see her later, down at the bar at o'clock tomorrow morning."

Milton walked whistling out of the bar. Winslow wished that he had Milton Bird's self-consciousness. He wished that he could be as easily with casual acquaintances, and particularly that he did not always feel that people were looking at him. As Milton left he felt one was just behind him. He told himself it was ridiculous but he could not get away from the feeling he had had once before in a piece of country near the headwaters of the Amazon. He had been paddling down a stream in a dugout canoe. An Indian whom he had always known as friendly was paddling in the stern. The same feeling now between the shoulder blades that other time it had saved his life.

The dice boxes kept banging on the table in the endless game of poker dice which the Americans and the agricultural agent were playing when Winslow finally turned around.

(Continued)

As he heard the sound, instinctively he threw his arm around Henrietta and pushed her to the wall of a building and stood in front of her

CHAMPION SPARK PLUGS

Champion Spark Plugs are on active duty in every phase of wartime service on land, water and in the air, demonstrating day after day that they are more vital—more dependable than ever. The knowledge and experience gained in this highly diversified and rigorous service will be invaluable. Obviously this will add to the inherent dependability of Champions—dependability that has made Champions the preferred spark plugs.

Wake up sleepy, sluggish engines with Champion Spark Plugs. Their exclusive and rugged Sillimanite insulators insure the hottest possible spark, the secret of complete combustion; and their patented Sillment seal prevents troublesome leakage *common to ordinary spark plugs*. Leakage causes overheating, pre-ignition and rough, wasteful engine operation. You're money ahead to insist on Champions.

*More Vital-
More Dependable
than ever!*

You wouldn't pay for gasoline pumped on the ground; but you are continually paying for gasoline wasted if you keep spark plugs too long in service, fail to keep them clean and spark gaps properly spaced. So have your spark plugs tested and cleaned at regular intervals. Replace old, worn-out or inferior quality spark plugs with new Champions.

SAVE GASOLINE • KEEP YOUR SPARK PLUGS CLEAN

SAVE RUBBER!

Here's How WOOD of Akron Gets
55,000 MILES
OUT OF HIS TIRES!

Read this Sworn Statement

"...at the time above photo was taken the tires had been in constant service for over 45,000 miles... and at this date the same tires are still in use and have travelled over 55,000 miles... I have checked all wheels for wheel alignment and wheel balance every 4,000 miles and made any necessary repairs or adjustments at those times."

Signed

M. E. Wood

PROPER INFLATION, ROTATION AND CAREFUL DRIVING ALONE WON'T SAVE YOUR TIRES!

HERE'S THE TRUTH... Without correct wheel alignment and wheel balance you can easily waste 50% of your tire life, besides risking a death-dealing accident!

You may be unaware that there is anything wrong with your steering alignment, until excessive tire wear begins to show. For in just ordinary driving, out-of-line and unbalanced wheels will scuff and pound the life out of your tires and vital steering parts. That's why Wood of Akron and tens of thousands of smart car, truck and bus owners have their Wheel Alignment and Balance checked regularly. Wood gets over 55,000 miles on his tires and they are still good! Don't drive another day

without a Bear Steering Test. Make sure you are really getting the most out of your tires.

Look For the **BEAR SIGN**

Magic Mountain

Continued from page 14

it. However, it is associated with copper more widely than with any other metal, and by-product plants at several of the nation's great copper mines produce most of the moly that is not produced at Climax. One tungsten mine and one lead mine also produce some. The Greene Cananea copper mine in Mexico is the world's leading producer outside the U. S., with 1,500,000 pounds a year.

Molybdenum is also produced in small quantities in Russia, Turkey, Chile and Canada. Perhaps the most heartening part of the picture is that only at the Knaben mine in Norway—producing before the war about 1,000,000 pounds a year—and at a small mine in French Morocco, are there known sources available to the Axis.

Even the geological story is somewhat of a miracle. If you should slice down Bartlett Mountain through the middle, you would see that it consists, in essence, of a cone within a cone. The outer layer or cone is a ring of ancient granite and schist, from 250 to 700 feet thick. This, in some primordial time, was steamed full of moly in solution, not in thick veins but in small hair-fine fractures through the whole mass. The inner cone is a silicious granite, barren of moly. But at depth, part of the central barren core becomes moly ore again. Slice off the top of the mountain horizontally, and the hollow moly-bearing ring would be about 4,000 feet east by west and 3,000 feet north to south, like a huge doughnut of ore with its center filled with barren rock.

Good ore runs about six tenths of one per cent molybdenite, or about 10 to 12 pounds per ton. But there are no fixed limits to the ore body; the moly gradually fades out in the granite, and the miners follow it and send broken rock to the mill if it contains as little as four pounds to the ton.

Miners describe the process of mining in highly technical terms, but to the layman they are simply caving down the mountain.

Million-ton Blastings

Back in its depths beyond the tunnels, they drill holes and place thousands of pounds of explosive. Then everyone gets out, the mountain groans and labors, and hundreds of thousands of tons of broken ore—one blast brought down 1,250,000 tons—tumble down to be loaded on the endless trains of mine cars that emerge at a rate of one every two or three minutes from the mountain and toot off to the crusher a half mile away, where units as massive as a battleship's turrets grind the rock into flour fineness for the mill.

In the mill are long batteries of flotation cells. The ore, now powder-fine, is run into these cells, mixed with pine oil, air and water. The particles of molybdenite cling to the bubbles of air, which float. Electrically driven paddles whirling alongside the cells ceaselessly skim off this floating substance into an endless trough for collection; the refuse or gangue sinks to the bottom of the cells. The molybdenite concentrate is cleaned, dried and packed.

But Climax isn't done. It has research laboratories at Golden, Colo., and at Detroit, Mich., and a converting plant at Langeloth, Pa.

Here the raw molybdenite is converted into many forms. It is roasted and sacked (or canned) in units of five pounds and upward, so the watchful steelmaster can simply toss these units into the molten bath one by one and

know when he has reached the exact proportions he wants.

The resulting alloys are now going into high-speed tools, armor plate for ships, and steel for the guns that fire from behind the tough moly-alloyed shields of turrets; into plane parts, anti-aircraft mounts, bullet cores, torpedo shells, rifle and machine-gun barrels, truck and tank axles and plating, and many other parts for trucks, tanks and jeeps that must bounce over tough terrain without breaking down.

But Climax still isn't done. Its experts prepare self-reducing briquets for foundries and furnaces, moly trioxide for making the pure metal used in the electric industry, sodium molybdate for colors and printing ink. Moly also is used as a catalyzer in the process by which oil is hydrogenated, in the chemical bases of many other preparations, and in the ceramic industry.

The Pioneers of Climax

This huge enterprise at Climax was built from scratch, and it took a lot of scratching. A forest ranger first sent ore out to be identified, and Hugh Leal, a Kansas banker, financed claims which covered part of the deposits. After hanging on until about the beginning of the first World War, Leal sold his claims to a syndicate headed by Max Schott of New York, which raised capital during that war. A 250-ton mill was built and some moly produced and then, through long years after the war, money, brains and endless toil were plowed into research and into attempts to sell the element, which found few sales outlets.

The mine was closed in 1919, reopened in September, 1924, and has been worked continuously since, growing by stages to its present huge size as the world demanded more moly.

Today, Climax Molybdenum Co.'s closely held stock is valued, at market prices, at between \$75,000,000 and \$80,000,000. But try to buy it for that! It has made many men wealthy and given many more a life competence. But every one of those men can point to grayed hairs and lined faces from their long years of pioneering toil.

Aside from the huge size and the formidable efficiency of the plant, what strikes the layman is that, working in the deadly, dusty silicate rock, there is virtually no dust.

There is a reason. Climax has spent more than \$500,000 for ventilation and dust control. Wherever dust is made, there are fine water sprays to dampen and lay it.

At that elevation, a sure water supply is the most needed and the most expensive requisite for a plant and community so large. The mine produces a stream of water that is purified for domestic use, and there is an artificial lake, gathered from the mountains, lying 600 feet below the mine. Water from this and from a supplementary lake in the midst of the desert of tailings is endlessly pumped into the mill and the crusher.

Climax has about 4,000 acres, and the entire community is company-owned. The company is insured in Colorado's state compensation fund, and its rate has gone steadily down, reflecting the decrease in reportable accidents from about 166 per million man-hours worked, in 1931, to an almost-miraculous 14.76 in 1940. Its Colorado pay roll alone now runs more than \$200,000 a month, and it pays two thirds of the taxes in its home county.

THE END

Take

Sevil Restaurant is over he said: "It's early but we might have dner."

ought her that it was an awk- ing to y, yet if he had stood ny long he would have said ing that would have made him ridiculous.

Seville restaurant was brightly and open to the street. He would ve gone ere ordinarily because

it was too bright and garish, but it fitted his mood that night. It was a place that did its best to be sophisticated and continental. It had a counter heaped with cakes and pastries. There were glass cases filled with assorted liquors. There were clean white cloths on the tables surrounding a dance floor and in one corner was an American importation—

■ juke box, glowing with rainbow-colored lights and blaring out dance music. He was careful to give her simple food and he ordered a bottle of Chilean wine. He was pleased when she asked him questions. He had never realized that anyone like Henrietta Simpson could be interested in anything that he did.

"Tell me about where you're going," she asked.

He told her he was going by plane to a landing field near a town with an Indian name. Then he would go by motor and then by mule to the base camp which would be reasonably comfortable in spite of its remoteness. There was a short-wave radio which communicated every night with the mine at Boca Grande. From the base camp he was going alone to a stream which the Indians had said contained large deposits of gold-bearing gravel. He could not tell how long it would take him to travel from the base camp to that stream. He would have good hunters with him, so that it would be possible to live off the country. There were fish and wild pigs and monkeys, and an animal called a kinkajou, that was something like a raccoon at home.

"It sounds better than Boca Grande," she said.

"It's better if you're used to it," he told her.

Then she leaned toward him across the table. "I don't suppose you'd take someone else along? I mean it. I'd like to go."

What surprised him was that she really meant it.

"That would give them something to talk about up at the mine," he said.

"Would that bother you?" she asked. "You needn't worry about the money. I can pay my way."

Then she must have realized it was impossible because she shook her head quickly before he had time to answer her.

"It isn't so bad at Boca Grande. You'll get used to it," he said.

"Why don't you like it there?" She looked at him curiously, waiting for his answer.

NEARLY all the tables were filled by then and the music from the juke box was still louder.

"I guess because I'm shy," he said.

"I'm no good at dancing or at talking. It's pretty social there."

"Out where you're going," she had to raise her voice against the juke box, "is it dangerous?"

"None of this country is dangerous if you're used to it."

Then he saw that she was not watching him any longer. When he turned to follow the direction of her glance he felt a spasm of disappointment, almost of resentment. Milton Bird was walking toward their table followed by two men Winslow had never seen before. One of them was short and stoutish with close-cropped gray hair. The other was thin and sallow with very deep-set dark eyes.

Winslow pushed back his chair and stood up. Milton was not looking at him. He was looking at Miss Simpson.

"This is Mr. Bird," Winslow introduced the newcomer. "He'll take you

SAY-THIS IS THE WAY TO TRAVEL- in Bostonian Air-Cools

NEXT TO ICE, coolest on your feet are Bostonian Air-Cools. Next to going barefooted. Walk-Fitted Bostonians are tops in comfort. Above is Spruce, in ventilated White Tropical Calf and Suntan.

FOR WALK-FITTED comfort try Breezeway, the two-tone brown oxford, shown above.

MESSAGE ON THE SANDS: Get Bostonian Air-Cools and be comfortable. Left—Breezeway. Right—Kendall, in "cool-breeze" cloth and tan calf.

SHE: I've never seen you so flighty about a pair of shoes.

HE: Elementary, my dear Co-pilot—I never had Bostonian Air-Cools before.

SHE: What's so special about Bostonian Air-Cools?

HE: Well, there's down-draft ventilation, for one thing. The air goes through the vents to my feet. Those little breezes evaporate the perspiration and keep my feet dog-gone cool.

SHE: Is that all? The way you talk I thought there must be a cake of ice stored in each toe.

HE: Better than that! These shoes are cool and they have comfort—Walk-fitted comfort—built in from heel to toe. That means more smiles per mile. Get it?

Bostonians... Whitman, Mass. • \$8.95 to \$12.50

FIT RIGHT - FEEL RIGHT *They're Walk-Fitted*

to the mine on the river boat tomorrow."

"Well, well," Milton said to the girl. "I thought you'd be forty, wearing glasses. Say, there must be a mistake somewhere. Why didn't you call for me sooner? You and I are going to have a swell time at Boca Grande."

It occurred to Winslow that Milton held her hand a good deal longer than was necessary. There was something flattering in his admiration, something in his elaborateness which women always liked. Winslow had never felt as he did just then. It was a hot sensation of jealousy combined with a sort of panic, for he saw at once that Milton Bird was impressed by her.

"I suppose he's been telling you to keep out of the sun," Milton said, "and not to drink the water. Well, don't you let Winslow worry you. I'm looking after you now. What are we all having? What about champagne?"

Then the sallow man coughed, a short, delicate little cough. "Do not forget your friends, if you please," he said.

"Why, boys," Milton turned to them cheerfully, "do you blame me, boys? This is Mr. Gruber and this is Mr. Martinez. And now excuse me, please. I know what the lady wants. She wants to dance. Come on, Señorita. Why didn't I know you ten years ago?"

MILTON BIRD was always a part of the music when he danced. Winslow could see them weaving in and out among the other couples. As he watched them, he noticed Señor Lopez's hat on a rack across the room. He recognized it even from that distance because the crown was too high for the current style, and the breadth of the brim gave it an unusual proportion, but as his glance searched the tables he could not find Señor Lopez. He could almost imagine that Señor Lopez had made himself invisible, all except his hat. With that thought came another: Señor Lopez had told him that a Mr. Gruber and a Mr. Martinez would speak to him and, sure enough, there they were.

They had arrived casually enough at his table and now there they were, smiling at him. Their presence was the only thing that day which gave Winslow Greene any real uneasiness, for it made him acutely aware that there was something going on which he did not know about. Certainly there was something. Mr. Gruber had folded his thick hands upon the table. Mr. Martinez coughed again and smiled.

"Our friend Mr. Bird forgets us," Mr. Martinez said. "He has a way with the ladies. If I had a wife I think I should keep her locked up from Mr. Bird."

"Yes," Mr. Gruber gave a comfortable chuckle. "Mr. Greene, I am afraid he will take your girl away."

Winslow glanced at the dance floor and again at Señor Lopez's hat.

"But if he does," said Mr. Gruber, "shall we three mind? There are other fish in the sea for a so-handsome man like Mr. Greene. Let us leave and make a night of it, eh?"

"Thanks," Winslow said. "I couldn't do that, really." But he was afraid what they implied was true. Henrietta Simpson would have no use for him now that she had seen Milton Bird.

"It is because I am a German you refuse, I think," Mr. Gruber said. "It is a misfortune these days to be a German. Myself, I hate the Nazi party."

"That is true," Mr. Martinez spoke softly, as though he were disclosing a secret which only Winslow Greene must know. "It is sad for him here because he hates the Nazis."

"Yes," Winslow said, "that must be sad," and Mr. Martinez coughed again.

"How is it at Boca Grande?" Mr. Martinez asked. "I hear the quality of the ore is growing richer, particularly in the vein to the northeast. You see, I

have a brother in the office."

"You have?" Winslow don't remember anyone Martinez."

"You have an eye for Martinez said, and he smiled disarming way. "It's a hat bears a different name but so much about the work at—a very loyal man."

Winslow took off his blinker at Mr. Martinez.

"All those workers," went on, "all those tons of ore being carried to that mine at show for it in the end—judged pounds a year of ore. How curious it is to reflect, if one is philosophical, You cannot eat the gold. Nothing of it useful. He thought of that?"

"Yes," Winslow said. "times."

"There it is in little bars, nez went on enthusiastically flat wooden cases weighing—you see, my brother has few cases on muleback, the comes from your mine, Mr. takes up very little space room of the ship on its York."

"Yes," Winslow said. His glance strayed from Mr. He saw that Henrietta Milton Bird were laughing danced. The sight made him thinner and once again he examining Señor Lopez's hat.

"I suppose," Mr. Martinez may have brought some of day."

"Brought what?" Winslow Mr. Martinez coughed but remained fixed on Winslow's

"A case or two perhaps to New York? Or those go brother says you ship each "I'm not running the mine," Winslow answered. nez stopped smiling. He flared at Mr. Gruber. "I'm sorry nez," Winslow added.

"It's my fault," Mr. Martinez hope you'll excuse me."

Then Mr. Gruber spoke came more slowly than the and so compellingly that up straighter: "My friend please, that attracts you across the room?"

IN THE pause, Winslow those strangers were watching though they wished to read upon his face. He remembered Señor Lopez had said that there was something wrong but it was all like searching Winslow put his glasses on considered what answer to "Frankly, I was looking said.

"A hat?" Mr. Gruber repeated voice rose incredulously.

"There, on the rack across Winslow said. "It's one of the best Panamas I've ever seen."

The other two men stared room at the hatrack. Their tensivity in both their face could not conceal, a sharper features. For some reason surprised them both.

"Ah, yes," Mr. Gruber said not noticed."

"Ah, yes," Mr. Martinez beautiful hat. Excuse me, going now. It was such a pleasure. You will both hope. It is getting late. I and held out his hand. I continually shaking hands. It has been a pleasure, Mr. Martinez is always busy."

it is so—it's getting late." The music stopped. The couples left the dance floor, and Winslow when Henrietta Simpson Bird reached the table.

"About getting out of here and some Spanish music?" Milton

"night." Henrietta Simpson told him to Winslow. Her and Winslow feel years younger. Just as much. We'll dance another time, won't we?"

"A long time since Winslow was so happy. The conviction on him like a bright effulgence that Henrietta had perceived were far above the average. A smile grew broader when he Milton Bird had been set back. Henrietta was smiling, too, sweetly. "That is," she said, "our wife doesn't mind."

Second, Winslow Greene came close to laughing and now he said what Milton had been saying. Milton's favorite lines and his most successful was that of his understood husband. Obviously he was trying it again out there on the floor, telling of a wasted life and sympathy.

"Yes," Milton said and he said to Winslow. "You're safe with Winslow. In case that worries you, you couldn't be safer with anyone else here, but me. This is my guess I'll be pushing off." Winslow said, "and the captain's it."

Ed scowled again but before Mr. Gruber spoke.

"Going, too," he said. "It's late. Which way do you go, Mr.

Winslow; from the juke box seemed to Henrietta Simpson was smiling at Winslow.

"Glad they're gone," she said. "Are you looking at?"

"Winslow told her. "I was afraid you might be coming back." Winslow said. He was looking for a hat, but in that interval the hat had also disappeared. Everything that might possibly have been gone, and only Henrietta was left.

"You dance at all?" she asked. "Step on your toes," he said. "You can't enjoy it. Not after Milton

"enjoy a great deal," she told Winslow particularly after Milton Bird. "Start back to the hotel a half hour. Walking under the arcades

past the shops, he told her it was better to get a good night's sleep, since she was going to make an early start, and that he was setting out even earlier. Most of Santa Rosa was sleeping already and most of the lights were out. Doors to the courtyards were closed and barred, and the iron shutters of the shops were down. They walked down a street called the Street of the Opera, though Winslow never knew just why, and then they turned to the Street of the Twentieth of August. Both the street and the sidewalks ahead of them were blankly empty beneath a few dim street lights.

"You'll come back, won't you?" she asked.

"Yes," he answered. "Oh, yes. I— And then he stopped.

A man had turned from a side street about a block ahead of them, moving in the direction which they were taking, so that his back was turned to them, straight and white—but once again Winslow recognized the hat. There was no use telling Henrietta, because he had other things to say.

"I wouldn't miss coming back for anything," he said, but he was never sure whether he said it or simply thought it, because that was when the shots came from the shadows of a doorway just a block ahead.

He could see the flashes just as he heard the sound, and instinctively he threw his arm around Henrietta's waist and pushed her to the wall of a building and stood in front of her. He had seen such things before, but he had never been so shaken. There were four shots that came almost together. There was a sickening fascination, watching that figure with the Panama. First it halted, then as it was hit again, the impact of the bullets made it whirl sideways. Then it fell and the hat rolled in the gutter. Next there was a thud of footsteps as two dark figures detached themselves from the doorway and ran, and finally the street was full of voices. People seemed to spring up from the ground, running toward the crumpled man who was lying on his face.

Winslow did not realize until then that he was holding Henrietta's hand.

"Come," he said, "let's get out of here." But his heart was beating painfully. He was thinking of how Mr. Martinez had looked when he had seen the hat.

"Did they—" she stopped and caught her breath. "did they kill him?"

"Yes. Please try not to look. We'll be around the corner in a minute."

Then they turned a corner, walking very quickly, and the sight was gone.

"Try not to think of it," he said. "These things happen here. There are

33 Fine Brews Blended into One Great Beer

"We're going to submerge a little, Nilda—do your stuff, now!"

BY AMER. KELLES

A SPECIAL PREPARATION FOR SHAVING

FOR THE 1 MAN IN 7 WHO SHAVES DAILY

It Needs No Brush Not Greasy or Sticky

Modern life demands at least 1 man in 7 shave *every day*—and men in service must get clean shaves, too. Yet daily shaving often causes razor scrape, irritation.

To help men solve this problem, we perfected Glider—a rich, soothing cream—not greasy or sticky.

SMOOTHS DOWN SKIN

You first wash your face thoroughly with hot water and soap to remove grit and the oil from the skin that collects on whiskers every 24 hours. Then spread on Glider quickly and easily with your fingers. Never a brush. Instantly Glider smooths down the flaky top layer of your skin. It enables the razor's edge to *glide* over your skin, cutting your whiskers close and clean *without scraping or irritating the skin*.

ESPECIALLY FOR THE 1 MAN IN 7 WHO SHAVES DAILY

For men who must shave *every day*—doctors, lawyers, businessmen, service men—Glider is invaluable. It eliminates the dangers frequent shaving may have for the tender face and leaves your skin smoother, cleaner. Glider was developed by The J. B. Williams Co., makers of fine shaving preparations for over 100 years.

SEND FOR GUEST-SIZE TUBE

If you want to try Glider right away, get a regular tube from your dealer. If you can wait a few days, however, we'll send a Guest-Size tube for a dime and any used metal tube. It is enough for three weeks and is very handy for traveling.

On this test we rest our case entirely—for we are positive that Glider will give you more shaving comfort than anything you've used.

Send your name and address with ten cents and a used tube to The J. B. Williams Co., Dept. EG-10, Glastonbury, Conn. Offer good in U. S. A. and Canada only.

always riots and revolutions." He felt her fingers tighten over his. "It hasn't anything to do with you or me, but I'm afraid it spoiled your evening."

"No," she said, "don't say that. It was such a nice evening. Do you think—"

"Don't talk about it," he said. "The police will be there now."

If she had not been with him, he would not have minded, for his life in mining camps and his life on the fringes of South American countries had made him inured to violence and to sudden death by accident or otherwise. He had seen a revolution sweep through a small town once, and sometimes he still would awaken with a start because his memories of the street fighting had disturbed his dreams. He had seen drunken men from the hill country fighting with machetes, and he had seen miners hideously mangled by accidents underground. He certainly would not have minded if she had not been there with him.

HE TRIED to talk to her casually about other things, but his voice at first sounded elaborate and unnatural. He explained to her that Captain Garcias would call for her in the morning and he repeated to her all the details of the trip she would make to Boca Grande. He wanted to put that moment from her mind, and he was sure that the best way of doing it was to resort to simple facts. He was glad to see that she was listening, and gradually his own mind dwelt only on her again, for he began to realize that he would not see her for a long while, and that the day they had spent together was almost over, and still the minutes were slipping by.

The lift moved slowly up to the fourth floor. She unlocked the door of her room, and then she turned on the lights. Her wardrobe trunk was packed with the things she would not need. He had gone over most of the details with her that afternoon.

"You're sure your bags are all closed tight?" he asked.

"Yes," she said. "You closed them."

"Well," he said, "we checked over everything, didn't we? There'll be mosquito netting on the boat, and your stateroom windows are screened, but I wouldn't keep your lights on too long on the boat tomorrow night, particularly if she sticks on a sandbar. The malarial mosquitoes are thick upriver. Wait a minute. Have you a hot-water bottle with you?"

"What on earth would I need one for?" she asked. "It's hot enough without one, isn't it?"

"You can have mine," he said. "I always travel with one. What are you laughing at?"

"I didn't mean to laugh," she said. "I only did because it's like you. No, keep your hot-water bottle."

"Well," he said, "I guess everything's all ready. The hotel will keep your trunk."

"Yes. I'm all right," she said.

"Well," he said, "I mustn't keep you up any longer." But he still stood there in the center of her room. It was the first time in years that he had felt lonely.

"You'll come back, won't you?" she said.

"Oh, yes," he answered. "I'll come back. Well, good night."

"Good night." She held out both her hands, and he took them.

"And don't worry about—what we saw," he said. "Those things happen sometimes."

"Of course," she answered. "I'm not thinking about that."

"Well," he said again. "Good night."

He never understood how he could have dared to kiss her, and he was sure that he had never consciously thought of

taking such a liberty. It must have happened because the shooting had upset him. He felt a shock of surprise when his lips touched hers, and the next instant he was mortified and felt sure that he had spoiled it all.

"I'm terribly sorry," he said. "I didn't mean to do that. Please excuse me."

He repeated what she said next in his mind for days and for weeks afterward. He hardly knew her. That was the amazing thing about it. It was unbelievable that such a thing could happen in the course of a single day.

"Why, I don't mind," she said. "I've been hoping you would all day. You can do it again if you like, so—so we'll both remember."

That was what she said. There was absolutely no doubt about it—"so we'll both remember." The words still pulsed in his temples when he walked across the hall and unlocked his own room door. Nothing like that had ever happened to him before. She had let him kiss her again, so that they would both remember; it might have meant a great deal or only a little; it might not be serious for her, but it was deadly serious for someone like him. He wondered whether she had realized that.

Thoughts such as these ran through his mind even when he closed his door and switched on his light. He was so bewildered by then that it was a minute before his instinctive sense of order told him that things were not exactly as he had left them. His bedding roll, still on the floor by the foot of his bed, jutted into the room at a slight angle, and he certainly had not left it so. He looked up from it slowly to the top of his bureau where he had left the battered leather case that contained his field notebooks and the engineering reports of the Boca Grande mine. He placed the case exactly in the center of the bureau out of his finicky instinct for order. He found the case closed, but it was not just where it had been left. Winslow moved very quickly and quietly to the door of his clothes closet and jerked it open. The closet was empty except for his travel-stained trench coat.

WHEN he opened the leather case, his notebooks, his papers, were all there, but the Boca Grande report was on top. It just happened that he was literal about such matters, and he recalled distinctly that the Boca Grande report had been at the bottom. There was nothing of any importance in his leather case; it was simply the general idea that disturbed him—that someone had been furiously watching him and that someone had known when his room was empty.

He was sure that if he were to ring for the room boy that either the boy would know nothing, or else he would have been bribed to be quiet.

Señor Lopez had asked him to call his room that night, room 410, and the room would be about twenty paces down the hall.

"I wonder," Winslow whispered to himself, and he knelt and loosened the straps of his bedding roll, and pushed his arm inside.

His .45 revolver was safe in its holster, wrapped in his spare clothing. He put on his raincoat and thrust the revolver into the right side pocket, and opened his room door softly. The corridor outside had that dreamy look peculiar to all hotels in the middle of the night.

The room boy was in his little cubby-hole near the elevator shaft with his head pillowed in his arms on a table in front of him, sound asleep, and above the table, hanging from a nail, was the pass key to the rooms. It was new in Winslow's experience, but it was very simple to take the key from the nail, and walk quietly down the hall.

the paper-covered novel he had been reading, and tapped his finger gently on the gaudy colored cover.

"Señor Greene," he said, "you are no- body's fool, my friend. No, it was not entirely careless of me. I had a little idea that I might be happier if I left without that hat. So many useless fel- lows were hanging about on the side- walk by the restaurant. I thought someone might take the hat and that I might observe what happened."

Señor Lopez paused and sighed, and his dark twinkling eyes met Winslow's frankly as though he had explained ev- erything, but Winslow still gazed at him coldly.

"What did you want in my room?" he asked.

"In your room?" Señor Lopez re- peated. "My friend! Was your room searched?"

"I guess you know it was," Winslow said. "Why did you want to look at the mine report?"

Señor Lopez raised his dark eyebrows. "So that is what they wanted." He raised his hands protestingly. "But, my dear friend, you are mistaken. I was not in your room. Believe me, I am a gentleman."

WINSLOW gazed at the lithe delicate figure of Señor Lopez in his shirt sleeves, at his smooth shiny black hair, at his handsome aquiline face.

"I don't know what you are," Wins- low said slowly, "or who you are. I just want to mind my own business and for you to mind yours. You said this morn- ing you were from the police. I asked about you in the bar this afternoon. My friends said they had never heard of you, and they know a lot about Santa Rosa."

"But, my dear Señor Greene," Señor Lopez shrugged his shoulders eloquently and patiently, "of course they do not know me. I am from the President's own private bureau, and this is a delicate affair that cannot go on any record. I cannot show you my papers because I do not travel with them, but my word of honor—my word of honor as a gentleman—"

But Winslow was not impressed. He had a number of ideas as he stood there gazing thoughtfully at Señor Lopez.

"That would sound better," he said, "if you hadn't offered me that hat your- self this morning. How do you answer that one, Lopez?"

GARDNER REA

Our Fighting Men

Continued from page 18

FORT SILL, Okla. Whither he was being transferred was a very closely guarded secret, but one soldier here decided he'd try to find out anyway. For three days he made frantic but unproductive inquiries; then, resigned to fate, the frustrated fighter climbed into a truck with his buddies and nonchalantly lighted a cigarette. "MacArthur, here I come," said he. Three minutes later the truck stopped and the driver announced the termination of the transfer. With his cigarette still burning, the soldier hopped out and joined his new organization in the same general area where he got his basic training.

CAMP BLANDING, Fla. It's getting hot again and the boys who have been doing their stints in the heavy sands around this neck of the country have a fellow feeling for the Negro soldier who sat down the other day after a long drill session and remarked: "I sho wish dese shoes had fans in 'em."

AWARE that German subs off the Atlantic Coast comb the air for information about the weather, smart guys at Blanding are wondering if they couldn't befuddle the enemy by broadcasting roll calls from the Quartermaster outfit. In the pay-roll section alone are Snow, Fogg and Haile; furthermore, there's Dew in the Medical Department and Rain at Camp Headquarters.

AS SOON as Congress acted favorably upon the measure to increase Army pay, amateur sleuths at Blanding undertook to find out what the lads intended to do with the extra dough. Consensus was, some of it would go toward War Stamps and larger money orders home-ward bound, but mainly the boys who were carrying \$2,000 and \$3,000 insurance policies planned to jump them to the \$10,000 limit. Reminds us of the World War story about the officer who was assigned to address a regiment on the subject of investing in government insurance. He climbed onto a platform and made his spiel and waited for the men to react. The apathy was colossal. The officer cleared his throat and made one more stab. "Do you men think," asked he, "that Uncle Sam would send you into the front-line trenches after he had insured your lives for \$10,000?" The rush that followed almost battered down the platform, and when the splinters stopped flying, every man in the outfit had signed up.

CAMP CROFT, S. C. So much has been said about the headaches of buck privates during their training period that officers at this post, where 60,000 rookies a year learn their basic infantry tricks, compared notes the other day and decided they probably have more trials and tribulations than the buck privates. Public Relations Officer Capt. Robert G. Stephens, Jr., presents two briefs in the case for the officers.

1. So many of the new gents in a company of the 39th Training Bn. were having trouble getting their mail a diagram was drawn on a blackboard at a company lecture one morning showing the correct way of addressing an envelope, thus:

*Private John Doe
Company B, 39th Training Battalion
Camp Croft, S. C.*

In less than a week the company mail clerk was staring at two letters addressed to Private John Doe. He knew there was none in the outfit, but when he yelled the name at mail call one of the soldiers stepped up. "Your name's not Joe Doe," said the mail clerk sourly. The soldier's defense was unquestionable. "I know," he said, "but that's the way you told us to have our letters addressed."

2. Over in the 37th Bn. a gang was being lectured on military etiquette. If a private wanted to speak to the battalion commander it would be necessary for him to first communicate with his company commander, etc. etc. Next day, a rookie stepped into his commanding officer's quarters, saluted smartly and said he'd like to secure a permit. "What kind of permit?" asked the C.O., impatiently ruffling a pile of papers on his desk. "Sir," implored the private, "I'd like permission to speak to my top sergeant."

FORT BENNING, Ga. En route to a horse show in Atlanta, one Pvt. Tharpe of Richmond, Ind., and two buddies stopped to ask directions of a colored maid who was sweeping the front porch of a large farm house. The boys swear that after they got the directions the following dialogue took place: "Who lives here?" "The kunnel, but he ain't at home." "Is he an Army colonel?" "No, suh; indeed no. He is a natchel bawn kunnel."

illerymen's song has been into so many microphones of we'd better say a few words with Corps Area Commander William Bryden, who, being an efficient officer, had a birth of The Caissons Gung. When Lieutenant (he Bill Bryden was sent to the from West Point he toted long and when evening mess and there was no duty the ers at Fort Stotenberg, just anila, used to gather around Bill's accompaniment. One Lt. E. L. (Snitz) Gruber—gadier general when he died last Memorial Day—who y Bryden's guitar and who original songs, using barber-for his fellow officers. That

ys General Bryden, "worked sons idea, and we were sing- barracks one day when the deder in. He liked the tune Gruber to do some more it with the bandmaster. As a t, we all worked on it. We harbershop chords and gave tie swing. But Snitz wrote it ad it copyrighted, and de- credit."

the first World War, John ou added some dash to the song and made it into a ng march; but General Bry- recall that it was created pines and he hopes it will n in the Philippines as the lling along—over the Nips.

GENERAL

we're going to have Our Fight- n, seems as if. Beginning plications for enrollment Des Moines, Iowa, Officers School of the Women's Army, Os were being accepted by ny cruiting stations through- ury. Candidates must be 21 ad 45, married or unmar- wit at least a high school edu-

itia adre of about 450 women e a 9 day course, at the end of e neral enrollment will be- an timate army of perhaps wome to replace and release bat ety enlisted men who are forming noncombatant service. A.A. will be under military e, w uniforms and insignia, uarte, food, and medical and reatnt provided by the gov-. Don't write to Washington er information. The War De- t has put the job in the hands Arm recruiting stations.

MISS PEGGY LAMM of Richmond Heights, Mo., knows how to make socks last longer and thinks soldiers who have to darn their own might like to hear the secret. "Put hose over a mender," Miss Lamm postcards, "and rub paraffin wax on toes, heels and other parts where wear occurs each time socks are laundered. It saves a lot of mending."

THE new chevrons hatched up some weeks ago for noncom technicians pleased the boys at first. The block letter T under the stripes looked swell. Then the lads at one post began to call the wearers Model-T corporals, etc. Besides, the T at first glance resembles the insignia worn by chaplains. The other day a rookie eased up to a Model-T sergeant and began: "Chaplain, sir, would you be kind enough to—" When he was interrupted by a string of words usually denoted in general publications by a row of dashes, the rookie almost went into what first-aiders know as severe shock.

THE above, as you'll recall seeing in this column for May 23d, is a line of soldiers named Herbie, created and christened by Typewriter Doodler Jacquelyn Richardson, of Fort Bragg's office of the Senior Hospital Chaplain.

Without thought of discrediting Miss Richardson's originality and ingenuity, we present two reactions.

"Herbie," writes Miss Lillian H. Carter, of Columbia, La., "is an old friend of mine. I was introduced to him during the last war by my big sister. However, he was then known as Oscar the Yank. Here are some groups, both side and back views."

Paul E. Rohrbaugh, York, Pa., shows Herbie at Port Arms, but declines credit for originating it:

And, remaining modestly anonymous, "Another Typist" writes that the letters used by Miss Richardson are very appropriate, being N O W; but submits a line of Herbies made up of the letters U S A:

JUST goes to show an army is made up of all types. G. W.

STEINBERG

FALSE TEETH

Played "hob" with Daniel Dobb—
But this is how he saved his job

From door to door trudged Daniel Dobb,
His sample case in hand;

Yet all day long he made no sales,
No orders could he land.

Alas! his dingy, foul
false teeth
Were more than folks
could stand.

A dentist said: "Try POLIDENT,
The modern thing to do.

"Although you neither rub nor scrub
Your teeth will 'look like new';

"It brightens smiles; checks Denture Breath;
Is inexpensive too."

Cleans, Purifies Without Brushing
Do this every day: Add a
little POLIDENT Powder
to half a glass of water.
Stir. Put in plate or bridge.
10 to 15 minutes. Rinse,
and it's ready
to use.

Dobb did! And now his order file
Is simply overflowing;

His pay-checks, too, are lush and fat;
His bank account is growing.

The lesson? POLIDENT can keep
Your plates clean, sweet and glowing!

Why Fight Ourselves?

AMERICAN industry has been criticized as a laggard in war. Yet American factories are not only our first line of defense but actually our only line of defense if we are to triumph in this Second World War. Without the matchless organizing skill of industrial managers, without the technical competence of American engineers and scientists, without the zeal, energy and inventiveness of hundreds of thousands of American workers, our soldiers and sailors, our fliers and fighters, would be as helpless as the brave Chinese before the Japanese war machine or the well-drilled Frenchmen against the German blitz.

In peace, large-scale industry made practicable the incomparably high standard of American living. In war, large-scale industry is forging the weapons through which we mean to win the war in behalf of our liberty and our lives.

Thurman Arnold and the trust-busting politicians in Washington know this. They seem, however, to act on the assumption that large American corporations are so immensely productive that it is perfectly safe to continue their baiting campaigns even in the dark and anxious hours of this worst of all wars.

The fact is that the basic principles under which we as a people have developed have been distorted or ignored by Mr. Arnold and the Congressional committees before which he has attacked numerous large corporations that are helping magnificently to forge the weapons requisite for winning this war. Mr. Arnold without ever saying it plainly has implicitly

assumed the immorality of patents as giving rise to monopolies.

Of course patents create monopolies. That's their purpose. Section 8, paragraph 8 of Article 1 of the Constitution gives Congress the power "to promote the progress of science and the useful arts by securing for limited times to authors and inventors the exclusive rights to their respective writings and discoveries."

The purpose was to promote the progress of science and so to make it possible for people to live better. The section of the basic law, adopted at the very start of our national life, has been immensely fertile.

American corporations, large and small, make discoveries and seek to patent their inventions. American corporations and American individuals seek to buy the rights to use foreign inventions and to sell the rights to the foreign use of American discoveries.

Why not? No nation and no people do all the thinking and make all the useful discoveries and inventions. It is definitely to our national interest at any time to acquire interests in foreign discoveries. To acquire these interests we have to make contracts. Until war intervenes honorable men and corporations keep their contracts. Governments and not private individuals or corporations have the authority to suspend contracts because of war.

Thurman Arnold knows these things. So do the politicians in the Senate. Yet they do not hesitate to brand as base and even treasonable the sale and purchase of patents between American and German corporations under

agreements made long before Con- ss or ag
other responsible group anticipate var.

Actually American interests v e served
through the purchase by an Ameri oth
pany of German patents covering t naman
ture of artificial rubber. American life
promoted by the purchase of otl German
discoveries by other American cor ations.

Once we have won this war, we n't have
to use discoveries made by Germ s or
other people unless we choose so do
shall live worse if we don't. We s have
do without products as useful as turn, the
sulfa drugs that have saved so ny lives.
salvarsan, the medicine so potent ast sym-

We can do without such things i e choice.
We can refrain from exchanging is s or pat
ents with all other people. But unt re devel
as a national policy to live for and ourselv
alone, there is neither point nor de by to imp
putting improper motives to those porations
that buy the right to use foreign nches
the United States.

Corporations, large and small, a obviously
subject to all American laws. Vi tions can
be prosecuted. The politicians try to
build reputations for themselves contr
ing the old sport of corporation b ng, re
less of the consequences upon the oduct
of goods required to win this war, a poor
faithless servants of our republic.

For the moment surely we hav enough
do to fight the enemy. We don't h to win
our energies by fighting ourselves

10great manufacturers
team up with
UNITED AIRCRAFT

Engines, propellers and airplanes are among the items of equipment most vitally needed by our armed forces. The faster they can be made, the sooner this war can be won.

United Aircraft recognized this fact as far back as the summer of 1940, and started enlisting other manufacturers as emergency production sources. Under this program ten great manufacturers, whose names are household words, have teamed up to build several billion dollars worth of Pratt & Whitney engines, Hamilton Standard propellers and Vought-Sikorsky airplanes *per year*. This emergency production will be without profit to United Aircraft, which has gladly contributed its proven designs, technical experience and manufacturing "know-how."

This foresight is bringing results today. Precious months have been saved. A number of these manufacturers are already shipping engines and propellers in quantity, and the others are rapidly gearing up for production.

All this is in addition to United Aircraft's own vastly expanded production, which has increased many fold since 1940.

This teamwork typifies the cooperative spirit of American industry in this emergency, about which the *New York Times* says:

"The whole manufacturing picture with regard to aircraft is an encouraging example of American industrial spirit rising to meet an emergency, with full cooperation and interchange of design, personnel and equipment between previously competitive elements within the aircraft industry and the automobile industry, and between the two great industries themselves."

In enlisting the full-out efforts of these ten organizations, United Aircraft has helped to create what is probably the greatest manufacturing team the world has ever known.

DON'T BLAME YOUR BLADE

If you get poor shaves too often . . . if your beard doesn't always "come clean", or your face feels raw and tender and irritated, don't be too quick to blame your blade. Blades today are really well made. It might be simply a matter of getting the right cream for your face, so

Change your cream. Try Listerine Shaving Cream with the same blade you were complaining about! No matter how tough your beard, no matter how sensitive your skin, if you're not 100% satisfied with Listerine Shaving Cream, just send the partly used tube to the Lambert Pharmacal Co., St. Louis, Mo. Your money will be promptly refunded. That's how sure we are that this different shaving cream will delight you!

ANY WEEK

WE HAVE just dropped in on friends of ours to see how their new baby was getting along. The kid is as lusty as a new born llama, which is to say healthy. And nobody on this reeling globe could be much lustier than its mother. But the father is still low in body and mind. He told us about it. They live in—well, let's call it the suburbs of Brooklyn. You've got to be durable in the suburbs of Brooklyn. But his story is that without much warning the child began to get itself born. He piled his wife into his car, started for the hospital—in Brooklyn. Taking the shortest route he arrived at one of the many bridges only to find that there had been a nasty motorcar accident thereon and that the police had closed it to traffic. Our friend detoured. This roundabout way was ten miles longer and packed with paving hazards. The car hit a break in the road, going fifty-five miles an hour, plunged, swerved, remained upright. But his head hit the top of the car, carving a nasty gash in his scalp and incidentally doing his wife no good. Dazed, he arrived at the hospital, where his wife was carried into the maternity section, and where he fainted. His scalp was sewed up and, still dazed, he was driven back home. What with his minor concussion and the heavy sedative they gave him he went to sleep immediately. He awoke the next morning, still groggy. In his blurred way he tried to remember what had happened. After some mental groping he recalled enough to telephone the hospital, got the nurse on the phone. "How's my wife?" he yelled. "What about the baby?" Of course he couldn't see the nurse but he tells us that he could hear her yawn. "Listen, Dodger," she replied. "We're okay on this end. Where've you been? How did our Beautiful Bums make out yesterday?"

WE'VE been going over the war situation with one of those practical psychologists, a Pullman conductor. As we get it, as long as the government will permit you to travel at all, rail transportation is becoming pleasanter. This is due, our conductor explained, to the duration disappearance of the club-car-compartment raconteur, the all-wise passenger who introduces himself, tells you what a hurricane he is in his own line, inquires into your business connections and proceeds to

tell you how to run your affairs. Our conductor assures us that the fellow has been silenced. He still exists, but he has been badly discouraged. The latest one our conductor noticed broke the grim silence in a club car not long ago by introducing himself to his neighbor; he demanded his neighbor's name and "line" (which he didn't get) and then, ignoring the snub, proceeded to outline in considerable detail how the Philippines could have been saved, how to destroy Japan, what really happened in the Coral Sea, the lowdown on Russia, what's going to happen after the war and so on. This took him all of a half-hour and when he stopped, a terrible silence greeted him. This lasted a long frigid minute. Then a fellow halfway up the car said, "Brother, why don't you be a good fellow and take a contract to win the war." Our conductor told us that it is not that the traveling public is tiring of club-car wise guys but is merely tired of talk in all forms. "Everybody," said he, "is sure that the guy sitting next to him is an enemy agent. In fact everybody hopes that his neighbor suspects him of being an enemy agent—either that or a G-man or a military intelligence man. War makes men romantic."

FROM Omaha we learn through Mrs. Aimee Bienstock that an elderly and wealthy masher went a-hunting not long ago. His luck was merely so-so until in the lobby of a hotel a lovely young woman smiled at him. He pursued her into the street and presently caught up with her. When he spoke to her, she became quite indignant. She called him by his name and reminded him that his reputation was none too wholesome—that he had been reported several times for accosting innocent young women. Recognizing the truth, he was about to take it on the lam, pretty well alarmed. But she grabbed his arm: "Oh, no you don't. I am about to give you your choice between hearing me call a policeman and buying a nice one thousand dollar War Bond, thus aiding a most worthy cause. Will you come quietly to bond headquarters or in any way you like to police headquarters?" We hope this story is not true, feeling that it would mortify our soldiers, sailors and marines beyond words to know that money for

COVER

Vol. 109, No. 26. Entered as second-class matter at Post Office, Springfield, Ohio, U. S. A., under Act of March 3, 1879, and at Post Office Department, Ottawa, Canada, by The Crowell-Collier Publishing Company, Springfield, Ohio. Publishers of Woman's Home Companion, The American Magazine, Collier's. Copyright, 1942, The Crowell-Collier Publishing Company, in the United States, Canada and Great Britain. Executive and Editorial Offices: 250 Park Avenue, New York, N. Y., 6 Henrietta Street, Covent Garden, London. Published weekly at Springfield, Ohio, U. S. A. Joseph P. Knapp, Chairman of the Board; Thomas H. Beck, President; Albert E. Winger, Executive Vice President and Treasurer; John S. Brehm, Vice President; William P. Larkin, Vice President; J. A. Welch, Vice President; T. L. Brantly, Vice President; A. H. Motley, Vice President; Denis O'Sullivan, Secretary. Manuscripts or art submitted to Collier's, The National Weekly, should be accompanied by addressed envelopes and return postage. The Publisher assumes no responsibility for return of unsolicited manuscripts or art. Price, \$3.00 a year, two years \$5.00, three years \$7.00 in the United States and Possessions, Argentina, Bolivia, Brazil, Canada, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, El Salvador, Guatemala, Haiti, Honduras, Labrador, Mexico, Newfoundland, Nicaragua, Panama, Paraguay, Peru, Spain and Colonies, Uruguay and Venezuela. Other foreign subscriptions including postage: \$6.50 a year. Remit by postal or express money order or check in United States funds to The Crowell-Collier Publishing Company, Springfield, Ohio. Changes of address should reach us five weeks in advance. Give both old and new addresses.

FRUITS Every part of the body needs vitamin C. Oranges, grapefruit and tomatoes—fresh—
are rich in this vitamin. Nutritious menus
include one or more of these, or their juices, every
day. Tomatoes may be added to soups, stews and gra-
vies. Save one other fruit daily—fresh fruits in season,
canned fruits or cooked dried fruits. Canned and quick-
frozen fruits retain their vitamins.

VEGETABLES Plan your menus to include
one or more servings daily
of potatoes and two servings of other vegetables—a leafy,
green one frequently. It is suggested that some vegetables
be served raw—as appetizers or in salads, for instance.
Others advise cooking all vegetables in small amounts of
oil, covered vessels, and only until tender. Use the
refrigerator. Store fresh vegetables in the refrigerator.
Canned and quick-frozen vegetables retain their vitamins.

MILK The best source of calcium is milk. Calcium
is the mineral most used by nature in build-
ing our bodies. Use milk, fresh, evaporated, dried, or in
the form of cheese and ice cream. Five ounces of Ameri-
can cheese equal a quart of milk in food value. Adults
require the equivalent of a pint of milk daily, children
half a quart. In figuring your family's quota, count the milk
used in cooking, too.

How to serve better meals—and help Uncle Sam

ONE OF the most effective ways to
co-operate with the wartime nu-
trition program is to increase your use
of fruits, vegetables, milk and its
products.

Governmental and private health
agencies have two good reasons for
wanting every family to eat more of
these foods in addition to the meats,
breads, cereals and other elements
which should continue to be a substan-
tial part of a good American diet.

First, *your health*. Fruits, vegetables,
and milk, important in times of peace,
are even more vital to the health and
efficiency of our nation in times of war.
They contain an abundance of the ele-
ments which help to protect us from
disease, and also to attain that robust
good health which enables us to do our
work more effectively.

Second, *our war effort*. Responsible
officials tell us that using more fresh
fruits, vegetables and milk, especially
those produced locally, will release
shipping facilities. It will also help pro-
vide larger reserves of easily trans-
ported foods such as meats and various
dehydrated foods, for shipment to our
armed forces and to our allies.

Even though you think that your

family is already well fed, it will pay
you to *make sure* that they are eating
enough fruits, vegetables and milk,
along with the other essential foods.
There are some suggestions on this
page for getting more of them into
your family's diet. Metropolitan will
send you a free booklet, "Three Meals
a Day." It contains much information
about planning nutritious meals.

"My hair stays good-looking since I checked dry scalp!"

Dousing didn't work!

I used to douse and soak my hair because it was dry. But instead of helping, it made things worse! My hair looked limp and plastered—down half of the time—dry and mussed up the rest of the time! Then I discovered that dousing wasn't necessary—not with 'Vaseline' Hair Tonic! And boy, what a difference that made in the looks of my hair!

How's this for a change?

When I comb my hair now, I just put a few drops of 'Vaseline' Hair Tonic on my comb. Sometimes I put a little on my fingers and apply it directly to my scalp. This checks dry scalp because it supplements the natural scalp oils. What's more it makes my hair easier to comb, and gives it a natural, healthy appearance. Of course, I ought to mention that I give my scalp a thorough massage with 'Vaseline' Hair Tonic before I wash my hair—and rub a little on my scalp after the shampoo. That helps to check loose dandruff scales, keeps both my hair and scalp in better condition.

'Vaseline' Hair Tonic is different, containing no ingredient that has a drying effect.

KEEP UP WITH THE WORLD

By Freling Foster

The largest rubber tires ever made for actual use are those on the giant excavation trucks employed on dam projects. They are 9½ feet in height, of 34-ply construction, weigh 3,487 pounds and take a 186-pound tube. Costing \$6,073, including tube and taxes, to change them requires a special derrick and the work of three men for five hours.

In Egyptian hieroglyphics, the character representing the sum of 1,000,000 is a picture of a man with his arms upraised in an attitude of astonishment.—By Oscar Shumsky, Philadelphia, Pennsylvania.

India's second ranking monarch, the famous Maharaja of Mysore, would greatly humiliate his chef if he made the man eat, drink or smoke with him. The chef belongs to a higher caste and, therefore, cannot degrade himself by engaging in social activity with an inferior.—By Dorothy Swift, Madison, Wisconsin.

After being "dry" for several decades, Granite Falls, Minnesota, the home town of Andrew J. Volstead of national prohibition fame, is now not only "wet," but one of the few municipalities in the United States today that own and operate their own saloons.—By Fred Hamann, Pekin, Illinois.

The world's smallest mammal is the American pygmy shrew, *cryptotis parva*, which is an inch and a half in length and weighs one seventh of an ounce. Although resembling a mouse, it is not a rodent, but an insectivore; and its litters contain from five to seven young, each about the size of a pea. Incidentally, this animal twitches its snout so rapidly that photographs of it, even when taken at 1-200th of a second, are blurred.

Saccharin, which is five hundred times sweeter than sugar, but which is neither a sugar nor a food, is still permitted in the manufacturing of foods and drinks in Great Britain and many other countries. Between 1917 and 1919, Europe consumed enough of this artificial sweetening agent to replace 300,000 tons of sugar.

London authorities estimated that, even when being bombed heavily, the odds are 2 to 1 against a bomb landing within a distance of 150 feet of any individual.—By Je Washington, D. C.

The slang expression "eyes," when applied to a person, is literally alcohol progressively muscles that draw toward and, consequently, gradually converge and actually does become

Canada's Hudson Bay, but an inland sea, is not a fox, but a bone is not a bone, wormwood is not a herb; and the white whale, but a sturgeon.

Carbon dioxide seen in many places around the world, and, when not caught by the wind, forms about the ground, most animals that happen to enter it. Among traps are a ravine in Park, a valley in Java near Naples.

The "Messengers of England, the men who carry documents between London embassies and consuls, wear a badge called the Silver which gives them authority to demand and have placed a motorcar, airplane or even a battleship of peace, in any part of the Empire.—By T. Burt Wood City, Pennsylvania

All persons in the U. S. Army must use the official superior when addressing one exception to this warrant officer, who is simply as "Mister."—By Frank Storm, Washington, D. C.

These can often be the Saddest Words in the World

All their lives they had saved for it . . . a little home of their own with red tulips in the front garden. . . .

Now, two years after the last payment was made, a tragic sign was posted in the yard: *For Sale*.

It happened suddenly as an earthquake. A darting car . . . too late, the screech of frantic brakes . . . minutes of court proceedings. The judgment was for \$7,000. To meet it, the house must be sold. All because a man thought it good a driver ever to have an accident. It is happening every day. It can happen to you if your car is not insured.

How to Safeguard Your Future Security

explained by G. J. Mecherle
Founder and Chairman of the Board

There is no reason for jeopardizing the security of your family by driving your car without adequate insurance.

Back in 1922 we founded State Farm Mutual

Automobile Insurance Company to make insurance protection so reasonable in cost that no automobile owner could truthfully say he couldn't afford it.

"So sound was our plan that State Farm Mutual has become the largest auto casualty company in the world. More than a million drivers have enjoyed the security of State Farm protection!

"By pioneering many economies, State Farm Mutual has been able to offer more auto insurance for your money . . . broader protection and better service.

"For instance, we save you money by not reissuing a new policy every year. We renew it instead, so long as the risk remains the same. Hence you pay the acquisition cost of your policy once a lifetime instead of once a year.

"Altogether, economies like this have saved State Farm policyholders in excess of \$50,000,000 in the cost of their auto insurance. We do business today in 40 states through 7,000 licensed representatives.

"Whether your car is now insured in another company or whether you carry no insurance, you should get the facts about State Farm's *More Protection for Your Money Plan*. Just mail the coupon."

FOR VICTORY

Save rubber

America needs rubber
Save every piece you can!

FOR VICTORY...

Save gas! Save oil!
Save engine wear!

Install

SEALED POWER PISTON RINGS

Gas and oil are going to help America win this war. So, save all you can. One way to save is by installing Sealed Power Piston Rings in your car. These famous rings, now available in packaged sets, save gas, oil and engine wear. They're individually engineered for your make and model of car—so they fit properly. Sealed Power Rings are used in leading cars, trucks, airplanes, Diesel and marine engines. You can't buy better piston rings! Ask for them by name! Sealed Power Corporation, Muskegon, Michigan and Windsor, Ontario.

Piston Rings for all types of Automobile, Aviation, Diesel, Stationary, Marine Engines

B 25

WING TALK

B 26

The North American B-25 and the Martin B-26 medium bombers carry heavy bomb loads, hit hard, get away fast

AVIATION people who have examined the salvaged Zero fighters that have been shipped back here are willing to bury the long-accepted myth that the Japs are a bunch of parrots who imitate accurately but are unable to create anything. They say it is a good airplane, with good workmanship and good performance.

The Zero is much lighter in weight than our fighters. It grosses about 5,000 pounds (whereas ours run from seven to thirteen thousand), has an air-cooled radial engine of 900 horsepower that is not a copy of any well-known model. It carries two 20mm. cannon and two machine guns. It has a high rate of climb and excellent maneuverability, due to low weight and low wing loading.

Protective armor and leakproof tanks were notably absent on the Jap fighters. That is why they are such meat for our fighters and bomber gunners. American combat planes are protected with heavy armor plate, bullet-proof glass and self-sealing fuel tanks. This runs up the wing loading and takes a bite out of performance, but it saves priceless American airmen for the next fight.

ANY small American boy instantly can tell the difference as they flash by in the sky, though most of us have to stop and figure out whether it's a

B-25 or B-26, both of which the Army Air Forces' medium bombers. The North American B-25 is named after General Billy Mitchell, and the Martin B-26 is named after Major General William B. Martin. Both are characterized by their sweep-back wings, a designation by the Army Air Forces.

The B-25 Mitchell and the B-26 are both four-engine bombers. The B-25 is a four-engine Flying Fortress, and the B-26 is a four-engine medium bomber. Both are capable of carrying heavy bomb loads and have excellent performance.

To tell them apart in the air, look for the twin rudders on the B-25, or the single rudder on the B-26. Both have engines extending far out from the leading edges of the sweep-back wings. The B-25 has a wing spread of about 100 feet, and the B-26 has a wing spread of about 80 feet. Both have tricycle landing gear and a high-wing configuration.

(Continued on page 47)

Wonder in the night

IS LIGHT AT A HIDDEN AIRFIELD.

The hangar doors open, and a huge bomber
leaves the earth. A shadowy figure signals, and the
plane glides down the dark runway. Hours later
it returns and circles above the field. Not a light
is seen—yet its wheels unerringly find the run-
way. How can men fly like this? How can they take off
in darkness, accurately bomb their objectives, return
to an unmarked field, land safely without lights at
hundreds of miles an hour?

The answer, of course, is *instruments*—precise,
reliable dials and indicators that are the eyes
of our fighting forces.

In the cockpit of every American bomber are
more than 200 of these instruments. In ships,
submarines, tanks, in every type of artillery,
instruments perform a thousand essential tasks.
This, truly, is a war of instruments.

If we are to have planes and tanks and fighting
ships by the thousands, we must have instru-
ments by the millions. Yet building precision
instruments is a delicate, painstaking process.

Manufacturing tolerances are frequently so small
that machining and fitting of tiny parts must be
done by hand, under powerful microscopes.

Before the war, America had no facilities for
making electrical instruments on such a tre-
mendous scale—yet *today*, America is getting
the instruments it needs. And Westinghouse is
proud to be contributing to this vital war effort.

In Westinghouse plants
long devoted to instrument
manufacture, and in others now
converted to that task, precise,
careful hand workmanship has
been put on a mass-produc-
tion basis—the job men used
to say could never be done.

Westinghouse is doing this
job *24 hours every day*.

**Again it's Westinghouse
"know how"**

Wherever American troops go
into action, Westinghouse
"know how" is on the job.

What is this "know how"? It is the ability to
get things done in the best possible way. It is a
combination of pride of craftsmanship, untiring
research, industrial ingenuity, and a world of
experience.

Today, Westinghouse "know how" has a single
task and a single aim: to provide the weapons
that will keep this nation free.

Westinghouse

**Every Westinghouse plant is producing equipment for the
Army, Navy, or Merchant Marine. Here are some examples:**

Blackout Plant Air-Conditioning Equipment	Aircraft Instruments Binoculars	Fluorescent Lighting
Naval Ordnance	Mercury Vapor Lamps	Ship Searchlights
Field Hospital X-Ray Equipment	Military Radio	Water Coolers
Army Camp Refrigerators	Marine Turbines and Gears	Ignitron Rectifiers
Instruments for Battleships		Motors and Controls
		Electronic Tubes

WESTINGHOUSE ELECTRIC & MANUFACTURING COMPANY, PITTSBURGH, PA.
Plants in 25 cities—offices everywhere

A Message of Confidence

The war has brought many changes to the Bell System. The nation needed telephone facilities in new places. It needed more facilities in the usual places. It needed all facilities in a hurry.

Shortages of essential materials brought new problems and new achievements in research and in manufacturing. Telephone calls increased about ten million a day.

Yet all this has been done without great change in your telephone service. Millions of subscribers

have felt no difference. The record as a whole has been good. That is the way it should be and the Bell System aims to keep it that way.

But when war needs delay your call, when you can't get just the service or equipment you need, when you put the blame right where it belongs — on the war —

Service to the Nation in Peace and War

The Night Horse

by Green Bell

ILLUSTRATED BY WARREN BAUMGARTNER

Healy was not up when
made his last run.
Healy was over the bor-
in land where there are
fences too high to carry

UTSIDE the door, the superin-
tendent said to the new doctor,
"Now in here is John Healy.
He's a sportsman, I understand, until
most of his money—
for a man to survive falls
into a field and finally go
into trouble. He's very little
of a fellow, not bad at all."
There were old hunting prints
on the wall. The room was bright, with
gay curtains moving in the
wind and green drapes, flowers on
a white-mahogany table in a green
and a white-mahogany bed
room. John Healy. His face was
somewhat red, and his hair was
on the way to whiteness, and in his
eye there was a look that re-
flected of the gay curtains.

He talked quite rationally as, of
course, he often did, and he seemed at-
tracted to the new doctor. He asked
him, "Ever been in Ireland,
doctor?" and seemed disappointed
the doctor had not been there.
"Anyway, it's a fine, fine country."
"Yes, say, it was a fine country."
"Still is, war or not. I think

the superintendent had gone out now
they were alone. Healy moved
into the bed, as if he were too warm.
His legs protruded from the bed-
clothes, the dark green pajamas pushed
up to his knee, exposing his gaunt
leg. The doctor noticed that there
was no hair growing on the in-
ner calf of his leg, from much riding,
he knew why John Healy had
come from Ireland.

NIEBRANDON waited for his
father, Matt, and then Matt's
Florence to finish the paper. First
he read his spectacles with the broken
hinge loosely on his small nose.
Florence came in and took the chair
and the rosene lamp, and while she
went out on the porch and
listened to the mockingbird, the first he
heard singing in the catalpa tree.
Tired Creek, the hounds of
Redman and his sons were chasing
spring they had treed one
hundred and thirty beyond the back field,

The horse jumped as if the switch had been a hot wire, knocking two men down. The man holding him put his weight on the rope, crying, "Don't hit him with that switch no more"

Big Boy came charging, ears laid flat as a cat's. Matt stumbled over the fence, crawled weakly home

in a black gum tree. Lennie thought of the back field, *his* field; it was only half broken with planting time almost here.

When he went back inside, Flora had finished the paper, but she made no move to let him sit by the light. Squinting, he read the news about happenings on the other side of the world. Some of it he read aloud, in indignation.

"Don't git all worked up," Matt said sarcastically, "you'll be into it before long."

"In town they said I might not be drafted," Lennie said in disappointment, "on account of being a farmer."

"A farmer!" Matt said, and Flora sniffed. "Here it's March and your land ain't even broke."

Lennie wondered what Matt thought he could have done to prevent the death of his mule when even the veterinarian couldn't prevent it, but he said nothing. He had long since quit wrangling with Matt. When their father died, the two brothers had tried farming together, but that had been far from satisfactory. So Matt had taken the sixty acres and the branch head woods, and Lennie had taken the forty and the pasture. Now Matt coveted the forty acres, for he had seen that the land was better than his, and he intimated that Lennie had tricked him although he himself had suggested the terms of the division.

"Tomorrow is Tuesday," Lennie said, "the day of the mule auction. I'm going in to buy me a mule."

"You better git Matt to go with you," Flora said. "You'll end up with one that's spavined or got the hollow-tail."

"I don't want to be no trouble to Matt," Lennie answered. So next day he walked to town alone. When he got to the livery stable, he said to the stable-

man, "I'm in a right smart of a fix. With my ground half broke and planting time nigh, my mule up and died."

"We got plenty of mules and work horses, Lennie."

"I just got through buying my fertilizer and seed. Didn't leave me a whole heap of money. About sixty dollars."

"That won't buy much of a mule, Lennie, sixty dollars. But we got all kinds. If a good working horse comes up, he might do better than a mule for what you got to pay. You be on the lookout."

The auctioneer, in his pulpit, began the selling, calling the bids in a rattling drone and occasionally thumping the pulpit with a piece of bicycle tire in synthetic enthusiasm. The mules and horses were trotted back and forth in front of the buyers, while stable hands twitched at their rumps to show how active they were. Most of the buyers were professional mule traders, leaning upon their canes and bidding by winks and nods; there were farmers, like Lennie, trying to buy a good strong animal cheap, somewhat bewildered by the noise and the swiftness of the selling, and there was a man from the Florida quarters of the big circus, buying old ten-dollar mules to slaughter for the show beasts.

The stableman found something about each mule or horse to brag on. "Now here's a mule that's sound, made a crop last year, he's a little frosty about the head but he'll still work, single or double," and about the next one: "Now here's a mule that's what you want, boys, good mouth, good short teeth, them rough places on his hide ain't nothing, they'll go away..."

Lennie kept watching, but with waning hope. He didn't want a thirty- or

forty-dollar mule, that might turn out to be stringhalted or might drop dead in the furrow. The kind of mule he wanted sold for a hundred dollars or more.

Now a lull came in the selling as a new animal was brought out. This one was a horse, a great ugly creature that needed clipping. They looked at him curiously, trying to decide what manner of horse this might be, for although he was tall as a Percheron he was not built like a draft horse. His head was big, and his withers quite high, making him look somewhat swayback, and his croup was incredibly wide, so that you could have almost hung your hat on his hipbones.

THE horse was calm, phlegmatic until the hostler touched his rump with the willow switch. Then he jumped, as if the switch had been a hot wire, wheeling on the woven grass halter and knocking two men down. The man holding him put his weight on the halter rope, crying, "Whoa, whoa! Don't hit him with that switch no more!"

The horse became quiet again. The stableman said, "Who's selling this horse?"

"Me. It's one the old man had sent down just before he went off his head. I don't know nothing about that horse, just that the lawyers said sell the farm and stock and everything. Once the old man sent a pair of Belgians down and I figured this'n's another one of them kind."

"Will he work?" the stableman asked.

"You know as much about him as me. We was going to hitch him up and try him, but then everything happened like it did."

"Can he be rid?"

"I tell you I don't know nothing about him. Let your nigger git up on his feet and see."

The Negro said, uneasily, "Don't believe I better, Cap'm. He too big for me."

The stableman said, "All right, here he is. A good sound horse. Lennie looked at his teeth. 'He's got a little age on him, but not too much. I bid?'"

Nobody made a bid. The buyers were not interested in a horse, they wouldn't for certain wear a coat, one of them confided that he had a horse had a floating eye, which would understood to mean that he was erous.

"All right, I start it off with fifty dollars," the stableman said, "waste time on him."

Lennie got interested in the horse. He walked around the horse. The flat thighs attracted his eye. He realized the strength of the hindquarters. The horse could moldboard plow by himself, he would. Lennie wondered if he could gamble on him.

The auctioneer was singing a fifty-dollar bid; he vainly looked for a buyer trying to catch his eye. The stableman observed Lennie's interest and shouted, "For all I know, Lennie, the blue-ribbon champion plow horse wherever he come from. Go on, him. If he don't suit you by bringing him back."

Lennie said, "I'll give fifty dollars for him."

Now, leading the big horse, Lennie was troubled by his foolish thing he had done, buying a plow horse.

Why We'll Have Enough to Eat

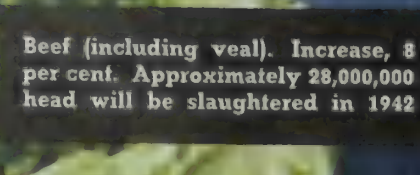

By **Claude R. Wickard**
SECRETARY OF AGRICULTURE

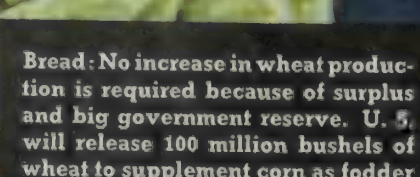

Garden produce (beans, peas, carrots, etc.): 1942 goal, 5,460,000 farm and home gardens as against, 4,431,000 in 1941. Estimated increase in food for consumption at source is 30 per cent. Commercial gardeners will produce 10 per cent more

Eggs: Goal is 13 per cent increase this year. Total 1942 production of eggs will be 4.2 billion dozens

Beef (including veal). Increase, 8 per cent. Approximately 28,000,000 head will be slaughtered in 1942

Bread: No increase in wheat production is required because of surplus and big government reserve. U. S. will release 100 million bushels of wheat to supplement corn as fodder

Corn: Increase, 8 per cent. From 92½ to 95 million acres planted in 1942; 87.2 million acres in 1941. Victory gardens will supply great amounts of corn for family tables

Milk (and butter): 125 billion lbs. of milk in 1942, against 116½ billion lbs. in 1941. Production of evaporated and dried milk and cheese will be at full capacity in 1942

Canning Tomatoes: 18 per cent increase. Other increases for 1942 are as follows: Hogs, 14%; peanuts, 155%; soybeans, 54%; canning peas, 32%; dry beans, 13%; dry peas, 73%; potatoes, 10%; rice, 6%

In a special article for *Collier's* the Secretary of Agriculture explains how more than 6,000,000 farmers, operating the finest food-producing plant in the world, are building impregnable defenses against hunger

BECAUSE some housewives can't believe there's going to be enough food to go around, they are having extra shelves put in pantries on which to place hoarded food. Fortunately, all housewives aren't buying more than they need. If they were, not even the record high production expected in 1942 could provide food for consumption and for the hoarders too.

In our society, when a government hoards—for example, to fill up our Ever-Normal Granary, it makes sense; whereas when an individual hoards, it makes trouble. Our hoarding housewives don't know their own strength. Last year, for example, as *Collier's* has pointed out in a recent article, they appear to have whisked about a million tons of sugar off the grocers' shelves and into cupboards and cellars all over the land.

So let me hasten to assure uneasy housewives that the answer is yes, there will be enough food. It's still yes, despite some selfish and unpatriotic hoarding—not only by consumers, but by processors and middlemen all down the line—which, if continued, is likely to cause temporary shortages, to hasten the necessity of rationing, and to complicate the problem of price control. It's yes because our six and a half million farmers own and operate the most productive agricultural plant in the world. They'll do the job, but there must be no waste of land, labor, or materials; moreover, they'll need the understanding and co-operation of all of us, from the housewife in her kitchen and the clerk in the corner grocery to the nutritionist in his laboratory and the country Triple-A committeemen working nights to make sure that farmers reach their 1942 production goals. Perhaps it will help to promote this mutual understanding if I try to describe how the machinery of our planned agricultural production operates. It is relatively new. Like most working farmers, I remember well its beginnings and why it was necessary.

During the twenties I was out in Carroll County, Indiana, raising corn and hogs. I had good land, good hogs, and poor markets. Like other farmers, I bought high and sold low. I've seen the time when it was cheaper to knock pigs in the head than it was to try to market them. Farmers and farm land took a lot of punishment and by 1931 both were pretty well worn out.

Consumers were worn out, too, if you remember. True, food was cheap when the average housewife had anything to use for money, but too often she had little or nothing. Most consumers didn't realize it, but one reason they were broke in that depression year of 1932 was that during World War I, instead of planning our agricultural production, we ran wild through a disastrous cycle of boom and bust.

We shan't do that again in this war. We don't have to. We have our national farm programs, wrought out of bitter experience and now firmly rooted in the conviction and practice of American farmers.

Originally our farm programs concentrated on cutting down surpluses. That was the immediate job in the middle 1930s. But as time passed, the programs put more and more emphasis on

(Continued on page 40)

All Hands On Deck!

By Howard Hartley

To man our ever-growing merchant fleet we need thousands of seamen and engineers—and in a hurry. Training them is the job of the Maritime Commission's schools now operating at full speed

THE white sails of a ketch, beating across the St. Petersburg harbor, hung limp. On the parade ground of the Maritime Commission's new million-dollar training school for apprentice seamen, the sixteen youngsters of Platoon Four, spotless in white jumpers and flaring bell-bottoms, stood rigidly at attention under the burning Florida sun.

The platoon's right guide was Trainee Wallace Wade, a tall, raw-boned youngster from Mountain View, Arkansas (Pop. 1,500). Six months ago, this 19-

year-old son of an Ozark farmer had never seen navigable water, unless you count the spring floods of the Arkansas lowland meadows. Tomorrow Trainee Wade and his fifteen shipmates of Platoon Four would receive their graduation certificates. They had been assembled to hear a baccalaureate sermon from Chief Bos'n William Joseph Donegan, facing the formation in resplendent dress blues, with the four gold hash marks on the sleeve denoting sixteen years' service in the United States Coast Guard.

Flanking the east side of the parade ground were the eight white concrete-and-steel barracks and the hospital and administration buildings that house the staff and the 400 trainees. Behind the platoon were the long wharves, where the historic sailing ships—the old Joseph Conrad and the equally ancient Tusitala—tugged gently at the mooring cables. Both ships had been saved from the graveyard to serve as floating barracks.

The Joseph Conrad is one of the last of the square-riggers and a relic of the

days when American clipper ships ruled the seven seas. In the afternoon sun that flashed from her brightwork she seemed a sedate grandmother. Just down the wharf were some of the Coast Guard's sleek, gray cutters and swift patrol boats.

For six months the boys of Platoon Four had been plastic lumps in the hands of Coast Guard sculptors, with the molding beginning on the day Trainee Wade and his fellow recruits arrived from the Maritime Commission's far-flung enrolling offices. That was the day Trainee Wade met Chief Bos'n Donegan, and for two hectic months the Coast Guard veteran had been the platoon's Simon Legree or kindly godfather, depending on how the recruits took to the Donegan brand of discipline.

Whether they loved or hated him made no difference to Mr. Donegan. His job was to help train the 20,000 new seamen and 5,000 new officers our fast-expanding merchant fleet must have by December 31, 1943.

This is the biggest mass-production

One of the last of the riggers, the Joseph Conrad is floating barracks for trainees at the St. Petersburg

training project in maritime history. It is costing around \$8,000,000, which isn't much when you remember what we're spending for new ships. It is one of the most important and publicized phases of our national effort. Ships are not robots. They must be manned, from engine room to deck, and engineer officers and stewards, cooks and oilers, erators and wipers called into from the farms and shops and cities. The program is important to our merchant fleet, when the war will be the biggest and finest in our history. It will number between 2,500 and 3,000 ships, from the smallest freight tanker up to fast passenger liners. When the war ends, this gigantic

Frustration on the Isle of Bali. The Japanese staff overlooked the peculiar quality of the native defenses

MRS. VAN CLERCQ gave a little scream and almost dropped her gin sling. "Look!" she said anxiously. "Something terrible's the matter!"

She pointed down the road toward an enormously fat Dutchman approaching by bicycle. Clad in acres of gleaming tropical whites, he looked like a blimp on roller skates, but Mrs. Van Clercq and her companions on the porch of the Bali Hotel were not amused.

Mrs. Van Clercq's husband, the manager of the hotel, glanced at his watch, noting that it was exactly nine-

teen minutes before ten. "Nearly twenty minutes early this morning!" he said in a hushed voice. "Perhaps an air raid!"

Frederick Smeeren, the perspiring object of all this, was a towheaded pink man in his fifties and his personal achievements were two. First, he was chief of police of the slightly malarial town of Den Pasaar, Bali, Netherlands East Indies. Second, for twenty-five years he had managed to cycle past the Bali Hotel at precisely ten A. M.—fair, monsoon or typhoon.

On this humid morning in January, 1942, no one could think of a reason for his lapse from routine—except disaster. By the time he reached the porch, most of the town's thirteen resident whites, who had gathered there as usual for gossip and a drink, were on their feet. A few of the ladies seemed about to faint.

Van Clercq hurried toward him. "What the devil is it, Smeeren?"

Waving a loaf of a hand in a signal for him to follow, Smeeren went directly into the manager's office. "Hah!" he said, closing the door behind them. "Tell no one, but we're dead! All of us goners, may heaven help the Queen!"

"The Japs have attacked Bali?" Van Clercq said in a tired voice.

"Worse! Just now I got orders to arm the natives!"

"So?"

Smeeren stared at him in horror. "As soon as they get guns they'll—why, they'll slit our throats!" he said wildly.

"Nonsense! They might straighten you out, though I don't think they'll bother. As for harming the rest of us—we're their friends."

It was an established fact that, alone among the Europeans there, Smeeren didn't like the Balinese. The natives returned the compliment and it was just as well that Frederick never bothered to look at any of their world-famous carv-

ing. Much of it featured the ponderous white man astride bicycle. All were caricature definitely vulgar.

"Natives aren't any whi friend," Smeeren told Van Clercq. "They're yellow. All of 'em. to boot."

Van Clercq stared at the moment and then shook his head. "You're a fool. I don't like never have."

"Fine thing to say! And wh here to ask you to keep my testament in your safe!"

"Leave it on the desk!" V turned on his heel and left the Alone, Frederick sank into chair, leaned far back, and be—wetly, but very quietly. Af he sniffed back his tears at document from his pocket. It a hotel envelope on which

Worry-Up Joe

by John Marshall

General Joseph W. Stilwell, a man with a mission—in Burma and he intends to waste no time in fulfilling it, either

“DON’T run out of Burma, and it is humiliating as hell!” said the old gentleman with the bristling gray hair. The scene was New Delhi, India, and the speaker was Lieutenant General Joseph Warren Stilwell. He had just finished a difficult 140-mile cross-jungle trek from Burma, where he had been Chief of Staff to Generalissimo Chiang Kai-shek, in command of the Fifth and Sixth Chinese Armies.

“These Japs aren’t supermen,” he said. “I’ve got to go back properly prepared and properly equipped we can win this out!”

When Stilwell reads in the papers about heroic retreats, stubborn retreats to prepared positions and brilliant rearguard actions, his eyes snap, his chin juts out and he barks, as he did to his men recently, “Our objective is to put on an intelligent fight, not just a bloody fight. We’re not looking for easy good losers. The country wants to win, and, in order to do it, there must be a let-up.”

When the general says he likes tough fighters, he means fighters who are as tough as nails physically, fighters who think realistically and who can’t fight a 1942 war with their heads. The thousands of selectees got their training under Stilwell on the Coast, before he went to the Philippines, all remember with awe the way he got his way through to be smart, gritty fighting men they

at Fort Ord on Monterey Bay, where Uncle Joe whipped a group of an-of-the-mine selectees into the Seventh Division, a visiting group looked over a headquarters which training schedules were set for next week,” he remarked to the general’s aide, with a

he gulped: “Next week! Heck, I’m alive, that’s the schedule for

EMMETT D. GRIGGS

Deceptively mild in looks, Gen. Stilwell believes attack and not defense is our formula for victory

In the Army, Uncle Joe is known as the greatest argument against the jeep. On the level, he can travel almost as fast as one, and in rough territory he easily strides ahead. During Army maneuvers in the West last summer, the usual reply to “Where’s the general?” was “Probably half a mile ahead of the advance skirmish line.” And the lad is fifty-nine years old, remember. Wears specs, too.

Stilwell was born in Florida, where his parents had gone for a vacation from their home in Yonkers, New York. They were Dr. and Mrs. Benjamin Stilwell. The boy, brought up north, got his early schooling in Yonkers and wanted to go to Yale.

But a background of twenty-four Stilwells who served as officers in the War of the Revolution changed that. Old Dr. Stilwell took young Warren—as he was called then—to visit West

Point, and the Army bug in the boy’s blood did the rest.

Just as West Point changed the name of another soldier—a man named Grant—so it changed J. Warren Stilwell into Joseph W. A cadet officer did that, probably as a whim, but it stuck. At least, it stuck until the inevitable nicknames started to attach themselves. The most pungent of these is “Vinegar Joe,” which the general attained for being impatient about stupidity.

After graduating as a lieutenant from the Point in 1904, Stilwell went to the Philippines with an infantry outfit; came back to the Academy as an instructor in '06; went back to the Islands in '10, and returned two years later for a three-year hitch at the Presidio of Monterey in California. He still has a home near there—“Llanfair”—to which he looks forward to retiring after he and his men have out-toughed and out-

smarted the Japs, something about which Uncle Joe has no doubts whatever.

He went to France early in the other war and was assigned to a British outfit at Noyon, serving for some months. Then he went to the A.E.F. Military Intelligence at General Headquarters and had a lot to do with planning the great Saint-Mihiel offensive. He never believed in defensive warfare at all. For this work, he got the Distinguished Service Medal and a citation:

“For exceptional merit and distinguished service during the Saint-Mihiel offensive and later during operations near Verdun . . . Great energy and zeal . . . excellent performance.”

After the Armistice he went into Germany with the Army of Occupation and got back home in the fall of '19. Being idle wasn’t in his book, so he went to (Continued on page 53)

Roses from France

Fly Away Home

By John Weld

Their break came when they least expected it. And it was engineered by their hearts, not by their heads

THE white roadside shack had HAMBURGER in large black letters across its façade. Inside, a woman sat on a stool behind the counter picking her teeth with a wooden pick and reading the green front page of a Los Angeles newspaper. She was about thirty-five and her Spanish skin was the color of olives, her hair black and shiny. She wore a pretty apron over her dress.

Someone went by singing Home on the Range. A car passed, headed south, toward San Diego, its bearings knocking. She looked up as the screen door opened. A man came in. He wore faded blue jeans and shirt, an old sweat-soaked felt hat. The neck of his shirt

was open at the throat. He had a swarthy skin, dark, furtive, frightened eyes and a shy, obsequious manner.

The woman got up. "Good evenin'," she said pleasantly and came down the counter. There was about her smile and her voice a sincerity, a warmth that was not commercial—a real friendliness.

The man's "Ello," was spoken with a strong Mexican accent. He smiled timidly and sat down on one of the stools.

"Nice evenin'," she said, and looked out, her hands on the counter, waiting.

"I take hamburger," he said, and pushed his hat back on his head.

The woman turned and lit the gas stove with a kitchen match, brushed the black, grease-encrusted grill with butter leavings. She opened the icebox and brought forth a meat patty on a piece of waxed paper. The meat was ground up and there was a lot of fat and suet in it. She slapped it on the grill, mashed it flatter with a spatula, opened a roll

and flopped it face down beside the meat. "With or without?" She turned to look at his face.

He nodded. "Sure. Everything," he said.

She sliced a great Bermuda onion, wiped the knife on her apron. "What to drink?" she asked, and looked up at the sign above her—glass tubing full of liquid fire: Acme. "How about a bottle of beer?" she asked. "It's ice cold."

"Sure," he said, and then looked at her hopefully. "You drink one with me, eh?"

Her eyes looked at him quickly, startled; then away again.

"I pay," he said.

"Okay," she said, smiling, and brought forth two bottles. "Much oblige." The bottles hissed as the caps came off.

She wiped the bottle on her apron and set it before him. She emptied the other one into her own glass. The amber fluid foamed up. Then she clicked her glass against his. "Salud."

"Salud."

They drank. She set the glass down and turned to the stove, flipped the meat over. "You work around here," she asked, after a little while.

He nodded. "Rancho Vincen," he said. "How long you been working here?"

"Five week."

"Thought I hadn't seen you. Where's your home?"

"I born in Rosario, Baja Ca."

The soft Mexican words came from his mouth like music. "You know Rosario?"

She shook her head. "I never been down there," she said. She but browned roll, put the meat on the halves, added the slice of onion and the relish, scooped it on a chipped plate, set it before him. She took the lid off the hamburger, spread mustard with a wooden paddle on a little salt, put the lid back on.

Red Flag in Brooklyn

Arch Murray

lead to a little fuss and then, but the c Magerkurth right in there, call- as he sees 'em during no man— on a Dodger fan

HE game hush had fallen over the Sunday crowd at Ebbets Field as the three men in blue came to the dugout. At first, there were customary brrrrppps that alarmed the umpires. Then suddenly, as the customers recognized the red-faced giant carrying the mallets, they came to their feet and the trickle of jeers became a roar of abuse.

The Public Enemy Number One came home. George Magerkurth, making his first Sunday appearance of the 1942 season at Ebbets Field, the crowd was merely giving him the reception due the man who has been called the most colorful human being in Flatbush. The sight of him was like a red flag to the bulls of Brooklyn.

The Maje gave off a customary snarl about his business. His big frame just bristled a bit more as he cried "Play Ball." This was new for the Maje. For years he has been a target of scorn. A battling, belligerent man with thunder in both his eyes on calling 'em as he sees the devil take his critics. The tant bazoos from the stands dugouts are old stuff to him. He has been parboiling in scalding water he quit a timekeeper's job in London mask and protector just

twenty summers ago. He has weathered more arguments than a henpecked husband. And he keeps on giving National Leaguers the thumb whenever he thinks it necessary, which is so often that there's a saying around the circuit that you're not really a National Leaguer until you've been thrown out by the Maje.

The Maje himself is a kind of dual personality. Off the field, he's a mild-mannered, peace-loving citizen whose favorite pastime is playing hearts at the Elks Club back home in Moline, Illinois. Soft-spoken, easy-going, he's a good neighbor and a fond father and husband. He laughs easily and heartily. An occasional beer is his only dissipation.

Put him on a ball field, though, and you wouldn't recognize the man. Once his spiked shoes bite into the baseball lawns, he takes on a three-ply coating of pugnacity. His lips set in hard lines; the mellow smile fades, and his eyes become twin fangs of fire. His shoulders go back and up, and he takes on the mien of a top sergeant drilling a band of raw rookies. He snorts confidence and his voice rings out with all the power of a bellowing bull. That "Stee-Rock-Ohhh Thrrrecccc" which sends a batter trundling back to the dugout in horrible shame can be heard in the farthest corner of the bleachers. The fellow oozes authority from every inch of his ponderous frame.

Perhaps it goes back to the fact that he was a fighting man in his youth. Like the usually amiable Jack Dempsey, he turned killer the second he slipped through the ropes. The resemblance to Dempsey ends there. The Maje had nothing more than two murderous fists, which were potent enough to flatten 42 unfortunate foemen. But he never fought for anything more than pin money around the docks and barges and small clubs along the banks of the Mississippi. He loved to fight, and today,

Storm center of baseball controversy, the pugnacious Magerkurth strides onto the diamond. When he umpires a game, he's boss, and takes back talk from no one

Angry Dodger fan takes it out on the Maje over an adverse decision. Three cops and two umpires were needed to pry the boys apart

thirty years later, he will still square off at the drop of the slightest slur.

The real answer probably lies in his beliefs. There's nothing fancy about him or them. But he throws that great big heart into everything he does, and his main precept is that the whole game of baseball is founded on the rock of the umpire's integrity.

"It's simple enough," he says. "I don't give a hang what a Brooklyn fan thinks of me today or a Giant fan tomorrow. All I care about is that I'm doing a good job and an honest one. The umpire must be the complete boss out there on the field. Once his authority begins to wane, then baseball's on the way out."

"I'll tell you right now that the biggest thrill I've ever had was when I read in the paper how Billy Phelps of Yale had gotten up at the baseball writers' dinner last February and pointed out that in all baseball history, there'd never been a scandal in which an umpire was involved. That's answer enough for me."

His jaw jutted out like the prow of a Viking vessel as he spoke, and the memory came back of other days when that jaw had reaped the harvest of disfavor that now hangs so heavily over his shoulders. Three times in the last three

years it has thrust itself and the tomato-red countenance above it into the midst of the National League pennant scramble. Each time he could have saved himself a lot of woe by backing down without losing face before the situation had boiled all over the sports pages. But that isn't the Magerkurth way. He wouldn't take a back step from the Twentieth Century moving on him at top speed if he were convinced that he was right and the Limited wrong.

High tide came last summer at Pittsburgh's Forbes Field. A September sun was dipping into the west, and the Dodgers were leading the Pirates by a run in the last half of the eighth inning of the final game of as dramatic a swing through the Western badlands as any ball club ever made. Vince DiMaggio danced off third with the tying run, and two dead ducks had gone back to the Pirate bench.

Hugh Casey, the portly curve-balling Brooklyn relief artist, eyed the fleet DiMag nervously as he prepared to pitch to Al Lopez. He brought his arms up, then suddenly brought them down. It was a glaring balk. Even Leo Durocher's protest was comparatively feeble as Maje waved DiMag home with

roteed position. On the other side,
to 100 inches from the mortar, is a

painted panoramic background studded
with targets. The range shows trainees
a mortar may be accurately sighted on a
target they can't see, and it teaches them
the hows of operating the gun. So sim-
ple it can be knocked together in two
hours and its operation learned in thirty
minutes, the device will be shown in in-
fantry camps all over.

CAMP WALLACE, Hitchcock, Tex.
Most of the men in Btry. A, 31st Bn.,
have each kicked in a nickel to Pvt. Paul
Fulmer and supplied him with their
names and probable postwar addresses.
Six months after the war ends, Secre-
tary Fulmer will mail each guy a double
postcard, so the recipient can give an
account of what he's doing and how
many Nips he nipped. For instance:
"Wounded in the capture of Tokyo, re-
ceived Congressional Medal; now work-
ing as night watchman for the Eskimo
Icebox Co., Reykjavik, Iceland. Present
address, 101 F. D. Roosevelt Ave.,
Reykjavik. Married Susie Belle Per-
kins." Fulmer will compile the infor-
mation and send a mimeographed copy
to each man in the outfit who paid his
dues. It ought to be worth a nickel.

THE fact that the VIII Army Corps is
in the Eighth Corps Area causes con-
siderable confusion in the Southwest.
Army Corps headquarters used to issue
a neat mimeographed letter to Texas
newspapers explaining the difference
between VIII Army Corps (a tactical
unit) and the Eighth Corps Area (a
hunk of geography), but they finally
tossed in the towel. The public just
wouldn't be educated along these lines.
Purists at Army Corps headquarters at
Brownwood have been known to say,
"Vee-three-one" so that there'd be no

Good and Married

By Hannah Lees

ILLUSTRATED BY REA IRVIN

It takes brains to make a modern marriage work. Sometimes it takes expert advice as well. That's what marriage counseling is for—to make marriage work and to see that it keeps on being fun

A SECRETARY held a trembling telegraph form under her boss' nose. "Could I have tomorrow off, please?" she said. The boss looked at the telegram. "Kelly Field," it read. "Flying home tonight on leave. Let's get married tomorrow. Love, Dick."

A boy was talking to a girl on her front doorstep. He was a clerk in a grocery store. She helped her father with his delicatessen shop. "Listen, Ida," the boy was saying, "my number's been called. I don't want to get out of it, but look, can't we get married before I go? You could keep on living at home and I'd get leave sometimes, and . . ." He stopped but he didn't need to go on. "Sure, we can, Jakey," said Ida.

A man was talking to a woman in a restaurant. He was an engineer. She was doing social service work. They had been engaged for five years, one of those engagements too comfortable to disturb by marriage. Now he was saying, "We've been crazy, Polly, wasting all these years. My reserve unit may be called out any day now. Let's not waste even a week more." "I'll marry you tomorrow, Ted," said Polly.

Six people rushing off to get married because of the war, six people who because of economics or uncertainty or lack of dominant urge might not have got married for a long time if at all. Multiply those six by many hundreds and you have a pretty good idea of

what is going on all over the country every day now. War marriages, added to all the other marriages.

Last year nearly a million and a half young Americans issued official notice of their desire to spend their lives together, by twos, as families . . . official notice in the form of marriage licenses. This year, sociologists suspect, the marriage rate may go up from five to ten per cent because of the emotional pressure on all the Dicks and Marys, the Jakeys and Idas, the Teds and Pollys, to take their happiness today because there may not be time tomorrow. And they may be right about the happiness, but that doesn't mean there won't be a tomorrow. Sociologists and astronomers alike agree that there almost certainly will be.

Last year some quarter of a million people of assorted ages issued official notice that their attempt to spend their lives together as families had failed . . . official notice in the form of divorces. A quarter of a million people who either never should have paired up as they did, or should have been better prepared to cope with all the things that a life of teamwork involves. It's a good many. It's about one divorce to every six marriages.

Next year the divorce rate will probably be a little lower because the excitement and emotional pressure of war make every personal conflict temporarily

Job-holding wives who come too tired to cook are a headache to marriage counselors as well as to Hubby-with-the-apron-on

more bearable. But in a few years after the war is over, say somewhere around 1949 or '50, marriages will probably fall to pieces faster than they ever have before. The divorce rate has been rising steadily for some years. And all these sudden unthinking marriages of today . . . a lot of them aren't going to stand up to ordinary life. About 1950 there may easily be one divorce to every four marriages unless something is done about it.

Well, something is being done, not specifically as a bulwark against reckless war marriages, but as a work around marriage in general. Something has been growing up the country in the past ten or twelve years from the belief that the American family is the most important institution in our free American democracy, and that you can't hold any amount of free people together without some amount of legislation unless the marriage counseling and its singleness in the world is to help families to develop strong roots.

Check Your Car for Gas Waste!"

It's just good "Horse Sense" to see your Mobilgas Dealer. He can help your car last —give more miles per gallon of gasoline.

THERE ARE 10 proved ways your Mobilgas Dealer can help you keep your car running efficiently.

You'll not only get a longer-lasting car—but extra gasoline-mileage, too! Stop and see your Mobilgas Dealer right away.

He is ready to...

Check your tire pressures every week. Helps you save both rubber and precious gasoline.

Switch your tires every 5,000 miles. Evens tire wear...makes the tire set last longer.

Change your oil every 1,000 miles. Refill with clean, tough Mobiloil—world's largest-selling motor oil.

Check battery every 2 weeks.

5 Mobilubricate your car every 1,000 miles—protect every chassis part from costly wear!

6 Adjust your carburetor for thrifty summer mileage...or recommend a competent man to do it.

7 Condition your radiator water against clogging rust and scale.

8 Protect your gears—with the right Mobiloil Gear Oil.

9 Clean spark plugs every 5,000 miles. May save 10% of your gas.

10 Clean your air-filter every 2,000 miles—helps save gasoline. Change your oil-filter every 8,000 miles—helps save wear!

took a huge bite. Chewing appreciatively, he looked around. "This your place?" he asked.

She shook her head. "Belongs to my brother. Him and my sister-in-law—they gone over to Santa Ana to a party."

"It's nice," he said.

"Oh, it's all right," she said. "Trouble is: there ain't enough business. He just barely makes ■ livin'." She watched him drain the bottle into his glass and turned to the icebox again.

"I pay," he said, as she brought forth another bottle of beer.

She shook her head. "This one's on the house," she said, and uncapped it.

"Gracias," he said as she set the bottle down before him. He looked at her glass: it was half full. "You have another one, too," he said in Mexican.

She shook her head, smiling, and replied in his native tongue, "I'll skip this round." Her Mexican was as good as her American.

"Where you come from?" the man asked, still speaking Mexican.

"I was born here," she said. "Back over the other side of the railroad tracks. But I been livin' in Los Angeles for the past ten years. I just come back a couple of months ago. I'm lookin' for a job on a ranch."

He stuffed the last of the roll into his mouth, drank. "I take another one," he said, pointing to the plate, and smiled. "Good," he said.

She put on another patty and roll to cook. He drank his beer, watching her. "It's hard to get a job on a ranch without a man," she said. "They always want a man."

"You no like the city?" he asked.

She turned to look at him, the warm smile on her face. "Gimme the country for mine."

He did not say anything for ■ while, but sat watching her back. "I go home pretty quick," he said, finally.

"You mean Rosario?"

He nodded. "I get land, raise grape for wine."

"That's the life," she said.

"I save my money—already I got five hundred dollar. Pretty quick I go—get land from government, build house, raise grape. Go hunting every day. Good hunting at Rosario."

"How far's it down there?"

"About two hundred mile below the border."

She shook her head and laughed. "That's a long way from anywhere."

"Pretty down there," he said rapturously. "You never see something so pretty. You got sea, mountain." He drank again. "You have beer now?"

She shook her head, and dished up the second hamburger.

"I pay," he said anxiously, pleading.

SHE put the hamburger down before him, looked at her empty glass, then out through the screen at the lights in the liquor store across the street. She opened the icebox. "What're you tryin' to do—get me drunk?" she asked, smiling.

"I no see Mexican lady for a long time."

She uncapped the bottle. "Where you been keepin' yourself?"

"Oh, I go all over," he said expansively, "Canada, Wyoming, Utah."

"How long since you been home?"

"Oh, long time. Fifteen—sixteen year."

She watched the beer foam up in the glass. "My, that is a long time!"

He nodded. "Pretty quick I go back."

"You never been to Capistrano before?"

Fly Away Home

Continued from page 22

He shook his head, chewing.

"You never seen the mission then?"

His "No," was muffled by the food.

"It's nice. You ought to see it sometime. It's where the swallows come back to every year," she said, and waited for the foam to settle before pouring any more beer into the glass. "You know the swallows?"

He shook his head slowly. "No," he said.

"The birds," she said, "that fly away in the fall and come back in the spring—always on the same days. You never heard of the swallows?" she asked, incredulous.

"No," he said apologetically.

She took a nickel from the cash register and went over to the juke box. It was constructed of red, blue and yellow plastics and had electric lights inside. It began playing When The Swallows Come Back to Capistrano. The record had been played so much the needle scratched badly.

The woman came back and stood leaning on the counter, listening, glass in hand. Presently a male voice came from the box singing the lyrics. The man listened attentively, without understanding the words very well. When the record was finished the woman said, "There—ain't that pretty?"

He nodded. "It's nice . . . How about another beer?"

"Sure."

And as she went toward the icebox, he said, "You, too," hopefully. Her glass still had beer in it.

"Oh, no," she said, and laughed. "Not me. I've had enough."

"I pay. I pay. I got money." He put a bill on the counter.

"I'd get drunk."

"I no see Mexican lady for long time. You celebrate with me."

"Well," she said hesitantly, and laughed. She took two more bottles from the icebox. "If I get drunk it'll be your fault."

He laughed quietly. She wiped a bottle and set it before him. He smiled timidly, looking into her face. "What you name?"

"Pepa Merino."

"Pepa Merino," the man repeated softly. Then he said, "Me—Jo Gar-

And having thus exchanged they both suddenly were shy. their relationship had been more impersonal; now, suddenly, it most intimate. An old wheezy clock on a counter ticked loudly a period of silence; a car whirled by outside.

"How you like come work for the man asked, after a little while you like come cook for me rancho, eh?"

"Me?"

He nodded.

"You mean—down in Rosario?"

"Sure." He was beginning good now. Some of his servile left him. "We live good. I tr nice."

"You kiddin'?" she asked.

"No, no," he said earnestly. "You and me—we go to Rosario. We get one—two hundred ac start nice rancho." He unbuttoned of his two shirt pockets, drew a bankbook, slapped it on the counter. "We got money—five hundred doll make good start."

HE WAITED, watching her breathe anxiously. And seeing her situation, he said, "You no know me, I know you either, but I like you laughed, feeling good, a little else go get job I no know the boss. know me." He shrugged. "I take head was full of logic, but he felt not expressing himself. "I like give you job. You come cook for me."

"I never figured on goin' so far away," she said, treading for time.

"I work one month more," he cited. "Next payday I go. You with, eh?"

"But what'll people say about us—about you and me livin' in the house and us not married? I ple'd talk."

That possibility had not occurred him. It quickly doused his spirits.

"That's right," he said, his forehead furrowed.

BUTCH

By Larry Reynolds

"They ain't either, 'big dirty paws'!"

"You ain't married, are you?" she asked.

"No, no married."

She took his plate away, put it in the sink, and looked at the water hard, so that she made a lot of noise. She didn't say anything. It wasn't her place to.

"I like to get married," José said. "I'm married."

"Right if you get the right person," she said. "I was married. It didn't work. She laughed nervously, suddenly. While she was wiping the said, "It's hard to tell. Even now a person a long time, you're chance. Sometimes it don't no matter how long you know."

"You wouldn't want to marry me?" he asked, doubtfully.

He looked at him, frowned, and then her face cleared abruptly and she started laughing. "Why, what're you laughing about?—I never heard nothing like that in all my life!" she said. "You walked in here off the street, you know me from a nanny goat?"

"I know you," he said, embarrassed. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

"You think I'm a nanny goat?" she asked, laughing again. "You think I'm a nanny goat?"

Baja California for, I don't know," she said, shaking her head. "Of all the God-forsaken places—"

"That's where José comes from; that's his home."

"There ain't nothin' down there but desert and salt."

"He says it's nice."

Concha put a clothes pin in her mouth and shook out a man's shirt. "Money couldn't get me to go down there," she said.

The hound's deep, warning bark—old and wise and weary—came to them, and then the sound of the knocker on the front door. Pepa said "I'll go," and skirted the fig tree and went into the house.

José was standing before the deep-set front door, hat in hand. He looked troubled and nervous. Pepa opened the screen door and said, "Why, hello there!" surprise and delight in her voice.

"You busy?" he asked hurriedly in Mexican. "I want to see you."

"Come in."

The room was in semidarkness: the blinds were drawn over the windows and the only light came through the front door. At one end of the room was a coal stove with a pipe which went out through the thick wall, at the other a bulky dining table and four chairs. Pepa pulled out one of the chairs for José and he sat down on its edge.

"What're you doin' around here this time of day?" she asked, and sat down on the cot, facing him.

HE SAID, "I got to go away from here quick," excitedly.

Pepa looked startled. "Why? What's the matter?"

"You know when I leave you Saturday night?" She nodded, frowning anxiously. "I am drunk. I not know how drunk I am," he said. "I am very drunk. I go about a mile on my way back to the ranch," he said, turning his hat nervously in his hand, "when two policemen drive up in car and arrest me."

"Arrest you?"

He nodded. "They say I drunk on highway—I make bad accident. They take me to Santa Ana and put me in county jail—for forty-eight hours—until just now. Just now they turn me loose."

"In jail?"

He nodded. "I am coming back to see you yesterday, but I am in jail."

"I thought you'd forgotten," she said.

"Now, I got to go," he said, and patted the shirt pocket where he kept his bank-book. "I go quick as I get money."

"But what's your hurry?" she asked.

"Did they fire you at the ranch?"

He shook his head. "No, no," he said. "I go there now. First I come see you."

"You can tell them you were sick," she said.

"I no care about that," he said, sorely troubled. "I no care about the rancho."

"Then what is it?—what's the matter?"

He hung his head. "They take my fingerprints. They send them to Washington. Pretty quick they find out I wanted in Canada."

Pepa's face paled. "What do they want you in Canada for? What've you done?"

He looked at her pleadingly for a long moment. She was withdrawn a little. "I no want to tell you," he said finally.

"But you got to."

He sat, turning the hat in his hands and looking at it. At last he said, "Long time ago—sixteen year ago—I kill a man."

Pepa's knuckles whitened as her hands gripped the edge of the cot. "You killed a man?"

He nodded dejectedly, not looking at her.

"What for?"

And then slowly, painfully, haltingly

How's your "Pep Appeal"?

—by Bundy

Babs: Alice is a swell girl, Mom, but something's missing. I just can't get a date for her. Maybe we ought to send her to your beauty shop—you know, glamour her up a bit.

Mrs. Brown: Glamour, my grandma! All that roommate of yours needs is a little get-up-and-go! A little whoosh. A little zip. A little pep appeal! Let me talk to her.

Alice: But what can I do, Mrs. Brown? If a girl hasn't got it, she hasn't got it.

Mrs. Brown: That's a lot of foolishness. I'll bet you haven't been eating right—not getting all your vitamins. And you can't expect to have pep unless you do! Come on, we'll make a start right now.

Mrs. Brown: See? This is KELLOGG'S PEP, a wonderful cereal made from choice parts of sun-ripened wheat. It contains extra-rich sources of the two vitamins most likely to be missing in ordinary meals—vitamins B₁ and D.

Alice: That's fine about the vitamins, Mrs. Brown—but why didn't you tell me PEP tastes so good? If getting the rest of my vitamins is as much fun as eating this swell cereal—I may have to get a date-book after all!

Vitamins for pep! Kellogg's Pep for vitamins!

Pep contains per serving: 4/5 to 1/5 the minimum daily need of vitamin B₁, according to age; 1/2 the daily need of vitamin D. For sources of other vitamins, see the Pep package.

MADE BY KELLOGG'S IN BATTLE CREEK

SOLD BY GROCERS EVERYWHERE

Wartime's **EXTRA** walking
soaks feet in perspiration—

Walk more—perspire more! Athlete's Foot fungi breed on excessive perspiration, grow twice as fast. When the skin cracks they get in and invade living tissue. Pain when you walk, severe itching, inflamed toes, flaking skin—all tell you Athlete's Foot has struck!

Cracks Warn First

Spread your toes apart tonight! At the first sign of a crack, drench the entire foot with Absorbine Jr., full strength.

Repeat daily night and morning. Remember, Absorbine Jr. is the national favorite in relieving painful Athlete's Foot.

1. Absorbine Jr. is an effective fungicide. It kills the Athlete's Foot fungi on contact.
2. It dissolves the perspiration products on which Athlete's Foot fungi thrive.
3. It dries the skin between the toes.
4. It soothes and helps heal the broken tissues.
5. It eases itching and pain of Athlete's Foot.

Athlete's Foot Fungi DIE AT TOUCH of Absorbine Jr.

Fungi growing fast
Photomicrograph of Athlete's Foot fungi. This parasitic plant life burrows under the tissues, irritates delicate nerve endings. No wonder Athlete's Foot causes such severe pain!

Fungi dead
Photomicrograph showing that Absorbine Jr. kills Athlete's Foot fungi on contact. No longer can they grow, causing you so much pain and misery.

Guard against reinfection. Boil socks 15 minutes. Disinfect shoes. In advanced cases consult your doctor in addition to using Absorbine Jr. \$1.25 a bottle at all druggists.

W. F. Young, Inc., Lyman Street, Springfield, Mass.

ABSORBINE JR.
KILLS ATHLETE'S FOOT FUNGI ON CONTACT!

ALSO QUICK RELIEF FOR: Sore, aching muscles—Tired, burning feet, Sunburn—Bites of mosquitoes and other small insects.

he told her that, as a young man seeking adventure, he had gone to Canada with two other Mexican youths, friends of his, and of their having found work on the Canadian Pacific Railroad. And he told her that, while working near Moose Jaw, Saskatchewan, a gringo had cursed him and that he had struck him on the head with a shovel. The gringo had died and José had been sent to a penitentiary for life. And he told her that for fifteen years he had worked to escape and of how, finally, the year before, he had managed to get away and across the border into the United States. He had worked his way south—through Montana, Wyoming and Utah into California—on his way home to Rosario.

When he had finished he raised his head slowly and looked at her beseechingly. "They catch me now they send me back," he said, not moving, hardly breathing.

Pepa got up presently and went over and stood in the doorway looking out upon the familiar scene. Some hens were pecking around the front step.

"He call me greasy Mexican bad name," he said pleadingly. "I hit him before I have chance to think."

She did not look at him. "You should've told me before," she said.

"I no mean to kill him," the man said hopefully.

A period of silence passed. Finally, Pepa turned back into the room. "I don't know what to say," she said slowly.

"I have learn my lesson," he said. "I never do nothing like that again."

"I never knew nobody what killed a man before," she said.

He did not say anything, but kept watching her and turning his hat in his hands, an expression of anguish on his face.

"You say you done fifteen years," she said. "How many more you gotta do?"

"In Canada—life, she is life. They take me back, I have to stay there till I die."

"How did you get away?"

"I dig. For fifteen year I dig."

"You mean you dug your way out?"

He nodded, looking at his hat.

They heard the back screen door slam shut and the Concha's voice: "Pepa—"

Pepa went to the door leading into the back room. "Yeah?"

"Who is it?"

"My friend."

Concha came through the kitchen and into the front room. "Ain't it about time you was gittin' over to help Jamie?" she asked, and looked curiously at José.

"I'm going right now," Pepa said.

"Meet Mister Garcia," she said to José, "Mrs. Merino."

José got up. "Glad to meet you," he said, turning his hat in his hands.

"I been hearin' about you," Concha said. "You're the feller what wants to go down to Baja California, ain't you?"

He nodded. "Si."

She laughed. "You must be crazy," she said, and turned back toward the kitchen. She stopped in the doorway and spoke to Pepa: "It's gittin' late."

Speaking to José, Pepa said, "I gotta go to the rest'rant," and went over to the front door. He followed her out into the yard.

They went out through the gate and along the sidewalkless street to the corner. They stood on the corner, about to part. A woman came out of the Rios house with a pair of scissors; she waved to Pepa.

José said, "I got five hundred dollar," timidly, speaking English again.

"It ain't that," Pepa said.

"I treat you nice. I make you good house."

"I thought you was gonna gimme some time."

"I no can help. I gotta go . . . I gotta go to rancho and get my stuff."

A boy rode by on a bicycle; he had his right trousers leg in a clip. Pepa watched him. "Well—" she said reluctantly. José opened his mouth to speak, closed it again without uttering a word, swallowed hard. "—I think I'll stick around here. I got a job comin' up over at Toro."

José didn't say anything.

She put out a hand. "Good luck to you," she said.

He took it and would have held it, but she drew it away, embarrassed. She turned quickly and started across the railroad tracks, going up toward the highway.

PEPA was in the sandwich shack the next morning when the eleven-forty-eight for San Diego highballed through town. The sound of its anguished whistle had hardly died before she said, "Well, I guess that's that."

Her brother said, "What made you change your mind?"

"Oh, I don't know. Concha sorta talked me out of it. She said the country down there ain't fit for nothin' but lizards and Gila monsters."

"It ain't every day a woman your age gits a offer of marriage."

Pepa did not say anything. She watched a freight truck drive up to the curbing. Two men got out and came into the shack. They were typical truck drivers: a little sweaty and nice. They ordered hamburgers and beer. Pepa put the meat and rolls on the grill, stood looking out the window. Another bus lumbered through town without stopping. The twelve o'clock whistle at the packing plant blew. A car stopped and a man, a woman and a sailor got out and came in, followed by some of the fruit packers. Pepa was busy and did not see the motorcycle policeman ride by, then turn and come back. He left his machine in the street and came into the shack. He had on leather puttees and carried a big pistol in a leather holster on his hip. He carried an envelope in his hand.

"Anybody here named Pepa Merino?" he asked, reading from the envelope.

She said, "That's me."

"Could I see you a minute?"

She nodded. "Sure." She came around the counter. The policeman stepped outside, held the door open for her. Everyone was watching them.

Standing in the sunshine, the police-

man said, "You know a guy named José Garcia?"

She nodded, her mouth open. "Yeah."

"He sent you this." He held the envelope. "He's in jail Ana."

She looked at it. It had her name on it. "In jail," she said, a little

The policeman nodded. The young fellow with eyebrows across the bridge of his nose wanted in Canada. We picked in a bank this morning. Holding extradition."

"In a bank?"

"Unhuh." The policeman took the cap and put it back on his head. He asked me to bring you that. He indicated the envelope, shifted his hand and went over to the motorcycle. "Sorry for him," the policeman kicked over the motor. "Well,

She watched him speed a weight a little on one side of the. Then she tore open the envelope. The side were five one-hundred-dollar bills.

"Hey, Pepa!" Jamie called to her.

"Yeah, I'm comin'—"

THE turnkey unlocked the door, and Pepa entered the door. She looked at the turnkey, her black eyes wide and apprehensive, her handbag in hands. She had on her best dress, her hair was neatly arranged and wearing lipstick. The turnkey, with a paunch, hollered, "José and someone else, evidently hollered, "José Garcia!" as if And presently José came and the other side of the thick sc was in prison uniform of denim and shirt.

"The cop brought me the money, not knowing how to begi-

His head was down; he did at her. He said, "I want you to I got no use for it now."

"I hired you a lawyer," she said.

He looked up quickly. "What he asked. "Lawyer can't do me I had a lawyer in Canada. He

money. I went to jail just the same."

"I got you a good lawyer," he said.

"He says they got no right to take you back. He says it was only hours the first place and that fifteen

more than enough time to serve."

He shook his head despondently.

PA is sitting in front of the house n the sunshine drying her abun- t bla hair when the car drove up. ader head down and was comb-

ing her hair forward, over her face, but at the sound of the car stopping she parted the tresses to see who was there. Because of the government emblem on the car and the two uniformed immigration officers, she did not see José until he opened the door to get out. He cried her name and came bursting through the gate. She tossed her hair back over her head and got up.

"I no gotta go back!" he cried. "I no gotta go back to Canada!" He came up to her, grasped one of her hands and kissed it. "The lawyer—he get me off! He set me free!" He was almost tearful with joy. He turned and pointed to the officers in the car. "They take me home!" he cried. "They take me home to Mexico! They turn me loose!"

"You mean the governor won't let them take you back to Canada?"

He nodded excitedly. "They take me home!"

SHE caught him and pulled him to her, held him there against herself, her face raised; and she whispered something prayerfully.

"You come, too, Pepa!" he asked eagerly. "You come, too, eh?"

"When? Right now?"

He nodded excitedly. "We go now—to Tia Juana."

"But I'm not ready. I'm not dressed," she said.

"Please, Pepa."

She looked at the officers in the car. "Will they let me?" she asked, and went down to the fence. "Can I come, too?" she asked. "Can I come with him to Tia Juana?"

The officers looked at each other. They wore stiff-brimmed hats. One, the driver, was a young man; the other was middle-aged and had a small neat, thin blond mustache.

The younger one said, "It's against the law," but without finality.

The other one said, "I guess it won't do any harm—if you'll make it snappy."

THE END

Any Week

Continued from page 4

ir suort was being got by such rly uthical means.

R wtical associate, Gurney Wil- ns, informs us that many of the car- nists who add to the numerous sons y it is worse than foolish to go along without this magazine, and at readers requesting the or- als our cartoons send with their uests ve-dollar checks made out to Redross. A nice idea. But Car- nist Charles Cartwright reports that en he lked a clergyman for five dol- in retn for one of his originals the d m promptly sent the check, call- Mr. Cartwright's bet, and raised him int of lood.

IS w moves so fast that we're hav- some trouble catching up with the aspe. All we can do is to report of sh intelligence as they come us fn our readers. We've just rd fr Mr. Bob Schmidt of Pitts- gh, Pennsylvania. Mr. Schmidt was inter- ed observer recently of the ang a long line of troops through well-manned city and noticed in ticals a jeep bearing two privates a colonel. The colonel dismounted, nt back to a corner to ask a policeman out dctions. A moment after he out, e of the privates got out too d let e air out of one of the tires. e col- l returned, observed the de- ted ti gave the lads instructions out re- ing the damage and re-em-

barked in another jeep. Whereupon the privates ran their jeep to a near-by filling station, inflated the tire and headed back alone in the direction from which they'd come. As they departed, Mr. Schmidt heard one of the lads say to the other: "Was it the fifth or sixth block back we saw her wave?"

AND Mr. John J. Murtaugh of Pasadena, California, informs us that he has just listened to a hardhearted judge sentence a fellow to two years in prison merely for smuggling into our country two hundred dollars' worth of opium. Listening to the prisoner's explanation of the opium reduced Mr. Murtaugh to tears. It seems that the fellow had been drinking. In short, he had got pretty drunk without, as he told the judge, knowing it. A friend told him that opium taken in proper quantities would relieve his hang-over. So, after shopping around at home for a bit of opium and finding none, he motored over into Lower California where a most sympathetic Mexican sold him two hundred dollars' worth but warned him to be very careful with it and not take too much. Promising to follow directions to the letter, he told the judge, he wrapped up his opium and motored back into California where the authorities at once took him in charge. . . . When he gets out of jail, Mr. Murtaugh thinks, some publisher ought to grab him. "A liar who can make me cry like this guy did belongs to literature." W. D.

Remember ME? I'm your WIFE!

Buried in the paper again

You've come home too hot and tired even to talk, much less have fun! But, man, you can make evenings the Best Part of the Day if . . . just before dinner . . . you take a dip in the tub with a cake of Ivory Soap!

Liven up in an IVORY BATH

Dig into your heat-weary, sluggish muscles with fistfuls of Ivory's thick, quick lather. Ivory's mildness makes your hot, sticky skin feel keen, cool, smooth. Such a fast pick-up, too! That white floating cake lathers faster than any other leading bath soap. You're in . . . you're out in no time at all, hungry as a bear with nary a care.

Fresh Start for the Day's Best Hours

You're as full of bounce as a coil spring after your Ivory Bath . . . good for hours of fun. Half the secret's that fresh, clean "Ivory" smell that makes you . . . better company. The other half's that more luxurious Ivory lather that makes an Ivory Bath specially refreshing. Get a Fresh Start every evening in an Ivory Bath!

It's Loaded, Mr. Bauer

By John P. Marquand

ILLUSTRATED BY RONALD McLEOD

The Story Thus Far:

WINSLOW GREENE, a young American geologist, leaves the Boca Grande mine, where he is employed, and goes to the coast town of Santa Rosa.

At the hotel he meets Milton Bird, a metallurgist from Boca Grande. Bird, a handsome, self-assured fellow, is drinking heavily; he says that he has made the acquaintance of two friendly drinking men, Martinez and Gruber; and he laughs when Greene points out that Gruber is a German—and possibly dangerous.

An American girl, Henrietta Simpson, is expected on the boat due from New York in a short time. She is to work in the office of Jim Walters, the manager of the Boca Grande mine; and Walters has asked Greene to meet her. On the way to the customs docks, Greene is approached by a stranger who introduces himself as Eduardo Lopez of the secret police. Lopez intimates that two men—Martinez and Gruber—may try to get some information out of Greene about his mining operations; he warns Greene to be careful; and he offers his hat, a fine Panama which Greene admires, to the American—who does not accept the hat.

At the ship, Greene meets Miss Simpson, a beautiful blonde, and escorts her to his hotel, where she takes a room.

That evening they dine together. While they are chatting, Milton Bird comes in with two men—Gruber and Martinez—whom he intro-

duces. Gruber announces, in no uncertain terms, that he hates Nazis.

A short time later, Greene and the girl leave the restaurant. Suddenly four shots ring out in the darkness ahead of them, and a man (who is wearing a Panama hat—Lopez's Panama hat) falls to the ground. A crowd gathers, and Greene and the girl hurry on to the hotel. There—in the girl's room—Greene obeys a sudden impulse and kisses Miss Simpson! After which, he goes to his own room, where he finds that someone has been looking through his records.

Seizing his revolver, Greene goes to Lopez's room, enters. Lopez is there, and Greene accuses him of snooping into his affairs. Lopez, astonished, professes to be the American's friend. Greene listens; then: "That would sound better," he says quietly, "if you hadn't offered me that hat this morning. How do you answer that one, Lopez?"

III

SEÑOR LOPEZ looked as though the idea were entirely new to him. He sat silent for a moment, looking at the floor.

"I can see," he said, very sadly, "I can see why you cannot like me."

"That's bright of you," Winslow said.

"No," Señor Lopez answered, "not at

all. It is you who have used your mind, very admirably, Mr. Greene. You came into this room and you did not think it was I who had been shot. I fear the others also know it. I only came back a few moments before, after those events outside, yet in the few moments you have been here your mind has worked, you have formed a natural conclusion, that I have been prying into your affairs. I can only tell you that I have not. I can only add that it was late this afternoon that I found out something, only a very little something, that made me what you Americans call 'hot.' I knew I was 'hot' when I saw that poor fellow killed tonight. I am so hot that I shall leave this hotel in a few minutes and arrange to go where I hope certain persons cannot find me. But I did not search your room. I wish you would believe me."

Señor Lopez ended his speech almost pleadingly, and his eyes looked wide and hurt.

"Maybe you can tell me who did, then," Winslow said.

Señor Lopez nodded slowly.

"You have every right to ask. I think it was either a gentleman named Mr. Gruber or another one named Martinez. It was either Mr. Gruber or Mr. Martinez who tried to wait for me tonight. Ah, now I see you are interested. What did they say to you in the restaurant? Remember, I said you would see them."

"You were thinking of taking the coat at me, weren't you?" Lopez laughed. "I was thinking, Winslow said, 'if you'd drop the gun I'd like to break your neck.'"

Winslow hesitated. It occurred to him that Señor Lopez had not said much.

"Why do you want to know?"

"It is difficult, you see," Señor Lopez said. "For the last two days the two gentlemen have suddenly become very interested in gold bars from Boca Grande; yet neither of them is a bandit. They are not that type. That is why their interest is peculiar to me, for I have been concerned for an entirely different reason. They ask you when the gold is being shipped?"

Winslow nodded.

"Did you tell them?"

Winslow shook his head, and Señor Lopez's teeth flashed in another smile.

"You have been more helpful than you think, Mr. Greene. Believing means very much—much more than I am free to explain. It may be something which is internal. I have fought in the Loyalist army. I was in Madrid before. I do not like the Fascists, and

THE LONG SHADOW OF WASTE

Can Postpone the Day of Victory

IT HAS BEEN SAID that America wastes enough food to feed all of Europe! That through neglect of our cars, we waste more mileage than Europe owns! That we throw more metal into our scrap piles than many nations possess!

That is a tragic indictment—even in peace times. Wastefulness is akin to treason!

For every ounce of food wasted—the clock that ticks too slowly toward victory is momentarily stopped!

But food is only *one* of the essentials on which we move forward to success... and peace.

All *materials* are vital! And with metals as with food, the battle against waste must be waged in every hour.

This is your moment—take time to do this: Look at your car—your refrigerator—your range, washing machine, electric iron. Everything made of metal!

Ownership of these luxuries is a privilege reserved for Americans. In other countries at war, they are long since prohibited—turned into ships, tanks, planes, tanks, shells. And the world demand for metals and rubber—for food and fuel and wool has become greater than the available supply.

Do you value your life? Then declare war against waste! Against neglect of the things you already own. Against needless wear and replacement.

Do you want peace? Remember that a car contains more of these precious materials than anything else the average family owns—and translate repair parts for your car into metal stolen from our fighting men! Into guns without triggers—unfinished shells—ships uncompleted on the ways—planes that don't come thru in time!

Do you really want peace? Then translate neglected adjustments or a little cheating on mileage between lubrications into freight cars loaded with repair parts instead of guns and shells! Into production time that could be used to turn out plane parts or machine guns!

Do you want victory? Then as you read this, resolve to guard your car's life as never before. Unimportant, you say? The life of just one car? That's the attitude that *loses* wars. In ordinary times, America wastes half the mileage in its cars thru neglect. Today such neglect is criminal. The mileage in every car today is part of our strength—essential to our victory. The extra miles that care can bring us will help speed victory and peace—for you and for America.

I PLEDGE . . .

To buy only what I really need—and to put the rest of my earnings into U. S. War Bonds.

To hoard nothing. And to put a stop to all waste.

To scrupulously guard and preserve everything in my home made of metals and rubber.

To use less paper of all kinds and to save—not burn—all waste paper.

To repeat no word of rumor or gossip. To accept sacrifice and privation without complaint. To devote myself to the one task of winning this war.

A BIG THING YOU CAN DO TO HELP WIN THIS WAR

Your car is a part of America's fighting strength. Guard it as a soldier guards his gun. Whether you prefer Alemite or some other lubricants, *get them regularly!* This is no time to risk car life by cheating on the distance you drive between lubrications. Use top-quality motor oil and change it regularly. Old, dirty oil can damage the parts it is supposed to protect. And repair parts not only use up vital materials—but getting them to you wastes desperately needed shipping space!

THIS MESSAGE is published by Stewart-Warner Corporation, Chicago, Ill., solely in the interest of speeding American victory. We have no ax to grind... our machines have been converted to the making of essential materials for war and war production. We hope that we may soon serve civilian needs again. But until this war is won, those needs must wait. There's a bigger job to be done.

**Clean
Oil
SAVES GAS
AND OIL**

**You may not believe it...but
it's true. And here's why—**

**Dirty oil clogs the slots in
piston rings. Then piston
rings and cylinder walls
wear faster. When that
happens, oil economy goes
out the exhaust pipe. And
so does gas economy.**

high in our government likes them even less. Shall we let it go at that?"

When Señor Lopez waved his hands, he seemed to be twisting the neck of a Fascist. He went on talking:

"Yes, we shall let it go at that. You shall like me if we live to know each other better. You shall call me Eduardo and we shall have wine and I shall play the guitar and sing. But not now. We must wait until a happier moment. This place is too 'hot' for me. By the way—I like your coat."

Winslow was a little taken aback by the swift flow of Señor Lopez's speech and by his sudden jumps from one subject to another.

"It isn't much of a coat," he said, "but I happen to need it myself."

"But useful," Señor Lopez answered. "It has a protective color and anybody wearing it will look like a gringo. I must borrow it tonight."

THEN Señor Lopez moved. He moved like a streak of light, and his co-ordination was beautiful. Before Winslow was aware of it, Señor Lopez had snatched up the pistol from the bed where it was lying, and Winslow was blinking into its muzzle. But Señor Lopez was still smiling.

"You see, I move fast," he said. "You must believe now that I was well-intentioned. I only want your coat, Señor Greene, without any argument. I only want your coat because it may save my life when I leave this place. Take it off quickly, please, and do not touch the pocket."

Winslow unbuttoned his trench coat. "You're right," he said, "I wouldn't have given it to you. It's the only one I've got. I need it where I'm going."

"Exactly," Señor Lopez's voice was soothing, "and that is why I am rude. Toss it on the bed sideways." And he laughed. "You were thinking of throwing it at me, weren't you, Mr. Greene?"

"I was thinking," Winslow said, "that if you'd drop that gun I'd like to break your neck."

Señor Lopez laughed again, and Winslow tossed the coat sideways on the bed. Señor Lopez edged toward it carefully, reached in the pocket and extracted Winslow's revolver, dropped it on the floor and slid it beneath the bed with his foot. Then he put the coat around his shoulders.

"I am only borrowing it," he said. "If nothing happens to me it will be waiting for you at the plane in the morning. I am sorry to be so rude." And he slid past Winslow to the door.

"Put up your gun," Winslow said suddenly. "You can handle them better than I can. You're welcome to take the coat."

They looked at each other for a moment, and then Señor Lopez dropped his gun into his pocket.

"You're a nice fellow, Mr. Greene. You and I are gentlemen. Good night and all my compliments."

A second later Winslow Greene was staring at the softly closing door. It may have been because he was past feeling astonished that he felt no resentment. He raised his hand and pushed his glasses more firmly on his nose, and then he scratched the back of his head. It had been an evening such as he had never known—quite an evening.

"I can't understand it," he said softly to himself. "I really rather like him."

THE next morning at the first streak of dawn, the southbound clipper was just gliding out of the sky as Winslow arrived at the airport. It rolled slowly up to the neat passenger building with its motors idling. Almost before it stopped, the mechanics had run to it and had begun working beneath its wings.

Then the attendants were rolling up

the gangway. A bell rang and out came the pilot and copilot, and the passengers stepped out for a breath of air. There were businessmen from New York and well-dressed tourists who stared incuriously at the dull landscape, and in ten minutes they were aboard again. The huge plane taxied across the field and turned to face the early morning wind, and each of the motors roared in turn, and all of them roared in unison. Then the clipper was in the air gliding toward the south. Although Winslow had seen the sight many times before, it gave him the feeling which he had experienced as a child on his grandfather's farm when he stood by the railroad and watched the trains go by. It was the same half-restless, half-homesick feeling.

He was not thinking of Señor Lopez at all, but of Henrietta Simpson. In a few minutes his own plane would be coming in. In a few minutes that smaller plane would carry him off, across the Andes, and he would be as inevitably and completely separated from her as though she had never crossed his horizon. It was all like the Berkeley philosophical theory which he had studied long ago—you could only be sure of the existence around you, of the objects which came into the narrow circle of your sight and hearing. He already was beginning to wonder whether Henrietta Simpson really existed and whether everything that had passed between them was not a part of his imagination, when one of the airport attendants touched his arm.

"Your baggage is weighed, and your tickets are ready," he said, "and here is a package for you, Mr. Greene."

He was holding a bundle wrapped in rough brown paper. It was Winslow's trench coat, and pinned to it was an envelope which bore his name. The script was written in elaborate flourishes with broad and fine pen strokes, reminiscent of copybooks back at home in the days when penmanship was an art.

"Thank you so much for the coat, my dear friend," Winslow read. "It is in the same condition in which you left it, and I beg that you excuse my rudeness which took it from you. I beg of you to remember me, but to forget if you can the circumstances of our meeting. Should you wish to communicate with

me again when you return from your journey, I am stopping in a place, the address of which shall give you—North Plaza 28, the rear apartment on the Third short knocks, a pause two. If I am not there, son tell you where to find me. I shall be busy for a while studying of Mr. Gruber and Mr. Martin. Someday I hope to tell you more about the meanwhile, all my most respectful compliments and felicitations with them goes my heart and all that I have is yours. Respectfully and obediently, your servant, Señor Lopez."

The attendant touched his arm. "Mr. Greene, your plane is coming in."

IN THE afternoon only three planes stood on the last high ground looking a mysterious sea of vegetation and marshy land for thousands of miles of unmapped which stretched to the Atlantic. He had reached one of the frontiers of the world and it was filled with a sort of majesty. When Winslow reached the clearing and the camp tents, thatched buildings, the city of San Rosa and the Boca Grande mission were years away. By the time he had eaten supper at the mess shack, he had been at the base camp all day and his mind had already turned to plans for pushing out alone, when John Swan, one of the young engineers called to him.

"We're going to talk to Boca Grande," he said. "You'd better tell me where you're here."

Although it seemed years away in time and in space on the other side of the Andes, you could talk by radio as easily as though Boca Grande were only a mile away. The radio was set up on some crates in the goods in the supply shack. It was burned beside it because it was too hot to touch at o'clock and dark. John Swan was of the instrument smoking his pipe and twiddling the dials and looking at his wrist watch.

"Hello," he called in Spanish. "The base camp at Zamorra is coming back."

**"Just be patient, Alfred—everyone must await his turn!
You can sing Love Dreams at next Sunday's concert!"**

... calling Boca Grande. . . .
 Hurned toward Winslow. "They're
 slow at answering tonight, but
 come through."
 Winslow could never get over the
 eness of it. There was an awful
 of mysterious powers as you sat
 that boxlike thing with its knobs
 and waited for it to speak.
 Swan was not impressed by it.
 He just the knobs and swore, and
 there was a hissing sound, and then,
 enough, the voice came, blurred
 istent:

"Hello, calling the base camp at Za-
 non."
 "Where is it," John Swan said, and he
 dial another twist. "We've got
 Hello, Boca Grande."
 Winslow hitched himself nearer the
 nt.

"Hello," the voice was clearer. It was
 alters, the boss of Boca Grande,
 ng as clearly as though he were in
 m. His voice had the familiar
 sound and the familiar brisk
 uthy.

"Hello, Jim," Winslow said. "I got in
 his terno.".

"What sort of a trip did you have?"
 "A right."

"When are you starting out?"

"Tomorrow, if I can make it. The In-
 dian are here," Winslow replied.

"Hello. Goodbye. Gook luck."

ALTHOUGH he was cut off from
 anything—a single white man in a
 canoe with three Indians pad-
 ling down a river, stopping at strange
 places, speaking a strange language
 with halting tongue—he could not lose
 the memory of Henrietta Simpson.

That night before they turned back,
 when he sat writing his last report in his
 notebook, and the mosquitoes droned in
 clouds above the smoke of the fire, he
 felt happy, even though the rumors of
 gold, the stream beds had been exag-
 gerated. It seemed to him in the days
 when they worked back up that river,
 that there was always growing nearer. And
 one evening, weeks later, when they were
 out of the level land, climbing the trail
 along the slope and when he saw the
 light of the base camp ahead of him, he
 had the most ridiculous thought that she
 might be there. When he was half a
 mile off, he fired a shot to tell them he
 was coming, and he walked into the
 camp about sunset.

He had forgotten all the comforts of
 the base camp, and the sounds and the
 smell of the life he had left were unfam-
 ilar to him. His clothing was patched
 and thin; he was thinner but he had suf-
 fered no illness and he was in good con-
 dition. As the people gathered around
 him, shaking his hand and asking ques-
 tions, their faces looked too well fed and
 their hands were too soft. It was always
 so on a trip like that. It would take
 him days to get used to the food and a
 bed.

At the base camp, they treated him
 with respect with which he was not fam-
 ilar anywhere else. They treated him
 so because they all understood what was
 implied by such a trip as he had taken.
 They gathered about the table in the
 mess hall, asking questions and look-
 ing at his map.

"It's the same story," he told them.
 "Of course there's gold. It's like the
 other places—there's gold in every
 stream, but not enough to make it worth
 while to try to get it."

Then he returned to his favorite the-
 ory about the gold of the old Inca em-
 pire, those stories from the Spanish
 Conquest, of gold in the temples, of im-
 mense accumulations of the precious
 metal, were surely not exaggerated.
 Nevertheless, this might not necessarily
 mean that there was some secret gold
 deposit which no one had discovered.
 Today if you could send a hundred thou-

sand Indians to wash the gold from the
 streams on the eastern slope, and if
 some central authority could take the
 gold and pay them nothing, you could
 pave a street with it.

There were a number of places he had
 examined where one of those huge
 placer operations such as existed in
 Alaska would be profitable—but how
 could you bring the machines to such a
 country? The gold must wait until there
 were roads, and would there ever be
 roads down there? Personally he hoped
 that there would never be, for when
 there were roads, no one would ever
 send him on another trip such as the one
 he had taken.

"You see," he said, "I like it out there.
 It's the only thing I'm good at, boys."

And then he had asked how every-
 thing had been going. It was character-
 istic of such a place as that, that they
 mentioned all the tribulations of the
 base camp first. Everything had been
 going all right there. There was enough
 gas for the motor that drove the electric
 generator, and they had been in touch
 with Boca Grande every day. In fact,
 in the next five minutes, Boca Grande
 would be calling.

"Jim Walters has been asking for you
 lately," John Swan said. "He's been
 anxious for you to get in."

It was ridiculous that Winslow should
 have thought of Henrietta Simpson, but
 she came immediately to his mind.

"He didn't say what he wanted me
 for?" he asked.

"No," John Swan told him. "He just
 wanted you. You can talk to him right
 now. Boca Grande will be calling."

They were back again, seated before
 the short-wave radio, and once again
 Winslow Greene was adjusting himself
 to the altered values of time and space.
 There were all those strange blurred
 noises, and then came Jim Walters'
 voice and again Winslow was calling to
 him across the Andes.

"Yes," Winslow was saying; "I got
 through all right. No, there was nothing
 there. . . . How's everything at Boca
 Grande?"

"Everything's fine down here. When
 can you get out? I want you to meet me
 at Pinas."

"What's the matter?" Winslow asked.

"Why do you want me in such a hurry?"

"Keep your shirt on. You're not sick,
 are you?"

"No. Everything's fine."

"THAT'S the boy," Winslow recog-
 nized the altered tone in Jim Walters'
 voice. It was the tone he used when he
 was going to make you do something
 that you might not like. "Get cleaned
 up and get a good night's sleep, and
 break out of there tomorrow morning.
 I want you down at the mine. I'll meet
 you at Pinas—the Villa Schwarz."

"What's the matter?" Winslow asked.

"I tell you," Jim Walters said, "nothing
 is the matter, and even if so, I
 wouldn't tell you over the air, would
 I, so all the Western Hemisphere could
 hear me? Get to that landing field, and
 get the plane to Pinas. Don't argue over
 the air. Get out first thing in the morn-
 ing."

"Jim." There was something else
 Winslow wanted to say, but he found
 himself hesitating and stammering. "If
 you should happen to see Miss Simpson
 —I mean, don't make a point of it—but
 if you should happen to see her tonight,
 you might tell her I'm back, and give
 her my regards."

"Give her what?"

Winslow squirmed uncomfortably.
 Jim Walters would not be alone by the
 radio. There would be others in the
 office listening.

"It isn't anything important, Jim.
 Just give her my regards."

Then he heard Jim Walters laugh.

"Son, I wouldn't worry. She's pretty

busy now. Get out of there tomorrow morning, will you?"

Winslow removed his eyeglasses, blinked at them, and wiped the lenses carefully. The right-hand bow had broken when he was crossing a stream in the Oriente and he had mended it, not very successfully, with a piece of adhesive tape.

The plane was losing altitude and the landing field of Pinas was beneath them. When he saw the brown tracks of the runway, Winslow told himself, as he had a dozen times before, that he preferred two weeks on muleback to the two hours in the air above the Andes.

Out on the landing field, the wind blew at the skirts of his trench coat, and snatched at the brim of his battered felt hat.

Mr. Valdez, the company's agent, was there to meet him, wearing a red Indian poncho, and a neat brown Homburg hat with a bit of feather in it.

"This is your baggage?" Mr. Valdez asked. "You travel very light, Señor Greene."

"How else can I travel," Winslow said, "back there?"

"True," Mr. Valdez answered, "but with the new spirit which is coming over South America, it will all be different soon. The government will be building highways to the Oriente. In no time, this country will be very modern."

The driver of a battered touring car picked up Winslow's bedding roll and placed it in the front seat, and Winslow and Mr. Valdez got in behind.

"Tell him to drive slowly," Winslow said.

The driver placed his left hand on the horn. He held the wheel superciliously with his right hand.

"Soon," Mr. Valdez said, "this road will be improved and there will doubtless be electric lights along it. Ah, before long Pinas will be a metropolis."

"Tell him to drive slowly. He scares me," Winslow said, but Mr. Valdez only smiled.

"There is a room reserved for you at the Villa Schwarz. The plumbing in the Villa has been much improved in the last two months. There is another bathroom and a new means of heating water. Señor Walters is waiting for you."

"I know," Winslow said, "he sent for me," and he would have liked to ask Mr. Valdez why, but it would not have been discreet.

JUDGING from the appearance of the road, it had been market day in Pinas. The barefooted Indians who had drifted down that morning from the mountains to buy and sell in the plaza were heading back for home, moving up the road wrapped in their brightly dyed ponchos. Their copper-colored faces, broad and smiling, were vaguely reminiscent of the faces in the Mayan sculpture of Yucatan—the same broad noses, heavy lips, deep-set eyes. Their flat bare feet pattered tirelessly through the dust; men and women were bending under burdens looped in cloth across their shoulders.

The car moved slowly through the crowded plaza, past the little booths where a few baskets and brown sugar cakes were still being sold, and where wool was being weighed, and there was the familiar plaza smell of dust and wool and cattle and vegetables.

"Business is very good," Mr. Valdez said. "The Germans are defeating the Russians. There are three new chairs in the Educational Department of Municipal Hall—very comfortable with soft, plush seats."

They were through the town by then. The atmosphere of the plaza, so like a hill town in Spain, and so different from the frosted-cake façades of Santa Rosa on the coast had disappeared like a

"You forget, Paul! We're married!"

LEONARD

memory. Now, instead of being in Spain, they were in one of those queer self-contained communities not uncommon in South America—a suburb of Pinas which had been known for years as the German colony. The street had become broad and very straight. Villas stood on each side, German villas, pink and blue and white, like the designs of houses which once came with boxes of blocks, fresh from an older Germany. The houses stood behind low walls, each in a garden of carefully spaced fruit trees with whitewashed trunks, each with a freshly brushed path leading up to its front door.

He might as well have been in another land, across another ocean. The car stopped by a soft pink stucco wall that was divided in its exact center by two gate posts, each with a brightly polished plaque marked, "Villa Schwarz." A straight path bordered by stock and mignonette led to the villa door.

Yes, he might not have been in South America at all, except for the Indian woman wrapped in a faded poncho, who sat resting by the gate posts with a great bundle of brushwood beside her, gazing at him with deep, expressionless eyes. Herr Knopp, the proprietor, was hurrying down the path to meet him, a short, nervous innkeeper with a perspiring pink, bald head.

"Welcome, Mr. Greene," Herr Knopp was saying. "Mr. Walters is in the garden. You share with him room number 7, the suite which looks on the kitchen garden. Hans, the gentleman's bag."

Winslow got slowly out of the car, feeling tired and dirty. A small German boy was already shouldering his bedding roll, and the long Indian blowgun which he was bringing back—purchased from one of the natives on his prospecting trip.

"I'll see Mr. Walters first," Winslow said. "Yes, I know the room."

The hall of the villa was cool and shady, its bare boards waxed and spotless. The door of a bedroom to the left was open, giving Winslow a view of a huge Teutonic feather bed and dark red draperies and maroon wallpaper. On the bed was a sailor's duffel bag. It was hard to realize that only a few miles away in the valley of the mountains that surrounded them, llamas were grazing and the Indians were sitting in front of

huts that looked like haystacks, playing plaintive tunes on reed pipes.

German men and women who dwelt in the villa were seated near the fireplace outside the dining-room door. They were speaking German, and their voices grew hushed as Winslow followed Herr Knopp along the hall. Their faces, because he had stopped there often, were familiar to Winslow, all except one, and a stranger who was always conspicuous in a place like this. This stranger was a large man with closely clipped blond hair. He was sitting very straight holding a coffee cup, and when he saw Winslow he set it down, and their eyes met for a moment.

THE memory of the face stayed with Winslow as he followed Herr Knopp through the rear door to the garden. The eyes had been gray and steady; the face very deeply tanned. The hand which had held the coffee cup looked very strong.

"Who is the large man, Herr Knopp?" Winslow asked. "He's new here, isn't he?"

"The large man?" Herr Knopp shook his head. "Oh, no, he has been here a long ways. He owns a hacienda in the west valley. He is Herr Bauer. He is in cattle."

"He looks more like a sailor," Winslow said.

"Oh, no," Herr Knopp answered more quickly than was necessary, "he is not a sailor. Where would he be in the Andes?" And Herr Knopp laughed at his little joke. "Mr. Walters is in the summerhouse. I shall send out good English whisky, not ersatz. And he laughed again at his second little joke.

The back garden with its wall of closely clipped hedges and its pruned fruit trees was a relief to Winslow after the swamps and virid thicket through which he had been traveling. The flower beds were in squares and circles and crescents, so neatly edged that they looked as though they had been cut out of dough with a cookie knife.

"You like it?" Herr Knopp asked. "It is like a bit of the Fatherland. We Germans are like the tortoise. We carry our shells and customs with us." He pointed to the end of the garden.

is Mr. Walters in the summer-
ow did not feel entirely at ease.
the jungle, on the eastern slope,
always necessary to be watchful
in one's sleep, and that instinct
entirely gone. As he walked
that garden, he remembered how
es had dropped in the hall. He
scious of an impersonal sort of
neither friendly nor unfriendly.
Walters was sitting in a canvas
air, in the open summerhouse,
a typewritten report.
are you sitting outdoors for?"
said. "It's cold."

an was already beginning to drop
d the highest mountain peaks
both the garden and the valley
ed with long shadows, but Jim
never minded heat and cold. He
e with sheets of typed paper ly-
nd his chair. His pipe was on e
and his tobacco was running
is pouch.
ow picked up the papers and
he tobacco pouch. Jim Walters
him without a line of his leath-
d face changing.
do you feel better?"

Winslow answered. "There's
having everything strewn

"G! Lord!" Jim Walters said. "I
n't e how the Indians stand you.
Why n't you sit down? Or do you
ant dust the chair off first?"

Winslow brushed at the folds of his
coat and sat down. "If you get a
ld at this altitude, Jim, you'll
robably get pneumonia."

"Di you bring your hot-water bottle
ack ith you, son?" Jim Walters

Winslow nodded, but he did not

"Le go inside," he said. "I don't
ant get a chill."

But the older man did not move. The
at the corners of his eyes and
deepened as his gaze, half
and half puzzled, fixed itself on
Greene's shambling figure and
his antern-jawed, nearsighted face.

"So," Jim Walters said gently. "you're
afraid you'll get a chill. No wonder they
think in the States—" He checked him-
self and began again. "Why, if I didn't
know you—" His glance traveled from
Winslow to the paths between the geo-
metrical beds in the formal gardens. An
aged, barefooted Indian with his greasy
hair in a long braid was trimming one
of the borders. From beyond the wall
came a surge of voices and laughter—
that odd Quechua language of the Andes
natives that could not have changed
much since Inca times.

"Afraid you'll get a chill, and I've
seen your groggy from malaria, carrying
through in wet clothes for a month when
no one else could walk."

Winslow's bony shoulders moved
slightly.

"There's no use taking a chance with
anything when it isn't necessary, Jim."

"There you go," Jim Walters said.
"No wonder the directors of the com-
pany—but never mind it now. I like it
out here because there are too many
people inside—too many Germans—or
maybe your mind was on metamorphic
rocks and you didn't notice."

It was hard for Winslow to remember
that he was at the Villa Schwarz now,
where one's life did not depend so much
on being careful. Nevertheless, a head
cold contracted at a high altitude was
always dangerous, but Winslow let the
matter drop.

"There's a man in there I've never
seen before—he's quite big and hand-
some. Do you know him?" he asked.

Jim Walters glanced toward the
house. "Maybe that's why I'm out here
in the cold. Things are getting worse all
the time between the States and Ger-
many, and we're a lot nearer war than
when you left. Maybe we ought to stop
staying at this place, when we come up
from the mine."

"Knopp said his name was Bauer,"
Winslow went on, "and that he's got a
hacienda in the west valley. You re-
member, we were up there once looking
at an outcrop of andesite. It was there
in the country rock—I never heard of
anyone named Bauer."

(To be continued next week)

"But can't we start on the budget after our honeymoon?"

Castle in the Air

By J. Bryan III

Hubert Castle is a fugitive from an accident ward. Twice a day he risks his neck on a bounding wire to thrill you and the kiddies

THE reason Hubert Castle is sore at the Encyclopedia Britannica is this: The EB says that in 1861 a guy named Blondin turned somersaults on stilts while performing on a rope stretched across the inside of the Crystal Palace, in London. Mr. Castle says this isn't so, that nobody ever did that and nobody ever will. He's probably right, at that, because his reputation in the amusement world is that of the best wire walker ever.

High above an arena, on a slim cable, Mr. Castle can—and does—perform backward somersaults through a twenty-five-inch hoop, thrilling swoops and swings on a unicycle and various other feats. But that fabled somersault on stilts!

"Hush, Hal! Your blood pressure," rebukes Mrs. Mary Castle, when he starts talking about it.

This is good advice, because you have to be pretty cool and concentrate thoroughly up there on the wire, in the glare of the lights, with the drums rolling—and a split second or half an inch between you and a hospital bed. Before he attained this coolness and concentration Mr. Castle broke his left arm twice, fractured a collarbone, half his ribs, a leg, a wrist, an elbow and a shoulder. He dislocated a knee once and his ankles and thumbs several times. And once, in a circus battle at Ponca City, Oklahoma, somebody kayoed him with a tent stake and he did a fast forward somersault into a hospital.

As every sawdusty circus fan knows, there are four kinds of wire acts. There is the novelty slack, with the wire so loose that when the performer balances on its center his head's level with each end; the Jap slack, about half as loose. Then there's the tight wire, with hardly any give in it. The fourth is the bounding wire, which is Castle's specialty. This wire is held firmly at one end, but the other end has a spring attached; it will give about ten inches under the wire man's weight, about two feet under his bound.

The bounding wire is the trickiest of the lot. Come down on it at the wrong angle and you're shot out into space, like an arrow from a bow. Leap from it a trifle sidewise and it will vibrate so fast you can't see it, your feet miss it, and, at best, you get a pair of scorched shins.

But—broken bones, scorched shins and all—it's worth it, Castle says. Hasn't it let him visit all the states, all the Canadian provinces, most of Mexico and half of South America? "Me—just a country kid out of Enid, Oklahoma. . . . And besides, when I step on my kid's roller skates in the dark, I know how to spill."

Although he was born in 1912, Castle dawdled away the first few years of his life and didn't get around to choosing a career until he was seven. On September 13, 1919, the kid watched Bird Millman pirouetting on the wire when the Ringling show played Enid. He was Hal Smith in those days.

There was a wire clothesline in the Smith back yard. He learned to walk its length in half an hour that evening. A week later he could balance a chair on the wire and sit in it. Two months later he could juggle Indian clubs while he was seated. Five years later he and his

partner, Bunny Dryden, a year older, were getting their act at smokers, school festivals and Legion

When a child walks the wire at the age of seven got not only a preoccupied mother, but a phenomenal sense of balance. What else? Excellent. Castle says that "feel" is only one tenth of the Eyes are all the rest. When he comes out of a somersault, for example, there is only a split instant between the time when he first catches sight of the and the time when his feet must hit it squarely. Then, his chest has obscured it. Afterward, he is

He never looks at the wire, except when he is looking. The rest of the time he is looking at its imaginary longation. When he runs or dances, his eyes are on object he has lined up across the tent. When he for his back somersault, he is not waiting until the ance is firm, but until a picture of the wire behind him is clearly visualized.

If the wire that broke during his feet-and-hand had damaged one of his eyes, it would have been conclusive as if it had crippled both his legs.

Wire Artistes Extraordinary

The boys got their first long-term contract summer of 1926, with Orton Brothers' Show, touring braska, Kansas, Iowa, Oklahoma and Texas. The work only in the summer, because they were still school. For \$60 a week, they did five acts twice

"Smith & Dryden, Wire Artistes Extraordinary," formed on the tight wire. "Dryden & Smith" slack-wire exhibition. "Dryden & Adair" had a h tal-bar act. "The Smith Bros.—Not of Cougl Fame" were tumbling acrobats. And "Dryden & pany" were strong men.

The "& Company" was then fourteen. His str to stand on a platform at the "front door" during "come-in" and do a "grind"—blow up an inn until it exploded.

"There was no gimmick to it," Castle says. a legitimate act and plenty tough. The secret was you didn't blow with your lungs. You took deep breath, then contracted your chest muscles so v that the air was squeezed out. You wouldn't believe it, but some of those tubes swelled eight feet high before they busted."

The summer of 1928, the team signed up with how which Smith, Sr., had bought—the Monarch. Ha four brothers were in it, too, as tumbling clowns. Ha own repertory now included a foot slide down a fil foot rope and—as the blow-off—a running dive over our roll ing car. He was supposed to light on a pad and do ing somersault, but one day—it was his birthda—the pad slipped. He broke his left arm at the elb and pulled all its muscles loose. As if that weren't ough, the show failed, and his father lost his money, hi 000-acre ranch and even his household furniture.

Hal finished out the season with the John S Silver Circus and came back to Enid with a new nar bor-rowed from the owner. "Smith" was too nondesc t for the future King of the Wire. "Silver" not or was sumptuous, but required no change of initial. He ayed "Hal Silver" until Ringling told him he was bein filled as an English act, and rechristened him "Hubert tle," as having a vaguely House-of-Lords sound.

He thinks of his Hal Silver (Continued on p 55)

PHOTOGRAPHS BY MAXWELL COPLAN

One of the most spectacular stunts ever performed on a wire—the back somersault through a hoop. You can't blame the circus fans for swallowing their gum when Castle does this one

Wine and a favorite old yarn—recipe for friendship

Wine helps an evening along—helps people to relax a moderate way, and enjoy themselves

When friends stop in at your house, set out for each a glass of wine. Maybe a tray with some appetizers. You'll find it will lead to a discovery.

As people sip wine together, it becomes plain how wine says "welcome." Not just warm, flashing color and interesting bouquet. Wine says welcome a deeper way. You discover wine is made on purpose for

the kind of relaxation most of us want—the moderate kind. Made to help us let up from the day's pressure. Made to give us a chance at the comfort and help that friendship brings. This is the reason more and more Americans now prefer wine.

If you would like a new booklet on wine serving (and on wine cookery) write the Wine Advisory Board, 85 Second Street, San Francisco. The board represents all the wine growers in California.

What about California wines? Judges rate them excellent by any standard in the world. Sound, well-developed and true to type. Ask your wine dealer to help you select from these good wines of our own land.

This is Muscatel—which tastes invitingly of Muscat grapes. You serve Muscatel as a dessert or refreshment wine. For enjoyment at mealtime you select a different type of wine—a white table variety like Sauterne (with fish or chicken), or rich red Burgundy or Claret (with roast or steak)

SENSATIONAL NEW TRANS-OCEANIC PORTABLE RADIO

**ONLY
ZENITH
HAS THIS!**

• THE FIRST AND ONLY PORTABLE RADIO GUARANTEED TO RECEIVE EUROPE, SO. AMERICA OR THE ORIENT EVERY DAY, OR YOUR MONEY BACK. IT ALSO BRINGS IN FOREIGN SHORT WAVE RECEPTION ON TRAINS, PLANES, SHIPS.

COLLAPSIBLE
WAVE ROD
When not in
use can be tel-
escaped inside
of cabinet.

U. S. PATENT NO. 2164251 AND 2200674

Wavemagnet and Shortwave Magnet

Built-in Movable for standard and short wave reception in trains, planes and ships

In local radio broadcasting blackouts and electric power shutoffs, this new portable radio enables you to listen direct on its own battery power to America's powerful short wave stations which may be your only source of instruction and information during emergencies.

FIRST TIME! Personal short wave radio reception from our own or foreign continents—at home and while you ride in planes, trains or ships.

FIRST TIME! A portable radio that gives domestic short wave reception in locations where broadcast does not penetrate in the daytime.

FIRST TIME! The miraculous time and band buttons. Pre-set the pointer—"Press a button... there's Europe."

FIRST TIME! On conveyances—on land—sea—air—choice of portable radio reception with built-in movable broadcast Wavemagnet and Shortwave Magnet.

FIRST TIME! Band Spread makes foreign station tuning on a portable radio as easy and simple as ordinary radio broadcast tuning.

FIRST TIME! Logged at the factory on short wave broadcasts... A convenient logging chart on inside lid of cover is pre-logged by factory experts. Shows exactly what stations are found on each wave band and at what number on the dial.

FIRST TIME! Zenith Famous Radiorgan Tone Device on a portable radio.

POWER—from self-contained battery and standard lighting current ingeniously interchangeable at a second's notice. Also, Telescope Whip Aerial for use in getting extra distance.

WATCH your Zenith dealer's window. Don't miss this NEW ONE!

EARPHONES for privacy. Special low impedance earphones for sporting events, traveling and the hard-of-hearing (extra equipment).

WORKS on light socket or battery.

**ZENITH DELUXE COSTS MORE
—BUT DOES MORE**

soil conservation, the Ever-Normal Granary, and other things needed for a well-rounded program of agriculture.

The Ever-Normal Granary is a plan based on lessons of the past; on the memory of times of plenty and times of famine that have succeeded each other like night and day. In 1934 this country had a real drought and the experience was repeated in 1936. Out in the great corn and wheat belts, weeks went by without rain. These droughts burned up about two billion bushels of corn, not to mention other feed grains. There is a corn belt saying: a hog is only corn on the hoof. Cut the production of corn and you cut the production of meat. After the drought years, up went the price of meat until consumers rebelled. Few consumers understood the reason for the high cost of meat. They didn't see the connection between a drought one year and high meat prices the next. Yet one was cause, the other effect.

Henry Wallace was Secretary of Agriculture at the time. The Vice-President knows his Bible. Joseph stored up food in the seven fat years for use during the seven lean years. Why not store up some of our own surpluses to be used when there would be need for them?

So we accumulated big surpluses of grain and cotton—and sure enough the need came. France fell, and within a year, to help keep England in the war, we found ourselves obliged to provide about a quarter of her protein food requirements. Plenty of corn and other feeds were in the granary, ready to be transformed into meat, eggs, and milk.

Agriculture Jumps the Gun

We were prepared in other ways, too. We had the machinery of the Agricultural Marketing Administration, which in addition to its purchases for school lunches and other direct food distribution, had been buying for the Red Cross, and was geared for rapid expansion as soon as the Lend-Lease Bill was passed. And we had the food—in part because we had jumped the starting gun on our Food for Freedom program a little. In 1940, with the export market cut off, the farmers' chief worry was surpluses; hogs were selling at \$5.00 a hundred, which is less than the cost of production. Yet in December of that year the Department asked the farmers to farrow more sows so that we might have more little pigs in 1941. There were protests when that release went out, but by and large the farmers took our word for it and went ahead. But if they are to produce, farmers need to be not only patriotic; they must also be solvent. So in the spring of 1941 a \$9 floor was placed under hogs, and price support was also given to poultry and dairy products. The result was the all-time high agricultural production of 1941—13 per cent higher than the average annual production in the 1935-39 period. With plenty for ourselves, we had enough left over to send Britain, from the end of April, 1941, through last February, over 1,800,000 tons of American food.

You can thank our Ever-Normal Granary for that. If we hadn't had plenty of corn in storage, we'd never have been able to expand our production of corn-on-the-hoof so rapidly. But there were other factors. A lot of soil fertility has been restored since 1932. And agriculture is organized as never before. Today, in almost every rural county there are farmer committeemen and a county agent. Within a week we can get in touch with every one of the six and a half million farmers of the nation.

Why We'll Have Enough to Eat

Continued from page 15

After Pearl Harbor we used that machinery to sound the call for all-out production of practically everything except wheat, cotton, corn and tobacco, of which we still had huge surpluses. The 1942 production goals—set in Washington and then broken down state by state, county by county, and farm by farm—call for an over-all production 5 per cent greater than that of the record year of 1941. For some crops the increases asked for are much greater. The war has cut us off from sources that formerly supplied us with more than a billion pounds of fats and oils yearly. But our home-grown peanuts, soybeans and flaxseed are excellent sources of oils. Accordingly, we have asked our farmers to grow over 150 per cent more peanuts than in 1941, 54 per cent more soybeans, 34 per cent more flaxseed. We've also asked for more lard—500 million pounds more than in 1941. We'll need every ounce of this production both for ourselves, and for Britain and Russia, who are also cut off from their usual sources of supply.

Some of the other 1942 quotas also represent sharp increases over 1941, as for example: eggs 13 per cent, dry field peas 73 per cent, canning peas 32 per cent, canning tomatoes 27 per cent, dry beans 13 per cent. As for sugar, we have urged all-out production of cane and of sugar beets, up to the capacity of the processors. Loss of the annual Philippine shipments that usually ran to nearly a million tons, the increased requirements of war industry for sugar-derived alcohol, and the increased needs of our allies, especially Russia, all contribute to the domestic shortage. But by a happy circumstance this shortage has its very real compensations. During the past half century we have increased our per capita consumption of sugar tremendously. We may well find that eating less sugar will not only slim our waists but improve our health generally. Bending our backs to our own vegetables may also benefit many of us, as it has the British. We've asked for a 20 per cent increase of home gardens this year over last. But don't waste seed and equipment on poor soil, improperly cultivated, with inadequate supervision.

It is one thing to set production goals, another to get them planted, fertilized, cultivated, sprayed and harvested. Let's not fool ourselves. 1942 is going to be a year of sweat and toil for the American farmer. He's going to have to get more done than ever before, and he'll have less to do it with. The draft has taken many of our farm boys, and war industry, which offers bigger pay and shorter hours, has taken many others. Farming is a skilled trade. We're not going to replace those skills

overnight, even if we increase should and must, the attractive agricultural employment with to wages, housing, and working conditions. We're going to have to land by enlisting everybody as high-school boys, older people, and temporarily unemployed. The Department is working with the United States Employment Service to develop the machinery to utilize available farm labor. Connecticut, New York, and Oregon have already necessary to call on students.

Ordinarily when a farmer is out of labor, he buys a new machine. When we have labor shortages and machinery shortages coming together, we would have gone into machine production. The War Production Board has limited the manufacture of new farm machinery—except for needed items like peanut pickers, 8 per cent of the 1940 level. But machinery reserves, and plenty

The Repair Machinery Campaign

The "Repair Machinery Not Campaign, started last fall, is already showing good results. The shock troops of this campaign are the Department of Agriculture War Boards, vocational agriculture teachers, extension people, and the managers of repair shops of the Soil Conservation Service, the Forest Service, and other federal agencies. They are the machine shops of our 10,000 high schools as repair headquarters, they are helping the crossroad man and the village blacksmith anything that's fixable. In October they've set up a "machinery bank" pool spare parts and "surplus" bling points. The farmers can get for anything from spare parts as long as they last. In county War Boards are organizing schools in machinery repair, in ation with vocational agriculturalers and implement dealers.

I'm not so worried about farm machinery as I am about labor, transportation, and a number of other things. We must face some inevitable of fertilizers, due to the stop imports and the competition of industry. When the nitrates are up I'm bound to think that for agriculture is very important think that their use in making powder is almighty important.

One of the things that worried a fear lest conservation farming be considered a luxury which should be "shelved for the duration." On trary, we can best make our progress goals if we continue sound conservation

Letter Box

prices. These not only save soil; increase the yield per acre.

The hope of the world is that America emerge from this war both more powerful and stronger than when she entered it. Make no mistake about it, the domination of national power is top priority. We must not forget that during the last century we have lost irrecoverable hundred million acres of our topsoil; if we had continued to lose at the rate we were losing it during the last war, the scars of which are still to be seen in our mid-continent and elsewhere, another hundred million would have seen the destruction of our potential as a major power. Sound farming will enable us to produce the maximum amount of food fiber and to do this without exhausting our soil fertility.

One of the most brilliant and valuable achievements of this war is that the nutritionists who are seeing to it that the farmer's labor in growing food is not lost through unscientific processing, unbalanced diets, and the perpetuation of bad food habits. Production of dehydrated foods is increasing tremendously, with the Army being a leading buyer. In part this development reflects the shortage of tin and shipping. But in compensating for these shortages the nutritionists and technicians who are working for the Army and other government services are likely to transform the nation's food habits. Vitaminized and dehydrated foods, "pemmican biscuit," balanced condensed mixtures in which milk proteins are blended with whole grains and legumes, dehydrated up and vegetable mixes—these and many other new and valuable additions to our diet are either already in the hands of consumers or soon will be. We've heard a great deal about what the scientists did back in 1935 to revolutionize the diet of the German people. Let me assure you that we're matching Nazi performance on that point, as we're building better bomb plants. Our food processors have proved themselves no less resourceful and dynamic than the engineering wizards who have suddenly waved tanks and munition factories into being where there was only empty prairie. When lack of refrigerated shipping became a bottleneck, the packers, in collaboration with government experts, solved the problem by shipping fresh meat cargoes inside a triple wall of frozen lard. When the British demand for canned pork assumed huge proportions, the processors multiplied their production elevenfold in the brief space of eight months. It is such demonstrations of inventiveiveness and energy, all in a line from the farmer to the consumer, that fortify my confidence that there will be enough food.

The Consumer's Role in Wartime

The consumer too will have her part to play. The average housewife won't have to say this summer and fall. She, like the farmer, will face some extraordinary shortages and handicaps. I don't think she'll mind; not when she remembers how much more the boys on the ship and in our A.E.F.s around the world are giving and suffering. What I do expect is that American housewives will pick up the ball almost as soon as it can be passed to them by the government agencies charged with holding the civilian nutritional front. We have to see neighbors getting together, their pioneer grandmothers leading them to organize and operate community canning kitchens. We still hunt for all those zinc and iron that women used to mislay and throw away. We hope to see scrupulous use of the fats that used to clog the

drainpipe. We hope to see simplicity and frugality displace carelessness and waste. I'm sure we'll see all this. We'll see—in fact we're already seeing—a steady application of modern nutritional science to the kitchen practice of American women so that to bear the increasing tension of the war effort, we'll have the improved health and morale that comes from eating properly cooked and balanced meals.

It is true that during the past year retail food prices have risen steeply. Yet the cost of food is still about 10 per cent less than it was in 1929. At the same time, wages and employment have increased so that the average worker spends a smaller percentage of his income for food than at any other time we know about. It should sober us to remember how much better off we are than the people in the occupied countries of Europe. Greeks and Poles are starving by thousands. In France, total food consumption has been cut in half. Every time an American has a good steak dinner, he eats the equivalent of a Frenchman's meat ration for two weeks. The average American schoolboy eats more eggs in a week than a Polish family gets in six months.

Food Prices Can Remain Stable

Unless the continuance of hoarding endangers the whole price structure, retail food prices and farm prices may come to rest not far from their present levels. What counts finally is production: our ability to raise enough of the crops we need. If we do that we'll be able to handle the food price situation. But will we be able to produce those all-out 1942 food quotas?

I have before me two reports that between them tell a good deal about how the war is going on the food front. One is from the office of Foreign Agricultural Relations, and the picture it draws doesn't look good for either Hirohito or Hitler. It seems the Japs haven't digested Manchukuo; they are having difficulty in inducing their subject peoples to grow food only to be robbed of it by their conquerors. The Nazis are having similar difficulties. Hunger choked the fight out of Germany once before, and it could happen again. As for unhappy Italy, it is evident that the average Italian would gladly swap Mussolini and Fascism for a square meal.

The other report is from our Crop Reporting Board on agricultural plantings for 1942. The new wheat crop appears to be a good one, which will mean that when it is added to our present big surplus, we will have storage troubles. Canada and other exporting countries all have big surpluses. The prospect for milk is only fair, though milk production has been increasing rapidly despite drought in some of the principal dairy areas. Pork looks better. This year we are raising 10 million more hogs than we have ever produced in any similar period. We'll have good supplies of other kinds of meat too. The ranges are in good condition, and cattle and sheep numbers have been increasing faster than marketings. Chickens and eggs will also hit a new high this year. Oils? Peanuts and flaxseed are slightly short of the quota, but to balance this, soybeans are well ahead.

In general, the report tells me what I'd been hoping to hear. The farmers have planted their quotas or better. They're planning great increases in the crops which the nation needs; they are carrying out in a single year sweeping changes in operations which ordinarily would require several years. They're doing it short-handed, with many handicaps, but they're doing it.

Yes, on the food front it looks as though we're winning.

THE END

Fast, efficient shipping service—so essential now to America's war effort and daily existence—is symbolized by the red-diamond call-card of Railway Express. Today, more than ever before, this nation-wide organization is ready.

RAILWAY EXPRESS

AGENCY INC.

NATION-WIDE RAIL-AIR SERVICE

The Messerschmitts were coming down. Quayle was silent. He could feel and see and know now what was going to happen

The Story Thus Far:

WHILE fighting in Greece, John Quayle, a Royal Air Force flight lieutenant, meets and falls in love with an attractive Greek girl: Helen Stangou. They part in Athens, where Helen works in a first-aid post; then, when both are transferred to the town of Ioannina, they have a happy reunion.

Fighting almost constantly as a member of Squadron 80, led by Commander Hickey, Quayle sees a number of his friends shot down. Then—while helping to escort a Greek flier named Nitralaxis on a reconnaissance flight—he, too, crashes.

Falling behind the Italian lines, he is delighted to find Nitralaxis—the Greek (a splendid fellow), who had also crashed; and the two, with a young Greek peasant who knows the country well, succeed in working their way to a Greek outpost. Unfortunately, however, just before they reach safety, Quayle's two companions are killed.

The Greeks give Quayle a warm reception; and two of them—"the little Greek" and "the corporal"—escort him to Ioannina, where he finds Helen (who had thought he was dead) hard at work in the hospital. By this time, it is evident that the British must soon leave the country. So—reluctantly, because she is a capable nurse, and badly needed—Helen promises to accompany Quayle to Athens and marry him there.

But how to get to Athens? With the Italians and Germans driving in—bombing, strafing the roads, and no planes or automobiles to be had—the problem is a difficult one. Fortunately, it is solved by a Greek captain—Mellass—who makes it possible for Quayle to steal an old automobile; and, late one night, Quayle, the girl he loves, the little Greek, the corporal and Tap Finchley (a member of Squadron 80 who, unaware that Quayle really cares for Helen Stangou, is extremely atten-

Flight to the Sun

By James Aldridge

ILLUSTRATED BY HARRY MORSE MEYERS

tive to her) all pile into the automobile and slip out of Ioannina.

The old wreck roars along in the night. There is some desultory conversation. Finally Tap remarks, "I'm sick of this bloody country." Helen, listening, tenses. "That," she says, "is very unfortunate." Tap glances at her. "I'm sorry, Helen," he says gently. "I don't really mean it."

VI

HELEN did not reply. She was sleepy and not conscious enough to think things out about Tap. She watched the road coming up at them as they climbed in great curves. Sometimes she could see the high range of Metsavo in the white cloud ahead and wondered if they would get over it in time. The high roar of the car straining in climb made her drop off into an uncomfortable sleep, and she could dream only of the smell of hospital on herself and John Quayle and Tap. . . .

Quayle was following a straight road, and the heat of the engine was warming him thoroughly so that he felt the evenness of his body again, and the steady high sound of the engine was like the warmth. The road was uneven in places and sometimes he had to slow down but he kept a good pace most of the way.

"If the Germans were around, they'd be up this road," he said to Tap.

"Maybe. Ask the Greek where this place is," Tap said.

"Where do you think Kalabaka is?" Quayle asked the corporal.

"Where the rocks rise from the plains. You can see it in the distance now."

Quayle bent low and lifted his foot slightly, so that they slowed down. He could see the high gray rock on the uneven roundness of plain before them and the road straightening toward it.

He leaned back and put his foot down hard again. The engine coughed. He lifted his foot slightly. The engine choked abruptly and stopped, then started. The momentum carried the car forward.

"What now?" Tap said.

The car stopped as the engine died, and Quayle eased in to the brakes.

"I don't know," he answered, looking at the dashboard. The instruments were all dead. He tried the starter. The whine came, and when he pushed the accelerator, not a sound but the whine.

"Did you put that extra petrol in?" Quayle asked.

"No. It's still in the back," Tap said.

"Pull it out. We've run out of petrol."

The little Greek and Tap lifted the petrol cans from the floor. Quayle unscrewed the tank cap. He got a screwdriver from the pocket of his uniform and plugged a small hole in the top of the can.

"Feel that sun," Tap said. "This is fine."

"Yes. You know these two towns are last up about fifty miles. We may get to Trikkala."

"Maybe we can get some petrol here."

"I doubt it."

(Continued on page 42)

Please send me 10c worth
of electricity — today"

If you had to order your day's supply of electricity
every morning, you'd appreciate even more how
little it costs and how *much* it does for you.

Actually, about two-thirds of all American
homes light their homes and run radios, cleaners, toasters,
vacuum cleaners, clocks and washers for *a dime a day — or less!*

What's more, that dime buys just about *twice as much* electricity
for the average family as it did fifteen years ago!

These bargains don't just happen. They come from
the electric industry's constant effort to give you good service
at low rates. *They are made possible by practical,
efficient business management of an industry built by
the savings of millions of Americans.*

That's the American way — and it works!

It works so well that even though America is pouring record-
breaking amounts of electric power into the world's greatest
production of planes, tanks, ships and guns — you still
get low-cost current at the flick of a switch in your home.

Probably the pennies you spend for electric service
bring you more for your money than anything else
you pay. *Would you take ten cents a day for beating
rugs, scrubbing clothes and cleaning oil lamps?*

Lady Fair spurns HOLIDAY HAIR

*When swimming leaves your hair a frazzle
Girls like me you'll never dazzle!
Don't use more water! Here's a tip—
Use KREML after every dip!*

*With hair a wind-tossed, dusty tangle
A date with me you'll never wangle!
And don't think goo makes grooming easy—
Try KREML! Leaves hair smooth—not greasy!*

*Poor sunbaked pate! I don't know whether
KREML would have helped you ever.
But KREML massage and proper care
Helps check excessive falling hair.*

*Your KREML hair so neat and smooth
Will keep our romance in the groove!
KREML removes loose dandruff, too—
Once you've used it--no other will do!*

DON'T USE WATER USE

KREML

REMOVES DANDRUFF SCALES
HELPS CHECK EXCESSIVE FALLING HAIR
NOT GREASY—MAKES THE HAIR BEHAVE

Ladies! Kreml keeps coiffures lovely, lustrous . . . conditions your hair both before and after permanents.

Hair-Care Combination: Use Kreml Hair Tonic and gentle Kreml Shampoo (made from an 80% olive oil base) that cleanses thoroughly, leaves your hair more manageable. Ask your barber for an application. Get BOTH at your drugstore.

The Night Horse

Continued from page 12

horse that might not plow. Of course, he could return the horse if it was not satisfactory, but meantime it might have kicked the plow stock to pieces and broken all the harness.

Also it was an affront to his pride that a young man like himself should be walking while leading behind him a horse big enough to carry three men. Suddenly he stopped resolutely. The horse, which had been looking at the countryside interestedly, lowered his great head and smelled Lennie's clothes.

Lennie walked around and touched the lean withers with his hand. The horse did not move, nor lay his ears back. Lennie took a deep breath and jumped upon the horse. The horse walked calmly off, with no bridle or rein except the woven halter and the halter rope.

"Yes, sir," Lennie said, finally, "you've been rode plenty."

This should have been a comforting thought, but it wasn't. For if he was a riding horse, more than likely he was not a plowing horse. Well, Lennie would soon know about that.

As he expected, Matt and Flora were disgusted with the horse. Especially when they saw the amount of corn he could eat.

"Well, you've brought you home a fine something-another," Matt said.

Lennie said nothing, and next day put the harness on the horse, which he called Big Boy. It was at once apparent that harness was something Big Boy was not used to. The jingling chains and metal and dangling leathers caused him to tremble and dance about in fright. Lennie finally tied him up, with the harness still on, and let him stand and get used to it. Next day he let him pull a fence post around, and Big Boy caught on to this at once.

On Tuesday, the last day for the return of the horse, Lennie and Big Boy were breaking ground in the back field. That night Lennie came from the barn whistling, in spite of his weariness. Big Boy had pulled the plow all day without unduly tiring.

Matt and Flora didn't share Lennie's enthusiasm for the big horse, and often spoke of how much he ate. But the grain was Lennie's, and he told Matt that what the horse did was no skin off his nose. This seemed true enough until Sunday, when Big Boy was found in Flora's vegetable garden after having eaten a row of lettuce and a row of sweet corn.

AS THE days went on, Lennie found himself growing attached to Big Boy. The horse would nuzzle him and sometimes lick his hand like a dog. You could crawl under him, or stand on his back, or do almost anything to him. Lennie never led him—he just told him to come on and Big Boy would follow.

Big Boy wasn't so gentle with Matt's two mules. He seemed to like to pick on them, biting them or driving them before him. In spite of his size he was too quick for their kicks. One or the other of the mules was always coming out with a bite mark on its croup, and of course, Matt raised a ruckus about it.

One night Lennie couldn't sleep for thinking about the war. He got up, went outside in the moonlight, and ended up down at the lot with Big Boy as he usually did when he felt restless. The horse came to the fence where Lennie sat, and nosed at him gently.

Then Big Boy's head and ears went up, as if he had heard or seen something. Lennie listened and finally he heard the baying of Bob Redman's fox hounds,

afar off. Suddenly Big Boy neighed and galloped to the far end of the lot the sound of the hounds. He stopped and listened again, and then he trotted back and forth, a fence.

He stayed until the music of the hounds faded and disappeared.

THE doctor came to John Healy's door, relieved to have finished the daily unreasonableness, a roseness, and stupidity, and violence. As he came in John Healy was "Then on, then on, down a half field, where a shiplike plow driver-keeled, with a bay horse and a white horse leading, and a man "zook" and the red earth bleeding.

The doctor sat down beside Healy's eyes were bright, and "A fine run yesterday. We had a half couple hounds, and came at Bailey's Farm, into the barn of the pond. They found in a house and the fox took them down High Pike. Then there was a turn south was made down through big corn stubble. A fine sight! I sin had been under me—"

"Who is Khamsin?"

"As good a hunter as ever I've seen, strong honest horse with a heart going and never a hunting wall can daunt him. Khamsin was my shooting place in Georgia where said I must rest. There we were quietly, watching the wire for the stump holes, and we were Khamsin and I. But then they sent me here instead. Tomorrow I'll see for him, for I'll soon be leaving place." Healy looked at the doctor tioningly.

"Perhaps you will," the doctor said.

THE coming of the big horse in Lennie's life had made changes. Lennie was sure the horse had made worn a plow collar before, but such a strong and willing work that the forty acres were easily and planted, and Lennie even had adjoining broom-sedge field of corn. The crops burst from the earth a healthy dark green, and long it was apparent that Lennie of the farm was going to outdo Matt's. This served to increase the tility of Matt and Flora.

On a Saturday night Lennie from town and went to the house to eat his supper alone, for Matt and Flora were still in town. Afterward he went to the barn and climbed the fence. Big Boy came to him and the trousers of his town clothing languid interest.

For a time Lennie simply stopped paying no attention to the horse he said, "They come a trailer town today, Big Boy, and played a machine in it, playing records one them loud-speaker to-dos; you hear it near-bout all over town fellers in uniforms had it in charge they were there to get more fellers join up. I said to one of the tired waiting for the draft to hit I'd join right up with them if I was pretty sure I'd be sent to where could git in a lick or two squinch-eyes, and this feller I won't be so terrible long before leaving."

Lennie had not been gone more than two days before Matt found him exercise his dislike of Big Boy caught the horse pestering him.

otted long strides to the fence, and
ighe

Gradually the faint baying of the
ounds grew. Head and ears up,
he ot trotted back and forth at the
uth of the lot fence.

Now the chorus of hound voices
ellect the fox had reached the branch
vampad was coming around the bot-
m. he baying rolled and echoed
om the swamp. The big horse stood
otions, his nostrils high as if there
was sc to go with the sound. Down in
the cherry tree, the chickens awoke
d closed uneasily.

Suddenly a small, fleet, gray thing
ipped cross the moonlit field by the
t fence. Down in the branchhead, there
as a tmentary break in the unanim-
y of the hound voices, quickly fol-
owed by a hot outpouring that grew
a volume as the hounds came uphill
d tough the farmyard, white-
arked wraiths. The horse trembled.
he p streamed by. As they passed,
he ot broke into an abrupt gallop,
ollowing them inside the five-foot bar-
er. At the end of the lot he effortlessly
uarded the fence.

The hounds, fired by the hot fox smell
a their nostrils, paid no attention to the
uge but that now thundered behind
hem. the far end of the field was an
ld spl rail fence, and beyond it a wide
itch tough which their quarry had
um hide his scent. The hounds
prang, er and splashed through. The
horse reached the rails, then fluidly took
off and cleared fence and ditch. There
was a click, and while the hounds milled
around ying to straighten out the scent,
the ot ate at the green leaves of a

willow. The hounds cast about anx-
iously, with tentative yelps and whim-
pers, sometimes running between his
legs.

A fresh cry broke, and the other
hounds took it up and sped away. The
horse threw his head and whirled in pur-
suit. They cut across the swamp, mak-
ing it a bedlam of bays and echoes. Here
he bogged to his hocks, and plunged in
sudden fright. Once free, he stopped
and listened, blowing; they had crossed
the swamp and were going into the next
field. The horse snorted, jumped the
creek, and took after them, smashing
heedlessly at the thicket. Bleeding, he
got through and leveled off in a dead run
across the field.

There was a fire on the top of the rise,
and men silhouetted, shouting:

"Look yonder, Bob! There's a bull or
something chasing your dogs!"

The gray fox ran in a wide circle,
coursing the edges of the fields when
it could, turning into the swamp when
the hounds got too close. Once the
hounds trailed swiftly through a pine
woods; and behind them the horse came
with hoofs muffled in the deep wire-
grass, swerving between the trees. He
stepped in a hidden hole, left by the rot-
ting away of a stump and fell in a great
heap. But quickly he was up, listening
momentarily, and then galloping off
again.

For an hour the fox ran, always cir-
cling. Finally he tired of the game and
treed. The hounds swept down the cot-
tonfield with their cries high in excite-
ment upon the hot fox smell. They
threaded through the top of a fallen tree
that the fox had used, and emerged be-
yond.

The horse reached the fallen pine and,
not bothering to swerve, soared over the
brush of it like a flying thing. The cry
was tumultuous. Down the flat field the
horse raced. Ahead, several hounds
yipped in astonished pain, having run
into a wire fence, invisible in the night.
The horse saw it too late; as he rose to
jump, his forefoot struck the top barbed-
wire strand, and hung, and he was
thrown. He fell with his broken neck
twisted under him, his great hindquar-
ters thrashing in the dry leaves.

"THE thing about Ireland," John
Healy said, "is the sunlessness of it,
but also the unending greenness. There
I rode with the Ward's Union Stag-
hounds, upon a time, and broke two
hats that wild day, flying like a mad-
man across the banks and drains of that
green place. One of the times I landed
at the bottom of the drain, and the horse
in his struggling came close to kicking
me into another world, a world, I under-
stand, which is also sunless but very
green and lovely and no doubt accepta-
ble hunting country."

"Was that Khamsin?" asked the doc-
tor.

"He was a good horse," Healy said,
"but he was not Khamsin."

"I'd like to see that one."

"But Ireland is where I found him,
where the fox kennels 'on a shelf of
grass in a thick of gorse, that would
bleed a hound and blind a horse.' He was
a colt then, and gentle as your mother,
and we rode in Ireland and then in
Maryland and Virginia, for fifteen years.
Still quite a man he is, and so am I; but
when I listen to the voices that talk to
me I know that there is more hunting
country that we shall ride together."

"Where would that be?"

"Country that neither you nor I have
seen."

"What other things are said by the
voices that talk to you?" asked the doc-
tor interestedly.

"Secret things," Healy said. He closed
his eyes, and presently he slept, breath-
ing deeply and peacefully.

THE END

Why the Neighbors Love Mr. Tabors

The odd Mr. Tabors is actually glad there aren't enough Schick Injector Razors to supply the demand this year. He's been lonesome for three decades. Now half the men on the block drop in every day—to use his Schick Injector Razor.

There's really nothing we can promise Mr. Tabors' neighbors. While there will *not* be a shortage of Schick Blades, war metal limitations now permit us to make only enough Schick Injector Razors for military demands. Our only suggestion is that those who haven't been able to get a Schick Injector Razor remain as contented as possible until the war is won.

If you *have* a Schick Injector Razor consider yourself a lucky man. *Take good care of it.* You've got the "comfort shave" razor. The only basic improvements in safety razor design in over 40 years are contained in the Schick Injector Razor.

SHAVING IMPROVEMENTS EVERY MAN CAN HAVE AFTER THE WAR IS WON

Automatic blade change shoots out the old blade like a machine gun and slides in a new one instantly! Just a pull and push does it! No take-apart or fumbling with blades.

The double-thick Schick Blades measure twice as thick as ordinary blades—3 times thicker than paper-thin ones. Plenty of backbone for steady vibration-free shaving.

The solid guide bar stretches and flattens skin ahead of blade. Makes whiskers pop up for closer, more comfortable shaves. Blade corner guards prevent skin nicks and scratches.

SAVE THE EMPTIES!
Don't throw away your empty Schick Injector Blade Cartridges. Give them to the Boy Scouts who are collecting them.

Our Fighting Men

Continued from page 25

mistaking the Roman numerals of the Army Corps. Is it all clear now? If so (or if not) let's pass along to Utah.

FORT DOUGLAS, Salt Lake City. Eighteen-year-old Werner George Goering, former errand boy at a local radio station, hopes to drop an egg on his Nazi relative's fat neck. Werner is a nephew or a cousin—he isn't sure which—of Barrelhouse Hermann, Germany's air chief; and, as a prospective cadet, prays that his future relationship with Hermann will be closer than in the past. Just once.

FORT DOUGLAS RECEPTION CENTER. "Since the Constitution guarantees every citizen the right of trial by a jury of his equals, how come in an Army court-martial the jury is composed of superior officers of the man on trial?" That's one of the lules Col. H. P. Kayser, Reception Center C. O., pops at draftees to acquaint them with the Articles of War. He has discovered most new soldiers lack a proper conception of military rules and justice, basic tenet of which is "to obey strictly and to execute promptly the lawful orders of their superiors." He has found, too, that if newcomers get off on the wrong foot in their first encounter with military discipline they may become habitual recalcitrants.

Col. Kayser likes to compare situations in civil and military life, pointing out that all military rules are designed to protect the efficiency of the Army. Answering that first question he explains that the Constitution also says that the Congress shall have power "to make rules for the government and regulation of the land and naval forces."

Other civil life-military life comparisons: Quitting your job is your affair; in the Army it's AWOL if you're temporarily absent, and desertion if you scam for good. It's a civilian's own tough luck if he rips his suit; a soldier who wrecks his uniform needlessly is destroying Uncle Sam's property. In civil life a guy can get pie-eyed and at worst land in the clink; in the Army he must avoid "all conduct of a nature to bring discredit upon the military service." In civil life the boss can call an employee anything he wants and the employee can't reply in kind and keep his job; in the Army "no person shall use reproachful or provoking speeches or gestures toward another." A private may prefer charges against a colonel. If a corporal sees a captain in "conduct unbecoming an officer and gentleman" he can have him put in the pokey, but the corporal better be sure of his ground first. A soldier can't shoot off his mouth and use insulting and contemptuous language about superiors, city, state or national officials. The broad 96th Article covers "all disorders and neglects to prejudice of good order and military discipline."

Orders are orders in the Army. Special efforts are made here to have Army vehicles driven in a manner that commands respect. The speed limit is 30 m.p.h. regardless of the civil limit. For doing something that in traffic court would have drawn a small fine, a corporal was busted, grounded, fined and punished.

Most draftees wind up impressed that a man's rights are more zealously guarded in the Army than in civil life. There are some fine points, as for instance: a soldier can't thumb a ride, but he can accept one. This, incidentally, leads to the new situation in the hitchhiking industry. Used to be that cars

"Dammit, man—next time don't wait until the last second!"

PVT. DOUGLAS BORGSTEDT

whizzed by the tired soldier hoofing along the macadam, trying to get home, or back to camp. Now, between the Salt Lake Air Base and Salt Lake City, careless motorists wearily waggle their thumbs at rolling Army trucks.

NEW YORK. First issue (200,000 copies) of Yank, the Army newspaper published exclusively for men overseas, was bundled off to unrevealed outposts last Saturday to be dispensed at a nickel a throw. In the ad-less, 24-page tabloid are pictures (50% of the contents), cartoons and departments covering everything from poker to poetry.

Yank is an enlisted man's paper, with no emphasis on brass hat management. Four officers (three more to come) roam the great open spaces of the New York offices but 35 enlisted men are grinding out the stuff. Among them are Cartoonist-Pvt. Douglas Borgstedt (see top of page) and Pvt. Lloyd Shearer, former Our Fighting Men correspondent at Fort Bragg. Plan now is to keep the reportorial staff on a revolving basis; men will work in the office for a while, then go out in the field, making way for new men. Couple of weeks ago, when the first issue was under construction, the Yank offices were a mess, but now that the weekly paper is under way, the place is probably a shambles. Newspaper offices are no fun to work in otherwise.

SCOTT FIELD, Ill. Alaska and Iceland, which have long winter evenings, have furnished some of the best and fastest-learning students of the Air Forces Institute, the correspondence school housed at this post. Enrollment passed the 25,000 mark last month, and up to 1,000 letters and pamphlets move in each direction every day. A civilian staff gives the mail-order instructions. There have been more than 5,500 graduates. Enrollment is voluntary, and not all who sign up finish the difficult technical courses. One soldier in Honolulu, deciding to drop his lessons, wrote the Institute to never mind sending him any more stuff. Before his letter arrived he

sent a telegram which is now on the wall by Maj. Robert H. Orr's desk. It reads: "Disregard cancellation order." It's dated Dec. 8, 1941.

The Institute's correspondence lessons, by the way, still bear the name Air Corps Institute, but the new Army Air Forces designation will go on all future papers. Idea of the general change was that "Forces" is a bigger name than "Corps," which has rather a limited and local sound. The Signal Corps hasn't yet but it may soon make the change, too.

ALASKAN DEFENSE COMMAND.

Best gag so far reported from the Arctic country is credited to Pvt. Andrew Kemak, who, digging into mother earth with a group of other pickers and shovelers, came up with three, shiny gold nuggets. "Looke, Looke," cried Kemak. "Gold! Gold!" The word spread with the rapidity of a rumor and the boys stopped working and went to work. After all, gold is where you find it. Trouble here was that nobody could find any more.

Hours later an ordinary buck private wised up. Seems Pvt. Kemak in civilian life had worked as a gold miner for the U. S. Smelting Co., and the nuggets were souvenirs he had palmed when he went out with the pick-and-shovel detail. His buddies didn't get any appreciable number of laughs out of the stunt, but they hope you will.

GENERAL

THE Army has a sweet tooth. Daily consumption of jams, jellies and marmalades is 20 carloads, or about a third of the output of the nation's professional preservers. The stuff costs the Army \$80,000 a day and puts an average of 7½ pounds on a soldier.

SOME of the boys have a heck of a time getting into the fight.

Exhibit A. "If you contemplate having a contest for the Army's unluckiest soldier," writes Pvt. John C. Holland, Sheppard Field, Texas, "I present Pvt. David A. Miller, of the 401st Tech.

School Squadron. Miller fought two years in Spain with the famous ham Lincoln Brigade of the government army, rose to the infantry captain, fought in most of the major battles, and was twice wounded. After Pearl Harbor he enlisted and asked for immediate action. They sent him here but a clerk sent him to Jefferson Barracks, Mo., also another man named Miller. He went without pay for four months. His record finally turned up at a Field, Wash., whence it was retyped. He received three months' pay then it was discovered his service record would have to return the money, to have previous endorsements erased and initialed. Since Sheppard Field is a replacement post, he isn't permanently attached to the ratings, so Miller is still a buck. He still instructs recruits in close drill and privately wonders what hell it's all about. On his own initiative he started to give instruction in principles, taking cover from an advancing under fire, identifying aircraft by sound and silhouette. Time was had by all until headquarters stopped it on the ground that drill periods should be devoted to the soldier and close order drill. He gets attached to a permanent unit. Miller can't even get corporal's rank. Only silver lining is that even so he doesn't mind taking orders and driving from him."

EXHIBIT B. "Although I have been flying for a year," writes Robert Felle from the Naval Air Base at Norfolk, Va., "I couldn't get into the Navy Air Forces for the lack of educational requirements, so I gave up and went to Canada to enlist in the R.C.A.F. Turned down because of physical defect, I came home, enlisted in the Army and got as far as Fort N. J., where a medico said I was unfit. Next I went to the local draft board and got classified as 4-F; then I wrote a letter to President Roosevelt. He replied I was sympathetic, but the government couldn't help me out. Well, I finally stopped in at my local Navy recruiting station in New Brunswick, N. J., and was sent to New York and an specialist. Yes, you've guessed it, I'm in the Navy—have been for nine months—and I like it."

EXHIBIT C. Corp. Chas. R. Brummett, of an Infantry Company in Texas City, was "a graduate engineer" and was placed in the infantry when drafted (probably the only Army engineer that has no use for engineering training). Shortly after, I was accepted for training as an engineer in the Army Flying Cadets," his letter continued "and while I was waiting for direct commissions to metallurgical engineers. I immediately wrote the chief of the Air Forces in Washington requesting release from my cadetment. This release arrived within days, so I submitted the Naval application. Recently, I checked at headquarters and found a call to duty with the flying cadets, an indication of the Naval commission a day, then, I was an infantry flying cadet, and an ensign in the Reserve; and at the time I was posted as an active private of the 1st Infantry Division. Laugh that off."

YOU can't laugh off a one-man Army and Navy and Air Force.

Wing Talk

Continued from page 8

weights of around 27,000 pounds. The mission of the medium bomber is to carry a heavy bomb load for a long distance (compared with the four-engine fighters), hit hard and get away. Both ships are very speedy and maneuverable.

The fact became public that Doolittle had led the Army airmen on the Tokyo air raid. His friends passed the word of his greatest confidence. Universal said that's Doolittle for you. Not a word. It was typically Doolittle. As it was typically Doolittle, he took leave from the Army and went to America fifteen years ago to make an American single-engine fighter.

Before the formal demonstration to the government of Chile, he was on a Santiago balcony and ankles. But he wouldn't let the announced demonstration. He jumped into the cockpit, ankles in, and took off.

German acrobatic expert, with a man after which he also was trying to show a golden opportunity to show the American plane and pilot. So he went after Doolittle. Jim's was no difference in his precision with or without broken ankles, he drove the German out of the sky. The German landed he had a gash in his wing, made, he said, by Jim's knife. He dived on him and pulled him down. "That man is crazy," he exclaimed.

"Nonsense," said Jim, when told of the charge. "I didn't come within six inches of him."

IN THE old, old days of flying, the master airmen had one procedure for landing their flimsy crates which distinguished them from amateurs: They would always come in with a dead engine. No matter from what altitude they were going to start a glide for landing, they'd cut the switch. They knew they were burning their last bridge behind them and that they had nothing in reserve to help them over the edge of the field if they undershot, and no power to draw upon if they overshot.

This little bit of lore is dug up because, in connection with a new program for training glider pilots, the Army is going to indulge in that same landing procedure of 30 years ago. The idea is to start them out in light planes and teach them to land with power completely cut off. Then they can step into gliders or sailplanes where they don't have a handy engine to help out when they guess wrong.

The course is for men from 18 to 35 who have had training as civilian pilots but who are ineligible for aviation-cadet training in the Army and Navy. These pilots, with training emphasized on dead-stick landings, will develop superior ability as forced-landing experts. With their glider and soaring training superimposed on that background, our strictly power-plant pilots can expect stiff competition in the civilian field at a happier and later date.

F. R. N.

"It's really about the only time I have to myself"

JOHN GORDON

"We're saving her looks as well as her tires!"

"Lizzie must last," said the Little Woman grimly and handed me a pint of Johnson's Carnu. That was a cue to drop my putter. True, I know the facts of car life—road scum, squashed bugs and dirt destroy the finest automobile enamel—but it looked like work. I started cleaning.

Clean as a whistle—bright as a dime—describes how our bus looked after that first Carnu shampoo! And so easy—you could have knocked me over with a birdie. Carnu cleans and polishes in one application and in half the time. All I did was rub Carnu on just hard enough to loosen the dirt—let it dry—wipe clean. Brother, it sparkled!

Life with Mother is easier now—and I've learned to hold off car enamel deterioration! Johnson's Carnu removes the damaging dirt—yes, and an occasional coat of Johnson's Auto Wax will make your Carnu polish last longer... save car washings. Auto supply stores, service stations and regular wax dealers have Johnson's Carnu and Auto Wax. If you can't get Johnson's Auto Wax, regular Johnson's Wax will do a good job. All Johnson's Wax Polishes provide positive protection.

Tune in Fibber McGee and Molly
—Tuesday nights—NBC

Your car looks like new —when you use CARNU!

The Defense of Frederick

Continued from page 18

To Be Opened Only in Case of Frederick Smeeren's Assassination. (Also Natural Causes.)

WHILE Smeeren wept about his own death there were other, grimmer men working very hard to hasten the same event.

Notably there was a certain Mr. Tanisawa whose preparations were all but completed, for his deadline was that same night. He took his orders from Tokyo and it had been made clear to him that he must not fail, for his task related to the great end of the whole war—the capture of Java, richest island in the world.

Only fourteen miles of gentle sea separate Bali from the eastern tip of Java; a weak, almost undefendable island, it has the bad luck to flank Java. Also it has the even worse luck to possess an emergency landing field less than a hundred air-line miles from the key Dutch naval base at Surabaya.

And this airfield lies in Smeeren's bailiwick.

So, for weeks Tanisawa had been busy watching both the airfield of Den Pasaar and the defender of the field. He knew what time Smeeren rose in the morning and what time the great man lay down to sleep. He had a plan of the chief's little cottage on the outskirts of Den Pasaar and a carefully annotated treatise on how he could most easily be liquidated without muss or fuss.

Tanisawa's base was a jungle camp on Bali's great uninhabited plateau which the natives refuse to visit, calling it simply "the place where tigers hide." There Tanisawa had been landed by parachute weeks before Pearl Harbor and from there, thanks to the island's efficiently interlocking dirt roads, he could reconnoiter all Bali. In the space of a single night his collapsible bicycle could take him all the way to Bulelang—where the garrison was. From there he could ride to Den Pasaar, at least four hours from Bulelang and aid, where there was nothing but Smeeren.

THE day he got orders to arm the natives, Frederick went about the business of obeying. In the cool of the late afternoon he marched his sixteen barefooted Balinese policemen to the edge of the dusty landing field and presented each with an American Springfield rifle of 1917 vintage. But he was careful to issue no ammunition.

"Port—ARMS! Simulate—LOAD! Ready—aim—FIRE!"—followed by the dry clicks of firing pins in empty chambers.

Although they flinched noticeably at each bellow, the natives were so delighted to have white man's weapons in their hands that they grinned and laughed almost continually. Every time they pulled the triggers, Likas, Smeeren's number one deputy, happily shouted "BOOM!" and the whole group screamed and giggled childishly.

Likas, a handsome white-toothed Romeo in his early twenties, was one of the most annoying thorns in Smeeren's official toe. For instance, less than an hour of "BOOM!" was enough for him. He calmly broke ranks and sauntered over to Smeeren. "Tabay, Tuan!" he said cheerily. "Ready for bullets now." Smeeren gulped and glared. "You'll get bullets when I'm good and ready," he growled.

Likas' response was a faintly pitying smile which convinced Smeeren that the natives knew just why he was withholding their ammunition. As he went back to his place in line, Likas said some-

thing to his comrades in Balinese—a language which Smeeren had always refused to learn.

What the boy said in that verbless tongue was, "Maybe Jap men be good and ready before Tuan Smeeren."

A FLASH of gray as a night-camouflaged parachute descended—and Tanisawa was welcoming his superior officer. A man named Marule, he brought with him, in addition to a war kit identical with Tanisawa's, some complicated orders, two twenty-five-caliber automatic rifles with hundred-shot magazines, and a quantity of explosives.

Tanisawa wrapped the dynamite in a tarpaulin, handed over his sketches of strategic spots, and studied the orders for the night.

Marule let him finish reading. "According to your sketches," he said ques-

tle bikes and attached wicker baskets to the handle bars. Into the baskets went dynamite; over that, a layer of wild hibiscus flowers. To the rear of the saddles they tied their automatic rifles concealed in the cores of Balinese wedding drums.

Nearing Den Pasaar they paid Smeeren the compliment of by-passing the town and going instead to the sea and along the smooth white beach of Koeta. Down that they pedaled, sudsy breakers on the right and a wall of jungle on the left; past deserted establishments that had once been hotels for European and American tourists; past the house Tanisawa—an "art collector" then—had inhabited for almost a year. Finally, they were at the Temple of the Sea.

Near that, they dismounted and carried their bikes into the deep under-

ground, they could create an effective road block.

When the time came, Tanisawa would hide where he could see to set the mine just as the maximum number of enemies were on top of it. By the expedient the first parachute would be sure of the few seconds necessary to consolidate hasty position. The murder of Smeeren was intended to be the same thing, and there supposed to be no troops in the district—nevertheless Jap policy was to take nothing to chance. The four would take troops to arrive from the long—assuming dive-bombing planes full of heavily armed troops who could make the field impenetrable.

"Perfect!" said Marule, and Tanisawa scuffed his feet like an embarrassed schoolboy.

Mr. T. was just about to crawl into the culvert when there was a shout from the airfield. "Matay!" he called. In Malayan this means, literally, "dead" and is the East Indian version of "Who goes there?"

Messrs. T. and M. hit the ground promptly and drew their weapons. Silhouetted in the moonlight were the uniformed figures of Likas and Jongal, brandishing rifles fiercely in all directions. Finally they relaxed and Likas laughed. "Wild pigs," he said distinctly and the two of them disappeared back into the fringe of the jungle.

THERE, snoozing contentedly in the laps of big vines, was the whole group that had come to keep them company. Likas prepared to go back to sleep himself. However, Jongal tapped his shoulder and nodded toward a camp a few yards away. "Jongal no sleep," he whispered when they got there. "Jongal worry."

Likas squatted on his heels, placed his rifle between his knees, and pursed his lips thoughtfully.

On the Japanese front there was also a great deal of worry. Not until Tanisawa's wrist watch had ticked off precisely sixty-one minutes did they permit themselves to move again. Then, cautiously, Tanisawa wriggled in the culvert. He arranged the explosion in a neat package in the center, and the detonating wires out to his fingers. Backing out, he made quite a race of it, neither of them heard Likas and approaching.

Leaping forward, Likas stuffed the muzzle of his rifle into Tanisawa's back while Jongal performed the same service for Marule. Four Jap hands went slowly, tentatively, into the air. Likas told them in Malayan to start walking "toward Den Pasaar."

Grudgingly they obeyed, but Tanisawa managed to lag behind a little in so doing, came almost abreast of Jongal. Looking out of the corner of his eye, he saw the muzzle of the field pointed at his superior's spine. His eye followed the barrel over his shoulder, past the sight leaf, and then—he almost gave himself away by falling dead in his tracks—he saw the bolt of Jongal's rifle was wide open, revealing an obviously bulletless chamber.

There was a long open stretch of road, and then they moved into the shadows of some tall trees. Tanisawa grabbed at Jongal's gun, and, as so, Likas hit him a glancing blow back of the head.

The two Balinese began to scale the tops of their lungs and were going back toward the jungle. By the time the Japs got hold of their au-

tioningly, "there is no guard at the airfield?"

Tanisawa grinned slyly. "They have not bothered," he said.

He was wrong. At the end of rifle practice that afternoon, a sweaty Smeeren had called Likas to him. "Pick out one man," he said, "to join you in special duty."

Likas—as Smeeren knew he would—asked for his side-kick, a high-caste lad named Jongal. "Both of you spend the night here," Smeeren told them. "Only one of you sleeps at a time. If possible, neither. Should something happen, come and tell me."

He called the rest of the detail to attention and marched them off down the road leaving Likas and Jongal, surprised and lonely, leaning on their unloaded rifles.

They were alone only a short while. Their compatriots passed the word along and within an hour Likas and Jongal were being royally entertained by a delegation from the nearest compound. The delegates brought straw to sleep on, some rice patties served on cool, green leaves, and enough Chinese-made cigarettes to last the night.

It was all very, very peaceful.

Just after midnight Tanisawa and Marule, Inc., hauled out their dandy lit-

brush. It was dark under the palm crowns and they had to use flashlights while they detached the baskets and guns. Holding these burdens on their backs with their right hands, they crawled along on their knees and left hands.

After a few hundred yards Tanisawa pulled aside a screen of brambles, and the airfield stretched out before them. In the light of the moon it looked as white as a fall of new snow, and had about it the same kind of hushed noiselessness.

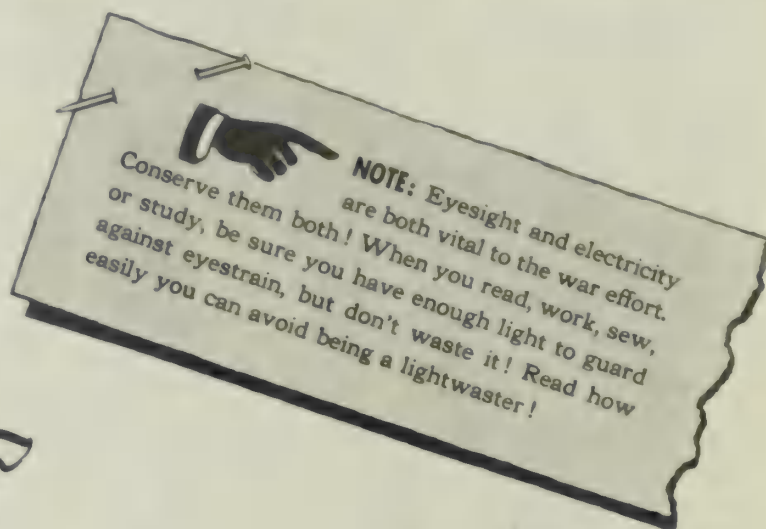

THEY slithered out onto the cruel stubble of the field and listened carefully for a full minute.

"Deserted," said Mr. Tanisawa, getting up. Suddenly Marule gave a warning hiss and Tanisawa quickly fell to the ground again.

Silence.

The noise—Marule wasn't sure he hadn't imagined it—was not repeated. They got to their feet and walked confidently toward the corner of the field where the road emptied into it. A hundred yards down the road, which was raised a good three feet above the level of the soggy soil, was a culvert. Here they stopped and Mr. Tanisawa explained how, by putting dynamite both in the culvert and twenty feet farther

Don't be a "Lightwaster" !!! by don herold

Don't let lamp shades get so dusty and dingy they absorb light instead of reflecting it. Clean or brush them regularly, or if they're too far gone, replace them with fresh shades. A shade with a white lining can give you twice as much light as a dark one!

Don't leave lights burning where they aren't needed. Don't use bare or poorly-shaded bulbs that glare in your eyes. Glaring light is partly wasted light, because it makes you squint to see!

Do be careful about lamp bulbs! Make sure you use the right sizes for easy seeing, and when you need new bulbs, get G-E MAZDA lamps. They're made to stay brighter longer. Don't be a lightwaster!

Do place your lamps so you get the most use from them. Arrange furniture so two or more people can use same lamp... but be sure nobody is too far away from the light!

Do see that lamp shades, bulbs, and reflectors are kept clean. You may not think bulbs are dusty, but sometimes wiping with a damp cloth will give you 50% more light!

G-E MAZDA LAMPS
GENERAL  ELECTRIC

MAZDA—not the name of a thing, but the mark of a research service

rifles, the countryside was alive with running, screaming natives, who seemed to appear from nowhere. Young girls, old women, middle-aged men, a few children—all went sizzling off in different directions.

When the two invaders finally decided at which target to aim, there was not a living soul in sight.

WRAPPED in the folds of a cotton nightgown, Smeeren slept in a great double bed shrouded in mosquito netting that hung from above like the canopy of a royal couch. His sleep was deep that night and he didn't awaken for several seconds after the lights were suddenly switched on.

Blurring through the fine mesh of the mosquito netting, everything in the room seemed to him misty and unreal. It was like a scene from his most haunting nightmare and for a while he didn't realize it wasn't.

There were Likas and Jongal in badly dirtied uniforms; almost a dozen of the other deputies. All stared at him with silent malevolence and all brandished creeses—long, serpentine knives with swordlike handles.

The hot rush of his pulse made Frederick giddy for a second, but he forced himself to slide his hand stealthily under the pillow for his automatic. With that encouraging instrument in his grasp, he jumped out of bed and crashed through the mosquito netting with such violence that the whole mess came tumbling down behind him.

The Balinese backed away, startled, and Smeeren took the moment's advantage. "Drop those knives!" he said in a quavering voice. He swept the gun impartially around at everyone as if it were a garden hose.

No one moved or spoke, and not a soul dropped his creese. Trembling a little, Smeeren extended his arm and aimed the gun directly at Likas' head. "When I count three, I will kill Likas," he said. "One—"

From the far side of the room there was a flash of steel and a flying knife knocked the gun out of Smeeren's hand. Within a second he was covered all over by nearly a ton of busy Balinese, and a linty gag was shoved into his mouth. He gurgled, gasped, kicked, but they managed to drag him to the big easy chair in the corner of the room and sit him in it.

Bound thoroughly with stout Sumatra hemp, he finally relaxed and fell to mumbling meaninglessly into the gag. Likas slipped a cold hand under Frederick's nightgown, grabbed the bunch of keys that hung around his neck, broke them off their string, and gave a shout of triumph. It was the signal for the whole group to high-tail out of there.

Alone and breathing hard, Smeeren had a moment of foolish exasperation that no one had remembered to close the screen door. Then he began to consider the situation. It seemed to him that it was his solemn duty to rouse the whites somehow before they were beyond all rousing, but he could think of no way.

He reflected hopefully that the key to the arsenal stuck a little, but then guessed they'd find out how to make it work. He sighed and wondered if they were leaving him for last or if they planned one great massacre of all the whites at once. That thought made him suddenly furious and he began to throw his two hundred and sixty pounds back and forth. On the sixth try he succeeded in toppling himself and the chair over, cracking his skull neatly against the hard floor.

There was no way for him to tell how long he'd been unconscious, but as soon as he came to he began to move painfully forward. By dint of arching his

neck and pushing with his toes, he was able to progress through the door and out to the road.

His head was both bowed and bloody, but he persisted, looking like some obese tortoise that had outgrown its shell. About twenty feet of this and he was at a tiny wooden bridge which was only a few feet above a shallow, rocky creek. There, straining every muscle, he got to an almost standing position and launched himself backward over the side of the bridge.

The chair cushioned the shock for him but broke up on the rocks as he had intended. Some more thrashing and swearing completed the job so that his burden was reduced to a pair of arms, an assortment of springs, wet upholstery and splintered wood. He could stand straight.

From there it was comparatively easy. Hopping along like a child on a pogo stick, he reached the chicken yard of the nearest compound. There, by scraping his bonds against the edge of an ax, he contrived to free his hands.

way of disposing of their quarry. Every time one of them stuck his head above the top of the wall there was a rain of automatic rifle fire. And if anyone ventured onto the beach he received the same treatment. It began to look as though the hunters had been thoroughly treed.

Squatting in the midst of his command, Likas thought and thought and finally brightened up. He rose happily to his feet and gave his orders in ringing tones. The entire group was to filter out by the jungle side of the temple and completely encircle the enemy. He realized that this meant his men might very well shoot one another, so, figuring that their aim would be bad anyway, he ordered them to fire into the air.

THEY scampered off into the underbrush with a great deal of boyish shouting. Then, as they separated one from the other, they became hunters and there was silence.

Just after sunup, there came a loud shout from the jungle. "Hooooaaa!" Tan-

"Who," Smeeren kept sayi
taught them to shoot so straig

Van Clercq wore nothing but shorts, having been roused from his bed and told that mutiny had broken out while Smeeren had on the same costume in which he'd made his escape. They felt silly, and both, despite the fear, found enough extra bluntness to bluish.

"The Dutch should make cars," Smeeren said suddenly.

Not daring to turn his head, Van Clercq stared through the bullet windshield and firmly resolved he would not, come what might, miss Smeeren's cue.

Finally Frederick went on. "The reason is," he said, "that automobiles would be solid. You just duck down and nothing would hurt us."

They were surprised by "Hullo!" from the jungle. Mistakenly, Tanisawa called, "Your position is worse than you realize. Underneath you is enough dynamite to destroy you. I can set it off if I want you to think about that."

Smeeren was more shocked than he had been by anything that night. "It's Japs!" he said softly. "What let them in?"

Van Clercq smiled an "I told you so" smile. "Where's your mutiny, Frederick?"

"Hah!" said Smeeren. "More creatures must have sold out to the enemy!"

"Now, Mr. Smeeren, listen carefully," came Tanisawa's voice. "You are surrounded. Granted. But you order your men to let us through to the beach and I have enough wire to still fire the charge from a long way off. Only if you let us escape will I be any deceit, and I blow you up."

Smeeren had never been a quick-witted man. "We have the situation rounded!" he said inanely. "What's the trick?"

"Give the orders!" Tanisawa bellowed. Smeeren answered in his drill-field bellow. "Blow us up!" said, "and you are still surrounded. Go on! Blow us up!"

Van Clercq turned gray. "Bravely aren't you?" he hissed.

There came a wild cry from the jungle and both white men recognized Likas' voice ordering a charge. The sound of a long burst of automatic fire, scattered rifle shots, that told of mortal agony, came again.

Two rifle shots, evenly spaced, still afraid to move, Smeeren and Van Clercq sat sweating with anxiety. Finally, from the woods, came the swarthy forms of Balinese. They were Likas, carrying Jongal.

He came to the side of the body held the body up to Smeeren. He said softly.

"Jap men?" Smeeren asked. "Also matay," Likas said. He aged a thin smile. "Two for one. We good and ready for bullets."

PRECISELY at the bong of morning Smeeren came into the porch sitters of the B. He rode his bicycle with assurance, chest out and knees both sides of him marched a little of honor—Likas and five fr shouldering rifles at the correct angle. Across their chests were cartridge belts, and these they badges of authority, thumb under them to show them off.

Mrs. Van Clercq gave a squint and dropped her gin sling. "My!" she said happily, "aren't the Japs going to be surprised!"

THE END

"So far I have buried five people"

PERRY BARLOW

As he ungagged himself, his relief was immense and he would have shouted for joy had he not heard, at that moment, the distant crackle of rifle fire.

THE Temple of the Sea was surrounded by a brick wall ten feet high. Behind this, Likas and his little troop had taken their stand, and, in the jungle in front of them were Tanisawa and Marule.

The Japs had run there to get their bicycles and been cut off by what they assumed to be a large and heavily armed force. Actually it had been only members of the sentry-warming delegation acting on Likas' instructions to follow the Japs wherever they went. Their stealthy creepings and whisperings had been construed as signs of a considerable foe—Tanisawa and Marule thought themselves surrounded. They could hardly have guessed that it was a detachment composed exclusively of young girls and old women, so they stayed put, on the classic military theory that the enemy would eventually reveal his weakness.

Thanks to this, Likas et al had had time to capture Smeeren, raid his arsenal, and return. Now all sixteen deputies held the fort. Strong on courage but weak on tactics, they could think of no

isawa called. The temptation to join in this attack on the common enemy—the silence—was almost irresistible and Likas was proud that his men knew enough not to answer. All was still once more.

Suddenly the Jap automatic rifles could be heard. They were firing in short bursts as though being carefully aimed.

They were. On the airfield side of Likas' little theater of operations, Frederick Smeeren and Mr. Van Clercq were in a most uncomfortable position. Bucketing down the road in Van Clercq's little English roadster, they had slowed as they approached the field. Their intention had been to be extremely cautious, but they overdid it.

So slowly had they been going when they were over the newly laid land mine, that the Japs had been able to halt them with two short bursts. The gas tank was punctured and two tires were flat. There they sat in that open car, being shot at by those who they still assumed were their erstwhile servitors, and with no place to go.

The automatic rifle fire made itself extremely clear. They were not to move. Every time either of them so much as raised his hand, there was another rain of bullets into the back of the seat.

Red Flag in Brooklyn

Continued from page 23

cost-knotting marker. But suddenly, explicitly, after getting two strikes over on Lopez, Casey added his smoldering wrath. Three times he hurled the ball high over the fence. Owen's upstretched arms couldn't have reached those heights with a stepladder.

The last two times, the Maje said nothing. But on the third ball he pulled off his mask and thundered out toward the mound, leaving a trail of dust behind him. Durocher bounced the ball dugout as if on a pogo stick. The crowd flickered and flared. The Maje's dumb went up and Durocher

at once. "Who could I do?" roars the Maje. "I couldn't let Casey get away with stuff like that. Nobody's going to make a mockery of a game I'm umpiring. It isn't my fault that Casey walked Lopez on the next pitch and that Alf Anderson tripped him home with the winning run. Sure, I know Brooklyn is a high place in a tough race and that the fans were all on edge. But you can't let any team make a travesty of a ball game."

Brooklyn fandom can never forgive Magerkurth for that. It might well have been the Bums the pennant they'd been waiting for 21 years. It didn't matter to them that Boston's Manny Salvo would lead the Cards with six hits that afternoon, enabling the Dodgers to remain the wafer-thin one-game edge.

But Maje had already been in hot water in Brooklyn because of a reversed decision that had killed the Dodgers' last hope of catching the Reds in 1940. He had equally have sidestepped that by saying his back had been turned. At last, footwork has never been one of the Maje's strong points.

The Dodgers were playing the Reds that day. The visiting Redlegs had men in first and second. The batter hit a double-play ball to Hudson at short. Hudson fielded it cleanly, flipped it to the Coscarart. Bill Stewart, the second baseman, wheeled with Coscarart to catch the play at first. He didn't see the ball and called Ival Goodman, the lead runner, out. Bill McKeech's plaintive screeching persuaded Stewart to ask Maje what had happened.

"Who could I say?" asks Maje with

his usual terrifying honesty. "Pete had dropped it. Goodman was definitely safe." The rallying Reds went on from there to win, 2-1, and that should have been that. But up in the stands, a Brooklyn fan brooded on the injustice of it all as only the Dodger breed can. That was the summer, you remember, when a man was shot and killed in a Brooklyn bar for slighting the hometown heroes.

This time, the fan in the stands, convinced that his Beloved Bums had been robbed, had murder in his heart but no gun. Descending on Magerkurth in full cry after the game, he steamed alongside of him screaming, "Burglar, robber, cheat!" Finally he could stand inactivity no longer. He tripped the Maje, wrestled him to the ground and started punching. It took two umpires and three cops to pry them apart. Later it was discovered he was out on parole. He had to go back to jail.

Downfall of the Giants

The summer before, Maje had been in on the downfall of the Giants. On July 15th the Terrymen were very much in the race—in second place only five and a half games back of Cincinnati. Going into the eighth inning against the same Reds, Harry Gumbert had them on the hip, 4-2. Then, with a man aboard, Harry Craft slammed a long one into the left field stands. To this day most of that afternoon's Polo Grounds inmates insist it was foul. But Ziggy Sears, the plate umpire, said no. So did Lee Ballanfant, umpiring at third.

The Giants, headed by Harry Danning and Bill Jurgens, blew a mental gasket. "Everybody," claims the Maje, blithely ignoring the fact that things had just about quieted down when he stuck his lobster-tinted neck out, "blames me. But actually I had nothing to do with the decision. As for what happened afterward when Jurgens and I mixed it up, well . . . that was as much my fault as his. I said so in my report to the National League office."

Both Jurgens and Magerkurth were fined and suspended for ten days. This didn't hurt the Maje except for his pride. But it just about killed the Giants. Lou Chiozza, Jurgens' sub, broke his leg in two places the next day in a

WALK! Is mah feet sad!

THAT'S RIGHT, SAM, w-a-l-k is that little four-letter word that exactly describes what you'll be doing when your present automobile gives out.

But cheer up, Sam. Smart motorists are letting Sinclair Dealers prolong the life of their cars. Sinclair Dealers, you see, have developed a special Sinclair-ize service to make cars last longer.

Just as American railroads, airlines and the U. S. Army use Sinclair lubricants to save wear on vital transportation equipment, so Sinclair Dealers use specialized Sinclair lubricants to save wear on your car.

Ask your nearby Sinclair Dealer about this special service today. You'll save money, and worry, too.

collision with Joe Moore, and the Giants
started a mad descent toward the loop's
lower levels.

Shake these three colorful episodes
together and you have the Maje im-
mersed to his eyebrows in misery. It
was even hinted last winter that he was
on his way out. But his record over the
years was too good. And, according to
at least three big-league managers, he
also happens to be the best man in the
business on balls and strikes.

"Tough," says Eddie Brannick, genial
secretary of the Giants, who has seen
them all come and go since the turn of
the century, "sure, he's tough. But he's
a fine umpire, too. He's square—shows
no favors—and he's smart, too."

That sounds strange, coming from
Brannick. For Eddie not only grieved
long and loudly over the exile of Jorges,
but he was in the stands the day that
Maje broke into the big time in typical
Magerkurth manner. That was the
April afternoon in 1929 when he tossed
John McGraw right out of his own Polo
Grounds.

The day before, at Boston, McGraw
had been giving the Maje one of his bet-
ter verbal roastings. McGraw always
could ride 'em. His words had a sting
that would have made even Caspar
Milquetoast come up swinging. The
Maje, as we know, is no Milquetoast. A
mere two innings had gone by before he
stormed toward the Giant bench.

"One more crack out of you," he
barked, "and you're through for the
day."

"You can't beat up everybody in this
league," taunted the veteran pilot. "You
may toss me out of here but wait until
I get you in the Polo Grounds."

"I'll be down tomorrow afternoon,"
snapped the beleaguered law.

They kept the date. McGraw proved
to be in great voice. This time, the
rookie umpire didn't wait two innings.

"Out you go," he boomed.

"You don't dare," retorted McGraw.
"I'll have your job by June."

Two minutes later, John McGraw was
on his way to the dressing room and
Magerkurth's tempestuous career was
in full tide. Thirteen years later, he is
still very much on the job.

"You bet he is," Brannick agreed,
"and the funny part of it is Mr. McGraw
was one of the first to go to bat for him.
Just a few days before he retired we
were having a sandwich under the
stands when Maje came by. 'There goes
one of the best umpires I ever looked
at,' he said. 'He's the absolute boss out
there. Nothing halfway about him. He
has good judgment, and he's so honest
it scares you.'"

Baseball Always His First Love

All in all, Maje has no cause for re-
grets, either. He's come a long way and
he's had a grand time doing it. Base-
ball was always his first love, though
he was a better football player. He was
a crack guard on the Moline Indians
who won the Illinois state champion-
ship of 1916. Among the fellows he
mussed up along the way was George
Halas, whose Staley Starchworks team
was the forerunner of the mighty Chi-
cago Bears. But he was in his own
words "never any better than a Class D
catcher" in baseball.

As a matter of fact, he had quit the
game forever, long before he ever
thought of umpiring. "I had given up
the game and taken a good job in a Mo-
line plant when the postwar depression
of 1922 threw me right back into it. After
I'd lost my job, Mike Sexton, president
of the Mississippi Valley League, called
me up and asked me how I'd like to um-
pire. 'No,' I told him. 'I'm not cut out
for that.' But the money finally broke
him down. 'You can't feed five kids on
air,' he added.

He had a few tiffs that first summer,
including a locker-room argument with
Iron Man Joe McGinnity, who was man-
aging Dubuque at the time. "I told him
he was too old to fight and took on his
first baseman in his place," Maje
chuckles. "Afterward, Joe and I became
close friends. He was the first guy to
predict that I'd hit the big time. 'You're
a big-league ump, Maje,' he used to say.
And later when I did get up there, he
used to come around to the Polo
Grounds and say I told you so."

That fall, Maje was sold to the Inter-
national League for \$500—from Class
D to Double A in one year. He had his
high spots there, including four riots in
four days at Newark, "when Fred
Brainerd kept telling me how to run a
ball game."

"The toughest afternoon I ever had,
though," he insists, "was at Baltimore
in 1923. The Orioles had Lefty Grove,
George Earnshaw, Max Bishop and Joe
Boley and a lot of other fellows who
were going to make history for Connie
Mack in Philadelphia. They were the
Yankees of that loop, the best minor-
league team of all time."

"One day they were playing Buffalo
and beating them as usual. The Bisons
didn't like one of my decisions. After
the game Jimmy Webb, Bill Kelly and
a few others were waiting for me under
the stands. One of them hit me in the
puss with a bag of balls. Another
jumped me from the rear; and a third
around the knees. There were about
six of 'em altogether and it was a whale
of a scrap. I gave 'em as good as I got,
too. I threw one of them clear through
the clubhouse door."

The next stop was the American As-
sociation, and from there he would
probably have gone to the American
League but for the fact that Ban John-
son and Thomas J. Hickey, president of
the A.A. weren't speaking, and Hickey
wouldn't let him take Johnson's offer.
That really burned him.

"I was spoiling for a fight when the
'27 season opened," he admits, "and I
got it—with Ivy Griffin of Milwaukee.
Hickey fired me and fined me every
cent of my salary. I went to Judge
Landis and he fixed things up so that I
could accept Harry Williams' bid of a

job in the Coast League. I'll
be grateful to the Judge for
that." Baseball was pretty rou-
tine in the late twen-
ties. But it didn't take Maje long to
fire out. After he had thr-
Vitt, then Hollywood manag-
both games of a double-hea-
the largest crowd in Coast
29,000—and had been backed
league heads for doing it, it w-
that the umpire was back to s-
didn't have any trouble after
added.

Two years later, he was ca-
majors, threw McGraw out
turbulence, now in its 21st sea-
rolled into high gear. For al-
cosity, the moment he recalls
pleasant one. Strangely enou-
that few recall.

The Babe Strikes O

"The time at bat," he recal-
Babe Ruth hit the most fan-
run of his career—the one c-
Root of the Cubs in the 19-
Series at Wrigley Field on
called the turn—he struck ou-
the third one on him. The Bat-
as if to protest. 'Right down
Babe,' I snapped before he c-
ed. He looked at me, chu-
started toward the dugout. 'I-
truth,' he grinned as he thre-
away."

Hurry-Up Joe

Continued from page 19

the University of California at Berkeley learning Chinese. Thus he went out to the Orient to attend to the American embassy in Peking.

One day and another, he had learned about civil engineering, and the government lent him to the Chinese government to build an eighty-mile highway in mountain country near the border in Shansi Province. Uncle Joe considers this as quite a job. He had 100 coolies working, speaking varying dialects and knowing about road building. The country was thick with grave mounds, and he had to go around every one to avoid its ancestral spirit, showing its grave, should cause calamity to bust loose.

Uncle Joe's reputation for pithy remarks on the trials of Army life dates from his stretch of highway.

His mental tour ended in '23; he went back to the Infantry School at Benning, Georgia, finished that and came to the Command and General Staff schools. Then he went to France, to serve with the famous First Infantry—the "Can Do" regiment—in Tientsin. A few months of peace went up again to become staff for American Army forces in China.

At that period he grew to know Generalissimo Chiang Kai-shek and other Chinese leaders and so became a "natural" when he needed a good man in the Orient in the year.

In '29 he was back at Benning teaching infantry tactics; six years later, he was back again. During this service he learned several definite ideas about the Japanese, who were shoving their noses off the sidewalks wherever they could get away with it. Mrs. Stilwell's husband was threatened by a dagger-wielding Japanese soldier—something she remembers very frequently.

Uncle Joe came to America in '39, Stilwell sent him to Houston, Texas, to command the Third Infantry Brigade. In the year of that year, he was made a brigadier general. In October, 1940, he went again to major general and took over command of the Seventh Division at Fort Ord on Monterey Bay, and later the 7th Army Corps. He got his rank of lieutenant general at—Cairo, Egypt, early in 1942.

Officers Who Disappeared

At Fort Ord job with the Seventh Division brought out Stilwell's genius for picking raw recruits into hard, fast fighting units. He didn't spare himself or his officers. If the officers failed to live up to his exacting physical and mental standards, they just disappeared on easy-going outfits. During field maneuvers he spent his nights in a sleeping bag more often than not and usually passed up the officers' mess for a bowl with his men.

Uncle Joe summed up his creed in a talk to the Seventh: "We don't expect you to be more than you're capable of," he said, and added with a grin, "but we expect you to try it!" He rewarded initiative and inventiveness, and officers had a tendency to drift along on the methods of past wars came to know that Stilwell was sometimes known as a general.

Mrs. Stilwell was Miss Winifred Stilwell, a belle of Syracuse, New York. She accompanied her husband on most of his Oriental tours of duty and together they became impressed with the

Chinese philosophy of the importance of the family unit. Two of their children were born in China: Ben, now thirteen, in Tientsin; and Alison, also in her teens, in Peking.

The other three children are Nancy, now Mrs. E. F. Easterbrook and the wife of an Army captain; Winifred; and Captain J. W. Stilwell, Jr., who is with the Seventh Division. Both Nancy and Joe, Jr., have sons of their own.

All the Stilwells speak Mandarin, and Ol' Pappy, in addition, knows several Chinese dialects. When they were all together at Llanfair before we got into the war, they often staged playlets for schools and clubs around Carmel, appearing in Chinese costumes they'd brought from the Orient.

Alison and Winifred both are proficient in Chinese art and music. The grandchildren—John Edmond Easterbrook and Joseph Warren Stilwell III—both seem to be headed for West Point.

During peacetimes, the Stilwell family is a closely knit unit. The custom for years was to designate one member to prepare and deliver a talk on some interesting subject, at dinner one evening each week. The rest of the family quizzed the talker afterward, and thus all of them became well versed in widely varied subjects.

His Philosophy of Attack

Uncle Joe has a dry humor, but seldom laughs out loud. His face is lined and tanned, and his specs give him a mild, schoolteacherish appearance. His men say he's "common as an old shoe"—and they respect him for it and his lack of pose. His feats of pedestrianism are famous.

Down at Fort Ord, the colored boys of the Quartermaster Corps used to threaten to "put General Stilwell's shoes on yo' lazy feet" to stir up recalcitrant mules.

Uncle Joe's main objective in training troops is to "develop an army that can think for itself." The result, at his training station, was a group of mobile, highly trained units that could work well singly or in any combination. Test after test turned a mob of civilians into one of the world's best fighting forces. In maneuvers simulating warfare, the Seventh's units were always turning up, embarrassingly, where they weren't expected, paying little attention to slightly antiquated "rules of warfare."

According to war dispatches, Vinegar Joe was breaking rules out in Burma not long ago, leading Chinese troops, in shirt sleeves, on the Irrawaddy and Sittoung River fronts. Americans out there were predicting he'd have more medals to hang alongside the French Medal of Honor and his World War medal with three citations.

His grim determination, his insistence on fighting a 1942 war with 1942—or maybe 1943—methods, and his philosophy of attack instead of defense, are his strongest assets—and probably ours—in his present job. Waiting for the other guy to hit you and then warding off the blow is something Uncle Joe doesn't believe in.

"We mean business," Uncle Joe says briefly. "We won't be satisfied until we see American and Chinese troops marching together through Tokyo."

When they do, it's a safe bet Uncle Joe with his little stick will be way out in front, and the boys in khaki will have to double-time every once in a while to catch up.

control most, if not all, of the world trade routes once dominated by Great Britain. Whether the peacemakers will try to hand these routes back to Britain is a matter of conjecture. But there isn't any guesswork about what the policy of our Maritime Commission will be.

According to some of the best-informed practical minds in Washington, it will fight to the last congressman any idealistic attempt to re-enact the tragedy that followed Versailles. There may be a lot of forgiving and forgetting, but it will not be at the expense of our merchant marine, the Washington prophets declare, amid a chorus of "Amen" from American ship operators.

In order to give you a long view of the Commission's training program and why 15,000 youngsters are enrolled at the Commission's six schools, we must see what happened to our old merchant fleet back in the early 1930's. We built about 2,300 steel, wood and concrete ships during the World War and about 800 of these had been sold to private operators prior to 1920. The shipping board, that year, pointed out that of the 1,502 ships then under the board's control 479 were laid up. By the end of 1920, however, the shipping industry was hit by a world-wide depression. Every wooden freighter flying our flag and 750 steel ships, 5,000,000 deadweight tons of steel, were idle at the docks. Only 485 ships remained under the board's control.

Atop this, the equipment was becoming obsolete. The life of a ship is twenty years. The bulk of our merchant fleet was headed for the dismantling yards when Congress, in 1936, decided to do something. It set up the United States Maritime Commission, and the fiery Joseph P. Kennedy, who later became our Ambassador to Great Britain, was made its first chairman.

Digging for Evidence

Chairman Kennedy and investigators spent a year in taking the merchant marine apart to find why it wouldn't tick. Among other things, including subsidies and the wide variance between American and foreign ship construction and operating costs, the survey dug into the whys and wherefores of a plague of water-front strikes. Some of the evidence, especially that portion dealing with the activities of racketeers and agitators within the maritime unions, is revolting.

Conditions in the merchant marine were bad. After the Morro Castle fire horror, the Coast Guard reported that "leadership and direction of the crew were conspicuous by their absence. There had been no regular fire drills..." The mutiny of the crew of the *Algic* in the harbor at Montevideo was another danger signal. In spite of these things, Labor Secretary Frances Perkins calmly told a congressional committee that "the time is not ripe for special maritime labor legislation."

Kennedy made public the whole grisly story of conditions aboard passenger ships, including thousands of bitter complaints from travelers—which showed Congress why passengers were boycotting American vessels. He produced letters from women protesting against being awakened in the state-rooms by union stewards with a cheery, "Hi, Babe, get up!" Other stewards, the file showed, had conducted escort bureaus for lonely women and had molested girls in dark corridors.

The Kennedy revelations were equally frank concerning conditions un-

der which some ship operators forced their crews to exist at sea—cold, crowded, dirty forecastles, lack of bathing facilities, poor food.

Using the Kennedy report as his Bible and adding his own ideas, Admiral Emory S. Land, who is Chairman of the U. S. Maritime Commission, had gone a long way toward putting our anemic merchant marine back on its feet when Hitler sent his legions into Czechoslovakia. Through generous construction subsidies, scores of worn-out ships had been replaced by new, fast freighters. Ship designs, such as the popular C-2's—Diesel-driven speedsters ranging from 6,000 to 10,000 tons—were standardized. A lot of old equipment was sold and the proceeds were turned back into the building program.

When Congress passed the Neutrality Act that barred American ships from the war zones, the admiral and our heavily subsidized operators had built up a fleet of around 1,500 vessels. Out of these, 350 were engaged in foreign trade when the Act forced the transfer

Gallup's Island, near Boston. In addition, the Commission operates two schools for officers—one at New London, Connecticut, hard by the Coast Guard Academy, and the other at Government Island in San Francisco Bay. It also contributes to the upkeep of state schools for merchant-fleet cadets operated by New York, California and Pennsylvania.

"You'll find boys here from every state," explains Commandant William Kenner, of the St. Petersburg training school. "Sixty per cent of them are Irish and very few—not more than ten per cent—have ever been to sea. We like them that way. The greener they are, in most cases, the better sailors they make."

To get into the Commission's apprentice-seamen schools, the applicant must be a citizen between the ages of eighteen and twenty-three and be able to pass a pretty stiff physical examination. Youngsters under twenty-one must get the consent of parents or guardians. Once a trainee graduates and joins the

Master sailmakers showed the usual of the marlinspike and have been spent in launching lifeboat wharfside davits. They had lived of the eight big steel-and-concrete racks, each man with a comfortable locker for his gear.

Our entry into the war found Commission trainees already instruction from Navy and Coast Guard officers had begun in both anti-aircraft guns and caliber weapons for use against submarines weeks before Japanese struck Pearl Harbor. Today instruction at all Maritime Commission training stations goes forward with doubled intensity.

"We are confident," said an officer at the St. Petersburg station, "that young seamen will be able to hold their own against the best forces can throw against them. They will be able to point, load and fire a piece of the ship's armament, and they're just itching for the chance to go into action against the enemy."

Trainees Choose Their Service

Trainee Wade and the rest of the class had gained an average of ten pounds per man, thanks to the fine mess you'll find at any of our military or naval establishments. They could choose one of four branches of service—deck, engine room, stateroom or radio communications—before they had completed their first period and were transferred to the 10,000-ton freighter, *American*, which the Coast Guard has converted into a seagoing school.

Once aboard the *American*, the trainees were assigned to the departments of their choice. Young Wade had picked the deck. His sights were on an able seaman's ticket. For four glorious months, Trainee Wade had cruised the Caribbean, had stood watch in fair weather and howling gale. From the rigging of the bridge, Trainee Wade had taken signalers on passing ships, the semaphore and Aldis lamp. He had helped launch lifeboats with the can Seamen steaming full-speed—a maneuver that requires split-second timing. He had returned to St. Petersburg a better seaman than he had been in our old merchant marine, and he was sent to the Maritime Commission "pool" at Gallup's Island, from which are dipped the crews for our merchant fleet.

In the early days of the training program, the unions sat in judgment of most of the Commission's activities. Once the embryo mariner received his able seaman's ticket, steamboat inspectors, he found himself of three roads—membership in the L. or C. I. O. union or an open-shop or company-union joined either the A. F. of L. or was compelled to take his chances on the long waiting list. Waterfront jammed with the unions' union. How many were on the beach, knows. Union officials, testifying before congressional committees in battle to block the establishment of a Maritime Commission school, total at 15,000.

Union spokesmen didn't tell the committee, though, that most of the jobless sailors were physically dangerous agitators and had f

of 80 to new routes. Meanwhile, Axis submarines, bombers and surface raiders were taking a terrific toll from Great Britain's merchant armada that had dominated the seas. Route after route, once served exclusively by British merchantmen, slipped quietly into the hands of American operators. And all this meant increased demand for new American-built ships, aside from Britain's frantic call for anything that could float.

Consequently, Congress voted \$3,000,000,000 for new ship construction, which means a postwar American merchant fleet of more than 2,500 ships.

Speeding Up the Ship Program

By midsummer, 1941, two new ships were sliding down the ways every day and they're coming off now at an ever-increasing rate. So we're getting the ships and the men to run them, too, because the Maritime Commission's shipbuilding and personnel training programs are operating like parallel assembly lines. For every new ship, there's a crew waiting.

This brings us back to the parade ground at St. Petersburg. There are counterparts of the St. Petersburg school at Hoffman Island, in New York harbor; Fort Hueneme, just up the California coast from Los Angeles, and

fleet, he is classified as a worker vital to defense. Draft exemption ceases the moment the trainee is washed out. However, less than two per cent ask for a discharge and few are sent home for misconduct.

Once a boy feels the urge to go to sea with the merchant fleet, just as Trainee Wade got the idea from reading *Moby Dick* and other briny tales, he writes the nearest Coast Guard or Maritime Commission recruiting station for an application blank. If he doesn't know the address, any postmaster will tell him.

"Within a week, he will be notified to report to one of our schools," explained Commandant Kenner. "He must pay his way here and, if he fails to pass the physical examination, he must pay his way home. Our tests are not unusually severe. Once the applicant is okayed by the doctors, he takes the oath and goes right on the pay roll at \$21 a month. He must promise to serve one year with the fleet after completing the course."

Trainee Wade and his shipmates had spent their first eight weeks at the station under Chief Bos'n Donegan. He had driven them hard. They had marched miles in close-order drill. They had toiled on the business end of a lifeboat oar until they were bug-eyed from exhaustion. They had been taught the mysteries of twenty kinds of knots.

jobs ashore. They did not tell sorted rackets in union "hiring ow job seekers were moved up ts after paying heavy fees and ed to pay from \$2 to \$50 for the of working.

are two courses of training, engineering. The first two spent at sea with the merchant

fleet, under the supervision of the ship's officers or, when in port, Commission instructors. The third year finds the cadets ashore at one of the academies and the seniors go to sea again.

But Trainee Wade, once he joins the fleet as an able seaman, can win his way to the top, if he studies hard, keeps his discharge book clean of black marks and remembers the lessons taught by Chief Bos'n Donegan. A class of 200 unlicensed seamen last July formed the first class of a special five months' course the Maritime Commission is offering ambitious youngsters who want to become third mates or third assistant engineers. This class was put in school at New London, Connecticut, and another class of 150 men was formed later at Government Island, California.

So the future is strictly up to young Mr. Wade. He can stay with the merchant fleet for the duration and then come back to that farm in the Ozarks. Or he can follow the way to promotion and pay until, one fine day, he'll dazzle the homefolks back in Mountain View with a peek at Third Mate Wallace Wade wearing his first dress blues.

it Ca e gets killed in his act, he nks i knows how it will happen. ll tu a back somersault too far, d the ire will break either his back his ck. That full gainer he has ded to is act in the past two seasons mak him worry about a possible ident or the first time in five years. He or had a close call in Houston, e used to make his entrance

as a drunk—stagger along the wire, lurch around, and finally take a four- teen-foot fall on the back of his neck in the ring. That night he lit half a de- gree crooked and smacked himself silly. He finished the act by instinct, but his strained neck muscles wouldn't let him sleep for three weeks.

He carries a death or total disability policy for \$10,000, which is the maxi- mum Lloyd's will allow him, and he has saved three quarters of his salary over the years. The sock ought to be bulging by now. Castle is not with Ring- ling this year. He's with Cole Brothers Circus which opened in Louisville, Ky., this spring.

Each season he introduces a new trick. One year it was a "half-twisting jerk"—he stood on his hands on the wire, then sprang back to his feet, facing the other way. Another year it was the back somersault through the hoop. Then he did "rocks" on his unicycle on the wire—swinging it back and forth with one foot on the pedals. He now has three new ones—the full gainer from the bar, the bowling-ball trick, and a somersault to the wire from a knee- hang on the bar.

A new trick will top them all, if he can master it—a forward somer- sault through the hoop. A simple for- ward is no harder than a back, but it's more dangerous. If his feet miss the wire, he hits it with his face. But a forward through the hoop is far harder, as well as riskier. In a back, his feet turn toward the hoop. In a forward, they turn away from it; the hoop has to chase them around.

Castle admits that he has doubts about this trick, but only because he doesn't think the audience will realize how extremely difficult it is. Some- thing that makes him more indignant is reading an "eyewitness" description of a wire trick physically impossible—say, a double somersault, feet to feet.

"Nobody in the world has ever done it," Castle declares, "and nobody ever will! You'd be turning too fast to see the wire, and if you can't see it you can't hit it and stick . . . and that guy Blondin, too—doing his impossible somersaults on stilts, in the encyclo- pedia!"

"Hush, Hal," reminds Mary.

THE END

Here is 1942's

WOMAN OF THE YEAR!

Hats off to the woman of the year! For the duration, she has abandoned her typewriter to volunteer her quick hands and steady nerves where they can speed the biggest job our Uncle Sam ever had.

Mutual Life is tackling its biggest job too. The job of providing Ameri- can families with the immediate pro-

tection so urgently needed in these uncertain times. The job of provid- ing this insurance protection at a price pinched budgets can afford. Ask your local Mutual Life representa- tive about our 4 new policies stream- lined for wartime needs. They offer you a choice of large insurance se- curity for a small cash outlay.

"What \$10 a Month in Premiums Can Do Today" is our free new booklet for the family head who wishes to plan wisely for the future, but must budget closely. Write for it today.

wasn't looking. The only problem in her life was the drought, which went on discouragingly year after year like a session of Congress.

She wasn't a very sophisticated kid, at that time. The farm, remember, was seven miles from town and there was always work to be done at home, work which meant rising with the cock and retiring eight-and-a-half minutes after bossy. She only really saw the bright lights of Denison on Saturday night. Then her father loaded the entire tribe into a somewhat exhausted car, put the surplus butter and eggs into the back for the market, and made the pilgrimage to civilization.

Saturday was a big night in Denison. Every farmer for miles around shut up his barn, put his house key under the mat, and gathered kith and kin into some kind of a conveyance. He joined his friends in the metropolis as the lights were lit, and greeted them like long-lost sailors. The stores and the streets became crowded with gossiping housewives, idly chatting men, and children of all ages and sizes. The movie house was packed for both the early and late shows. The soda fountain did a roaring business.

It was there that Donna got her training for Hollywood. For it was on those Saturday nights that the real dirt of Denison was dished. No one was spared. News circulated up and down the main drag, into the theater, through the booths in the drugstore. The housewives buying salt and the men paying a nickel for a chew threw out seines of hearsay and brought in catches of solid information. It was a fascinating three hours. Everybody knew everybody else and everybody's business. On Saturday, after the week's work was finished, the town caught up with current affairs.

That's just like Hollywood: Everybody knows everybody else and everybody's business. The only difference is that the gossiping is not reserved for Saturday night. It goes on, week in and week out, year in and year out, with a reckless abandon that is terrifying. Careers are made and broken by it. Slander and scandal are taken for granted. If one stays in the city long enough, in fact, one begins to forget that the rest of the world exists.

And any newcomer who can skip it all is bound to be a sensation.

Donna was. She knew the technique before she even got her contract. After that, it was a cinch; she just didn't do anything scandalous that people could discuss. It was as simple as that.

College Girl in Hollywood

She didn't come to Hollywood to get into pictures, oddly enough. She came in acceptance of an invitation from her aunt, who offered her a year at Los Angeles City College. Without this parentally approved haven, she would undoubtedly still be in Denison. Anyway, the year lengthened into three and, though she was aware that movies were being made a few miles from her, she didn't pay much attention to them. She was too busy studying drama and learning how to be a passably good secretary. (Iowa is notoriously devoid of millionaires to marry. Donna knew, therefore, that she had to prepare for her own shekel-making.)

Then she was elected Campus Queen of City College. It was great stuff in the school. But a thousand girls get that sort of publicity every year and nothing comes of it. A photography major took a picture of her. That, too, is done with

Farmer's Daughter

Continued from page 13

revolving regularity. A journalism major sent the print to the Los Angeles papers, just to see if he could "plant" something.

"The shot arrived at the Los Angeles Times late one Saturday afternoon," Donna says now. "And the editor evidently didn't have anything to fill in the Sunday editions. So he put it on the front page."

That also has been a Hollywood custom since back in '02. The town's newspaper readers regard a cut of a pretty girl with much the same excitement as a vegetarian holds for a gallon of corn-beef hash.

But, for some reason, this picture and Donna Reed's face were unusual. Perhaps she looked like a farm girl. Perhaps her make-up had not been put on with a trowel and she wasn't swathed in silver fox. At any rate, the following day brought seven telephone calls, three from studios and four from the strange mutations the world calls "agents." All seven wanted a look at her. And, depending on the verdict after the gander, all seven wanted a piece of her future earning power, if possible.

This was when Donna first showed the bright boys that her noggin was still screwed on with Midwestern straightness, that the studios and their henchmen could not impress her.

She talked to the people, yes. Then she talked to some other people who could tell her about the first people. She came out of this series of conferences with the information that one firm of agents, Feldman and Blum, was among the best and biggest in the city. So she went to see them.

They wanted to put her under contract as soon as they heard about the two years of dramatic training she had received at City College. When she read for them, they wanted to get her a test immediately, see that she went to work, collect their ten per cent. Blissfully, they began dreaming up a new handle to substitute for the moniker of

Mullinger. But Donna had other ideas.

"I want to finish the course," she said, very quietly and very firmly, smiling across the desks of Mr. Feldman and Mr. Blum. "You see, I might not be in the movies. Then what would I finish this semester, I shall know how to be a secretary."

"How much longer do they continue?" F. and B. asked.

"Three months," Donna replied.

"Three months!" they yelled in a yelting chorus. "But Hollywood have forgotten all about you now?" Donna inquired.

The Heretic Miss Ree

It was heresy. Here was one of the biggest outfits in town, which practically assured her a screen at a major studio and a subsequent contract—and the girl insisted on a secretarial course! Messrs. Feldman and Blum were appalled. They were shaken. But they were also over by her sane, casual view of the picture business in general. They acquiesced. Wagging their heads, they pulled out a forty-page contract, read, "Commencing three months hence..." and Donna signed. She went back to learning to type.

It was a Midwestern way of business. It was the careful way she had learned on a farm. She went ahead, as she had watched her father look ahead in years of drought, protecting herself in case of an unknown field by learning a trade which she could always fall back on.

Three months later, a secretary with finger tips, Donna once more appeared on the hallowed doorstep of Feldman and Blum. She went into the room to become movie material. This time, in the main, of six weeks' coming

"Here comes my dad. You'd better put out the lights if you know what's good for you"

SAID ROTH

and diction and a quick switch to the same department. The boys did things to her appearance, too, but not much. She could stand alone. She had soap-and-water kind of beauty that made her noticeable among the make-slathered maidens already in the picture.

After that, she had a test at M-G-M. They gave her a contract. Then she had another test. They gave her a lead in a picture called *The Getaway*. She was a little nervous about that. She thought the moguls were being a mite lenient. Anyway, as simply as that, she began her career. Ever since, she has been making movies, better and better ones. (M-G-M got her out of the popu-lar class in a hurry.) Her last three were in the shadow of the Thin Man, The Purloined of Andy Hardy, in which she stole scenes from Rooney, and *Random Harvest*. And, brother, that ain't bad for a finer's daughter!

But she continued to astound the naves as much as she had upset the men- balance of Feldman and Blum, Inc. Her wives, for instance, couldn't date her, brier on her door as they would. She was "busy." Which, incidentally, was a trip. Since the fifth of December, 1941, she has not had a day off. She staggered out of bed at five-forty-five A.M., faced a camera all day, came to dinner, studied a script, retired at nine o'clock, and risen with the farm- again. (Reed: "But even on a farm there's an *occasional* holiday!")

Quiet Saturday Night

Instead of Ciro's, on Saturday nights she goes to some quiet spot with a friend named Bert Todd, whom she knew in high school. He's a nice lad, totally unimpressive. He works for a construction company. He isn't glamorous, but he's fun. And he's a good listener. When Donna falls asleep, he reads her a book. "Kay Kyser it has nothing to do with that gentleman's personality—or his. It's just that he has worn her out."

she destroyed the routine, too, when she continued to live where she had been when her contract first made her dependent of her aunt: The Hollywood Radio Club. This, as you may have heard, is an abode for professional artists. Her man is allowed above the first floor. Her rent is comparatively low. And, even though M-G-M has lately granted Donna a salary bonus as a pat reward for excellence, she has not moved any nearer to a swimming pool and a five-acre garden.

ood doesn't get it. The pseudo-
ave tank she's kidding when she says,
rious: "I'd like to win an Academy
ward me day, and then get married.
aybe I'd like to get married first.

though, and have five or six children." She'll do it, too, all of it. They think it's a new kind of gag when she remarks, forthrightly, "I'd like to buy the very best farm in Iowa. Farming's the only thing I know for sure!" The painted fillies are completely boxed up when they hear their escorts muttering about Donna's simple clothes and clean appearance, about how vastly attractive she is, just as she is. "What goes?" they scream, red fingernails reaching for the Reed head. The town can't fathom her sense in buying a dark, conservative coupé for her first car, when she could have purchased a flaming convertible with a top that went up and down automatically.

She's changed very little, really, since she got her contract. She could go back right now to her original plan of becoming a secretary.

She still likes to design her own clothes, but they're usually quiet things of excellent taste. She sits and dreams up superfancy outfits for her friends which she'd be terrified to wear. She goes beautifully and blissfully mad on the subject of shoes, and has four versions of one high-heeled pump with gold nailheads on the soles. But she doesn't truly like getting dressed up like a "movie star."

"It's awful of me, I suppose," she says. "I really get sharp for my one date on Saturday night. The studio—God love it!—would completely approve. But about nine o'clock, off come my hat and my earrings and I put my gloves in my pocket. Then I have fun!"

She still likes to ride horseback, too, but seldom does so any more because her manner of doing same knocks Hollywood into a figure-eight. She learned on a farm, remember.

"There's nothing Central Park about my riding," she reports. "It's bareback and it's wild. I wouldn't know how to stay on a saddle!"

This, in the home of Gene Autry!

The result of all this is that Donna Reed is a very much discussed gal in cinema circles.

In the cocktail lounges and the supper clubs, she's an enigma. For she's never seen in the joints. She's as much a hermit as Garbo, as far as café society is concerned. So they chat about her for hours. And they discuss her, too, in the offices of the gents who cast the pictures. She's up for stardom. They talk of borrowing her now. They talk of her last performance and her next option. They team her with Colman and Rooney. They worship the wench.

And all because she's a kid of twenty-one who learned something that utterly befuddled Hollywood. Normalcy. No, I'm wrong. She didn't learn it. She was born with it—on an Iowa farm!

POTLUCK

By Kyle Crichton

ILLUSTRATED BY MARIO COOPER

FRED knew he was getting into something when Amy started raving about the Lockwoods. Amy had met Kate Lockwood at First Aid and the friendship had quickened rapidly and now the Mitchells were going over to have dinner with the Lockwoods.

Fred worked in the heavy armament purchasing division of OPM. Harold Lockwood was feature editor of the Gazette and a man of some importance around town. Not everybody was invited to the Lockwoods, said Amy proudly.

Kate Lockwood met them at the door with shouts of joy and they were no sooner in the living room than Harold came forward. This would have been pleasant enough except that Harold was wearing an apron. Harold was the cook.

"Can't wait for the maid's night out," cried Kate, pointing ecstatically at Harold. "They don't fool him with the woman's page recipes; he tries them."

She went out and came back with a tray of glasses and a decanter. Fred perked up. He perked down when he had a taste of what Kate was serving.

"You're going to like this," bubbled Kate. "It's an aperitif. The French always have it before a meal."

Amy cooed in appreciation but what Fred needed then and for the rest of the evening was a succession of slugs that would knock him unconscious. For Fred the meal was a nightmare, with the proper wine for each course, and much talk about condiments, garlic-rubbings, enbrochette, and something called saffron.

Fred was a plain man. He had nothing against fancy cooking except that it didn't agree with him. In fact, all night after the Lockwood meal he tossed in his sleep, and straggled off to his office next morning more dead than alive.

What was worse, the Lockwoods admired the sterling qualities of the Mitchells so greatly that they started dragging them around to strange little restaurants where Harold presided as a connoisseur of fine cooking.

As Fred's misery mounted, Amy's enthusiasm waxed and the ultimate was reached that night when she welcomed him home from work with the triumphant words: "I've landed them! They're coming over Thursday night."

Fred groaned inwardly but said nothing. When he came down for breakfast Thursday morning, Amy was already making tentative dabs in the kitchen. She was also worried about something.

"Your sister would pick this time to send the children over," she said. "They're coming for lunch tomorrow, and I have to be at Red Cross in the morning."

"You invited them to the circus, didn't you?" said Fred.

"Oh, it's all right," said Amy. "I'll cook something ahead for them today, a pot roast or something. . . And, Fred, don't forget the wine."

Fred said ummm and took the list and grunted and departed.

When Fred left the office that afternoon, he decided to drop in at a bar and have a drink before he bought the wine. In fact he had five drinks.

When he got home, Amy was working

furiously in the kitchen. Shortly after the Lockwoods arrived, and Amy went out to meet them. They talked a while and then Fred said, "Well, I guess a little shot of something wouldn't hurt," and went to the kitchen to prepare it.

It was no surprise to Fred that he had something besides wine. He had ordered the liquor very early. He had brandy and bourbon and scotch. He took a cocktail shaker and threw a sizable gob of each into it. Then he shook well and set the shaker on a tray and added glasses.

"Ah," cried Kate, "an aperitif."

"No, it's a little mixture from the Russians," said Fred. "Something like vodka but they call it kabooshka. Bottoms up."

"Kabooshka," said Kate. "What a strange name."

She reached for a glass and also took one. Kate tilted the glass downed it, gulping a bit hard but seemingly enjoying it. She took another. Fred took another. Harold considered the matter for a moment and then on a second. This proved such a notion that they took a third, and . . . All but Amy.

Amy went out to the kitchen and brought back the soup. They took to their places a bit ostentatiously. Fred made a sort of noise with his soup. He gulped. Amy got red in the face.

"Fred," she said hastily. "I think you should get the wine."

FRED got up and went out and was gone a long time. When he came back he had no wine but he had a large plate loaded with four plates, filled with something that looked like a new course. He shoved the plates in front of the guests.

"Fred!" screamed Amy, but Kate and Kate seemed not to hear. They were tasting the food avidly.

"Amy," cried Kate happily. "Did you ever happen to think of this? It's wonderful!"

"Did you ever taste such a thing?" Harold cried loudly.

"Oh, Amy," caroled Kate. "What is it?"

"Pot roast," said Amy icily.

"No, but the way you've fixed it, must tell Harold how you've done it."

"No, no," said Harold, his face rather full. "It isn't sporting another chef's secret."

They were still exclaiming and congratulating Amy and themselves when they left. Fred had said little. His first definite words were the Lockwoods had gone.

"Amy," he said, "what did you do with that?"

"Salt," said Amy furiously. "I know those brats won't eat it unless you put even a pinch of pepper in it. She buried her face in her hand and roared!" she said venomously. "I spent five hours over a hot stovetop cooking Boeuf Bourguignon and Zucchini Milano and—"

"Oh, you know how children are," Fred consoling.

"Don't talk to me about the children or your silly Lockwood friend or anything else," wailed Amy.

"My friends!" exclaimed Fred.

"Yes, you and your drunker friend," cried Amy, and broke into a spasm of patted her shoulder and thought of dinner and of the future. Her future was going to be all right.

Amy met Kate Lockwood at First Aid and the friendship quickened rapidly. Now the Mitchells were asked to dine with the Lockwoods

A SHORT SHORT STORY
COMPLETE ON THIS PAGE

Flight to the Sun

Continued from page 42

"You know, it's funny, John." Tap looked at us. Like a couple of down ducks. I'll bet Hickey could see us if he could only see us. "I wonder where he and the others are. I suppose they're in it somewhere. They've gone back to Egypt." "I don't think so," Quayle said. "What would it make anyway?" "Hickey must have a whole new set of his hands." Quayle laughed and lifted the second can to the tank. "We'll see you," Tap said. "I hope they've got some planes. They've got Hurricanes." "You won't be flying for a while," Tap said. "I'm surprised," Quayle said. "Nothing wrong with me." "Are you still going to marry her?" "Mean."

Quayle looked up suddenly. He tilted the can a little higher. "What do you think?" Again he had the old feeling of experienced back at the hospital. There was the strangeness and the thought about Tap and Helen that was sure about.

Quayle poured the last of the can into the tank and threw the can away. He looked around and said to Tap, "We ought to get some water for the radiator."

Tap walked to the ditch at the side of the road. He told Quayle there was water over there. Quayle threw him a tin and Tap crawled down the ditch to get it filled. He came back with a tin slopping over him. The corporal took the tin from him and poured it into the radiator. Tap was standing by Quayle as he closed the boot of the car.

"Where are you going to do with Helen?" Tap asked. "We have to leave this place?" Tap asked. "Leave Greece," Quayle told him.

"Yes. Take her with me." "In a radiator?"

"Come off it, Tap. There'll be a way. There isn't. . . . Sure, I'll fly her out in a Gladiator."

"What about in Egypt? No wives allowed. They sent the last lot home."

"We'll see when we get there, Tap. We can't be wasting time."

Helen had been walking into the timber and she came back again. John looked at her as she walked eastward. She swung her head back and threw her hair back. She had washed her face. He looked at her quickly, with the warmth of a man possessing him. She smiled at him when she reached him. She put her arm through his and placed her hand in his cut one.

"Your face is not so black now," she said quickly, and smiled.

"It feels all right."

"You could let me change the bandage on your head. I have some in my pocket."

"Late," he said. "How're you feeling?"

"I'm good. One would never believe it around here," she said.

"Tap thinks it's too quiet," he said. "Perhaps. I hope it will be all right."

They were making their fast way along the dirt road. Quayle pulled the car to a quick stop when he thought he

heard planes. He took a quick look out but there were none. They were nearing the high rocks which were close enough to shadow the white road between the poplars. Then Quayle saw the airplanes. They were flying low and in large formation. He stopped the car and everybody got out.

"What are they?" Tap asked him.

"I don't know. Could be Blenheims but we haven't got that many."

"They're heading south."

"Come on. We'll keep going. They won't come near us. That's the first we've seen all day. I hope this petrol lasts till we can get more. There may be some in this town."

They could see the timbered and stone outline of Kalabaka ahead of them and they could see the form of the monasteries high on the rocks. They started again.

As they came into the village they could see it was smashed like Ioannina and there was still the white smoke clinging to the wood that smoldered. There was the nakedness of the shells of the buildings. There was the complete loneliness and the splinters of wood, long and jagged, scattered in confusion, and the cold air that was quiet in the warm sun.

"We won't find anything here. It's been bombed too much," Quayle said when they stopped because the road was blocked by a log. Quayle and the corporal pulled it aside.

"We need some more petrol," Quayle said to the corporal. "Do you know where we can get any?"

"We might look around here," the corporal said.

"Ask the little Greek."

The corporal asked the little Greek about the petrol and the little Greek got out of the car and smiled.

"There should be some somewhere here," he said. "We could look."

"Well," Quayle said when the corporal told him. "We can spread out and look. It would be in cans, I suppose, and not in drums. Five minutes. We haven't got time for more. We'll just have to take a chance. Will you wait here, Helen? Tell them to wander out and look about for drums or tins of petrol."

HELEN told the other two and they all walked along the smashed black road and divided into the ruins along the edges of the small village and looked for the cans.

It was death in the village because there was no one there. . . . no one, and the great silence dominated the place. Then the little Greek became quickly surprised when he saw an old man sitting upon a heap of ruins, wide-eyed and with puzzlement in his face.

"Hullo, Father," the little Greek said.

"Where is everybody?"

The old man was silent, then he looked up blankly. "They have all gone into the hills," he said flatly.

"And they leave you?"

"I am old," he said.

"Shouldn't you go too?"

"I am old," he said again.

"Do you know where there is any gasoline?" the little Greek said.

"I am old," was the blank reply.

The little Greek looked at the old man for a moment, made a loud clicking noise with his tongue and walked away.

Quayle was walking through the ruins of a small house to the back where there were wire chicken runs. He could see the mess of domestic utensils strewn out on the earth and the chairs and

tables smashed. He walked to the next place, kicking the rubble and looking in the hollows for any signs of cans. From one smashed place to another he walked over the wreckage and when it crumbled under his feet he noticed how the noise made big the quiet of the place. There was nobody about, and he looked up at the monasteries and wondered if there was anyone in them.

Helen, standing near the car, was wondering about the quiet too. She did not like it so quiet when Quayle was not around. It was not an entirely feminine fear, either. There was uncertainty and hopelessness in the quiet, as it had been back at the hospital in the confusion. It was waiting for something. She could see the quiet in the smashed village as she could physically see the quiet in the confused hospital. It was all the same and it was very depressing. The very desertedness of the place was depressing. She was feeling the quietness getting into her when Tap came back.

"Nothing here," he said to her. "Not even food."

"How far will the petrol get us?" she asked.

"To this next place maybe. This village looks as though everybody just up and left it."

The corporal came back, wiping his hand on his trousers.

"If we were only nearer Germany and could do this to their towns," he said to Helen.

"Did you find any fuel?"

"Nothing. I thought I saw a tin but there was a man very squashed." He wiped his hand again.

"Nothing doing," Quayle said when he came up.

Only the little Greek was not back. "Maybe he's left us," the corporal said as he got into the car.

"He will not do that," Helen said. "And please let him be."

The little Greek came, and Helen watched his small face, with its tight eyes over the creased nose and cheeks furrowed like his forehead; and she studied the black stiff hair of his head and beard and the smallness and bentness of his frame. His eyes blinked quietly when he was near her but he said nothing and got into the car. Quayle started the engine and moved off quickly. He did not go fast but he went fast enough, so that too much of the gasoline was not used. They passed the long shadow caused by the rock with the monasteries and they were on the flat road again, passing over the small bridges that were bomb-cratered around. All along the road now there were the fresh-earthed craters from the fifty- and hundred-pound bombs.

THEN it was quietness again. It was flat, and the green rolled quietly on each side of them. There were numbers of small bridges, and Quayle expected them to be blown up but none of them was. The long canal that he could see winding at one side had been hit by light bombs but nothing had been damaged.

There was quietness between them too. Sometimes they crossed railroad tracks that had suddenly appeared, and it was more like a returning to inhabited parts because of the long stretch behind them. They passed peasants and their sheep at the side of the road too. Tap wanted to stop and have Helen ask them about the Germans.

"They might know," Tap said.

"I don't think so, Tap," Quayle said. "We haven't time. We waste petrol anyway."

"I hope it lasts through this next place," Tap said.

"Maybe the Australians are there."

"I think that was part of the Greek front."

"I suppose this will all end in another Dunkirk," Quayle said quietly.

"It's too bad if it does. What could we do, though?"

"I don't know," Quayle said. "There seems to be something wrong."

"Maybe. We just haven't got enough equipment," Tap suggested.

"It's more than that."

"We could do with more men, John. We haven't got a front, either. I get sore every time I think of France caving in like that."

"I don't think it would have made any difference," Quayle said.

"Well," Tap said, "we would have had a front."

"I think we would be badly off even if we had the front."

"Why doesn't somebody do something about it?"

"I don't know," Quayle said. "I don't know."

THEY were crossing the railroad often now, and the trees were definite in the way they lined the road. They passed through the quiet mud of a bombed village.

The village was deserted; Quayle saw a broken poplar for the first time as it flicked by the window and he did not like it. There were definite mountain shapes to the left of them, and more obscure ones to the right, and a river with trees along it.

At high noon Quayle heard the bombers again. He stopped and stood on the running board and looked up. He could see the planes coming straight along the road from the pass toward them. The planes were sure and flying very low.

"Better get out," he said to Helen. "Tell the others."

"Are they to bomb us?" the little Greek asked Helen as the voice of the engines became distinct.

"I don't know," she said. "They surely will not. They probably can't see us."

"Gosh, fellers, I'm sorry!"

GEORGE WOLFE

"Walk away from the car," Tap said to her.

They walked through the d h at th side and into the green w at fiel Quayle was looking at the b bers: sly fc he walked. They were obvi abo matio lowing the road. There w right "They're following the road I right Tap said.

"They're pretty sure of t mselv too, flying so low," Quayle sa

The little Greek was star ing ne Quayle because he was sure o s sal as in his nearness to Quayle. He as and pletely confident of all thing look safety when Quayle laid a h look at the bombers with Quayle.

"Airoplanos," he said to Q yle a smiled. "Inglesi?" He knew ey we not.

"No," Quayle said. He sm d at t little Greek. "Germanos."

The little Greek spat and tted l face again. The planes were a ust ov them now. They were maki stea noise that ran flat along the ech.

"Better get down in case t let o go for luck," Quayle advised.

THEY all sat down in the gr a who and watched as the bomber ame rectly above them at about a ouse feet. The first group of plan passe they could see the straight cr on t fuselage and the wings of ea

"That's hellish good forma h," T said.

"They're good fliers," Quay agre

The second group came r. T corporal was raising his rifle. I sight allowed for deflection and fire Quay

and Tap had been looking at a bom ers and had not noticed him ut th heard the shot behind them.

"Stop that!" Quayle said. What you want to do? Bring them ll do on us? Put that bloody thing wn

The corporal looked at him hen t the rifle down. Quayle wa looking tensely at the bombers now. e cot see the third group come by ad, pr over.

"I'm glad they didn't see at," m muttered.

"They probably did but he m important things to do," Tap s. "T dumb fool."

"What would they have dor" He asked.

"I don't know," Tap said. robal dropped a blast."

"A what?"

"A bomb. They don't like ing fire at by rifles," Quayle said.

"I am sorry, Inglesi," the corpor said. "I feel bad to let ther pass. may

"I know," Quayle said to n. "I just as well they didn't take 7 not of it."

They were walking through e wa high wheat back to the car.

"It is fine wheat," the cor ral s in Greek.

The little Greek said, "It al ne be bread."

"There is plenty of time. will some months before it is to b eape

The corporal was pulling the ing gr blades as he walked.

"Then the Germans will he it," little Greek said.

"Yes," the corporal said.

"You know about wheat?"

"In my youth I was of a la own family. We had wheat like is," corporal replied.

"I have never seen whea to cl before," the little Greek said

"This is fine wheat. It has en g this season."

The little Greek held out l hanc help the corporal over the ch, both of them got into the car.

They were traveling with 1 mor ony of the steady engine roa gain. was warm in the car and the was haste and anxiety to see if e pel

last to Trikkala and beyond, be-
cause the Germans would be almost

They were getting close and they
all feel it. There was the group
of pines and the plane trees—always
a good indication of a village.

"It must be it," Tap said.

"There are the bombers again too."

Quayle could see them through the
clouds. They all got out again and
went to the side of the road. This time
a different group. They passed
the village and went on south.

The fugitives got back into the car
and carefully forward. They were
easily when they came to the
village and went on south.
The fugitives got back into the car
and carefully forward. They were
easily when they came to the
village and went on south.

It came out at the end of the smashed
buildings and it was the only main road,
he guessed it was right. When they
got to the town Quayle could hear
the bombing.

"Come on," he said. "We'd better
get going. They're not bombing that
place or nothing. Whoever's bombing
doesn't look so good for us," he added.
The who was now in the front seat
with a.

"What's the next place?"

"Larissa. I don't know how we're go-
ing to get there," Quayle said quietly.

That afternoon and they were bump-
ing over the rough road, waiting defi-
nitely now for the petrol to run out.
The road was good in some places and
Quayle was nursing the car. They were
content among themselves again, quietly
expectant in the way they sat and
waited. Quayle was getting sleepy be-
cause of the engine heat. He knew he
would stop to fill the radiator with wa-
ter, but he kept going because he was
tired that if they stopped now they
would never start again. They kept
passing the tattered Greeks and the
dilapidated trucks that seemed abstract
things.

They were crossing one river over a
small bridge that had been bombed,
when Quayle thought he could feel a
plut in his engine but it kept going.
"Get going much longer," Tap finally
said.

"We must be a good thirty miles past
that place," Quayle said.

"What are we going to do if it runs
out of gas?"

"We'll probably be all right if we get
to Larissa," Quayle moved his hands
around the steering wheel of the car to
wipe the sweat that had collected. He

half closed his eyes to clear them of the
sun which was making a long shadow
before them of the trees, of the rise in
the ground. They could not be far from
Larissa either. If the petrol would last
a little longer they would be within
reach of it. He refused to think the
Germans were there.

The road seemed to wind unneces-
sarily and it was very empty here.
Quayle was almost counting to himself
from one to ten, then backward, and
making abrupt noises with his mouth.
The pastoral terrain was low and rolling
out on each side until they came to a
narrowing of a sudden rise from the
south. They had been following the
river all the way and now they climbed
a little, crossed the river and kept go-
ing on the high level.

"I remember this when I came up.
I walked here. This is near Larissa,"
Helen told Quayle.

The slight incline was keeping them
in second gear. There were wide turns,
and thick mud surfaced the road, so
that you could almost hear the gaso-
line being swallowed by the cylin-
ders. It was while turning one of these
wide curves that the engine spluttered,
started again, then stopped dead.

"That's that," Tap said. Quayle had
eased the car to the side of the road.
"What do we do now?" the little
Greek asked Helen.

She said she did not know and waited
for Quayle to move. He was sitting
with his hands on the wheel looking at
the road ahead, trying to remember the
map of the Larissa area they had used
when they were stationed here. They
might be able to take a short cut. It
would be too risky, since it might in-
volve walking just off course and over-
stepping the road to Athens.

"It's certainly empty," Tap said. He
had been shaking the car and listening
to see if there was the swish in the tank.

"All right," Quayle said. "We might
as well get going. We'll walk from here."

The others got out and Quayle looked
around to see if there was anything
worth taking with him. There was noth-
ing that would serve a purpose equal to
the drag of its bulk.

He stepped out, slammed the car door
and started out behind the others who
were already walking along the road.
The little Greek was waiting for him
and smiled when he caught up and kept
in step with him as he took long strides
up the incline. Helen looked behind to
see if he was coming and saw the car
tucked in the side of the road. She
thought of it as one of Quayle's delib-
erately careful acts.

Quayle caught up with her and the
three of them walked together. The
corporal and Tap were about twenty

yards ahead of them. In this order they
walked up the incline to the top, keeping
steady pace and not talking much. Once
Quayle called, "Not too fast, Tap.
We've got some ways to go."

"Okay, Johnny," Tap had shouted
back and kept going at the same pace.

Over the incline there was the flat
winding road cut into the slight moun-
tain that had made the incline. They
walked unevenly along the earth road
and felt the warmth of the sun on their
bodies.

"Did we have any food left?" Quayle
asked Helen.

"No."

"I'm pretty hungry too. I could do
with a drink," Tap said.

"How's your arm feeling now, Tap?"
Quayle asked.

"Stiff. How's your head?"

"All right."

"I should change that bandage,"
Helen told him as they walked along a
very muddy stretch.

Quayle was taking his jacket off.
"Later. Wait until we know how we
stand," he said.

"I think I can hear bombing," the
corporal called back to them. He was
walking ahead and Tap was back with
Quayle, the little Greek and Helen.

Quayle lifted one side of his head as
he walked. He could hear the deep ex-
plosions but they did not have enough
krumph in them to be bombs, he was
thinking. It was too flat a sound and
without resonance; it was made up of
separate sounds each time there was an
explosion and was not like the indis-
tinguishable deep-running explosions of
bombing.

QUAYLE knew that it was artillery.
They were walking even atop the
incline now and it would soon go down.
When they turned the wide corner they
could see the stretch of flat leading to
Larissa and the outline of the town
spreading wide across the river, with the
timber in clumps around it and within
it, and the white houses distinguishing
themselves.

"Here we are!" Tap shouted. He was
ahead again.

"I can still hear the bombing," Helen
said.

"I knew we were near," the little
Greek told her. He walked ahead to
catch up with Tap and the corporal.

"They don't seem to be bombing it,"
Tap called back.

"It's artillery," Quayle told him.

"There's a truck on that road," Helen
pointed to the northeast. They could
see the one truck moving steadily to-
ward Larissa, and the white dust it left
behind swirling and disappearing in the
viscous air.

"What about that artillery? Where's
that?" Tap asked.

"Somewhere to the left." That would
be north, Quayle was thinking as he
spoke. That would be in the mountains
too, probably, and he remembered from
the flying that the nearest mountains to
Larissa were those they were in now.
The nearest to the north were some dis-
tance, maybe five miles away.

"I think they're fighting somewhere
near here," Quayle said to Tap.

"Come on, then."

They walked in a group along the
road and they could see the smoke from
the town settling low into the sun. They
had left the incline and were now on
the flat. It seemed farther away than
ever.

"Won't the Germans see us?" Helen
asked Quayle.

"We might as well take a chance."

"We could keep in the fields," Tap
suggested.

"No, we'll walk along the road,"
Quayle decided.

When they passed the first house he
half expected a German patrol to walk

out. But they passed by the scattered houses on the outskirts and there was only the noise of the artillery now. It was long and wide. There was the black smoke too and that was clearer; they could see the mess of craters along the road. Then Quayle caught sight of the figure at the long bridge they were coming to.

"Do you see what I see?" Tap said to him.

"Yes."

"Well?"

"Well?"

"I hope it isn't a German."

They walked straight to the bridge. The corporal was in the lead with Quayle. Tap was unsurely walking on the edge of the road. Helen and the little Greek were behind him. They were all trying to make out the shape at the end of the bridge. Then Tap recognized it.

"Look at the hat," he said to Quayle.

They were right at the end of the bridge now. They saw the figure come up to them. He had on the wide-brimmed hat of the Australians.

"What's this?" the Australian said to them. Quayle noticed the MP band on his arm.

"Are we lucky!" Tap was laughing happily now.

"I was ready to drop to death," Helen said.

"It's very lucky. My look at the *Australos*," the corporal said.

The little Greek was quiet.

"What's up?" the Australian asked. He was looking at them. He saw Quayle with the dirty bandage on his head and the black face and the torn jacket and the worn dusty boots and the ripped Irvin jacket on his arm. He saw the girl Helen, with sunburned face and warmth in her wide cheeks, smiling, and looking at him happily. And he saw the tall Greek with the pointed beard and the mist in his eyes and the rifle on his back, and, behind him, the little Greek with the black beard, and Tap, with his blue uniform buttoned, one arm hanging loose and the other obviously bandaged to his chest, and the collar without a tie though it was open.

"We're certainly glad to see you," Tap said to the Australian.

"We have come from Ioannina," Quayle said.

THE Australian was facing them in the middle of the road. He was being careful.

"We're English," Quayle told him and pointed to the wings on his pocket.

"What about the others?"

"They're Greek. They're all right. The girl is a nurse who came with us."

"I'll have to see your papers," the Australian said. He was speaking with a broad A and the "OI" sound for the I; Quayle was thinking it sounded like cockney and remembered Vain. He took out the papers that were wet and the yellow folding pass that was the British-Forces-in-Greece pass. Tap handed him his pass, too. Helen gave him a plain sheet of paper with Greek writing on it. The Greeks handed over their soldier's books.

"We're all right," Quayle said. "We were in Ioannina. We are from Eighty Squadron. I was shot down and he was in the hospital. We got a car some of the way but we ran out of petrol on the mountain back there. What's it like ahead?"

"I suppose you're all right," the Australian said. He looked at Quayle's black-bruised face and was convinced. He gave them back their papers.

"We're just getting out of here," the Australian said.

"Can we get to Athens?"

"There's a signal truck coming through sometime. That's about all that's left."

"How's the war?" Quayle asked him.

"Bloody awful. They've been strafing us all day."

"What's been happening? We don't know what's going on."

"It's a mess. You don't know what's been happening at all?"

"No."

"We evacuated Florina. Then we left Ellasson. We've been getting slaughtered. They got too much stuff in the air and too many tanks. We didn't have a chance. We haven't got anything in the air. The boys held them up a lot but they're outnumbered now."

"What's going on now?"

"I suppose we'll hold the next mountain pass. I've got orders to go back to Pharsala. The sappers are going to blow this bridge when the signal truck comes through. The Germans are a couple of miles away. You can hear the artillery."

"When will this signal truck be along?"

"Any minute. Say, there's those so-and-sos again," the Australian said.

They could hear the high drum of numerous airplane engines again.

"They've been over all day," the Australian added. "You'd better get away from the bridge." He pulled off his big hat and pulled on a tin hat. Then he looked at Helen and offered the tin hat to her, but she smiled at him and shook her head and said, "No, thanks," and walked with him in the soft field away from the bridge.

Quayle was behind her. He could see the outline of Larissa just ahead of them. It was fading now because it was getting late and the sun was below the mountain to the west. He could see the line of poplars and the white plane trees with the clear dust pink in the air caught by the sun. He looked up for the planes. They came from due north over the ridge of mountains.

"I hope we get out of here in time," Tap said.

They walked to where Helen and the Greeks and the Australian were sitting down.

"We haven't much time," the Australian said. "The Germans will be coming down the road soon if that signal truck doesn't turn up. That's why they're bombing Larissa, I suppose."

They could see the planes now. They were in four uneven groups, with a small flying escort above and behind them. As they approached the town, the

first group merely inclined i Larissa, and they could see catching the bombs in clusters dropped from the planes. T planes following did the same others climbed and came another run-up. There was th burst of the string of bombs, black smoke was now straight ening like a train's smoke and through the poplars into the re the sky in flat quiet and still warmth.

The third group of planes f the town and went to the south Quayle watched them diving ally and then the black smoke high.

"They're after the airdro Australian said. "Looks like th too. They had Hurricane fighter "We ought to head for the said to Quayle.

QUAYLE nodded and wat bombers come down again smoke grow black, and he kne a plane or oil dumps on fir walked back to the road.

"Look," Quayle said to the A "If we walk on, will you tell t truck to pick us up? We'll b road. We want to get to the ai "I'll tell them," the Australia ised.

"Is the airdrome off this roa "Yes. Just keep walking thr town. It goes straight throug you get to the other side you'll turn-off place. You can see t If that truck doesn't come soon walking myself. The German coming down that road any mi "Thanks," Tap said.

"It's a bloody mess, isn't Australian said.

"Certainly is," Tap agreed.

"Come on," Quayle told H n.

"S'long," Tap said to the A

The Australian watched th them walking down the road sl with no energy. They're ce bloody mess, too, he was thin bet that signal truck got it in . . . This is certainly like the around Rose Bay. . . . It's funny being here. . . . I wish th truck would hurry up. . . . I'll ait truck would hurry up. . . . I'll ait truck by then I'll take to the

"Just the same, dear, I'd feel better if you had a look into that locomotive"

LARRY REYNOLDS

It certainly a bloody mess, a bloody mess all right. He watched them disappear into the mess of the horizon and the black pall smoke and the poplars. He was alone in the middle of this whole world, in the warmth and the quietness, with the wide flat river and the pleasant greenness and the poplars—and absolutely nothing around him. And soon the Germans would be here. This country is certainly like Rose Bay, I think I get out of here now. And he started to walk down the road.

They could see the Hurricane burning in the field that had been made an airfield. They could see the two high trucks at the end of the field and the two Hurricanes at a short distance from each other. This looks as if they're clearing out, Quayle was thinking. We can probably climb on one of the trucks.

They reached the men loading the trucks with large boxes.

"Is there an officer around?" Tap asked.

"Over there," one of the aircraftmen said. They were all looking at the five of them. Helen waited while Quayle and Tap walked urgently to the group near the burning plane.

"Are you clearing out?" Quayle said to the flight lieutenant who was looking at the plane.

"Well, where did you spring from?" "I came from Ioannina. We'd like to get on your truck."

"We're from Eighty Squadron," Tap said. "You're Seventy-three, aren't you?"

"Yes," the flight lieutenant said. "What have you been doing?"

"This is John Quayle," Tap said to the flight lieutenant.

"Well, for heaven's sake! You're certainly good and alive," the flight lieutenant said. "They all thought you were dead. You're quite a hero. What happened to you?"

"Crashed. What about the truck?" "They're leaving now."

"Can you let HQ know we're coming down?" Tap asked.

"We've no communication now. But I'll tell them. I'm flying back. Those blisters just shot us up. Did you see it?"

"Yes."

"I lost this one. Come on over and I'll tell the sergeant you can go with him."

They walked back to the truck. The flight lieutenant told the sergeant that they were coming with him.

"We've got a couple of Greeks and a Greek girl I'm going to marry," Quayle said. He did not like to say that, but he knew it was better to tell it now and save explanations.

"No doubt about the Greeks. We're pretty well loaded down," the flight lieutenant objected.

"We had better get moving, too," the sergeant said. "Are you taking off now?"

"Yes. Look, take the Greeks, will you, Sergeant? They've brought these officers from Ioannina. Afraid you'll have to give them a lift. Pitch something off if it's too heavy. All right?"

"Yes, sir."

"Well, the others are waiting for me," the flight lieutenant said. "There's a pilot officer in the first truck. That's his Hurricane that's burning. He'll look after you. Give you some food. Look after them, will you, Sergeant?"

"Yes, sir."

"Long. Glad you're all right, Quayle."

"Long," Quayle said to him and she took his hands. "Thanks for everything!"

"I'll tell them when I get to Athens," the flight lieutenant said as he walked quickly to his plane.

They stood and watched him climb

in. The fitter was there and had already started the engine. He was walking toward them as they watched the flight lieutenant taxi with the others to the end of the field to form a rough V. The Hurricanes had just turned around and were in line when Quayle heard the quiet roar. He looked quickly toward where he had heard it and saw the large flight coming from behind the mountains. He saw immediately their square shorn wings and knew they were Messerschmitts. He wanted to run and warn the Hurricanes but they were already taxiing down to lift and take off.

"Look," Tap shouted. He was pointing to the Messerschmitts coming down in a steep dive from the glide.

The fitter groaned as he came. Quayle was silent. He could feel and see and know now what was going to happen.

"Get down!" Tap shouted. They were all lying flat on the grass, waiting.

Only Quayle stood there. He could see this happening. The Messerschmitts came straight onto the Hurricanes just as their wheels were off the ground and they were lame, with their undercarriages still down.

"You dogs!" Quayle shouted as loud as he could.

The Messerschmitts came in threes, and then there was the burst. He heard the roaring of the Hurricanes and knew they did not know the Messerschmitts were almost on them. There was all roaring and nothing else now. The Hurricanes were nearly above him when the first three Messerschmitts were pulling out of their dive and firing.

There was the quick burst, then the long one and the quick one and the roaring. The Messerschmitts pulled up. Quayle saw the kicking of the machine-gun bullets along the field near him. He stood there and looked at death. The Hurricanes were aware now.

THE second three Messerschmitts came on them—and there was the burst. The Hurricanes were beating it flat and trying to climb but there was the burst from each one and the lick of flame and the tracers and the terrific noise. Quayle was standing up shouting, as the Hurricane in the lead burst into flames and fell in the split fraction of a second, the white flat plump of it exploding into ten thousand pieces. And still the noise of the flying continued, and the other two Hurricanes were loping flat and climbing, and the third three Messerschmitts were coming down. Quayle was still standing there, shouting and watching the Hurricanes because they had got more height. They were good and climbing now and were doing the right thing—weaving and climbing—and Quayle knew they would be all right because the Messerschmitts had used up too much height value in their initial dive and were disappearing over the mountain. And there was the smell of the Hurricane burning.

"It was the flight loot," he heard the fitter say to the sergeant.

"Proper goner, too. The bloody hounds!"

"Come on, we'll take a look."

"It's no use," the sergeant said. "He's a goner."

"The skunks. The filthy skunks, fancy them doing that!"

"What do you expect them to do? Wait for us to ask them?" Tap said.

He was angry, standing next to Quayle and watching the high black smoke that added to the smoke in the air from Larissa and from the other Hurricane that had been shot up on the ground.

Helen walked to Quayle and he looked at her slowly when she touched him. He could see that she was crying without sound.

"It is all terrible!" She said it to the earth and not to the people around her.

Good and Married

Continued from page 26

Most people don't know what marriage counseling is. Some people, if they've any contact with Joe and Betty College, know that a good many colleges and universities are now giving courses with names like Preparation for Marriage, Marriage and Family Relationships, and so on, but that's all they do know.

Actually marriage counseling is pretty closely tied up with both courts of domestic relations and with Joe and Betty College. Particularly Joe and Betty College, because though sociologists and home economists and psychologists have worried their heads over marriage for a long time, feeling that a relationship that was supposed to last for life was maybe something worth studying, they couldn't make much progress until the boys and girls in college decided the same thing. And they have. Ten years ago there were possibly half a dozen courses in marriage in all the colleges in the United States. Today there are 234, all of them elective, all of them jammed. And in the co-educational colleges a good many of the courses are nearly as crowded with boys as with girls.

Ten years ago there were possibly one or two marriage counsel bureaus in the United States, all of them brand new. Today there are twenty-five busily counseling in twelve different states; not many, considering that divorce rate and how much marriage counseling is needed, but enough, anyway, to show that young people, whether they go to college or not, must be feeling the need of lessons in living together.

Friendly, Expert Guidance

Marriage counsel bureaus are the friendly places where married or about-to-be-married people can discuss privately with an expert all the questions about marriage that they have been unable to answer for themselves, all the problems, usually minor but sometimes frighteningly major, that they have been unable to solve for themselves. They are usually nonprofit organizations, privately run, but almost always with the ardent co-operation of the local colleges, churches and Y.W.C.A.'s. The best known and probably the oldest is the Institute of Family Relations in Los Angeles under the direction of Paul Popenoe. It runs to four directors, a dozen or so assorted counselors, and a fairly complicated organization. But Marriage Counsel in Philadelphia, another one of the pioneers, which has been at work for ten years under the direction of Mrs. Stuart Mudd, is probably more typical with its three or four trained counselors, a secretary, a lending library and some consulting physicians and psychiatrists.

Marriage counselors are apt to be trained psychologists, social workers, sociologists or doctors, though they don't have to be. What they do have to be is well adjusted to life themselves, with a talent for understanding and interviewing people, and a good deal of specific education in the economics, psychology and physiology of marriage. Usually, since some men would rather talk to a man about their problems, there is a man among the counselors, but most of them are women.

In case you're wondering with a faint dismay who could possibly bring themselves to go to an impersonal organization to discuss anything as personal as their own marriage, here is how it has worked out in something like a thousand cases in Marriage Counsel in

Philadelphia. The clients seem to be pretty evenly divided, half already married and half about to be married. Of the married ones, most have been married less than five years and nearly all have come in before their marriages have reached a definite breaking point. Marriage Counsel thinks this is one of the strongest proofs of how necessary such a service is. At the breaking point these people could go to court or to a psychiatrist. But there is no other organization ready to give help to fairly normal young people with fairly normal problems. And young is the proper adjective: three quarters of all the people coming to Marriage Counsel for help are under thirty. Three quarters are women and a quarter men. Over half

to postmarital clients was much more equal. And by the time you reach the college group the number of people who came for advance advice about their marriages is much greater.

As to how these young people find their way to Marriage Counsel—well, take a young girl who is going to be married. She comes from what is known as a strict home. Her mother is what is known as a good woman. Perhaps it has never occurred to the girl that she could ask her mother any questions about the physical side of marriage. Perhaps—and Marriage Counsel's records are full of such cases—she has asked her mother and has been answered by tears or bitter silence. But this girl, for all her repressed background, is intelligent

the local maternal health center. Perhaps most of all are sent by professors in the schools where marriage courses are taught but still early enough or widely enough. Educators, of course, feel that the very place for education for marriage is home, and the best time the two or so years from birth to marriage. Not many homes so far are wise enough or relaxed enough to graduate boys and girls who need no further marriage counseling.

Now let's get back to the hundred engaged men and women who come in to Marriage Counsel, sometimes singly, sometimes in pairs, to ask an expert about their marriages. They are the least dramatic group the Counsel sees. They have no broken hearts to mend and no serious mistakes to make up for. But they're the most important group all the same. They're the future of marriage. They're the future of democracy. They're the divorce rate for 1950.

So here they are, a little shy but much in earnest, and here is the expert. She doesn't lecture them. She doesn't wrap up and deliver so many fixed ideas or bits of information. She tries to find out what it is basically that bothered them enough to send them to a stranger for advice. Obviously they couldn't discuss satisfactorily with anyone closer. And what are the

Sex and Marriage

Well, most of them want to know a lot of all about the physical side of marriage they're getting into for the first time. It's rather odd, actually, how carefully the connection between marriage and sex is guarded by society at large. As far as the reading public is concerned, there is a lot closer relationship between sex and college proms than between sex and marriage, and a lot closer relationship between marriage and cooking than between marriage and making love. Which is pretty ridiculous, and for good reason, experts agree, why so many marriages fall to pieces. Because whether you admit it publicly or privately or not at all, the fact remains that a happy marriage is pretty generally dependent on a happy love relationship, and a happy love relationship is as complicated and a lot more important than balancing a budget.

Joe and Betty College are beginning to think so, too. That's why they give these courses in marriage all over the country. And don't think it's salacious interest. You only want to be told the sex when you don't know. Once you know, it becomes part of your education, part of your background. I don't think the ones who have learned what they felt they needed at marriage counseling that come to Marriage Counsel, but the ones who haven't.

So the marriage counselor tries to tell them what they want to know about themselves and each other, again not with a fixed lecture but trying to follow the client's lead and answer his spoken or unspoken questions. She explains pretty specifically that men and women are not only physically different but also emotionally and psychologically, and how important it is for them to make allowances for those differences. Individual men and women are too, in their desires and needs, she explains, but most impulses are shared and ought to be considered so. There is no one correct way of making love, and many couples find that their love grows on subtle change and variety. The

are Protestants, about a third Jewish and about ten per cent are Catholics. The clients pay if they can, but are never refused because they cannot pay. As for education, about a quarter of the clients have been through college and another half through high school.

A recent Marriage Counsel survey is revealing an interesting little tie-up between marriage counseling and education. Almost never, they are discovering, does a person who has no more than grade-school education come in for premarital counseling, though a good many with this type of education have come for help when their marriages were in really serious shape. As people have more education, apparently, they are more and more likely to come to Marriage Counsel for premarital advice. Among these who had been through high school the proportion of premarital

enough to realize that everybody doesn't feel that way about marriage. She may have a friend who has been to Marriage Counsel before her own marriage. Or she may go regularly to the Y.W.C.A. and happen to mention her feeling of inadequacy to one of the leaders there. Marriage Counsel has had any number of clients referred in just those ways.

Or take a young man. His wife cries all the time. No matter what he does or says to try to make her happier she still cries if he so much as mentions the weather or that the meat is a little tough. Perhaps he knows his minister or his doctor well enough to mention casually that his marriage is not all laughter and kisses. The minister or more often the doctor is very apt to send him and his problem along to Marriage Counsel.

Other clients are referred by social-service agencies, by the courts and by

phy behind all her words is that
ess in marriage is an achieve-
not a discovery, and that with a
me and patience a love relation-
usually be worked out which
us to both the man and woman,
ows more rather than less joyous
ars of living together.

Some people often can absorb ideas
reading, which they can't accept
conversation, Marriage Counsel has
variety of sound books on all as-
pects of marriage which the client may
read. It is important for the coun-
selor to lend books which the client will
to accept and absorb, and this is
the most difficult and delicate
of her job. Very occasionally a
client will return a book with horror at
its length, but this is not the fault
of the book, the client or Mar-
riage Counsel. It's the fault of society
and its ostrich attitudes, and
of fault marriage counseling is
trying to make up for. In general
the books are intelligently and appre-
ciatively read.

Not Afraid of Responsibility

Along with information about love
relationships, most engaged couples—
like it or not—want to know about con-
sensus. Marriage Counsel doesn't
and is at all alarming. Only once in
years of existence has it run into
a client who didn't want children at all.
This is a girl who thought, mistak-
enly, that she had a hereditary strain
of insanity and the marriage counselor
was able to convince her that she was
normal. Generally, it is a case of couples
wanting to be a little more economically
secure before they take on anything as
serious as a baby. They aren't
afraid of responsibility, they just want
to be sure they are equal to it. A good
many for instance, want premarital
examinations to see that they are in
shape to undertake both marriage
and children.

Marriage Counsel isn't equipped, of
course, to give physical examinations or
contraceptive help, but the counselor
discusses the problems pretty carefully
with the client and then refers him or
her to a competent doctor. She has to
refer unmarried clients to a doctor
in private practice, regardless of their
economic position, for it is another of
the idiosyncrasies of our society that less than
half a dozen planned parenthood clinics
in the whole United States are able to
give up or information to people when
they are about to be married and need
this help the most.

But physical problems are by no
means the only problems that are

brought to Marriage Counsel. One of
the commonest questions is whether a
girl should keep on working after she is
married. The problem, of course, is
largely whether it will hurt her hus-
band's pride or his standing in the com-
munity. A good many think it will, and
if either the man or woman feels pretty
strongly about this, the counselor is apt
to advise the girl to give up her job even
though it means a much lower standard
of living. But there are two sides of
the problem to consider, for some
women need an outside job to keep
them from being restless and unhappy,
and all the love in the world isn't going
to make up for this need. So if a man
with a sole-protector psychology is en-
gaged to a girl who is basically a career
girl there is almost sure trouble ahead.
Mrs. Mudd, who has done a good deal
of lecturing at various Philadelphia col-
leges and organizations, says she has
run into more intense feeling and emo-
tional conflict over this question of
working wives than over any other
problem.

The next most frequent problem is,
not surprisingly, in-laws. Marriage
Counsel's advice here is, just about al-
ways, Don't. Don't live with your in-
laws. If it means one room and a bare
table, have the room and table for your
own. Marriage Counsel has seen too
many marriages at the breaking point in
the past ten years from the inability of
the wife or husband to change over from
dependence on father or mother to de-
pendence on husband or wife. Be tol-
erant, be polite, be affectionate to your
in-laws, advises Marriage Counsel, but
fight your own fights, solve your own
problems, make your own decisions. Ida
and Jakey back there in the beginning
didn't know they were running into two
of the toughest problems young mar-
ried people can face when they decided
to get married and have Ida live at
home and keep on working.

The married clients who come in are
apt to have much more difficult and
more complicated problems. Often the
question that brings them in is physical
but, and this is both surprising and in-
teresting, it frequently turns out that
the sexual difficulty is an outgrowth of
some psychological or social difficulty.

One woman who came to Marriage
Counsel to discuss her lack of emotional
response to her husband turned out to
be bitterly jealous of his first wife and
to feel miserably inferior to her. When
the counselor made her see this and
helped her understand that a person
could, after all, have two loves in a
lifetime, she was able to return her
husband's love without reservations.

And there are plenty of other kinds of

problems. One bride who had always
thought her parents were blissfully
happy together discovered the day be-
fore her marriage that they had only
stuck it out because of her, and that her
mother personally doubted if marriage
could ever bring anything but misery.
Add to the sense of insecurity this gave
her an abnormal possessiveness on her
mother's part and you have a nice prob-
lem for Marriage Counsel to work on.
It might have failed, too, Mrs. Mudd
admits, if it hadn't been for the draft.
The girl's husband was sent to camp
and wanted his wife to come live near
him. She did, and they now show signs
of living happily ever after.

One young man whose wife was work-
ing so that he could finish an important
course he was taking suddenly decided
because she was always too tired at
night to be entertaining that he and she
had nothing in common. They were on
the verge of separation when the young
wife came to Marriage Counsel. The
counselor saw that the husband was
clearly a little boy who hadn't learned
to take his gingerbread without guilt. She
talked to both of them and then advised
the wife to walk out on her husband for
a while and give him a chance to grow
up. The effect of a few homely truths
and a little solitude on the young man
was remarkable. When his wife re-
turned after a few weeks, she shifted to
a job which was related to his work so
that they had more things to talk about
together and when last seen, by chance
by the counselor, were walking happily
down the aisle of a theater, arm in arm.

The Root of Marriage Difficulties

The counselor tries very hard to find
out the real problem and help the
client to look at it with grown-up eyes.
You are not going to get very far with
the problem of your husband's rudeness
to your parents if the facts are that you
have never broken away from their
domination and your husband is treated
a good deal like an outsider by all of
you, and you don't know these facts.
Often just getting the husband and wife
to see their troubles from the same point
of view is all that is necessary.

But occasionally there are situations
where no amount of discussion is going
to solve the problem: if the husband is
a pathological drunkard, for instance,
and has no desire to get over it. Or if the
wife is so immature and neurotic that
she is unable to cope with even the sim-
ple marriage responsibilities of meals
and laundry. In cases like these, though,
Marriage Counsel feels that divorce is
always like a major operation. It some-
times seems the only solution and the
counselor has to be brave enough to say
so. After all, one of the partners in an
ill-matched marriage of this sort may
be perfectly normal and deserving of a
chance for happiness. Moreover, there
is a good deal of evidence that children
brought up in homes of perpetual con-
flict are more likely to grow up ineffec-
tive citizens than children brought up
by one affectionate parent.

Marriage Counsel in Philadelphia,
like all the other marriage counseling
organizations, wants to help build
stable, intelligent homes that can pro-
duce brave, intelligent citizens for a
world that is going to need them badly.
But it believes that, in war or peace, in
fast time or famine, the only stable
homes are intrinsically happy ones. A
wise columnist remarked in print some
years ago that marriage survived as an
institution not because of the church or
because of children or for any other high
moral or sociological reason, but be-
cause it was more fun than a picnic.
Marriage Counsel, accepting the fact
that the best picnics have spiders and
mosquitoes and sometimes even poison
ivy, thinks this should be true.

ATHLETE'S FOOT

Laboratory Tests Prove Medi-
cated Poslam Kills—on contact
—and in 10 minutes—the
Fungus Causing Athlete's Foot

If you tried and tried to find relief from Athlete's
Foot and failed—get Poslam—a successful home
remedy that should help you—for laboratory tests
prove it kills—on contact and in ten minutes—
three types of contagious fungus that cause Athlete's
Foot! Immediately relieves the itching and burning!
Pure Poslam, a concentrated ointment, stays in
prolonged contact with the raw itchy infection—
simply massage gently into the cracked
skin—no need for bandaging and it
won't rub off, burn or pain. It's so good
that Poslam is offered on a money back
guarantee—costs but 50¢ at druggists.

WAKE UP YOUR LIVER BILE— WITHOUT CALOMEL

—And You'll Jump
Out of Bed in the
Morning Rarin' to Go

The liver should pour out two
pints of liquid bile onto the food
you swallow every day. If this bile is not flowing
freely, your food may not digest. You get constipated.
You feel sour, sunk and the world looks punk.
It takes those good, old Carter's Little Liver
Pills to get these 2 pints of bile flowing freely to
make you feel "up and up." Get a package today.
Take as directed. Effective in making bile flow free-
ly. Ask for Carter's Little Liver Pills. 10¢ and 25¢.

RADIO FIGHTS BACK

WHEN William S. Paley, president of the Columbia Broadcasting System, stood up recently before the House Interstate Commerce Committee and let fly some broadsides at the Federal Communications Commission, we could not forbear to cheer.

Paley wants Congress to limit the FCC strictly to regulating traffic on the air waves by allocating wave lengths to keep stations from interfering with one another.

The FCC's majority members, led by Chairman James L. Fly, have long been angling for power to regulate the character of the programs that the various networks and stations broadcast. These men want to pass on the morality, quality and general desirability of those programs. Thus, they seek a power over radio which no bureaucrats have yet succeeded in gaining over the press in this country, though plenty have tried.

If the FCC should get that power, as Mr. Paley points out, it would get the power to say what should and should not be broadcast—and there would go glimmering a huge piece of the constitutional guaranty of freedom of speech in the United States.

CBS's president puts the matter in these words:

"Great danger exists, whether the commission can censor in advance or whether it is in position to revoke a license or to hand over a wave length to someone else by an ex-post-facto judgment that programs have not been in the public interest. Let the commission once be able to say, 'We do not like the advertising,' or 'There was too much jazz music,' or 'We disapprove of the quality of dramatic programs,' or 'We think the news should be handled differently,' or 'Broadcast Station A should

have taken programs from Network B,' and the broadcaster is bound hand and foot, subject to subservient compliance or the death penalty. One victory for the commission in any such judgment after the fact, and from then on, its whispered wishes will be amplified over all the kilocycles in the land. So, in effect, power of censorship after publication in the hands of a licensing authority in reality can always be power of censorship before publication, which is contrary to the whole theory of freedom of speech and of publication in America."

In other words: Give the FCC power to pass on the character of radio programs, and if the FCC thinks Charlie McCarthy isn't elevating enough, Charlie will have to get off the air, and too bad about the fact that millions of people like to listen to his inspired idiocies; if the FCC doesn't like Raymond Gram Swing's mental processes, Swing will have to fall silent; if the FCC feels that the Metropolitan Opera is a little too good for the common people, the Met will have to drop the broadcasts which have endeared it to some 10,000,000 listeners. And so on.

We hope radio will keep on fighting any and all FCC attempts to regulate any part of radio except the wave lengths, and we hope Congress will prevent any and all such FCC grabs for power to censor radio.

The best censorship for radio is the censorship which has operated on it from the beginning—customer censorship, exercised whenever listeners turn away in mass from a program which has lost their approval. That is the only kind of censorship (aside, of course, from the necessary withholding of military secrets in time of war) that can be consistent with the Bill of Rights.

Rationing and Ro

WE KNOW of no American who is unwilling to endure any privations that may be necessary to help us win the war. Gas rationing, sugar rationing, the rationing of dozens more items by October 1st, as proposed by Leon Henderson—it's all okay if it contributes to the building up of our fighting strength by land, sea or air.

But we dislike intensely, and hate to meet up with anybody who doesn't like intensely, the talk that emanates from our leaders about how the Americans have gone fat and soft and all this rationing going to be good for them.

That is rot. Bataan, Corregidor and the tle of the Coral Sea, not to mention Jim Doolittle & Co.'s bombing of Tokyo, lie to the charge that we're fat and soft. Economics and common sense give the lie to the claim that these restrictions are going to be good for us.

They are not going to be good for us. They are already cutting into our standard of living and will cut much deeper if we are finished with them. They will cut the quality of many manufactured articles, stimulate bootlegging of various kinds, spread resentment, injure business, in a manner of injustices and inequities, and place a lot of people in public jobs from which it will be difficult if not impossible to blast them out after the war.

That is the plain truth about rationing, necessary though it may be. Why not look the truth in the face? Why try to pretty up something that is not pretty, or kid ourselves that an unmitigated curse is a blessing in disguise?

The trouble is that war itself is the chief reason for fighting, and the uttermost in the hope of ending it as soon as possible. Let's take all the mistakes that necessarily go with war, but let's not try to like them. That would be the first step toward falling in love with war—for which the Germans and the Italians are now paying through the nose, and for which the Japanese will pay through the nose in due time.

White Feather and Glass Eye

HERE is as poignant a story as we have seen come out of a war:

SYDNEY, AUSTRALIA.—Lieut. Jack Leary, who lost an eye in action, was handed a white feather by a young woman as he walked down the street in civilian clothes. Perry said he dropped his glass eye in the woman's hand.

That writes its own editorial, doesn't it? Indeed, it was all anticipated some time ago, in the Sermon on the Mount: "That ye be not judged."

The incident is a good one to call to mind now and then, in this time of war and strained emotions and suspicion. Hysterical judgments are more dangerous in wartime than at any other time. Give people the benefit of the doubt, now more than ever before; don't jump to conclusions about them.

But we're wandering off into generalities. You'll think for a minute or so about the white feather and the glass eye and the implications thereof, you'll see more than we can tell you what we're driving at.
